

# भारत में परिवार उपभोक्ता व्यय के मुख्य संकेतक Key Indicators of Household Consumer Expenditure in India

## एनएसएस 68 वॉ दौर

NSS 68<sup>th</sup> Round (जुलाई 2011 - जून 2012) (JULY 2011 – JUNE 2012)

भारत सरकार Government of India सांख्यिकी और कार्यक्रम कार्यान्वयन मंत्रालय Ministry of Statistics and Programme Implementation नेशनल सैम्पल सर्वे ऑफिस National Sample Survey Office जून 2013 June 2013

## Foreword

The Household Consumer Expenditure Surveys of the National Sample Survey (NSS) are the primary source of data on various indicators of level of living, pattern of consumption and well-being of households at the National and State levels. These indicators are used for planning, policy formulation, decision support and analytical studies by various Government organizations, academicians, researchers and scholars. NSS surveys on Household Consumer Expenditure with a large sample of households have been conducted quinquennially from the 27<sup>th</sup> round (October 1972 - September 1973) onwards. The NSS 68<sup>th</sup> round survey, carried out during July 2011 - June 2012, was the ninth quinquennial survey in the series, covering the subjects of (i) Household Consumer Expenditure and (ii) Employment and Unemployment.

The NSS round on Household Consumer Expenditure provides the database for calculation of poverty estimates by the Planning Commission. For past several years the Planning Commission used to estimate the proportion of people below poverty line following the Lakdawala Committee method. However, in recent past, an Expert Group under the chairmanship of Prof. Suresh D Tendulkar developed a new methodology with a view to provide a more realistic estimate of poverty in the country based on NSS data. This undoubtedly indicates his trust in reliability and credibility of the NSS data. Through this document, NSSO has made an attempt to bring out the important indicators of the 68<sup>th</sup> round survey on Household Consumer Expenditure within a year of completion of the fieldwork.

The Survey Design and Research Division (SDRD) of the NSSO undertook the development of the survey methodology, survey instruments and the preparation of this document. The field work was carried out by the Field Operations Division (FOD) of NSSO while the data processing and tabulation work was handled by the Data Processing Division (DPD) of NSSO. The Coordination and Publication Division (CPD) coordinated various activities pertaining to the survey.

I am highly thankful to the members of the Working Group for NSS 68<sup>th</sup> round and National Statistical Commission for their valuable guidance provided at various stages of the survey. I also place on record my appreciation of efforts made by officers of different Divisions of the NSSO involved in the preparation of this document. I hope, this document will be found useful by planners, policy makers, academicians and researchers.

りっし

(Vijay Kumar) Director General & Chief Executive Officer NSSO

New Delhi June 2013

## Chapter One

## Introduction

## 1.1 Background

1.1.1 The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure surveys at regular intervals as part of its "rounds", each round normally of a year's duration. The NSS surveys are conducted through household interviews from a random sample of households selected through a scientific design and cover practically the entire geographical area of the country.

1.1.2 The household consumer expenditure survey (CES) is generally covered as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES's. The 68<sup>th</sup> round survey (July 2011 - June 2012) was the ninth survey of this series. The key indicators of household consumption in India during 2011-12 based on data collected through the 68<sup>th</sup> round of NSS are presented here.

## **1.2** Objective of the survey

1.2.1 The NSS consumer expenditure survey aims at generating estimates of household Monthly Per Capita Consumer Expenditure (MPCE) and the distribution of households and persons over the MPCE range separately for the rural and urban sectors of the country, for States and Union Territories, and for different socio-economic groups. These indicators are among the most important measures of the level of living of the relevant domains of the population. The distribution of MPCE highlights the differences in level of living of the different segments of the population and is an effective tool to study the prevalence of poverty and inequality. These numbers thus enable the apex planning and decision-making process to allocate the nation's resources among sectors, regions, and socio-economic groups, and assess the "inclusiveness" of economic growth.

1.2.2 Besides measuring the household consumption level and the pattern of level of living, another important use of the CES is to provide the budget shares of different commodity groups for the rural and urban population, which are used to prepare the weighting diagram for official consumer price indices (CPIs).

1.2.3 Apart from these major uses of the CES, the food (quantity) consumption data are used to study the level of nutrition of different regions and disparities therein, and in studying demand and supply of commodities. The estimated budget shares of a commodity at different MPCE levels facilitate the study of consumption elasticity or responsiveness of demand to change in overall purchasing power.

## **1.3 Genesis of the CES**

1.3.1 *The quinquennial series:* Beginning from the first round (1950-51) of the National Sample Survey (NSS), data on household consumer expenditure were collected in every round up to the 28<sup>th</sup> (1973-74). After the 26<sup>th</sup> round of the survey, the Governing Council of NSSO decided that the surveys on consumer expenditure and employment-unemployment might be undertaken together on a large scale once in every five years. Accordingly, "quinquennial" surveys were conducted in the 27<sup>th</sup>, 32<sup>nd</sup>, 38<sup>th</sup>, 43<sup>rd</sup>, 50<sup>th</sup>, 55<sup>th</sup>, 61<sup>st</sup> and 66<sup>th</sup> rounds of NSS, at roughly 5-year intervals. By a decision of the National Statistical Commission, the "quinquennial survey" of consumer expenditure and employment-unemployment was repeated in the 68<sup>th</sup> round (2011-12) although it was only two years since the 66<sup>th</sup> round survey had taken place.

## 1.4 Reports of the 68<sup>th</sup> round CES

1.4.1 The results of NSS 68<sup>th</sup> round survey on household consumer expenditure are planned for release in six reports. The titles of these reports are:

- 1. Level and Pattern of Consumer Expenditure, 2011-12
- 2. Household Consumption of Various Goods and Services in India, 2011-12
- 3. Public Distribution System and Other Sources of Household Consumption, 2011-12
- 4. Energy Sources of Indian Houssholds for Cooking and Lighting, 2011-12
- 5. Nutritional Intake in India, 2011-12
- 6. Household Consumer Expenditure across Socio-Economic Groups, 2011-12

## 1.5 Contents of this document

1.5.1 This document brings out the key results of NSS 68<sup>th</sup> round within a year of completion of the field work for use in decision support, policy inferences and economic analysis. It contains three chapters and five appendices. Following the present introductory chapter, Chapter Two outlines the features of the Consumer Expenditure Survey along with its conceptual framework. A brief summary of the information contained in the key indicators is presented in Chapter Three. Appendix A gives the State/UT and all-India tables of key indicators. Appendix B is a brief note on the differences – theoretical and empirical – among the three methods of measurement of MPCE. Appendix C contains the basic definitions and procedures followed in the survey and the definitions of terms used in this document other than those discussed in Chapter Two. Appendix D gives details of the sample design and estimation procedure followed and Appendix E consists of the schedules of enquiry (Schedule 1.0, Type 1 and Type 2) that were canvassed in the surveyed households.

1.5.2 The indicators presented in this document – separately for MPCE\_{URP}, MPCE\_{MRP} and MPCE\_{MMRP})^1 – are

A. For each State/UT and all-India,

<sup>&</sup>lt;sup>1</sup> These are the three estimates of MPCE generated from this survey. See also Chapter Two, paragraph 2.3.4.

- Average MPCE and distribution of rural and urban population by 12 MPCE classes
- Fractiles of the distribution of population by MPCE
- Break-up of average rural and urban MPCE over 30 groups of food and non-food items.
- B. For all-India,
- Break-up of average rural and urban MPCE over 30 groups of food and non-food items for each of 12 MPCE fractile classes.

## Chapter Two

## Main Features of the Consumer Expenditure Survey

## 2.1 Schedules of enquiry

2.1.1 The household consumer expenditure schedule ("Schedule 1.0") used for the survey collected information on quantity<sup>2</sup> and value of household consumption. To minimise recall errors, a very detailed item classification was, as usual, adopted to collect information, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods, and 89 other items. The schedule also collected some other particulars of each household member, such as age, sex and educational level.

2.1.2 The schedules of enquiry used were of two types, Schedule Type 1 being canvassed in one half of the sample households and Schedule Type 2 in the other half. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used 'last 365 days' (only) for the infrequently purchased categories, 'last 7 days' for some categories of food items, as well as pan, tobacco and intoxicants, and 'last 30 days' for other food items, fuel, and the rest. This was in line with the recommendations of an Expert Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption<sup>3</sup>. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table 2.1.

Cate-	Item groups	Reference period for			
gory	item groups	Schedule Type 1	Schedule Type 2		
Ι	Clothing, bedding, footwear, education, medical (institutional), durable goods	'Last 30 days' and 'Last 365 days'	Last 365 days		
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days		
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days		

Table 2.1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2

<sup>&</sup>lt;sup>2</sup> For education, medical care, and some goods and services listed in the schedule as "miscellaneous goods and services", no data on quantity of consumption are collected in the NSS CES's.

<sup>&</sup>lt;sup>3</sup> See NSS Report no. 475, entitled "Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption".

NSS KI(68/1.0): Key Indicators of Household Consumer Expenditure in India

## 2.2 Scope and coverage

2.2.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of a bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

2.2.2 Population coverage: The following rules were adhered to:

- 1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
- 2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Appendix C for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
- 3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
- 4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

## 2.2.3 Sample size

2.2.3.1 *First-stage units*: As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a "State sample" was surveyed by State Government officials in addition to the "Central sample" surveyed by NSSO. For rural India, the number of villages surveyed in the Central sample was 7,469 and the number of urban blocks surveyed was 5,268. This document is based on the estimates obtained from the Central sample only.

2.2.3.2 *Second-stage units*: For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2. The total number of households in which Schedule 1.0 was canvassed was 1,19,378 in rural India and 83,935 in urban India.

2.2.3.3 Table 2.2 shows the numbers of villages and urban blocks surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed, for each State and Union Territory.

Table 2.2: Number of villages/blocks surveyed and number of households surveyed for Schedule 1.0Type 1 and Type 2: NSS 68<sup>th</sup> round, Central sample

## 2.3 Conceptual framework

2.3.1 **Reference period:** The consumption of any good or service by a household or person occurs in the form of a flow over time. The survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period. If all households are required to report consumption over the same fixed (calendar) period, such as Jan-March 2011, the reference period is said to be fixed. If each household is asked to report consumption over the past 7 (say, or 30) days preceding the date of survey, the survey is said to have a moving reference period.

2.3.2 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure.<sup>4</sup>

## 2.3.3 Monthly per capita expenditure (MPCE)

2.3.3.1 Normally, the concept of per capita income – or per capita (overall) expenditure, if income data are not available – is used for comparison of average living standards between countries, between regions, and between social or occupational groups. For studies of poverty and inequality *within* populations, however, average income or average expenditure is not enough. One needs to assign a value that indicates level of living to *each individual*, or at least to each household, in a population in order to know the level of inequality in living standards of the population, or the proportion living in poverty.

2.3.3.2 The NSS concept of MPCE, therefore, is defined first at the household level (household monthly consumer expenditure  $\div$  household size). This measure serves as the indicator of the household's level of living.

2.3.3.3 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level.

## 2.3.4 The three estimates of average and distribution of MPCE obtained from the 68<sup>th</sup> round survey

2.3.4.1 From each sample household where Schedule Type 1 was canvassed, two measures of MPCE emerged. This was because for each such household, there were two sets of data for Category I items (see Table 2.1) – "last 30 days" data and "last 365 days" data – unlike items of Categories II and III, for which only "last 30 days" was available. Thus there were two ways of measuring household MPCE: one using "last 30 days" for all items, and the other using "last 365 days" data for Category I items and "last 30 days" for the rest. The first

<sup>&</sup>lt;sup>4</sup> For a more elaborate discussion of the coverage of this term and the procedures adopted to obtain this information from the surveyed households, the reader is referred to Appendix C, Concepts and Definitions, paragraphs 1.3 to 1.3.5.

measure of MPCE is called MPCE<sub>URP</sub> (Uniform Reference Period MPCE) and the second, MPCE<sub>MRP</sub> (Mixed Reference Period MPCE). From data on MPCE<sub>URP</sub> and MPCE<sub>MRP</sub> (collected from households where Schedule Type 1 was canvassed), two alternative estimates of the distribution of MPCE and average MPCE can be built up.

2.3.4.2 From each sample household where Schedule Type 2 was canvassed, a single measure of MPCE emerged, as, for each item of consumption, data for only one reference period had been collected. Since the reference period system used for Schedule Type 2 was only a slight modification of the Mixed Reference Period (differing only in the reference period used for Category II items), this measure of MPCE was called the MPCE<sub>MMRP</sub> (Modified Mixed Reference Period MPCE). The estimates of the distribution of MPCE and average MPCE that can be built up from Schedule Type 2 data are therefore called the estimates of MPCE<sub>MMRP</sub>.

## Chapter Three

## **Summary of Findings**

## **3.1** Three sets of estimates

3.1.1 Like the 66<sup>th</sup> round survey, the 68<sup>th</sup> round survey employed three different methods of measurement of Monthly Per Capita Expenditure (MPCE) at the household level – the URP (Uniform Reference Period), MRP (Mixed Reference Period) and MMRP (Modified Mixed Reference Period) methods (see Chapter Two, paragraph 2.3.4). In the detailed tables of key indicators of consumer expenditure (Appendix A), indicators generated by all three methods have been presented. In this chapter, which gives summary results, the MMRP estimates have been discussed in more detail, as the MMRP method uses the reference periods that were recommended after suitable experimentation by the Expert Group on Non-Sampling Errors. Since, however, the MMRP estimates are available only from the 66<sup>th</sup> round (2009-10) onwards, discussion of change in consumption *over time* has to rely on estimates obtained by the URP or MRP method.

3.1.2 For better understanding of the differences in estimates obtained by the three reference period systems, the reader is referred to Appendix B.

castar	Average MPCE (Rs.) by measurement method				
sector	URP	MRP	MMRP		
(1)	(2)	(3)	(4)		
rural	1278.94	1287.17	1429.96		
urban	2399.24	2477.02	2629.65		
difference as % of rural	87.6	92.4	83.9		

Table T1: Average rural and urban MPCE (all-India)

#### 3.2 Average MPCE: all-India and States

3.2.1 The all-India estimate of average MPCE (Table T1) was around Rs.1430 for the rural sector by the MMRP method, but about Rs.150 less if URP or MRP were used. Average urban MPCE was about Rs.2630 by MMRP but about Rs.150 less by MRP and Rs.230 less by URP.

3.2.2 Average urban MPCE measured by the MMRP method was about 84% higher than average rural MPCE for the country as a whole though, as we shall see later, there were wide variations across States.<sup>5</sup>

3.2.3 Average rural MPCE was lowest in Odisha and Jharkhand (around Rs.1000) and also in Chhattisgarh (Rs.1027). In Bihar, Madhya Pradesh and Uttar Pradesh, rural MPCE was about Rs.1125-1160, perceptibly below the all-India average of Rs.1430. The only three

<sup>&</sup>lt;sup>5</sup> In comparing rural-urban differentials across methods of measurement of MPCE, or across States, it should be borne in mind that estimation of percentage differences in the value of any parameter is, as a general rule, subject to greater errors than the estimation of the parameter itself.

major States with MPCE above Rs.2000 were Kerala (Rs.2669), Punjab (Rs.2345) and Haryana (aout Rs.2176).

3.2.4 In urban India Bihar had the lowest MPCE, Rs.1507. In Chhattisgarh, Odisha, Jharkhand, Uttar Pradesh and Madhya Pradesh, urban MPCE was between Rs.1865 and Rs.2060, well below the all-India average of Rs.2630. These six were the six major States with the lowest MPCEs in both rural and urban sectors. The four major States with the highest urban MPCEs were Haryana (Rs.3817), Kerala (Rs.3408), Maharashtra (Rs.3189), and Karnataka (Rs.3026).

3.2.5 *Rural-urban differentials:* Column 4 of Table T2 shows the rural-urban MPCE differential across States. Although such percentage differences may be subject to greater errors of estimation than average rural MPCE or average urban MPCE themselves, and although urban price levels are generally higher than rural price levels so that the rural-urban gap in consumption may be smaller in real terms, it is clear that States vary widely in the degree of the rural-urban gap. Restricting ourselves to the major States, we find that urban MPCE is double rural MPCE in West Bengal and Jharkhand, and 93-97% higher than rural MPCE in Maharashtra, Karnataka and Odisha. The gap is relatively narrow in Rajasthan, Andhra Pradesh and Tamil Nadu (about 53-55%), Bihar (34%) and Kerala (28%), and lowest in Punjab (19%).

Table T2: Average MPCE<sub>MMRP</sub> and rural-urban differentials across State/UTs

\* % difference: urban minus rural as percentage of rural

## 3.3 Fractiles of the all-India rural and urban distributions of MPCE

3.3.1 Selected fractiles of the all-India distribution of rural and urban population by  $MPCE_{MMRP}$  are shown in Table T3. (The average MPCE of each of the corresponding fractile classes is also shown.)

3.3.2 For rural India, the  $5^{th}$  percentile of the MPCE distribution was estimated as Rs.616 and the  $10^{th}$  percentile as Rs.710. About one-half of the rural population had MPCE below Rs.1198 and one-half had MPCE above this level. Only about 10% of the rural population reported household MPCE above Rs.2296 and only 5% reported MPCE above Rs.2886.

3.3.3 For urban India, the 5<sup>th</sup> percentile of the MPCE distribution was Rs.827 and the 10<sup>th</sup> percentile, Rs.983. The median MPCE was Rs.2019. Only about 10% of the urban population reported household MPCE above Rs.4610 and only 5% reported MPCE above Rs.6383.

### 3.4 Trends in level of consumption in monetary and real terms

### 3.4.1 Trends from MPCE<sub>URP</sub> estimates

3.4.1.1 Table T4 below shows estimates of all-India average MPCE<sub>URP</sub> from four full-scale surveys of consumer expenditure including the  $68^{th}$  round survey. (The URP method was not used in the 55<sup>th</sup> round quinquennial survey.) For rural India, real MPCE (measured using a price deflator with 1987-88 as base) is seen to have grown from Rs.159.89 in 1993-94 to Rs.220.51 in 2011-12 – an increase of about 38% over 18 years. In urban India there has been a substantially higher growth in real MPCE (obtained using a similar deflator with base 1987-88) – from Rs.264.76 in 1993-94 to Rs.400.54 in 2011-12 – an increase of 51% in the 18-year period since 1993-94. Over the 7-year period since 2004-05, the growth in real rural MPCE has been about 26% and the growth in real urban MPCE about 29%.

Table T4: Growth in MPCE<sub>URP</sub> at current and constant prices since 1993-94, all-India

\*Price deflators for the years up to 2009-10 are taken from NSS Report No.538: Level and Pattern of Consumer Expenditure; they represent price indices for rural and urban India with base 1987-88=100. For 2011-12 indices have been computed as a continuation of this series, with the help of CPI-AL for the rural sector and CPI-IW for the urban sector.

#### **3.4.2** Trends from MPCE<sub>MRP</sub> estimates

3.4.2.1 While Table T4 above gives estimates obtained by the URP method, a corresponding table of estimates of MPCE obtained by the MRP method at current and constant prices is shown below (Table T5). In terms of the MRP estimates, MPCE in rural India has grown from Rs.162.56 in 1993-94 to Rs.221.93 in 2011-12 – that is, by about 36.5% in 18 years. Urban MPCE has grown from Rs.268.38 in 1993-94 to Rs.413.53 in 2011-12 – a growth of 54% over the 18-year period since 1993-94.

Table T5: Growth in MPCE<sub>MRP</sub> at current and constant prices since 1993-94, all-India

characteristic			Year

\*Price deflators for the years up to 2009-10 are taken from NSS Report No.538: Level and Pattern of Consumer Expenditure; they represent price indices for rural and urban India with base 1987-88=100. For 2011-12 indices have been computed as a continuation of this series, with the help of CPI-AL for the rural sector and CPI-IW for the urban sector.

## 3.5 Share of food in consumer expenditure across fractile classes: URP, MRP and MMRP estimates

3.5.1 Estimates of the share of food in consumer expenditure showed interesting variations with change in method of measurement of MPCE, the share being markedly higher for measurement by the MMRP method.<sup>6</sup> This method gave estimates of 52.9% for rural India and 42.6% for urban India (see Table T6). For rural India, the estimate was 4 to 4<sup>1</sup>/<sub>2</sub> percentage points lower by both URP and MRP; for urban India, it was 4 percentage points lower by URP and over 5 percentage points lower by MRP.

<sup>&</sup>lt;sup>6</sup> The fact that the MMRP estimate gave higher estimates of the share of food was noted in the 66<sup>th</sup> round consumer expenditure survey as well. The increase is clearly due to the higher figures reported for quantity and value of those food items for which a 7-day reference period was used in Schedule Type 2.

3.5.2 Table T6 and Figures 1a, 1b and 1c (R & U) show the fall in the share of food with rise in MPCE level. The fall is steepest for the URP method; this is a reflection of the fact that using a reference period of 30 days for all items – including items such as durables on which large infrequent expenditures occur – results in more extreme values (very low and very high values) of MPCE being reported, while food expenditure itself varies more moderately. Between MRP and MMRP, the basic difference seen is that for the latter method, the share of food is usually about 3 to 5 percentage points higher in every fractile class.

3.5.3 In Figures 1a, 1b and 1c, the shares of food and of non-food are shown on the same graph for each fractile class. The point where the curves intersect is the point where the share of food falls to 50%, and thereafter, more is spent on non-food than on food. Thus one can see that the URP/MRP methods estimate that persons below the 7<sup>th</sup> decile (70<sup>th</sup> percentile) of the MPCE distribution spend more on food than on non-food, those above the 8<sup>th</sup> decile spend less on food and more on non-food, and the '70-80' percentile class spend, on an average, equal portions of their budget on food and non-food. But, going by MMRP, the share of non-food overtakes the share of food around the 90<sup>th</sup> percentile of the rural population. For the urban population, it is the population below the '20-30' range (that is, the first and second deciles) that spend more on food than on non-food according to the MRP method of measurement, while it is the first three deciles that exhibit this behaviour according to URP, and the first four deciles, according to MMRP.

 Table T6: Share of food in consumer expenditure for different fractile classes by URP, MRP and MMRP methods, all-India

#### 3.6 Share of food and share of cereals across States/UTs (MMRP estimates)

3.6.1 The variation in share of food, and also of cereals, in consumer expenditure (MMRP estimates) across States/UTs is shown in Table T7, separately for rural and urban sectors.

3.6.2 In the rural sector average share of food at State level was 57% or more (against the all-India average of 53%) in 5 major States: Assam (61%), Bihar (59%), Jharkhand and West Bengal (58%), and Odisha (57%). Kerala (43%) and Punjab (44%) were the major States with the lowest food shares for the rural sector.

3.6.3 In the urban sector the State-level food share exceeded the all-India estimate of 42.6% by as many as 8 percentage points for Bihar, 5 for Assam, 4 for Jharkhand and 3 for Odisha. In the smaller North-Eastern States, too, the share of food was often well above the all-India average, as in Manipur (10 percentage points higher), Nagaland and Tripura (8 percentage points higher), and Mizoram. Kerala again had the lowest food share among the major States (37%), followed by Haryana (39%) and Karnataka (40%).

3.6.4 State-level averages of share of cereals in consumer expenditure varied from 5% to 20% in rural India and from under 4% to 18% in urban India. Except for the southern States, the share was generally higher in States where rice is the major cereal consumed.

Table T7: Percentage share of (a) cereals and (b) all food in consumer expenditure (MMRP)

3.6.5 In the rural sector, the share of cereals in consumer expenditure was 15% or more in 5 major States: Jharkhand and Odisha (17%), West Bengal and Assam (16%), and Bihar (15%). Among the major States, it was lowest in Punjab, Kerala and Haryana (5 to 5.5%).

3.6.6 In the urban sector, the major States with the highest share of cereals were Bihar (over 12%), and Odisha, Jharkhand and Assam (10 to 10.5%), against the all-India average of 6.6%. Haryana had a share of 3.7% and Kerala, 4.6%.

### 3.7 Shares of different food and non-food groups in consumption

3.7.1 Table T8 gives the absolute and percentage break-up of all-India rural and urban MPCE (MMRP) in 2011-12 into 9 broad groups of food items and 11 broad groups of non-food items. A more detailed break-up, using 14 food groups and 16 non-food groups, is available in Tables 3.2R & 3.2U of Appendix A for all States and UTs. Corresponding estimates by Schedule Type 1 (URP and MRP) are available in Tables 3.1a and 3.1b. Tables 4.1a, 4.1b and 4.2 give break-up of all-India MPCE (R & U) separately for households in different fractile classes of MPCE.

3.7.2 Table T8 shows that, going by the MMRP method of measurement, food accounted for about 53% of the value of the average *rural* Indian's household consumption during 2011-12. This included 11% for cereals and cereal substitutes, 8% for milk and milk products, another 8% on beverages and processed food, and  $6\frac{1}{2}\%$  on vegetables. Among non-food item categories, fuel for cooking and lighting accounted for about 8%, clothing and footwear for 7%, medical expenses for about  $6\frac{1}{2}\%$ , education for  $3\frac{1}{2}\%$ , conveyance for 4%, other consumer services for 4%, and consumer durables for  $4\frac{1}{2}\%$ .

3.7.3 For the average urban Indian, 42.6% of the value of household consumption was accounted for by food, including 9% by beverages and processed food, 7% by milk and its products, and less than 7% by cereals. Education accounted for nearly 7%, while fuel, clothing (including footwear) and conveyance each accounted for about  $6\frac{1}{2}$ %.

3.7.4 While the share of most of the food item groups in total consumption expenditure was higher in rural India than in urban India, fruits and processed food were exceptions. For non-food item groups, the share was usually higher in urban India. The most noticeable rural-urban differences were in case of cereals (urban share: 6.7%, rural share: 10.8%), rent (urban: 6.2%, rural: 0.5%) and education (urban: 7%, rural:  $3\frac{1}{2}$ %).

3.7.5 While drawing these conclusions from Table T8, the following aspects would need to be taken note of:

3.7.5.1 All averages are computed taking the *entire* estimated population in the denominator.

3.7.5.2 "Expenditure" on food includes the value of self-consumed home produce, calculated at ex farm prices. It also includes the value of food collected free, for example, from forests, imputed at prevailing local retail prices. "Expenditure" on fuel, likewise, includes the value of home-grown firewood, calculated at ex farm prices, and the value of firewood and other fuel collected free, imputed at local retail prices.

Table T8: Absolute and percentage break-up of MPCE<sub>MMRP</sub> by item group in 2011-12: all-India, rural and urban

\*includes gram <sup>#</sup>includes purchased cooked meals <sup>\$</sup>excludes tailoring charges

3.7.5.3 "Processed food" refers to purchased food items such as jam, pickles, etc., the quantities and values of the individual ingredients of which are not known well enough to be reported against the detailed items listed in the consumer expenditure schedule. All food processed at home is accounted against the ingredients.

3.7.5.4 Spending on tailor-made clothing does not include tailoring charges, which are included in "consumer services".

3.7.5.5 "Education" includes expenditure on newspapers and periodicals, and on books of all kinds including fiction.

Fig. 2: Break-up of average rural and urban MPCE (MMRP), all-India

#### 3.8 Trends in pattern of consumption

3.8.1 Table T9 shows changes in percentage composition of MPCE<sub>URP</sub> (or in aggregate consumer expenditure) as shown by the 5 quinquennial surveys beginning with 1993-94. The share of food is seen to have declined by nearly 15 percentage points to 48.6% in the rural sector and by about 16 percentage points to 38.5% in the urban sector over a 18-year period. In the two years prior to 2011-12, the share of food has fallen by 5 percentage points in rural India and about 2 percentage points in urban India.

Table T9: Trends in percentage composition of consumer expenditure since 1993-94

URP estimates shown except for 1999-2000, for which only MRP estimates are available.

3.8.2 Over the 18-year period ending 2011-12, cereals have registered the largest decline in share among all the item groups – from 24% to 12% in rural India and from 14% to 7% in urban India. Except for 'beverages, etc.', none of the food groups show any noticeable increase in share, and some of them show a distinct fall. The share of pan, tobacco and intoxicants, too, has fallen noticeably in both sectors, though the decline appears to be flattening out.

3.8.3 Over the same period, the share of durables has increased from about 3% to 6% of MPCE in both rural and urban sectors, and the share of fuel and light shows a rise of about 2 percentage points in the rural sector and 1 percentage point in the urban. The "miscellaneous goods and services" category (including education and medical care) is, of course, the group which has grown the most – from 17% of total expenditure in 1993-94 to 26% in 2011-12 in rural India and from 27.5% to nearly 40% in urban India.

 Table T10: Percentage shares in consumer expenditure of item groups of the miscellaneous goods and services category (including education and medical care) since 2004-05\*

\*based on Schedule Type 1 for 2009-10 and 2011-12

3.8.4 It is of interest to examine the recent changes in share of expenditure on the "miscellaneous goods and services" category (including education and medical care) in greater detail (Table T10). In urban India the most prominent increases in share since 2004-05 appear to have taken place in case of rent (over 1 percentage point) and conveyance (1 percentage point). The share of education is also seen to be rising steadily in both sectors, though at a slower pace. In the rural sector the share of conveyance has risen by 1 percentage point, that of consumer services other than conveyance by 1 percentage point or a little less, and the share of entertainment, though much smaller, appears to be rising rapidly.

## **Appendix B**

## A Note on the Differences in the 3 Methods of Measurement of MPCE

## A Note on the Differences in the 3 Methods of Measurement of MPCE

1. As has been made clear in Chapter Two, three different methods of measurement of Monthly Per Capita Expenditure (MPCE) at the household level were employed in the 68<sup>th</sup> round survey, just as in the 66<sup>th</sup> round survey – the URP, MRP and MMRP methods. These have given rise to three different estimates of average MPCE and distribution of MPCE at State/UT and all-India level. A few words on the differences among these estimates are added here for their better understanding and interpretation.

2. Compared to the URP method, the MRP method of measurement of a household's MPCE averages out month-to month fluctuations in spending on clothing, education, durables, etc. The distribution of MPCE<sub>MRP</sub> therefore has fewer extreme values than the distribution of MPCE<sub>URP</sub>. One important consequence of this is that the estimated proportion of population with MPCE below any chosen cut-off point at the lower end of the MPCE range will be higher if the MPCE<sub>URP</sub> distribution is used than if the MPCE<sub>MRP</sub> distribution is used. However, there is no theoretical reason to expect <u>average</u> MPCE computed by the MRP method to be higher or lower than <u>average</u> MPCE computed by the URP method.

3. For all item groups other than clothing and bedding, footwear, education, institutional medical care, and durables, the URP and MRP estimates of per capita consumption for any State/UT or all-India are identical, because they are based on the same data (collected from the same households). However, estimates of share of food (or any other item group) in total consumption differ, because of the difference in the estimate of overall (all-item) MPCE.

4. When estimates are given separately for each decile class of MPCE, differences between URP and MRP estimates are expected. Consider an item group such as cereals. For any State/UT or all-India, the URP and MRP estimates of per capita cereal consumption of the entire population are identical, because they are based on the same data. But consider the estimates for, say, the bottom decile class. The set of sample households forming the bottom decile class when MPCE is computed by the URP method is different from the set of sample households forming the bottom decile class when MPCE is computed by the URP method. *Thus, for any region, the decile-classwise estimates for any item group by the URP method will in general differ from the corresponding estimates by the MRP method, because the set of households in the corresponding decile classes are not expected to be identical.* 

5. In 2002 an Expert Group that had been formed for the purpose of suggesting a suitable reference period for each item of consumption recommended, on the basis of a specially designed pilot survey, that for all food items other than cereals, milk and milk products, sugar and salt, and for pan, tobacco and intoxicants, a reference period of "last 7 days" be used, as it produced better reporting of consumption than "last 30 days". This led to the evolving of the reference period structure used in Schedule Type 2. It is expected to be less prone to (downward) reporting biases due to recall error that are suspected to be present in recording of a household's consumption of these items by the usual (30-day recall period) method. *It gives somewhat higher estimates of per capita consumption for the item groups for which the* 

7-day reference period is used, and hence for the food group as a whole as well as of household MPCE (all items) itself. The MMRP estimates are expected to be closer to the true value of MPCE for the population of the State/UT than the estimates by the MRP method.<sup>1</sup>

6. For non-food items, and for cereals, milk, sugar and salt, the differences in MRP and MMRP estimates of per capita consumption for any State/UT or all-India are differences due to sampling fluctuations, because the method of data collection is in both cases the same. Estimates of share of non-food (or any other item group) in total consumption differ for this reason and also because of the difference in the estimate of overall (all-item) MPCE.

7. The discussion in Chapter Three is focussed primarily on the MMRP estimates as it uses the reference periods recommended by the Expert Group on Non-Sampling Errors after suitable experimentation,. *However, it is important to note that because of the different reference period system followed by the MMRP method, the magnitudes of the MMRP estimates are not comparable with the estimates from earlier rounds of NSS, with the exception of the MMRP estimates of the*  $66^{th}$  *round.* To study changes in the level and pattern of consumption over time, therefore, it is the URP and MRP estimates that have to be used, because MMRP estimates are available only from the  $66^{th}$  round (2009-10) onwards.

<sup>&</sup>lt;sup>1</sup> See NSS Report No. 475: *Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption.* 

## Appendix C

## **Concepts and Definitions**

### **Concepts and Definitions**

1.1 **Household:** A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

1.2 Household size: The size of a household is the total number of persons in the household.

1.3 **Household consumer expenditure:** This is the expenditure incurred by a household on domestic consumption during the reference period. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

1.3.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

1.3.2 For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption. However, for a few items of expenditure such

as rent, telephone charges, consumer taxes and railway season tickets, expenditure during the month is recorded as the amount that was last paid divided by the number of months to which the payment related.

1.3.3 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests during ceremonies or otherwise. Normally, transfers of food, fuel, clothing and footwear made by a household as charity, loan advance, etc. are not considered as consumption of that household, since consumption out of all transfer receipts of these items have to be included. However, meals prepared in a household and served to non-household members are an exception to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure.

1.3.4 All goods and services received as payment in kind or perquisites are included in the consumption of the recipient household as goods and services received in exchange of services, except for meals received from other households' kitchens.

1.3.5 To simplify data collection, consumption of food processed *in the home* from one "item" into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

1.4 **Value of consumption:** For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

1.5 **Monthly Per Capita (consumer) Expenditure (MPCE):** This is defined as household consumer expenditure divided by household size.

1.6 Uniform Reference Period MPCE (or MPCE<sub>URP</sub>): This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer

expenditure on each item is recorded for a reference period of "last 30 days" (preceding the date of survey).

1.8 **Mixed Reference Period MPCE** (or **MPCE<sub>MRP</sub>**) This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of "last 365 days", and expenditure on all other items is recorded with a reference period of "last 30 days".

1.9 **Modified Mixed Reference Period MPCE** (or **MPCE<sub>MMRP</sub>**) This is the measure of MPCE obtained by the CES when household consumer expenditure on edible oil, egg, fish and meat, vegetables, fruits, spices, beverages, refreshments, processed food, pan, tobacco and intoxicants is recorded for a reference period of "last 7 days", and for all other items, the reference periods used are the same as in case of Mixed Reference Period MPCE (MPCE<sub>MRP</sub>).

1.10 Fractiles and fractile classes of MPCE: For any fraction f (0<f<1), the corresponding fractile of the distribution of MPCE is the level of MPCE  $Y_f$  such that the proportion of population whose household MPCE lies below  $Y_f$  is f. A fractile class of MPCE is a segment of the population lying within two fractiles f1 and f2, which means that if Y be the household MPCE of any person falling within that fractile class, the proportion of population with household MPCE below Y will be between f1 and f2. Thus MPCE fractile classes of population may be referred to simply as "0-5%", "5-10%", "10-20%", etc. Estimates of population characteristics are often generated separately for population in different fractile classes in order to portray the variation of such characteristics with variation in MPCE. MPCE fractile classes may be formed separately for different States/UTs, or at all-India level. In NSS tabulation, fractile classes are usually formed separately for the rural and the urban sector of India.

1.11 **Deciles and decile classes of MPCE:** Deciles are special cases of fractiles. The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population lie, the second decile, the level below which 20% of the population lie, and so on. Thus the population can be divided into 10 "decile classes of MPCE" as follows: those with MPCE below the 1<sup>st</sup> decile of the MPCE distribution (the bottom 10% of the population ranked by MPCE), from the 1<sup>st</sup> decile to the 2<sup>nd</sup> decile (the next 10%), from the 2<sup>nd</sup> decile to the 3<sup>rd</sup> decile (the next 10%), and so on. Averages of other variables of interest, computed separately for the 10 decile classes, help to portray the variation of such variables with variation in MPCE. In line with usual NSS practice, decile classes are formed separately for the rural and the urban sector of India.

1.12 **Major States:** This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

#### 1.13 Notes on coverage of consumption item categories

**Beverages, etc.:** This stands for "beverages, refreshments and processed food". It includes tea, coffee, mineral water, soft drinks, fruit juice (not prepared at home), soda water, other beverages such as cocoa, biscuits, cakes, pastries, pickles, sauce, jam, jelly, and other salted refreshments and sweets not prepared at home. Refreshments prepared at home are not included here. Instead, the ingredients of the refreshments (such as flour, sugar, milk, etc.) are accounted under "cereals", "sugar", etc. Food purchased in the form of cooked meals is also included in "processed food".

**Cereals:** Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether.

**Cereal substitutes:** Cereals are usually a person's staple food in India. But sometimes, by choice or due to scarcity, a person may consume little or no cereal. The food requirement is partially or wholly met in such cases by consumption of food items which could be treated as substitutes for cereals. Tapioca, for example, is consumed in some parts of the country as a substitute for cereals. Similarly, jackfruit seed, *mahua*, etc. are also consumed as substitute for cereals are not, however, shown here. These are included in "vegetables".

**Clothing and bedding:** This category includes bedding (pillows, quilts, mattresses, mosquito nets, etc.), as well as rugs, blankets, curtains, towels, mats, cloth for upholstery, etc. It excludes footwear and raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are accounted in "consumer services". Consumption of an article of clothing is considered to take place when it is brought into first use. However, clothing purchased second-hand is considered as consumed as soon as it is purchased. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

**Conveyance:** This includes expenditure incurred on account of journeys undertaken and/or transportation of goods made by any means of conveyance. The expenditure is the actual fare paid except in case of railway season tickets, for which expenditure is calculated as the cost of the ticket divided by the number of months for which it is valid. Expenditure on journeys undertaken by household members as part of official tours is not considered as consumer expenditure of the household. But journeys to commute to and from place of work are included here. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

**Durable goods:** Items included here all have a lifetime of one year or more. However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that

glassware, earthenware and plastic goods such as buckets are excluded from durable goods and included in "other household consumables". Consumption expenditure on durable goods includes both expenditure on purchase (both first-hand and second-hand) and expenditure on repair and construction of household durables. For land and residential building, only expenditure on repair and construction is included. Durable goods include furniture and fixtures, "entertainment" durables such as radios, TV, VCR/VCP/DVD players, tape recorders and CD players, cameras, musical instruments, jewellery and ornaments, crockery and utensils, cooking and other household appliances such as fans, air conditioners, air coolers, sewing machines used for household work, washing machines, stoves, pressure cookers, fridges, water purifiers, electric irons, heaters, toasters and ovens, household transport equipment including two-wheelers, four-wheelers and their parts, therapeutic appliances, clocks, watches, computers for household use, mobile phone handsets, and bathroom and sanitary equipment.

Edible oil: Edible oils used for toilet purpose by the household are not included here.

**Education**: This includes expenditure on goods purchased for the purpose of education, viz., books and journals (first-hand or second-hand), newspapers, stationery, educational CD, etc, and also magazines, novels and other fiction. It also includes fees paid to educational institutions (e.g., schools, colleges, universities, etc.) on account of tuition and other fees like game fees, library fees, etc., and payment to private tutors. Fees for shorthand and typing courses, fees for music, dancing and swimming lessons, and fees for training in nursing, physiotherapy, etc., are included. Occasional payments to the school fund made on account of charities, and "donations" generally, are not included here, unless they are charged by the educational institution as compulsory payments.

**Entertainment:** This includes expenditure on cinemas, theatres, *melas*, fairs and picnics, expenditure incurred on processing, developing, etc., of photographic film, charges paid for hiring of VCD/DVD players and CDs, and charges for viewing a video show. Expenses incurred on subscription to dish antenna, cable TV facilities, etc. are also included. Club fees are included here.

**Footwear:** This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

**Gram:** This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, not included here, but in "other pulse products".

**Medical expenses:** This includes expenditure on medicine of different types and on medical goods; also, payments made to doctor, nurse, etc., as professional fees and those made to hospital, nursing home, etc. for medical treatment, and expenditure incurred for clinical tests, including X-rays, ECG, pathological tests, etc. Medical expenditure reimbursed by employer or by insurance companies is included. Expenditure on all family planning devices is

included, and also expenditure on medical termination of pregnancy. Medical insurance pyments are excluded.

**Medical:** institutional and non-institutional expenditure: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (non-institutional). Medical institution here covers private as well as Government institutions such as hospitals and nursing homes.

**Milk and milk products:** Milk products include ghee, butter, curd, etc. Milk used in home preparation of sweetmeats, etc., is also accounted here. This category also includes those baby foods of which the principal constituent is milk. Further, milk (liquid) includes ice-cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included in this category.

**Minor durable-type goods:** These include spectacles, torches, locks, umbrellas, raincoats, gas lighters, etc. These are not included in "durable goods" but in "miscellaneous goods and services".

**Miscellaneous goods and services:** This is a residual category covering all items *other than* food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, and durable goods. It includes, among other things, expenditure on education, medical care, entertainment, conveyance, rent, and consumer taxes and cesses. (Note, however, that in Schedule 1.0, collection, education and institutional medical care are separated out from the "miscellaneous goods and services" block to form a separate block.)

**Other consumer services:** This includes expenditure on domestic servants, cooks, attendants, sweepers, barbers and beauticians, laundry, ironing, tailors, priests, legal services, telephone charges, postal charges, grinding charges, and repair charges for non-durable goods. Apart from conveyance, it excludes the consumer services coming under "entertainment".

**Other household consumables:** These include electric bulbs, tubelights, batteries, earthenware, glassware, plastic goods such as buckets, water bottles and feeding bottles, coir and rope, washing soap, washing soda, other washing requisites, incense, room fresheners, flowers, acid and insecticides.

**Pan:** This includes, *pan* (betel leaves), *supari*, lime, *katha*, other ingredients of "finished" *pan*, and *pan* purchased in finished form.

Rent: Rent includes house and garage rent, residential land rent and other consumer rent.

# Appendix D

# Sample Design and Estimation Procedure

### Sample Design and Estimation Procedure of NSS 68<sup>th</sup> Round

### 1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socioeconomic data employing scientific sampling methods, conducted its 68<sup>th</sup> round during the period July 2011 - June 2012. The subjects covered were 'Household Consumer Expenditure' and 'Employment and Unemployment'. The last survey on these subjects was conducted in the 66<sup>th</sup> round of NSS (2009-10) which was the eighth survey in the quinquennial series of surveys on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The 68<sup>th</sup> round survey was similar to the quinquennial series as far as subjects of enquiry, design, questionnaires and sample sizes were concerned.

#### 2. Outline of survey programme

2.1 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five km of any bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

2.2 **Period of survey and work programme:** The period of survey was of one year duration starting on 1<sup>st</sup> July 2011 and ending on 30<sup>th</sup> June 2012. The survey period was divided into four sub-rounds of three months' duration each as follows:

sub-round 1 :	July - Sept 2011
sub-round 2 :	Oct - Dec 2011
sub-round 3 :	Jan - March 2012
sub-round 4 :	April - June 2012

To ensure uniform spread of sample FSUs over the entire survey period, equal numbers of sample villages/ blocks (FSUs) were allotted for survey in each of these four sub-rounds, and attempts were made to survey each FSU during the sub-round to which it was allotted. However, because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

2.3 Schedules of enquiry: The following schedules of enquiry were canvassed:

Schedule 0.0	: List of households
Schedule 1.0	: Consumer expenditure
Schedule 10	: Employment and unemployment

Two versions of Schedule 1.0, using different reference period systems, and called Schedule Type 1 and Schedule Type 2, were canvassed in this round in roughly equal numbers of sample households.

2.4 **Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli, and Lakshadweep participated. The ratio of the size of the State sample (the sample in the survey conducted by the State/UT) to the Central sample size varied across States/UTs as follows:

Nagaland (U)	: triple
Andhra Pradesh, J & K, Manipur, Delhi	: double
Maharashtra (U) & Kerala	: one and a half
Gujarat	: half
Remaining States/ UTs	: equal

### 3. Sample Design

3.1 **Outline of sample design:** A stratified multi-stage design was adopted for the 68<sup>th</sup> round survey. The first stage units (FSU) were the 2001 Population Census villages (*panchayat* wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In both sectors the ultimate stage units were households. When a large FSU was selected, there was an intermediate stage of sampling: the FSU was partitioned into a suitable number of hamlet-groups/ sub-blocks and two of these were selected to provide the households which would form the sampling frame for ultimate-stage sample selection.

3.2 **Sampling frame for first-stage units:** *For* the rural sector, the list of 2001 Census villages (henceforth the term 'village' will mean *panchayat* wards in case of Kerala) constituted the sampling frame. For the urban sector, the list of UFS blocks (UFS 2007-12) was the sampling frame.

3.3 **Stratification:** Within each district of a State/UT, generally speaking, two basic strata were formed: i) a rural stratum comprising all rural areas of the district and (ii) an urban stratum comprising all urban areas of the district. If, however, within the urban areas of a district, there were million-plus cities (towns with population 10 lakhs or more as per Population Census 2001), each such city formed a separate basic urban stratum and the remaining urban area of the district, another basic urban stratum.

### 3.4 Sub-stratification:

**Rural sector r:** If 'r' was the sample size allocated for a rural stratum, the number of sub-strata formed was 'r/4'. The villages within a district as per frame were first arranged in ascending order of population. Then cut-off points were marked off in this list demarcating sub-strata 1 to 'r/4' in such a way that each sub-stratum comprised a group of villages of the arranged frame and had more or less the same population.

**Urban sector:** If 'u' was the sample size for an urban stratum, the number of sub-strata formed was 'u/4'. If u/4 was more than 1, formation of 2 or more sub-strata was required. This was done by first arranging the towns in ascending order of number of households in the town as per UFS phase 2007-12 and then arranging the IV units of each town and the blocks within each IV unit in ascending order of their numbers. From this arranged frame of UFS blocks of all the towns/ million-plus cities of a stratum, 'u/4' sub-strata were formed in such a way that each sub-stratum had more or less the same number of households as per UFS 2007-12.

3.5 **Total sample size (FSUs):** 12784 FSUs were allocated for the Central sample at all-India level and 14772 FSUs for the State sample.

3.6 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 as far as possible given the resource availability in terms of number of field investigators, subject to a minimum sample allocation to each State/UT.

3.7 Allocation of State/UT level sample to rural and urban sectors: State/UT-level sample size was allocated between rural and urban sectors in proportion to population as per Census 2001 with double weightage to the urban sector. However, if such weighted allocation resulted in too large a sample size for the urban sector, the allocation for bigger states like Maharashtra, Tamil Nadu, etc. was restricted to that of the rural sector. A minimum of16 FSUs (minimum 8 each for rural and urban sector separately) was allocated to each State/UT.

3.8 Allocation to strata and sub-strata: Within each sector of a State/UT, the sample size was allocated to the different strata/sub-strata in proportion to the population as per Census 2001. Allocations at stratum level were adjusted to multiples of 4 with a minimum sample size of 4. Allocation for each sub-stratum was 4. Equal numbers of sample FSUs were allotted to the four sub-rounds.

## 3.9 Selection of FSUs

3.9.1 For the rural sector, from each sub-stratum, sample villages were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population of the village as per Census 2001.

3.9.2 For the urban sector, UFS 2007-12 phase was used for all towns and cities and FSUs were selected from each sub-stratum by Simple Random Sampling Without Replacement (SRSWOR).

3.9.3 Both rural and urban samples were drawn in the form of two independent sub-samples and equal sample sizes were allocated to the four sub-rounds.

## 3.10 Selection of hamlet-groups/sub-blocks

3.10.1 **Number of hamlet-groups/ sub-blocks formed:** After identification of the boundaries of the FSU, it was first determined whether listing was to be done in the whole sample FSU or not. In case the population of the selected FSU was found to be 1200 or more, it was divided into a suitable number (say, D) of parts of more or less equal population – the parts being called 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector. D was determined as the table below shows.

approx. present population of the sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 1200	1*
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
and so on	

\*no hamlet-groups/sub-blocks formed

3.10.2 For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for 4 districts: Dehradun (P), Nainital (P), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approx. present population	no. of hamlet-groups/
of the sample FSU	sub-blocks formed
less than 600 600 to 899 900 to 1199 1200 to 1499 and so on	1* 3 4 5

\*no hamlet-groups/sub-blocks formed

3.10.3 Selection of hamlet-groups/ sub-blocks to form the frame for sampling of households: Once a large FSU had been divided into the required number of sub-FSUs (hamlet-groups or subblocks), two of these sub-FSUs were selected in the following manner – the one with the largest population was purposively selected, and another was randomly selected from the remaining sub-FSUs by Simple Random Sampling (SRS). Listing and selection of the households was done independently in the two selected sub-FSUs.

## 3.11 Formation of second-stage strata and allocation of households

3.11.1 In each selected village, some households were identified as affluent on the basis of a number of criteria such as possession of certain durables or assets. If there were more than 10 such

households, the 10 most affluent of these were identified as the 'relatively affluent households' of the village.

3.11.2 For urban areas, two cut-off points 'A' and 'B' (in Rs.) were determined for each NSS stateregion in such a way that the top 10% of the population had MPCE more than 'B' and bottom 30% of the population had MPCE less than 'A' in 2009-10, as estimated by the NSS 66<sup>th</sup> round survey.

3.11.3 Households listed in the selected FSU/sub-FSU were stratified into three second-stage strata (SSS). Composition of the SSS and number of households planned to be surveyed from different SSS were as follows:

		number of households surveyed for Sch.1.0, Type 1/ Type 2						
SSS	composition of SSS	FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)					
	Rural							
SSS 1:	relatively affluent households	2	1					
SSS 2:	of the remaining, households having principal earning from non- agricultural activity	4	2					
SSS 3:	other households	2	1					
	Urban							
SSS 1:	households having MPCE of top 10% of urban population (MPCE > B)	2	1					
SSS 2:	households having MPCE of middle 60% of urban population (A $\leq$ MPCE $\leq$ B)	4	2					
SSS 3:	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1					

3.12 **Selection of households:** From each SSS, the sample households were selected by Simple Random Sampling Without Replacement.

## 4. Estimation Procedure

## 4.1 Notations

s = subscript for stratum

t = subscript for sub-stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU [village (*panchayat* ward)/ block]

d = subscript for hamlet-group/ sub-block (d = 1, 2)

j = subscript for second-stage stratum in an FSU/ sub-FSU [j = 1, 2 or 3]

k = subscript for sample household in a particular second-stage stratum within an FSU/ sub-FSU

D = total number of sub-FSUs (hg's/ sb's) formed in the sample FSU

$$D^* = 0$$
 if  $D = 1$ 

= (D - 1) for FSUs with D > 1

N = total number of FSUs in an urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes of all the FSUs of the sub-stratum)

- z = size of sample village used for selection
- n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and sub-stratum
- H = total number of households listed in a second-stage stratum of an FSU/ sub-FSU
- h = number of households surveyed in a second-stage stratum of an FSU/ sub-FSU
- x, y = observed value of characteristics x, y under estimation
- $\hat{X}$ ,  $\hat{Y}$  = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

 $y_{stmidjk}$  = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in the following paragraphs when they are obvious.

## 4.2 Formulae for estimation of aggregates for a particular sub-sample and stratum $\times$ substratum

## 4.2.1 **Rural**

(i) For j-th second stage stratum of a stratum  $\times$  sub-stratum:

$$\hat{Y}_{j} = \frac{Z}{n_{j}} \sum_{i=1}^{n_{j}} \frac{1}{z_{i}} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_{i}^{*} \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum ( $\hat{Y}_s$ ) is obtained by adding sub-stratum level estimates ( $\hat{Y}_{st}$ ).

## 4.2.2 Urban

(i) For j-th second stage stratum of a stratum × sub-stratum:

$$\hat{Y}_{j} = \frac{N}{n_{j}} \sum_{i=1}^{n_{j}} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_{i}^{*} \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_{j} \hat{Y}_{j}$$

(iii) Estimate for a stratum ( $\hat{Y}_s$ ) is obtained by adding sub-stratum level estimates ( $\hat{Y}_{st}$ ).

#### 4.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_{s} = \frac{1}{2} \sum_{m=1}^{2} \hat{Y}_{sm}$$

## 4.4 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/UT/ all-India.

## 4.5 Estimates of Ratios

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/UT/ all-India level.

Then the combined ratio estimate 
$$(\hat{R})$$
 of the ratio  $(R = \frac{Y}{X})$  is obtained as  $\hat{R} = \frac{Y}{\hat{X}}$ .

#### 4.6 Estimates of Error

The estimated variances of the above estimates are as follows:

## 4.6.1 For aggregate $\hat{Y}$ :

 $V\hat{a}r(\hat{Y}) = \sum_{s} V\hat{a}r(\hat{Y}_{s})$  where  $V\hat{a}r(\hat{Y}_{s})$  is given by  $Va\hat{r}(\hat{Y}_{s}) = \sum_{t} \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^{2}$ , where  $\hat{Y}_{st1}$  and  $\hat{Y}_{st2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

## 4.6.2 For ratio $\hat{R}$ :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_{s} \sum_{t} \left[ \left( \hat{Y}_{st1} - \hat{Y}_{st2} \right)^2 + \hat{R}^2 \left( \hat{X}_{st1} - \hat{X}_{st2} \right)^2 - 2\hat{R} \left( \hat{Y}_{st1} - \hat{Y}_{st2} \right) \left( \hat{X}_{st1} - \hat{X}_{st2} \right) \right]$$

#### 4.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

#### 5. Multipliers

The formulae for multipliers at stratum/ sub-stratum/ second-stage stratum level for a sub-sample and schedule type are given below:

	mu	ltiplier
sector	hg/sb 1	hg/sb 2
Urban	$\frac{N_s}{n_{sm}}$	$rac{N_s}{n_{sm}} D^{*}_{smi}$
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D^*_{stmi} \times \frac{H_{stmi2j}}{h_{stmi2j}}$
Urban	$\frac{N_{s}}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$	$\frac{N_{s}}{n_{smj}} \times D_{smi}^{*} \times \frac{H_{smi2j}}{h_{smi2j}}$
	(i - 1, 2, 2)	

(j = 1, 2, 3)

Note:

- (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.
- (ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic,  $D_{stmi}^* = 0$  in the relevant multipliers and there is only one multiplier for the village.
