

NSS Report No. 492(59/18.1/3)

Some Aspects of Operational Land Holdings in India, 2002-03

**NSS 59th Round
(January–December 2003)**

**National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India**

August 2006

Preface

The survey on Land and Livestock Holdings carried out in the 59th round (January-December 2003) of the National Sample Survey (NSS) is the sixth in the series of similar surveys conducted so far by the NSS. These surveys aim to study two important aspects of the agrarian structure of the country: the ownership of land and its agricultural operation. The surveys, accordingly, collect information that allows the identification of both *ownership* holdings of land, and *operational* holdings. In the 59th round, information on various aspects of ownership and operational holdings was collected for both rural and urban areas. Particulars of land owned, land leased out and leased in, and types and terms of lease formed the main body of information for the study of ownership holdings. For the operational holdings, data were collected on size, composition, tenurial form, land use, extent of irrigation, fragmentation of holdings, drainage facilities and other related aspects.

The present report is the third report being brought out from the Land and Livestock Holdings Survey. Two other reports have already been released. This report presents aggregate and average area of operational holdings and traces the changes in their size distribution over the last four decades, investigates the extent and form of tenancy, and studies the distribution of operated area by land use and the distribution of net sown area by type of crop grown.

The survey covered practically the entire geographical area of India. Information was collected from a sample of 52,265 rural households and 29,893 urban households spread over 6638 villages and 3764 urban blocks through personal interviews. Each sample household was visited twice during the period of survey with a gap of four to eight months to collect data relating to the *kharif* and *rabi* seasons.

Chapter One of this report serves as the introduction. Chapter Two explains the concepts and definitions adopted in the survey. Chapter Three summarises the major findings on the size distribution of operational holdings, extent and form of tenancy, pattern of land use and area under different crops. Appendix A gives the detailed survey estimates at State/UT and all-India level. Appendix B explains the sample design and estimation procedure used for the survey. The schedules of enquiry used in Visit 1 and Visit 2 of the survey are given in Appendix C.

The Survey Design and Research Division of the NSSO undertook the development of survey methodology as well as drafting of the report. The field work was carried out by the Field Operations Division of NSSO while the data processing and tabulation work was handled by the Data Processing Division of NSSO. The Coordination and Publication Division of NSSO coordinated various activities pertaining to the survey.

I am thankful to the Chairman and Members of the Working Group for the NSS 59th round for their valuable guidance at various phases of work from designing of the schedules of enquiry to the preparation of this report. I am also thankful to the Chairman and Members of the Governing Council of NSSO, for providing technical guidance at various stages of survey work.

I hope the report will be useful to planners and policy makers.

Comments and suggestions from readers will be most welcome.

New Delhi
August 2006

Dr. K.V.Rao
Director-General & Chief Executive Officer
National Sample Survey Organisation

Highlights

A sample of 52,265 rural households and 29,893 urban households was surveyed in the sixth Land Holding Survey of NSS, carried out in 2003. The following highlights relate to rural India only.

- There were 101.3 million holdings operated during the kharif season of 2002-03 and 95.7 million holdings operated during the rabi season of the same agricultural year.
 - Average area operated per holding in 2002-03 was 1.06 hectares compared to 1.34 hectares during 1991-92 and 1.67 hectares in 1981-82.
 - Marginal holdings (of size 1 hectare or less) in 2002-03 constituted 70% of all operational holdings, small holdings (size 1 to 2 hectares) constituted 16%, semi-medium holdings (2 to 4 hectares), 9%, medium holdings (4 to 10 hectares), 4%, and large holdings (over 10 hectares), less than 1%.
 - The share of marginal holdings in total operated area climbed by 6-7 percentage points since 1991-92 to reach 22-23%, drawing level with the shares of the semi-medium and medium holdings, which had the largest shares in 1991-92.
 - Tenant holdings, that is, holdings with partly or wholly leased-in land, formed about 10% of operational holdings during 2002-03 compared to 11% in 1991-92. On an average, a tenant holding operated 0.7 hectares of tenanted land in 2002-03.
 - The share of leased-in land in total operated area, which has been declining more or less steadily from 10.7% in 1960-61, was 6.5% for the kharif season of 2002-03.
 - At the all-India level, the size distribution of operational land holdings exhibited more or less the same degree of concentration (as measured by Gini's coefficient of concentration) as in 1991-92.
 - In West Bengal, Bihar (including Jharkhand), and Orissa, the degree of concentration of the size distribution of operational land holdings was appreciably lower in 2002-03 than it was in 1991-92. In Kerala, the degree of concentration registered a fall in each of the three decades prior to 2002-03.
 - Sharecropping remained the most widely prevalent form of lease contract, covering 41% of all tenanted land. However, the shares of "fixed money" and "fixed produce" appeared to be on the increase, together accounting for over 50% of leased-in land in 2002-03.
 - Net sown area constituted 87% of operated land during the kharif season and 57% during the rabi season.
 - Irrigated land formed 42% of net sown area during the kharif season and 67% during the rabi season.
 - About 64% of net sown area was under cereal cultivation in both the seasons of the agricultural year.

Chapter One

Introduction

1.1 General

1.1.1 The survey on Land and Livestock Holdings carried out in the 59th round (January-December 2003) of the National Sample Survey (NSS) was the sixth in the series of similar surveys conducted so far by the NSS. The objective of these surveys has been to generate basic quantitative information on the agrarian structure of the country, which is relevant to land policy.

1.1.2 The present report is the third of a series of four reports to be brought out on the 59th round Land and Livestock Holdings survey. The two reports already released are: “Livestock Ownership Across Operational Land Holding Classes in India, 2002-03”, and “Seasonal Variation in the Operational Land Holdings in India, 2002-03”. The last report, “Household Ownership Holdings in India, 2003”, will be released very shortly.

1.2 Background

1.2.1 The first survey on land holdings was taken up by the NSS in its 8th round (July 1954 - April 1955) as part of the World Agricultural Census initiated by the Food & Agriculture Organisation (FAO) of the United Nations. In this survey, information on (agricultural) holdings was collected primarily to meet the requirements of the FAO. In addition, information on household ownership holdings was collected to provide the policy framers with the much-needed data for formulating land reforms policy for the country. A similar survey was conducted again in the 16th (July 1960 - August 1961) and 17th (September 1961 - July 1962) rounds of the NSS as a part of the World Agricultural Census Programme of 1960.

1.2.2 Since then, the NSS has been regularly conducting land holdings surveys every ten years or so. The third land holdings survey of the NSS, in its 26th round (July 1971 - June 1972), was conducted simultaneously with a survey on Debt and Investment at the instance of the Reserve Bank of India. Since then, this has been a regular feature of the rounds in which land and livestock holdings surveys have been conducted: the 37th round (January-December 1982), the 48th round (January-December 1992), and the present one.

1.3 Scope

1.3.1 In the Land and Livestock Holdings surveys of the NSSO, two classifications of holdings are made: by ownership and by operation. Household ownership holdings and operational holdings are identified by interviewing the sample households. Data are also collected on the livestock and agricultural implements owned by households. In the

present survey, however, data on agricultural implements of households were not collected, as this was being done in another NSS survey called “Situation Assessment Survey of Farmers”, carried out concurrently.

1.3.2 *Items of enquiry:* In the 59th round, information on various aspects of ownership and operational holdings was collected for both rural and urban areas of the country. Particulars of land owned, land leased out, and types and terms of lease formed the main body of information for the study of ownership holdings. Further, particulars of land leased in were collected to ascertain the land possessed by households. For the operational holdings, data were collected on size, composition, tenurial form, land use, extent of irrigation by sources, fragmentation of holding, drainage facilities and other related aspects of holdings. An inventory of livestock owned by the households on the date of survey was also obtained.

1.3.3 *Geographical coverage:* The 59th round survey covered the whole of the Indian Union except

- (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir;
- (ii) Interior villages of Nagaland located beyond 5 km of a bus route;
- (iii) Villages in Andaman & Nicobar Islands which are inaccessible throughout the year.

1.4 Method of Data Collection

1.4.1 Information for the Land and Livestock Holdings Survey was collected from a random sample of households spread over rural and urban India by the interview method. Each sample household was visited twice during the period of survey with a gap of four to eight months to collect data for the *kharif* and *rabi* season separately.

1.4.2 *Survey period:* The survey period for the 59th round survey was the calendar year 2003. To reduce recall error, particulars relating to the entire agricultural year 2002-03 were collected by visiting each sample household twice during the survey period. The first visit to a sample household was made during the period January to August, while the second visit was made during the period September to December. Certain particulars such as details of individual household members and details of livestock owned were recorded in the first visit only. The longer period for the first visit reflected the higher workload for the field staff during this visit compared to the second visit.

1.4.3 *Reference period:* Information on holdings operated during the *kharif* season of the agricultural year 2002-03 was collected in the first visit, and information on holdings operated during the *rabi* season, in the second visit. In addition, some general information on operational holdings for the agricultural year 2002-03 was collected in the second visit. This information did not, however, include the *area* of the operational holding with the entire agricultural year as reference period. Estimates of number, area, and distribution of operational holdings by size class have therefore been presented in this report separately for *kharif* and *rabi* seasons, and not with the entire agricultural year

as reference period as was done for the 48th round. In fact, all the detailed tables relating to operational holdings are given separately for kharif and rabi seasons.

1.4.4 *Sample design* : The sample design adopted for the survey was essentially a two-stage stratified design, with census villages and urban blocks as first-stage units (FSUs) for the rural and urban sectors respectively, and households as the second-stage sampling units (SSUs) in both the sectors. Selection of villages was done by Probability Proportional to Population Sampling (With Replacement), mainly based on the Census 2001 list of villages. Selection of urban blocks was done by Simple Random Sampling Without Replacement, based on the list of blocks obtained from the Urban Frame Survey (UFS) conducted by the NSSO as an on-going activity. The details of sample design and estimation procedure adopted for the survey are given in Appendix B of this report.

1.4.5 *Sample size – first-stage units*: The sample surveyed by the NSSO staff is known as the “Central sample” and the sample surveyed by the State Government staff as the “State sample”. Most of the States and Union Territories participated in the NSS programme at least on an equal matching basis. For rural India, 6760 villages formed the Central sample for this round. Of these, 6638 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 3824 blocks of which 3764 were surveyed. This report is based on the estimates obtained from the Central sample alone.

1.4.6 *Sample size – second-stage units*: 8 households were selected for survey from each sample village and urban block. In the Central sample, the actual number of households surveyed was 52265 in the rural sector and 29893 in the urban sector.

1.4.7 The sample of first-stage units was drawn in the form of two independent and interpenetrating samples termed sub-samples. Each sub-sample was drawn by the same sampling scheme. The present report is based on the combined estimates of the two sub-samples.

1.4.8 Table 1 shows the number of sample villages and blocks allotted for survey, and the number actually surveyed, as well as the number of households interviewed, in each State and Union Territory of the country.

1.5 Contents of the Report

1.5.1 Chapter 2 sets out the concepts and definitions adopted in the survey. Chapter 3 discusses the principal survey findings on operational holdings with special reference to their number, total and average area, tenancy status, and concentration. Both national and State-level estimates are discussed in this chapter. Appendix A presents the detailed tables. It gives the survey estimates separately for different size classes of operational holdings for rural areas of 27 States (Tables 1R to 12R), and in a more summarized form for the urban areas of the country and for rural areas of Delhi, Goa and the Union Territories (Tables S1 to S10). Appendix B gives a detailed description of the sample design and estimation procedure used for the survey. Facsimiles of the schedules of enquiry used in Visit 1 and Visit 2 of the survey are given in Appendix C.

1.5.2 The results presented in the report are mostly in the form of rates and ratios (percentages, averages, etc.). To arrive at aggregate estimates of the relevant characteristics, the basic aggregate estimates for the number and area of operational holdings in each size class, provided in the detailed tables of Appendix A, may be used.

Table 1: Number of sample villages/blocks allotted and surveyed and number of sample households surveyed

State/UT	no. of villages		no. of blocks		no. of sample households	
	allotted	surveyed	allotted	surveyed	rural	urban

*The large difference between the numbers of villages and blocks selected and the numbers surveyed in Jammu & Kashmir was mainly due to the disturbed conditions prevailing in the relevant areas.

Chapter Two

Concepts and Definitions

2.0 The major concepts and definitions of important terms used in the survey and relevant to this report are explained below.

2.1 *Household*: A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel was treated as a cluster of households, where each individual boarder formed a separate household. If, however, some persons among them normally pooled their income for spending, the group was treated as forming a single household. Barracks of military and paramilitary forces, orphanages and vagrant-houses were excluded from the scope of the survey.

2.2 *Agricultural production*: The extended definition of agricultural production, as adopted in the survey, relates to crop production and allied activities intensive in the use of land (except mining and quarrying) and includes growing of field crops, fruits, grapes, nuts, seeds, tree nurseries (except those of forest trees), bulbs, vegetables and flowers both in the open and in glass houses; production of coffee, tea, cocoa, rubber; forest production in parcels of land which form part of the enumeration holding and production of livestock and livestock products, poultry and poultry products, fish, honey, rabbits, fur-bearing animals, and silk-worm cocoons.

OPERATIONAL HOLDINGS

2.3.1 *Operational holdings*: An operational holding is defined as a techno-economic unit wholly or partly for agricultural production (defined above) and operated (directed/managed) by one person alone or with the assistance of others, without regard to title, size or location. The holding might consist of one or more parcels of land, provided these are located within the country and form part of the same technical unit. In the context of agricultural operations, a technical unit is a unit with more or less independent technical resources covering items like land, agricultural equipment and machinery, draught animals, etc. Holdings used partly or exclusively for livestock and poultry raising and for production of livestock and poultry products (primary) and/or pisciculture are also considered as operational holdings whereas holdings put exclusively to uses other than agricultural production are not considered as operational holdings. Holdings operated by cooperative farms are also not considered as operational holdings.

2.3.2 A household is considered to have two operational holdings only when EITHER

- two or more members of the household independently direct/manage two distinct economic units engaged in agricultural production, even if most of the technical resources used by them are the same; OR

- there are two distinct technical units engaged in agricultural production, even if managed/directed by the same set of persons.

2.3.3 However, if a household forming a single economic unit undertakes some crop production and at the same time is engaged in livestock/poultry raising or pisciculture during the reference period, the household is considered to possess a single operational holding even if the technical unit used for crop production is distinctly different from the technical unit used for livestock/poultry raising or pisciculture. This is, indeed, a departure from the general rule. But, since it is known that in a majority of such cases, the crop production constitutes the main activity of the household and the other activities are of an ancillary nature, the above guideline is adopted as a general rule in land holding surveys of the NSS.

2.3.4 *Individual and joint holdings:* An operational holding managed by the members of a single household is called an individual holding and a holding managed by members of different households jointly is called a joint holding.

2.3.5 *Parcel:* A parcel of an operational holding is a piece of land entirely surrounded by other operational holdings or by land not forming part of any operational holding. It may consist of one or more plots.

2.3.6 *Size of an operational holding:* The inclusion of the term 'wholly or partly' "(for agricultural production) in the definition of operational holding implies that once a household is identified to operate some land, all the plots possessed by the household during the major part of the reference period is taken into account in determining the size or area of the operational holding, irrespective of whether all the plots included in the holding are put to agricultural production or not. In case a household is found to possess more than one holding, plots possessed by the household during the major part of the reference period and put to uses other than agricultural production, such as house-sites, paths, buildings, etc., are also included in the operated area and all such plots are considered as part of operational holding number '1'.

2.3.7 *Household operational holding:* For each household, this is identified with respect to a particular reference period and encompasses all land - either owned, leased in or otherwise possessed - under physical possession of the household during the major part of the reference period, provided some agricultural production was carried out on any part of the land during the reference period; if not, that is, for non-operating households, the household operational holding is considered as "nil" and its size as zero.

OWNERSHIP AND LEASE OF LAND

2.4 *Ownership of land:* A plot of land is considered to be owned by a household if permanent heritable possession, with or without the right to transfer the title, is vested in a member or members of the household. Land held in owner-like possession under long-term lease or assignment is also considered as land owned. Thus, in determining the ownership of a plot of land two basic concepts are involved, namely,

- (a) land owned by the household, i.e., land on which the household has the right of permanent heritable possession with or without the right to transfer the title, e.g., *pattadars*, *bhumidars*, *jenmons*, *bhumi-swamis*, *rayat sithibans*, etc. A plot of land may be leased out to others by the owner without losing the right of permanent heritable possession.
- (b) land held under special conditions such that the holder does not possess the title of ownership but has the right to long-term possession of the land (for example, land possessed under perpetual lease, hereditary tenure and long-term lease for 30 years or more); such land is considered as being held under owner-like possession. In States where land reform legislation has provided for full proprietorship to erstwhile tenants, the latter are considered as having owner-like possession, even if they have not paid the full compensation.

2.4.1 Sometimes a plot may be possessed by a tribal in accordance with traditional tribal rights from local chieftains or village/district council. Again, a plot may be occupied by a tenant for which the right of ownership vests in the community. In both the cases, the tribal or other individual (tenant) is taken as owner, for in all such cases, the holder has owner-like possession of land in question.

2.5 *Lease of land:* Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable possession is defined as land leased out. It is defined as land leased in if it is taken by a household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral.

2.5.1 Sometimes orchards and plantations are given to others for harvesting the produce for which the owner receives a payment in cash or kind. Such transactions were not treated as “lease” for the purpose of the survey.

2.5.2 *Terms of lease:* Leasehold under crop-sharing basis means that the owner of land receives a stipulated share of the produce but does not participate in the work, nor does he manage or direct or organise the agricultural operations on the plot of land that he has leased out. Land is considered as leased under service contract if an employer gives some land to an employee for cultivation in lieu of the services provided by him under the condition that the land can be retained so long as the employee continues to serve the employer, and no other specific terms of lease are contracted. Where the mortgager retains the ownership of land till the foreclosure of the deed but the possession of the land is transferred to the mortgagee, the land is considered as leased out under usufructuary mortgage. Sometimes, land owned by a household is looked after and operated by a close relative. For example, a person staying away from his village may own a piece of land in the village that is looked after and used by his brother’s household. All such land owned by the household but looked after and used by some relative’s household, under no contract of payment of any kind to the owner, is treated as leasing-out to ‘relatives under no specified terms’. All rent-free leases, other than to (or from) ‘relatives under no specified terms’, are considered lease ‘under other terms’.

2.5.3 *Duration of possession*: The period for which a piece of leased-in land or otherwise possessed land (see paragraph 2.6) is actually possessed by the household without break is called the duration of possession of the land.

2.6 *Otherwise possessed land*: This is understood to mean all public or institutional land possessed by the household without title of ownership or occupancy right. The possession is without the consent of the owner. Private land (i.e., land owned by the household sector) possessed by a household without title of ownership and occupancy right is not included in this category. All private land encroached upon by the household is treated as leased-in land.

2.7 *Homestead land*: Homestead of a household is defined as the dwelling house of the household together with the courtyard, compound, garden, out-house, place of worship, family graveyard, guest house, shop, workshop and offices for running household enterprises, tanks, wells, latrines, drains and boundary walls annexed to the dwelling house. All land coming under homestead is defined as homestead land. Homestead may constitute only a part of a plot. Sometimes gardens, orchards or plantations, though adjacent to the homestead and lying within the boundary walls, may be located on a clearly distinct piece of land. In such cases, land under garden, orchard or plantation is not considered as homestead land.

LAND USE

2.8 *Forest*: This includes all area actually under forest on land classified under any legal enactment or administered as forest, whether state-owned or private. If any portion of such land was not actually wooded but put to raising of field crops, it was treated under net sown area and not under forest. All area under social and farm forestry was included in this class.

2.9 *Net sown area*: For a particular season, this consists of area sown with field crops and area under orchards and plantations counting only once the area sown more than once in the same season. The net sown area defined above has been further classified into area under seasonal crops, orchards and plantations.

2.9.1 *Orchards*: A piece of land put to production of horticulture crops, viz., fruits, nuts, dates, grapes etc. (other than those treated as plantation crops), is regarded as an orchard, if it is at least 0.10 hectare in size or is having at least 12 trees planted on it. It may be clarified that in the case of such fruit trees where distance between the trees is quite large, say more than six metres as in the case of mangoes, the orchard is defined according to the minimum number of 12 trees planted in it, while, in such cases, where the distance is less than six metres as in the case of bananas, papayas, grapevines etc., the orchard is defined on the basis of the minimum area of 1/10th of an hectare.

2.9.2 *Plantations*: Area devoted to production of plantation crops, viz., tea, coffee, cashew nut, areca nut, oil palm, clove and nutmeg, was treated as area under plantation. The size restriction given for orchards was also applicable for plantations for the purpose of the survey.

2.9.3 *Area under seasonal crops*: All the land under net sown area not coming under orchards or plantations was taken as area under seasonal crops.

2.9.4 Sometimes, net sown area may consist of a piece of land put to a combination of the above three uses. In such cases, the use to which the major area of the piece of land is put was treated as the use of the piece of land.

2.10 *Current fallow*: This comprises cultivable area which is kept fallow during the current agricultural year. If any seedling area in the current agricultural year is not cropped again in the same year, it is also treated as current fallow.

2.11 *Other fallow*: All pieces of land which were taken up for cultivation in the past, but are temporarily out of cultivation for a period of more than one agricultural year but not more than five years, including the current agricultural year, are classified under other fallow.

2.12 *Area under non-agricultural uses*: This includes all land occupied by buildings, path etc. or under water (tanks, wells, canals etc.) and land put to uses other than agricultural uses. For the purpose of this survey, this class of land has been further divided into two classes:

Water bodies: All land which are perennially under water is defined as water bodies, provided that no crop is raised on them.

Other non-agricultural uses: All land put to other non-agricultural uses, viz., buildings, roads, railways, paths etc. are classified under land put to other non-agricultural uses.

2.13 *Other uses*: This includes all land coming under rest of the classes of standard nine-fold classification, viz., 'culturable waste', 'miscellaneous tree crops and groves not included in net sown area', 'permanent pastures and other grazing land' and 'barren and unculturable waste'.

2.14 *Drainage facility*: A plot of land was considered to have drainage facility if there existed some method of removal of excess water from the surface of land, from the upper layers of soil or sub-soil by artificial means for the purpose of making (a) non-producing wet land productive and (b) producing wet land more productive. Natural drainage, i.e. normal outflow of excess water from the plot of land by virtue of its position, was not considered as drainage facility.

2.15 *Irrigation*: Irrigation was considered as a device of purposively providing land with water, other than rain water, by artificial means for crop production.

REFERENCE PERIOD AND SEASON

2.16 *Reference period*: Most data were collected with season as reference period – kharif season of 2002-03 during the first visit of the survey, and rabi season of 2002-03 during

the second visit. In addition, for each plot owned or possessed by the household on the date of survey, the size of the plot and, for plots leased in or leased out by the household, particulars of the lease agreement were ascertained. Some general information on operational holdings identified with the entire agricultural year of 2002-03 as reference period was also collected (as in earlier rounds of land holding surveys) but this did not include the size of the operational holding for 2002-03. Nor could the size of the operational holding for the agricultural year be derived from the seasonwise data collected.

2.17 *Season*: The crop seasons are generally identified by the months of harvesting of a crop during a normal year. For the purpose of the survey, Kharif season was taken to include both early Kharif (i.e. autumn) and late Kharif (i.e. winter). Similarly, the Rabi season included both Rabi and Zaid Rabi (i.e. summer). Generally, the harvesting months of the early Kharif and the late Kharif seasons extend over August to October and November to January, respectively. Again, the crops of Rabi and Zaid Rabi seasons are harvested during February to April and May to June, respectively. Thus, in general, the crops which are harvested during August to January were considered as crops of the Kharif season and those harvested during February to June were treated as crops of the Rabi season. However, there are departures from this general rule in case of some crops grown in certain regions. For example, rice in Tamil Nadu is harvested thrice and the three harvests are termed autumn, winter and summer crops. But the respective harvesting periods of the three crops are September to February, January to April and May to June. Though the periods of harvesting of first and second crops are spread over longer periods than those of the usual autumn and winter rice crops, the season for the autumn and winter paddy were taken as the Kharif season. Similarly, the autumn and the winter paddy in Karnataka, where these crops are harvested during September to December and November to March, were considered as Kharif crops. However, the crop seasons for the principal crops, given as part of the general guidelines issued for ascertaining the seasons of an agricultural operation in this survey, are listed below:

sl. no.	crop	season	sl. no.	crop	season
1.	Rice	Kharif, Rabi (summer)	9.	Sugarcane	Kharif
2.	Wheat	Rabi	10.	Sesamum	Kharif, Rabi
3.	Jowar	Kharif, Rabi	11.	Groundnut	Kharif
4.	Bajra	Kharif	12.	Linseed	Rabi
5.	Maize	Kharif	13.	Castor	Kharif
6.	Ragi	Kharif	14.	Cotton	Kharif
7.	Barley	Rabi	15.	Tobacco	Kharif
8.	Gram	Rabi	16.	Jute	Kharif

2.17.1 Since most of the principal crops are grown in only one season, there is little difficulty in ascertaining the crop season of a particular agricultural operation. Nevertheless, emphasis was laid on the need to exercise caution while determining the crop season of the crops grown in both Kharif and Rabi. In general, the crop season of such a crop should be determined on the basis of its months of harvesting. However, it

has to be ensured that all the crops, whether principal or not, grown during the agricultural year 2002-03 are duly considered in either Kharif or Rabi season.

2.17.2 For land without crop, July to December 2002 was treated as Kharif season and January to June 2003 as Rabi season of the agricultural year 2002-03.

2.17.3 A plot constituted exclusively of an orchard or a plantation (either of perennial crops, like coconut, arecanut, tea etc., or of fruit plants and trees, like orange, mangoes, vines etc., which are usually harvested in only one season) is considered as being operated in both the seasons, provided some trees/ plants remains standing on the land for the major part of each season.

2.17.4 A plot engaged only in agricultural production relating to livestock, poultry, pisciculture etc., i.e. activities other than crop production, is treated as being operated for as long as it continued to carry out the activity. In other words, a plot exclusively used for livestock is considered as being operated in both the seasons provided some livestock is maintained in the major part of each season. In such cases, whether or not the plot produces any livestock product during a season, it is considered to be in operation.

WORKERS OR EMPLOYED

2.18 *Permanent attached farm workers:* A person employed by the management of an operational holding was considered to be a permanent attached farm worker of the operational holding for an agricultural season if (i) the person was employed more or less continuously during the season in the holding and (ii) the employment was under some sort of a contract that was binding on the person to serve the holding during the period of various agricultural operations (from preparation of soil to storing of grains) in respect of the crops of the seasons.

2.19 *Economic activity:* Any activity resulting in production of goods and services that adds value to national product was considered an economic activity. The entire spectrum of human activity falls into two categories, viz., economic and non-economic activities. The economic activities have two parts – market activities and non-market activities. Market activities are those that involve remuneration to those who perform it i.e., activity performed for pay or profit. These are essentially production of goods and services for the market including those of government services etc. Non-market activities are the production for own consumption of primary products including own account processing of primary products and own account production of fixed assets. However the whole spectrum of economic activities as defined in the UN System of National Accounts (SNA 1993) was not covered under ‘economic activity’ for this round. The term ‘economic activity’ includes:

- (i) all the market activities described above i.e. the activities performed for pay or profit
- (ii) of the non-market activities:

- all the activities relating to agricultural sector which result in production (including gathering of uncultivated crops, forestry, collection of firewood, hunting, fishing etc.) of agricultural produce for own consumption and
- the activities relating to the own-account production of fixed assets. Own account production of fixed assets includes construction of own houses, roads, wells etc., and of machinery, tools etc. for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction either in the capacity of a labourer or a supervisor.

2.19.1 It is to be noted that *the activities like prostitution, begging, smuggling etc. that might result in earnings were, by convention, not considered economic activities.*

2.20 *Workers (or employed):* Persons who are engaged in any economic activity constitute workers. Unpaid helpers who assist in the operation of an economic activity in the household farm or non-farm activities are also considered as workers.

2.21 *Persons seeking or available for work (or unemployed):* These are persons who, owing to lack of work, are not employed but are either seeking work through employment, exchanges, intermediaries, friends or relatives or by making applications to prospective employers or have expressed their willingness or availability for work under the prevailing conditions of work and remuneration.

2.22 *Labour force:* Persons who are either ‘working’ (or employed) or ‘seeking or available for work’ (or unemployed) together constitute the labour force. Persons who are neither ‘working’ nor ‘seeking or available for work’ are considered to be ‘out of labour force’. The persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, persons too young or too old to work, prostitutes, smugglers, etc.

2.23 *Activity status:* The three states - (i) employed (ii) unemployed and (iii) not in labour force – are called the three broad activity statuses. In this survey, each member of the households surveyed was classified into one of the three activity statuses on the basis of his or her situation during the last 365 days. Those who had spent the greater part of the year out of the labour force (as defined above) were classified as “not in labour force”. Of the remaining, those who had spent a longer time in the “employed” state than in the “unemployed” state were classified as “employed” and the rest as “unemployed”.

Chapter Three

Summary of Findings

3.0 The Land and Livestock Holdings Survey (LHS) of NSS is one of the main sources of information on ownership and agricultural operation of land in the country. Information on household ownership of land obtained from the 59th round LHS is presented in NSS Report No.491 (forthcoming) and information on household ownership of livestock in NSS Report No.493. The present report gives some of the survey results relating to techno-economic units known as *operational holdings*. Another report, emphasizing the seasonal variation in operational holdings, has already been released.

3.0.1 The major findings of the enquiry on operational holdings are summarised in this chapter. To start with, the discussion traces the changes in aggregate characteristics and size distributions of operational holdings over the last four decades. The nature and extent of tenancy are then presented in some detail. Finally, the report discusses a few aspects of the use of land holdings in terms of agricultural operations carried out in them. To help comparisons with data from earlier LHS's, State-level results are mostly presented in this chapter for the 15 States for which summary results were presented in NSS Report No.407 - the report from which most of the past results reproduced here for inter-temporal comparison have been taken. Occasionally, results are presented for the top 17 States in terms of rural population according to the 2001 Census – these include Jharkhand and Chhattisgarh, which were formed in 1999 and for which no figures are available from past LHS's.

3.1 Estimates of operational holdings: all-India

3.1.1 An operational holding is defined as a techno-economic unit used wholly or partly for agricultural production and operated (directed or managed) by one person alone, or with the assistance of others without regard to the title, size or location.

3.1.2 As distinct from a *household ownership holding*, which is restricted to the area of land owned by a household, *operational holding* encompasses all land - owned, leased in or otherwise possessed - under physical possession of the techno-economic unit. A unit with more or less independent technical resources for agricultural operations like land, agricultural equipment and machinery, draught animals, etc., was considered to be an operational holding if some agricultural production was carried out on any part of the land under its possession during the reference period. The present survey used two reference periods, the kharif season and the rabi season of the agricultural year 2002-03.

3.1.3 Area under operational holdings is called operated area. For the present survey, the area possessed by an operational holding for the major part of the reference period was taken as its operated area.

3.1.4 Table 3.1 shows that there were around 107 million operational holdings in the country during the kharif season and 102 million during the rabi season of the agricultural year 2002-03. Of these, around 94% were operated by residents of rural areas. The total operated area was estimated at 112.2 million hectares (mha) during the kharif season and about 107 million hectares during the rabi season, with only about 4% of it operated by the urban residents. The average size of an operational holding during the kharif season was around 1.06 ha for the rural sector and 0.77 ha for the urban sector; the averages for the rabi season were close to these values.

Table 3.1
Estimated number of operational holdings and area operated by sector and season: 2002-03

ALL-INDIA				
item	rural		urban	
	kharif	rabi	kharif	rabi
1. No. of operational holdings (mill.)	101.27	95.70	5.99	6.11
2. Total area operated (mill. ha.)	107.65	102.45	4.60	4.47
3. Average area operated per holding (ha.)	1.06	1.07	0.77	0.73
4. No. of households (mill.)	147.84	148.01	55.51	55.52

3.1.5 The remaining part of this chapter will be concerned with the rural sector only.

TRENDS IN OPERATIONAL HOLDINGS

3.2.1 Data on operational holdings have been collected regularly by the NSSO since its eighth round (1954-55). So far, six land holding surveys, including the present one, have been conducted. The estimates from different rounds are on the whole comparable, except for those from the 8th round, which, due to differences in definitions, are not strictly comparable with estimates from the other rounds and are therefore omitted from the discussion which follows.

3.2.2 The definition of operational holdings has undergone only a marginal change since the 17th round (1960-61) with respect to the coverage of "operated land". In the 37th round (1981-82), the definition of operated land was extended to include land encroached or occupied on squatter basis, which is referred to as "otherwise possessed" land in this report. It is seen from Table 3.2 that the percentage shares of such land in the total operated area were only 1.7% and 1.0% in 1981-82 and 1991-92 respectively, and less than 1% during 2002-03. This means the results of the four surveys since the 17th round remain broadly comparable in spite of the change in definition.

3.2.3 Regarding number of operating households and area operated, however, some clarifications are necessary. The data collected in the present survey permit identification of kharif and rabi holdings and computation of their size but not of holdings for the agricultural year. The estimates from the 59th round given in Table 3.2 relate to the kharif season, and are expected to be slightly lower than figures for the agricultural year. (According to the 48th round survey, for instance, the number of kharif holdings was about 4% lower than the number of holdings for the agricultural year and the area operated was about 1% lower.) There is also a problem of comparison between the estimates from the LHS of the 37th round (1981-82) and those from other LHS's of NSSO. The estimates from the 37th round were generated only from the data collected for the major crop season. In contrast, the estimates from the 17th, 26th and 48th rounds were obtained directly from the data collected for the entire agricultural year. On this count, the estimates of number of operating households from the 37th round are probably low in comparison with those from the other LHS's.

3.2.4 Table 3.2 gives the basic estimates relating to operational holdings of the last five Land Holding Surveys (LHS) of NSS. The sizes of the samples (at both the stages) on which the estimates are based are also shown in the table.

3.2.5 *Rise in the number of operational holdings:* The number of operational holdings increased rapidly from 51 million in 1960-61 to 101 million in 2002-03, which is understandable considering the growth of population. However, the rate of growth of operational holdings, which accelerated over the three decades from 1960-61 to 1991-92 (see item 1.1 of Table 3.2), appears to have slowed down in the decade prior to 2002-03. If we assume that the 96:100 ratio of kharif holdings to agricultural-year holdings, obtained for the 48th round, is maintained (see paragraph 3.2.3 above), then the number of operational holdings in 2002-03 with the agricultural year as reference period would be about 106 million, which is more than double the number in 1960-61. The virtual disappearance of joint holdings also has made some contribution to the rise in the number of operational holdings, though mostly during the first ten years of the period under consideration. There were over 4% joint holdings, i.e., holdings operated jointly by members of two or more households, in 1960-61. By 1970-71 the proportion of joint holdings had come down to a tiny fraction (0.6%).

3.2.6 *Decline in area operated:* The total operated area of 133 million ha. in 1960-61 had dropped to 126 mill. ha. in 1970-71 - a fall of about 5.8%. It dropped by around 5.6% again between 1970-71 and 1981-82. The estimate for total operated area from the 48th round showed a rise to 125 mill.ha., that is, back to the 1970-71 level, casting doubt on the 37th round estimate. However, the present survey's estimate of 108 mill. ha. amounts to a fall of about 8% since 1981-82, that is, in the last 21 years, which is consistent with the declining trend observed up to 1981-82. The overall fall over the 42-year period is about 18.5% - which is roughly equivalent to a 5% fall every decade. (Note that though the present survey's estimate shown in Table 3.2 gives only area operated during the kharif season, this ought to be quite close to the area operated during the agricultural year

2002-03 - the 48th round survey found that as much as 99% of area operated during the agricultural year 1991-92 was operated in the kharif season of that agricultural year.)

Table 3.2
Estimates of certain key characteristics of operational holdings in rural India from Land Holding Surveys of NSS: 1960-61 to 2002-03

ALL-INDIA					Rural
item	1960-61 (17 th)	1970-71 (26 th)	1981-82 (37 th)	1991-92 (48 th)	2002-03 (59th)
1. Number of operational holdings (million)	50.77	57.07	71.04	93.45	101.27
1.1 percentage increase	--	12.4%	24.5%	31.5%	8.4%
2. Total area operated (mill. ha.)	133.48	125.68	118.57	125.10	107.65
3. Average area operated (ha.) per holding	2.63	2.20	1.67	1.34	1.06
4. Percentage of joint holdings	4.22	0.60	0.62	0.08	0.4
5. Number of parcels per holding	5.7	n.a.	4.0	2.7	2.3
6. <i>Percentage of operational holdings with partly or wholly</i>					
(a) owned land	94.86	95.64	92.91	96.15	95.33
(b) leased-in land	23.52	24.68	15.20	10.99	9.9
7. <i>In total area operated, p.c. share of</i>					
(a) area owned	89.30	89.43	91.08	90.44	92.7
(b) area leased in	10.70	10.57	7.18	8.52	6.5
(c) area otherwise possessed	--	--	1.74	1.04	0.8
8. No. of sample villages	3,486	4,547	3,692	4,231	6,638
9. No. of sample households	53,138	35,947	29,089	33,289	52,265

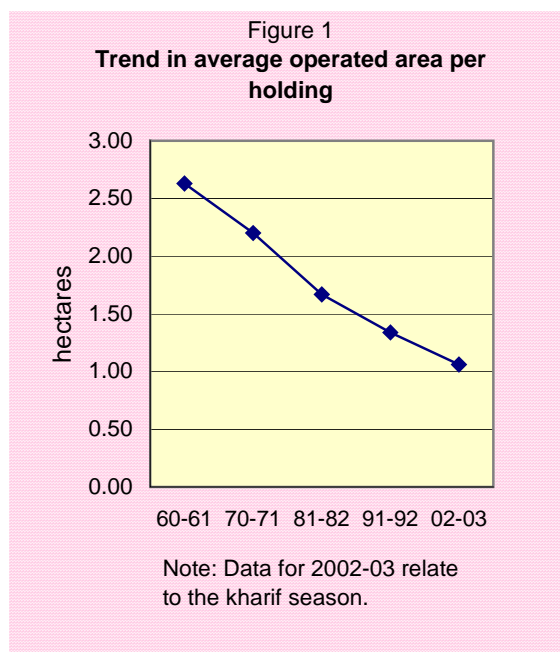

1. *Source of estimates from 17th, 26th, 37th and 48th rounds: NSS Report No. 407. Estimates for 59th round are based on the holdings reported for the kharif season.*

2. *Estimates for item 7 are based only on area for which the type of possession was reported.*

3.2.7 Declining size of holdings : The consequence of rapid growth in the number of operational holdings with a limited land base is clearly shown by the estimates of average area operated per holding given in Table 3.2. Over the four decades, the average size of a holding came down (see Figure 1) by nearly 60% - from 2.63 ha. in 1960-61 to 1.06 ha. in 2002-03. (For a discussion of the inter-State and inter-season variation in average holding size, see NSS Report No.493: Seasonal Variation in Operational Land Holdings.)

3.2.8 *Number of parcels per holding*: Fragmentation of holdings has been a chronic problem in Indian agriculture. The estimates available from the last four LHS's show that the average rural holding, though smaller, is less fragmented than it was earlier, the number of parcels per holding having dropped from 5.7 in 1960-61 to 2.3 in 2002-03.

3.2.9 *Trends in tenancy of land by operational holdings*: During the four decades from

1960-61 onwards, land tenure status of operational holdings has undergone significant changes. Table 3.2 reveals that while the percentage of holdings with partly or wholly owned operated area changed little between 1960-61 and 2002-03, the proportion of holdings with partly or wholly leased in land (henceforth called 'tenant holdings') declined sharply from around 24% to 10% during the period after 1970-71. This trend, indicating a continuous shift from tenant cultivation to self-cultivation, has been a characteristic feature of Indian agriculture during this period.

3.2.10 The extent of tenancy measured in terms of percentage share of operated area leased in reveals (*see item 7 of Table 3.2*)

a similar trend during 1970-71 to 1981-82. The share of leased-in land in operated area came down to 7.2% in 1981-82 from 10.6% in 1970-71. The 1991-92 survey estimated the share to have risen to 8.5%. However, the present survey's estimate of 6.5% shows that the decline is continuing. A more detailed discussion on tenancy is contained in Section 3.5.

3.3 Size distribution of operational holdings: all-India

3.3.1 Any significant change in agrarian structure should have some impact on the size distribution of land holdings. In this section, various aspects of this distribution are examined to see whether any such structural change is indicated. In the detailed tables given in the Appendix, 13 size classes of operational holdings have been used for presentation of the tables. Here, in order to study the change in size distribution, the 13 size classes are merged to form 5 broad size classes along the lines adopted in the Agricultural Census of India. The 5 broad size classes (called categories) are as follows:

marginal	: 1.000 hectare or less
small	: 1.001 - 2.000 ha.
semi-medium	: 2.001 - 4.000 ha.
medium	: 4.001 - 10.000 ha.
large	: larger than 10.000 ha.

These broad size classes will henceforth be called *categories* of operational holdings.

3.3.2 *Marginalisation of holdings*: A general feature of the size distribution of operational holdings is that the percentage of holdings decreases as the holding size increases. The percentage distributions of operational holdings given in Table 3.3 reveal that the decline is getting progressively steeper with each decade. The percentages of large, medium and semi-medium holdings have been declining steadily since 1960-61. The decline is steepest for large holdings - from 4.5% to 0.8%. At the other end, one witnesses a great crowding of holdings into the “marginal” category. The percentage of holdings in this category has swelled from 39% in 1960-61 to 70% in 1991-92.

Table 3.3
Changes in the size distribution of operational holdings
shown by different LHS's

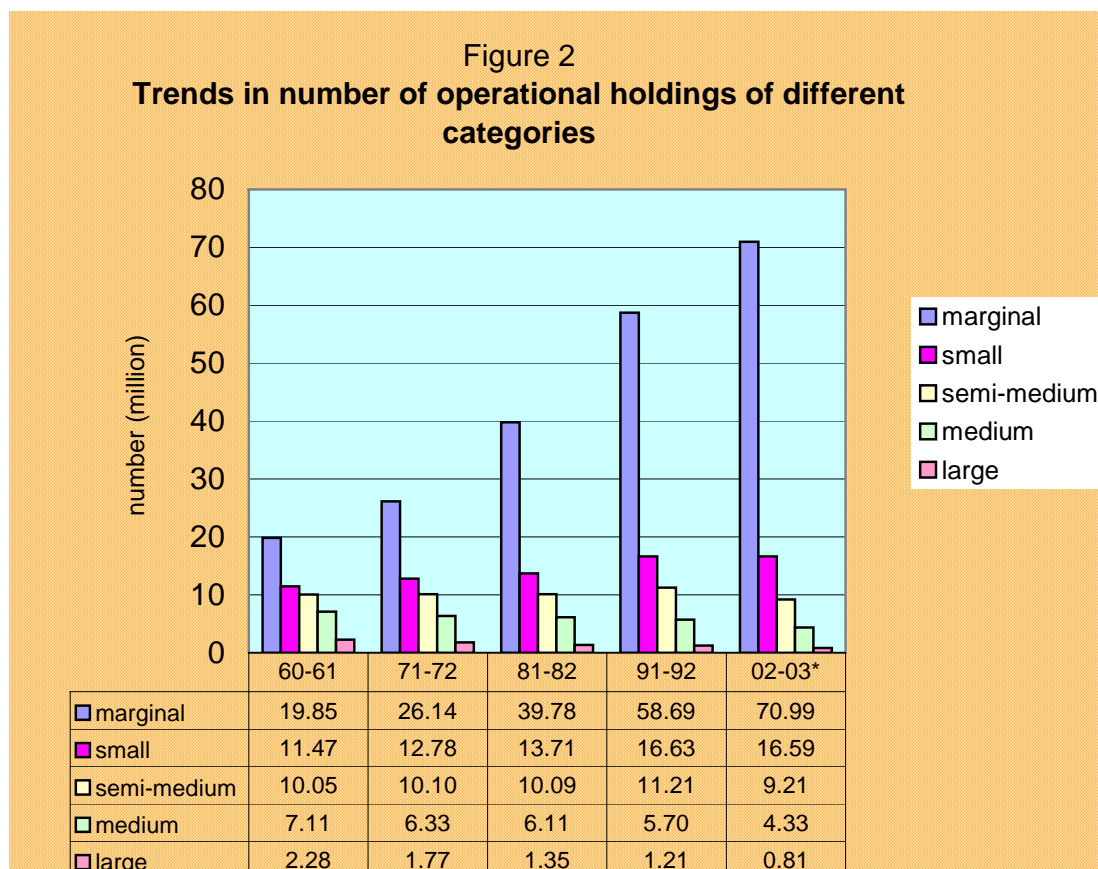

ALL-INDIA
Rural

category of holdings	percentage of operational holdings					
	60-61 (17th)	70-71 (26th)	81-82 (37th)	91-92 (48th)	02-03 (59 th)	
					kharif	rabi
marginal	39.1	45.8	56.0	62.8	69.7	70.0
small	22.6	22.4	19.3	17.8	16.3	15.9
semi-medium	19.8	17.7	14.2	12.0	9.0	8.9
medium	14.0	11.1	8.6	6.1	4.2	4.4
large	4.5	3.1	1.9	1.3	0.8	0.8
all sizes	100.0	100.0	100.0	100.0	100.0	100.0

Source of estimates of 17th, 26th, 37th and 48th rounds: NSS Report No. 407.

3.3.3 *Number of operational holdings*: The pressure of growing population on the limited land base and the consequent division of holdings is clearly reflected in the changes in the absolute numbers of operational holdings in different size classes. Figure 2 shows the trends in the number of operational holdings in different categories during the period 1960-61 to 2002-03. It will be noted that numbers of operational holdings in different categories are not changing at the same rate, or even in the same direction, over time. Over the three decades the number of marginal holdings has multiplied from 19.8

million in 1960-61 to over 71.0 million¹ in 1991-92 – an increase of over three and a half times. The number of small holdings, too, has been increasing, though at a much slower rate, since 1970-71. As against this, the absolute numbers of large and medium holdings have declined steadily during this period. Even the number of semi-medium holdings, which had remained stable at 10 million from 1960-61 to 1981-82 and even showed signs of an increase, has begun to fall.

*kharif season estimates

3.3.4 *Distribution of operated area* : Table 3.4 gives percentage distributions of operated area by category of operational holdings from the last four Land Holding Surveys. It is seen that the shares of marginal holdings in total operated area, which was under 7% in 1960-61, has risen rapidly over the last four decades and increased by 6-7 percentage points since the last survey (1991-92) to draw level with the shares of the semi-medium and medium holdings (around 22.5%) at the time of the present survey. The share of small holdings, too, has been continuously on the rise and is now over 20%, while the share of large holdings has been steadily declining and, from 29% in 1960-61, has reached a level of 12-13%. The share of area operated by medium holdings has

¹assuming that the number of operational holdings with agricultural year 2002-03 as reference period would be at least as large (probably larger) than the number of holdings for the kharif season of that year (which is shown in Figure 2). See also paragraph 3.2.3.

declined steadily but more moderately, and the share of semi-medium holdings appears to have reached its peak in 1991-92 and begun to dip.

Table 3.4
Changes in percentage distribution of operated area by category of operational holdings

category of holdings	percentage of operated area					
	60-61 (17 th)	70-71 (26 th)	81-82 (37 th)	91-92 (48 th)	02-03 (59 th)	
					kharif	rabi
marginal	6.9	9.2	11.5	15.6	22.6	21.7

semi-medium	20.7	22.6	23.6	24.1	22.5	22.3
medium	31.2	30.5	30.1	26.4	22.2	23.1
large	29.0	23.0	18.2	15.2	11.8	12.5
all categories	100.0	100.0	100.0	100.0	100.0	100.0

Source of estimates from 17th, 26th, 37th & 48th rounds: NSS Report No.407.

3.3.5 Lorenz curve: The Lorenz curves for the all-India size distribution of operational land holdings in 1960-61, 1981-82, 1991-92 and 2002-03 are shown in Figure 3 (page 22). The curve for 1970-71 is not shown as it was practically indistinguishable from the curve for 1960-61. For the three rounds other than the present round, the all-India cumulative percentage distribution of operational holdings and area operated, as given in NSS Report No.407, were used to construct the Lorenz curves.

3.3.6 Degree of concentration: It is clear from Figure 3 that concentration of the size distribution of holdings deepened between 1960-61 and 1981-82, after which it attained some stability. The shares of the bottom 40%, 50%, 60% and 70% holdings in 1991-92 were about 4 percentage points lower than in 1960-61. Parts of the curve for 2002-03 are seen to lie above the curve for 1991-92; it needs to be remembered, however, that the 2002-03 data relate to the kharif season holdings. It will be seen in paragraph 3.4.3 that the all-India distribution hides definite trends in concentration observable at State level.

3.3.7 Gini's coefficient - a measure of concentration: To obtain an overall measure of concentration in the size distribution, Gini's coefficient of concentration² is used. This is

² Gini's coefficient of concentration C was computed as follows: $C = 1 - [\sum(P_j - P_{j-1})(Q_j + Q_{j-1})]$ where P_j and Q_j are respectively the cumulative proportions of number of operational holdings and area operated up to the j^{th} size class of holdings, and Σ denotes summation over the size classes.

presented for the distributions for 1960-61, 1970-71, 1981-82, 1991-92 and 2002-03 in Table 3.5. The trend in Gini's coefficient also suggests that the degree of concentration in operational holdings has increased since 1960-61, *but the increase has slowed down since 1981-82 and may not be continuing.* (Since the coefficient for 2002-03 is based on the distribution of kharif holdings, the slight difference between the figures for 1991-92 and 2002-03 may or may not reflect a real fall in concentration during the intervening period.³)

ALL-INDIA	Rural
year (round)	Gini's coefficient of concentration
1960-61 (17 th)	0.583
1970-71 (26 th)	0.586
1981-82 (37 th)	0.629
1991-92 (48 th)	0.641
2002-03 (59 th)	0.624

Source of estimates from 17th, 26th, 37th and 48th rounds: NSS Report No.407. Estimates for 2002-03 relate to area operated during the kharif season.

3.4 Changes in size distribution: inter-State comparisons

3.4.1 Table 3.6 gives percentage distributions of number of operational holdings and area operated in different categories of holding in 15 major States for 2002-03, 1991-92, 1981-82 and 1970-71, as obtained from the Land Holding Surveys of NSS 59th, 48th, 37th and 26th rounds respectively.

3.4.2 In all the major States, the pressure of population growth on the limited land base is reflected in the progressive downward shift in the distribution of operational holdings over the three decades. In general, there is seen a rise in the percentage of marginal holdings and a decline in percentage of holdings in all other categories. The percentage of area operated by marginal holdings has been rising over the decades, while the percentage of area under small holdings has been rising at a slower pace. In all the States, the share of area operated by medium and large holdings was declining. Except for Maharashtra, Madhya Pradesh, Rajasthan, Haryana and Punjab, the share of area operated by semi-medium holdings was also falling.

³ Moreover, the size classes used in computing the coefficient for 2002-03 are a little different. For 2002-03, the distribution of holdings by the thirteen size classes provided in the detailed tables has been used to calculate this coefficient (see Appendix A). For the years other than 2002-03, the values of Gini's coefficient are taken from NSS report No.407. The classes used for the computation of these values were 13 in number but differed from the current classification in two respects. The range "1.0 and below" was divided into 3 classes 0-0.2, 0.2-0.4 and 0.4-1.0. Also, the range 5.0-10.0 was divided into 3 classes 5.0-6.0, 6.0-8.0 and 8.0-10.0. (See Appendix A.)

Note: The data relate to the 17th, 37th, 48th and 59th rounds of NSS. The Lorenz curve for the size distribution prevailing in 1970-71 (26th round) could not be shown on this graph as it was found to be practically indistinguishable from the Lorenz curve for the distribution in 1960-61.

ALL-INDIA	0.567	0.596	0.591	0.557

Source of data used to compute estimates for 26th, 37th and 48th rounds: NSS Report No.407. Note that Gini's coefficient is computed here using fewer size classes of operational holdings than used for Table 3.5, hence the all-India figures do not tally with those shown in Table 3.5. Estimates for 2002-03 relate to area operated during the kharif season.

since 1981-82. In Kerala, there has been a steady decline in the index since 1970-71. In Karnataka, Madhya Pradesh (including Chhattisgarh), Maharashtra and Rajasthan, no clear trend is discernible.

3.4.5 The two most agriculturally developed States of Punjab and Haryana show the most pronounced *rise* in the concentration ratio since 1970-71. In Haryana, the ratio rose substantially in every decade since 1970-71. In Punjab, the ratio increased sharply from 0.398 in 1970-71 to 0.685 in 1981-82. This was followed by a smaller rise in the next two decades. In Gujarat, there has been a steady, though more gradual, rise in the index of concentration over the decades.

⁴ The procedure of computation of Gini's coefficient from the distribution of land holdings over a finite number of size classes ignores the convexity of the Lorenz curve and thus underestimates the degree of concentration; the smaller the number of classes used, the greater is the extent of underestimation.

EXTENT OF TENANCY

3.5.1 The changes under way in the tenancy status of operational holdings have been briefly discussed in paragraphs 3.2.9 and 3.2.10 above. This section deals with the trends in incidence of tenancy and proportion of tenanted land under major terms of lease *vis-à-vis* size class of holdings.

Table 3.8
Selected indicators of land tenure status in 2002-03 (59th round)

ALL-INDIA item	Rural estimate	
	kharif	rabi
	1. no. of tenant holdings (mill.)	10.03 (9.9%)
2. total operated area leased in (mill. ha)	6.94 (6.45%)	6.92 (6.75%)
3. area leased in per tenant holding (ha)	0.69	0.71

Note: (i) "Tenant holding" stands for an operational holding with wholly or partly leased-in area. (ii) Percentages to total number of holdings and total operated area are shown in brackets.

3.5.2 Granting of the right to use a piece of land to others, either on rent or free, by the owner without transferring the title is termed *land lease*. Agreements of such lease, even when made orally, are considered as lease contracts in the land holding surveys of NSSO. On the other hand, hereditary tenancy and long-term lease for 30 years or more are not treated as land lease -- they are treated as land ownership.

3.5.3 *National level estimates:* Table 3.8 gives the estimates from the present survey indicating extent of tenancy in rural India. The picture is nearly the same in the two seasons of the agricultural year 2002-03. The number of tenant holdings, i.e. operational holdings with wholly or partly leased-in land, was about 10 million, reporting an area of

about 6.9 million hectares of tenanted land. Thus, on an average, a tenant holding included about 0.7 hectare of leased-in land during 2002-03.

3.6 Tenancy and size of holding

3.6.1 Though the measures of land reform undertaken since Independence appear to have deterred the growth of exploitative tenancy, there is still a high proportion of tenanted land in total operated area. What is most remarkable about tenancy in rural India is the significantly high proportion of total tenanted land operated by a small proportion of holdings.

3.6.2 Table 3.9 shows the incidence of tenancy by broad size class of operational holdings in 2002-03. Except that the lowest size class shows a much lower incidence of tenancy (only 4.7% being tenant holdings), the percentage of tenant holdings shows no clear pattern of variation with variation in holding size. In most of the classes shown, the percentage of tenant holdings varies between 9% and 12%. In the "large" category of holdings, however, nearly 14%, in 2002-03, were tenant holdings.

The next column of Table 3.9 shows that the percentage of tenanted land (area leased in) in operated area, in general, falls as one passes from the marginal category to the categories representing the larger holdings. The percentage is 8.6% for marginal holdings as a whole but under 6% for the rest of the holdings considered together.

3.6.3 Share in tenanted land by holding size:

The percentage distribution of tenanted land by size class or category of holdings is shown in the last column of Table 3.9. It is seen that over 47% of the total tenanted land was operated by the top 3 categories, which constituted only about 14% (see Table 3.3) of the total operational holdings. If one considers the holdings larger than one hectare i.e., the top 4 classes, one sees that nearly 70% of the total tenanted land is operated by these holdings, which, from Table 3.3, are found to constitute about 30% of the total number of operational holdings. Since around 10% of the holdings in the size classes larger than 1 hectare were tenant

Sources of estimates of 17th, 26th, 37th and 48th rounds: NSS Report No.407. Data for 2002-03 relate to the kharif season.

holdings, it follows that about 70% of the total tenanted land was operated by only 7% of the total number of operational holdings.

3.7 Trends in extent of tenancy

3.7.1 The percentages of tenant holdings by category of holdings from the five land holding surveys of NSS are given in Table 3.10. Except for a slight rise during the 60's, the percentage of tenant holdings has been continuously declining. From over 20% in 1960-61 it has declined to 11% or less in all the size categories of holdings except the large holdings. Among the large holdings the percentage is still as high as 14%, which is an increase over the 1960-61 percentage.

3.7.2 Table 3.11 shows the percentage of leased-in area by category of holdings from the five land holding surveys.

3.8 Extent of tenancy: inter-state comparisons

Table 3.11
Change in percentage of area leased in by category of operational holdings

ALL-INDIA	Rural				
category	percentage of area leased in

large	8.3	5.9	5.3	11.4	6.1
all sizes	10.7	10.6	7.2	8.3	6.5

Sources of estimates of 17th, 26th, 37th and 48th rounds: NSS Report No. 407. Data for 2002-03 relate to the kharif season.

3.8.1 Table 3.12 provides the survey estimates of percentage of tenant holdings and percentage share of tenanted land in operated area for 15 major states. The corresponding estimates of the last two land holding surveys are also given in the table to see whether any trends can possibly be discerned.

3.8.2 The percentage of tenant holdings in 2002-03 was highest in Orissa (19%). It was 14% in West Bengal, 12-13% in Andhra Pradesh, Punjab and Bihar, about 12% in Uttar Pradesh, and 11% in Haryana.

3.8.3 In most major States the percentage of tenant holdings appears to have dropped appreciably below its 1981-82 level.

3.8.4 The percentage of leased-in area, in 2002-03, was highest among the 15 States in Punjab (17%) and Haryana (14%). The same two States had reported the highest percentages of leased-in area in 1981-82 and 1991-92. Orissa, too, reported a high percentage (13%) of leased-in area in 2002-03. In all other major States, the percentage was less than 10 in 2002-03.

3.8.5 While Table 3.12 gives a good idea regarding the inter-State differentials in both percentage of tenant holdings and share of leased-in area, little can be said definitely regarding trends in the latter parameter at State level. The last survey had noted an

Data for 2002-03 relate to the kharif season.

increase in share of leased-in area in Punjab and Haryana during the 80's, but this increase, even if genuine, does not appear to be continuing. The results of the last survey had suggested that, despite the clear fall in the percentage of tenant holdings, the share of leased-in area could have increased during the 80's. But the results of the 59th round indicate that both percentage of tenant holdings and share of leased-in area are declining (see also Table 3.2). Most States appear to conform to this pattern. Orissa and Gujarat could, however, be exceptions.

3.9 Terms of lease

3.9.1 Leasing of land is contracted by two parties under certain terms of lease that are binding on both parties. In the present survey, leased-in land was classified by terms of lease as follows:

(i) for fixed money (ii) for fixed produce (iii) for share of produce (iv) under service contract (v) for share of produce together with other terms (vi) under usufructuary mortgage (vii) from relatives under no specific terms.⁵

3.9.2 Table 3.13 gives the percentage distribution of leased-in area by the four major terms of lease and the rest put together under "other terms". Sharecropping (40%) was found to be the most prevalent practice of leasing land followed by fixed rent in cash (29.5%) and fixed crop rent (20%).

3.9.3 *Terms of lease and size of holding:* Sharecropping is seen to be the most widely prevalent form of land lease in the three size classes spanning the range 0.04 to 2 hectares

Table 3.13

Data relate to the kharif season.

which accounts for more than 52% of the total leased-in area. "Fixed money" contracts were the most common in the lowest range "below 0.04" (accounting for less than 0.1% of total leased-in area) and in the range 2-10 hectares. If one leaves out the holdings of size below 0.04, the prevalence of fixed money contracts appears to increase more or less steadily with size of holding. Among the large holdings, however, the most common form of contract reported was "fixed produce" (36%). Leasing of land from relatives under no specific terms accounted for as much as 21% of leased-in area in the range "below 0.04" but less than 8% in all other classes and only 4% for all holdings of all sizes considered together.

⁵ Detailed State-level estimates of percentage of holdings reporting leasing in of land under different terms of lease are given in Table 4R of Appendix A. Percentage distributions of leased-in area by terms of lease are given in Table 5R.

3.9.4 *Rise in share of "fixed rent" in tenanted land:* The percentage distributions of leased-in area by terms of lease from the five LHS's of NSSO are given in Table 3.14. It is clear that sharecropping (row 3) has consistently been the most prevalent form of lease contract, accounting for 40% or more of leased-in land according to most of the surveys. A study of trends is, however, complicated by the large proportion of leased-in area against "other" (row 4), which was as high as 41% in the 1981-82 survey and 32% in 1991-92. Examination of the data of 1991-92 revealed that plots for which terms of lease could not be ascertained - terms of lease not recorded or "n.r." cases – contributed to an estimated 16% of the leased-in area. The 32% shown against "other" in that survey is inclusive of this 16%. For a proper comparison of the terms-of-lease distribution in different years, it appears natural to exclude this area from the total in calculating the estimated distribution of leased-in area by terms of lease. This has been possible for the

Sources of estimates of 17th, 26th, 37th and 48th rounds: NSS Report No.407. Data for 2002-03 relate to the kharif season.
Figures in parentheses are the percentages of tenant holdings reporting leased-in area under the terms of lease.

1991-92 survey and the present one (see columns 6 and 8 of Table 3.14). Using these adjusted distributions, one can see that, firstly, the share of leased-in area accounted by sharecropping in 2002-03 is practically the same as it was in 1991-92 – around 41%. Secondly, the shares of both the "fixed rent" -type contracts – "fixed money" and "fixed produce" – are on the increase, at the expense of "other" terms.

3.9.5 *Inter-state variation in leasing under different terms:* The percentage distribution of leased-in area operated under four specific terms of lease and the rest put together in "other" terms is given for 15 major States in Table 3.15. The distributions for the individual States reveal a wide variation over the country in the relative importance of different contracts.

Table 3.15

INDIA	29.5	20.3	40.3	4.0	5.9	100.0

Figures relate to the kharif season.

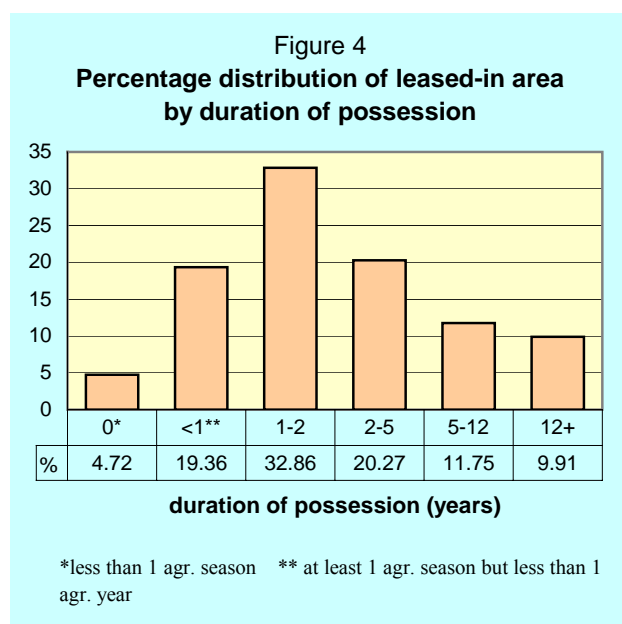

3.9.6 In Punjab and Haryana - the two most agriculturally advanced states in the country - the most prevalent form of contract was fixed rent in cash. About 79% of the tenanted land was contracted for fixed money in Punjab and about 71% in Haryana.

3.9.7 Sharecropping was found to be the predominant form of tenancy in Orissa (73%), former Bihar (i.e. including Jharkhand) (67%), Assam (55%) and former Uttar Pradesh (inclusive of Uttaranchal) (53%). In Madhya Pradesh (including Chhattisgarh), Rajasthan, Maharashtra and West Bengal, too, sharecropping was the most prevalent form of contract, covering 35-40% of tenanted land.

3.9.8 Fixed crop rent was reported as the most common form of tenancy in terms of leased-in area in Gujarat, Karnataka and Andhra Pradesh. In all the Southern States except Kerala, fixed rent (cash or kind) contracts covered over 60% of tenanted land.

3.9.9 While sharecropping and fixed-rent tenancies were the main terms of lease in most of the States, leasing in from relatives under no specific terms was very common in Kerala. Land so possessed accounted for 33% of the tenanted land in the State.

3.10 Duration of possession

3.10.1 Figure 4 shows the percentage distribution of leased-in area during the kharif season by duration of possession. The position for the rabi season was very similar.

3.10.2 At the all-India level, about one-third (32.9%) of leased-in area had been in the possession of the lessee for “1-2” years, that is, for at least one agricultural year but less than two. About 20% of the area had been possessed by the lessee for “2-5” years, and another 19% for at least one agricultural season but less than one agricultural year.

3.10.3 Detailed State-level results are available in Table 6R of

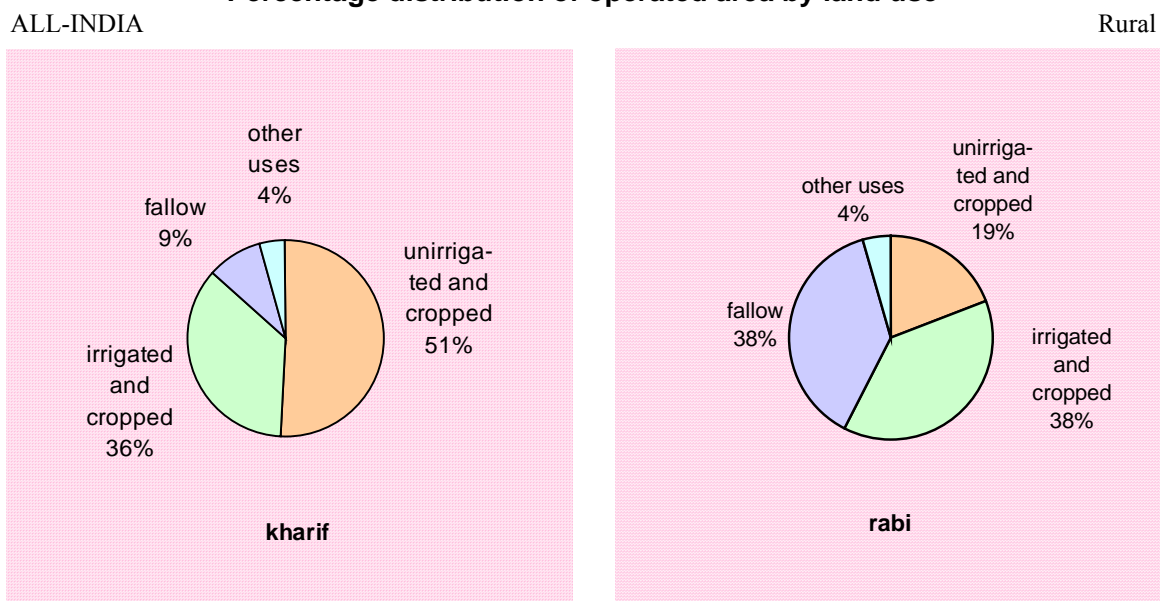

Appendix A.

LAND USE

3.11.1 In presenting information on land use, the standard ninefold classification is followed, with irrigated and unirrigated components of net sown area shown separately. Detailed percentage distributions of area operated by type of land use are given in Table 7R of Appendix A. The uses of land accounting for the largest shares of operated area at all-India level are shown in Figure 5.

3.11.2 During the kharif season, net area sown constituted nearly 87% of all operated land. Irrigated land formed about 36% of operated area, that is, about 42% of net sown area, and unirrigated and cropped land accounted for about 51% of total operated area. About 9% of operated land was left fallow.

Figure 5
Percentage distribution of operated area by land use

3.11.3 During the rabi season of 2002-03, net area sown formed 57% of operated area. Of this, as much as two-thirds – 38% of operated area – was estimated as irrigated. Another 38% of operated area was left fallow.

Table 3.16
Net sown area and its unirrigated and irrigated components as percentage of operated area for major States, 2002-03

U: unirrigated cropped area I: irrigated cropped area N: net sown area

[Abbreviations used in Table 3.16: AP: Andhra Pradesh, ASM: Assam, BIH: Bihar, CHH: Chhattisgarh, GUJ: Gujarat, HAR: Haryana, JHK: Jharkhand, KTK: Karnataka, KRL: Kerala, MP: Madhya Pradesh, MAH: Maharashtra, ORS: Orissa, PUN: Punjab, RAJ: Rajasthan, TN: Tamil Nadu, UP: Uttar Pradesh, WB: West Bengal, IND: India.]

3.11.4 Table 3.16 shows net sown area and its irrigated and unirrigated components as percentages of operated area in each major State. Percentage of operated area sown during the rabi season was under 30% in Orissa (22%), Chhattisgarh (23%), Jharkhand (24%) and Rajasthan (29%). On the other hand, it was as high as 97% in Punjab, 93% in Bihar, 88% in Uttar Pradesh and Haryana, and 87% in Kerala. (For abbreviations used in Table 3.16, please see page 37.)

3.11.5 In Punjab, extent of irrigation of net sown area (irrigated area as proportion of net sown area) was as high as 97-98% not only in the rabi but also in the kharif season. In Haryana and Uttar Pradesh, extent of irrigation was 91% during rabi and 78-80% during kharif. Extent of irrigation even during the rabi season was only about 22% in Assam.

3.12 Area sown under different crops

3.12.1 The land use classification used in collecting plotwise information allows one to estimate detailed percentage distributions of net sown area by type of crop grown (col.1 of Table 3.17 shows the eleven crop groups that were used for classification of crops). These are presented at State and all-India level in Table 8R of Appendix A, separately for different size classes of operational holding.

Table 3.17
Net area sown under different types of crop in kharif and rabi seasons, 2002-03

crop type	% of net sown area		aggregate area (10,000 ha) sown		ratio (col.4/col.5) x 100
	kharif	rabi	kharif	rabi	
	(2)	(3)	(4)	(5)	(6)
(1)					
cereals	63.7	63.8	5950	3764	158
pulses	5.8	11.0	545	651	84
oilseeds	9.0	6.7	845	395	214
mixed crops	5.5	3.5	517	206	251
sugarcane	3.2	2.5	303	148	205
other crops	1.7	1.4	157	82	191
vegetables	1.2	3.5	113	204	55
orchards	1.2	1.8	109	105	104
plantation	2.1	3.1	198	188	105
fibre crops	4.4	1.3	407	75	543
fodder	2.1	1.4	198	81	244
all	100	100	9342	5897	158

3.12.2 At the all-India level, it can be seen from the last column of Table 3.17 that aggregate area sown during kharif was more than double the area sown during rabi for oilseeds and sugarcane, and two and a half times the area sown during rabi with mixed crops. Aggregate area sown being only 58% higher during the kharif season, the percentage shares of these crops in net sown area is substantially higher during the kharif season. The difference is highest, in fact, for the group “fibre crops” (4.4% in kharif and 1.3% in rabi). For pulses, on the other hand, the area sown during rabi was higher than the area sown during kharif, and for vegetables, it was nearly twice as high. As a result, the percentage share of pulses in net sown area was 11% during the rabi season compared to 5.8% during kharif, and the percentage share of vegetables was nearly three times what it was during kharif. For the cereals group, area sown was higher during kharif by the same proportion (58%) as was aggregate area sown, and so its share remained the same (64%) in both seasons.

3.13 Size of ownership holding and area operated by a household

10.0 – 20.0	10	62	929	10	1000
> 20.0	30	98	901	-	1000

3.13.1 The general nature of the relationship between the size of a household’s ownership holding (area owned by the household) and the area operated by it - or size of household operational holding (HOH) - is explored in Table 3.18 for the operational holdings of the kharif season – the picture for the rabi season is similar. Among households owning an area of land in any of the lowest four size classes, that is, up to the size class “0.005-0.40 ha”, the majority were non-operating households (see second column of Table 3.18). From the size class “0.040-0.5 ha” upwards, however, 90 per cent

or more households (96% or more from the size class “0.5-1.0” onwards) operated some land (second column of Table 3.18, subtracted from 1000, gives the number per 1000). Further, for 82% or more households in these size classes, the operated area was in the same size class as the area owned (see fourth column of Table 3.18). More details, including State-level results, are available in Table 11R of Appendix A.

3.14 Other aspects of operational holdings

3.14.1 Distribution of households by number of holdings operated is presented State/ UT-wise in Table S9-R of Appendix A. At the all-India level only 0.1% of rural households operated more than one holding. The table therefore mainly serves to point out the proportions of operating and non-operating households in different States and Union Territories.

3.14.2 Table 3.19 shows, at the all-India level, the percentage break-up of adult household members (persons aged 15 or more) by employment status (employed in agriculture/ employed in non-agriculture/ unemployed or not in labour force), separately for rural households in each size class of household operational holding. The size of the household operational holding during the kharif season has been used to classify the households.

Table 3.19
Percentages of adult* household members employed in agriculture and non-agriculture for households in different size classes of household operational holding of kharif season, 2002-03

> 20.0	69	3	28	100
all sizes	55	12	33	100

*adult: aged 15 or more

3.14.3 In households with size of operational holding above 0.5 hectares, 64-69% of the adult household members were employed in agriculture and 3-4% in non-agriculture. On the other hand, in operating households with size of operational holding 0.04 hectares or less, 16-18% of adult members were employed in non-agriculture. In the class 0.040-0.5 ha, accounting for 23.6% of rural households⁶ at the all-India level, 61% of adult household members were employed in agriculture and 7% in non-agriculture.

3.14.4 Table 12R of Appendix A gives, separately for households in each size class of household operational holding, the break-up of average number of household members into adults and children (persons below 15 years of age), and the break-up of numbers of adults and children by employment status (employed in agriculture/ employed in non-agriculture/ unemployed/ not in labour force). Households are classified by size of household operational holding during the kharif season.

3.14.5 Appendix A gives the detailed tables based on the survey. Estimates are given separately for 13 size classes of operational holdings for rural areas of 27 States in Tables 1R to 12R. For Union Territories, urban areas of all States, and rural areas of Delhi and Goa, estimates are given for the State/UT as a whole (rural and urban separately), in Tables S1 (R&U) to S10 (R&U).

⁶ Per 1000 distributions of households by size class of household operational holding are shown in Appendix A, Table 10R. The all-India tables are on page A 253.

Appendix B

Sample Design and Estimation Procedure

Sample Design and Estimation Procedure

1. Geographical coverage: The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

2. Period of survey: The survey period of this round was January to December 2003.

3. Visits: There were four subjects of enquiry in the 59th round of NSS: Land and Livestock Holdings, Debt and Investment, Consumer Expenditure, and Situation Assessment Survey (SAS) of Farmers. With the exception of consumer expenditure, all the enquiries required two visits to each sample household for collection of data: one during January to August and the other during September to December. Accordingly, each sample first-stage unit (village or block) was visited twice by the investigator to whom it was allotted. A small proportion of households could not be surveyed a second time due to varying reasons; for these, only one set of data could be collected. Some items of information were in any case collected in the first visit only; these included general household characteristics, age, sex, educational level and other characteristics of household members. Also, importantly, information on livestock owned was collected only in the first visit. The field work during the first visit included the canvassing of the listing schedule (Sch. 0.0) and selection of the sample households.

4. Sub-rounds: The survey period of the round was divided into two sub-rounds. Sub-round one consisted of the first half of the survey period of each visit while sub-round two consisted of the remaining period. Equal numbers of sample villages/blocks were allotted to each sub-round and a village/block was normally surveyed in the sub-round to which it is allotted. Because of arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

5. Participation of States: All the States and Union Territories except Andaman & Nicobar Islands, Dadra & Nagar Haveli and Lakshadweep participated at least on an equal matching basis. The following was the matching pattern of the participating States/UTs.

Nagaland (Urban)	: triple
J & K , Manipur & Delhi	: double
Goa, Maharashtra (Urban)	: one and half
Remaining States/UTs	: equal

6. Sample design

6.1 Broad design: A stratified multi-stage design was adopted for the 59th round survey. The first-stage units (FSU) were the census villages (*panchayat* wards in Kerala) in the rural sector and UFS blocks in the urban sector. In both sectors, the ultimate stage units were households. In large villages/ blocks, an intermediate stage unit called hamlet-group/ sub-block was also involved.

6.2 Sampling frame for first-stage units: The list of villages (*panchayat* wards for Kerala) as per Population Census 1991 was used as sampling frame in rural areas; for urban areas, the latest UFS frame was used.

6.3 Stratification

6.3.1 Rural Sector: Two *special strata* were formed at the State/ UT level:

Stratum 1: all FSU's with population between 0 to 50 and

Stratum 2: FSU's with population more than 15,000.

6.3.1.1 Special stratum 1 was formed whenever at least 50 such FSU's were found in a State/UT. Similarly, special stratum 2 was formed if at least 4 such FSU's were found in a State/UT. Otherwise, such FSU's were merged with the general strata.

6.3.1.2 From FSU's other than those covered under special strata 1 & 2, *general strata* were formed, their numbering starting from 3 onwards. Each district of a State/UT was normally treated as a separate stratum. However, if the census rural population of the district was greater than or equal to 2 million as per Population Census 1991 or 2.5 million as per Population Census 2001, the district was split into two or more strata by grouping contiguous tehsils. However, in Gujarat, some districts were not wholly included in an NSS region. In such cases, the part of the district falling in each NSS region constituted a separate stratum.

6.3.2 Urban Sector: In the urban sector, strata were formed within each NSS region on the basis of size class of towns as per Population Census 2001. The stratum numbers and their composition (within each region) are given below.

stratum 1 :	all towns with population less than 50,000
stratum 2 :	all towns with population 50,000 or more but less than 2 lakhs
stratum 3 :	all towns with population 2 lakhs or more but less than 10 lakhs
stratum 4, 5, 6,... :	each city with population 10 lakhs or more

The stratum numbers remained as above even if, in some regions, some of the strata did not exist.

6.4 Total sample size (FSU's): 6760 villages and 3824 urban blocks were allocated at all-India level for the Central sample. Ultimately, 6638 villages and 3764 urban blocks were surveyed. In all 82158 households were interviewed.

6.5 Allocation of total sample to States and UTs: The total number of sample FSU's was allocated to the States and UTs in proportion to provisional population as per Census 2001 subject to the availability of investigators, so as to ensure more or less uniform workload.

6.5.1 Allocation of State/UT level sample to rural and urban sectors: State/UT level sample size was allocated between the rural and urban sectors in proportion to provisional population as per Census 2001 with 1.5 weightage to the urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc. would not exceed the rural sample size. The earlier practice of giving double weightage to urban sector was modified considering the fact that two important subjects of enquiry (Land and

Livestock Holdings and Situation Assessment Survey of Farmers) were rural-based and there had been considerable growth in urban population over the years. More FSU's were, however, allocated to the rural sector of Meghalaya state sample at the request of the DES, Meghalaya.

6.5.2 Allocation to strata: Within the rural area of a State/UT, the sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 2 with a minimum sample size of 2. However, a multiple of 4 FSU's was allocated to a stratum wherever possible.

6.6 Selection of FSU's: In all the strata except for stratum 1, FSU's were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 1991. In stratum 1 of the rural sector and in all the strata of the urban sector, selection was done using Simple Random Sampling Without Replacement (SRSWOR). Samples were drawn in the form of two independent sub-samples in both rural and urban sectors.

6.7 Selection of hamlet-groups and households

6.7.1 Formation of hamlet-groups/ sub-blocks: Large villages/blocks having approximate present population 1200 or more were divided into a suitable number of hamlet-groups/sub-blocks (h-g's/ s-b's) as shown below:

approx. present population of sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 1200	1*
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	...

*(i.e., no h-g/ s-b formation)

6.7.2 For rural areas of Himachal Pradesh, Sikkim and Nagaland, and Poonch, Rajouri, Udhampur and Doda districts of Jammu and Kashmir, the number of hamlet-groups formed was as follows:

approx. present population of sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 600	1*
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	...

*(i.e., no h-g/ s-b formation)

6.7.3 Hamlet-groups/ sub-blocks were formed by more or less equalising population. Two hamlet-groups/ sub-blocks were selected from a large village/ block by SRSWOR. Listing and selection of the households was done independently in the two selected hamlet-groups/ sub-blocks so formed.

6.8 Formation of second-stage strata (SSS):

6.8.1 Rural

6.8.1.1 From the data of NSS 48th round, households having land area 0.005 hectares or more were considered. Two cut-off points, X and Y, were determined at State/UT level in such a way that 40% of these households possessed land area less than X, 40% possessed land area between X & Y and 20% possessed land area greater than Y.

6.8.1.2 For the land and livestock holdings survey of the 59th round, four second-stage strata (SSS) were formed in the rural sector as follows:

- SSS 1: households with land less than 0.005 hectare
- SSS 2: households with land equal to or more than 0.005 hectares but less than X
- SSS 3: households with land equal to or more than X but less than Y
- SSS 4: households with land equal to or more than Y

6.8.2 Urban

6.8.2.1 Four second-stage strata (SSS) were formed as follows: First, three cut-off points, viz. A, B & C, at State/UT level were determined using NSS 55th round data in such a way that 30% of the households had MPCE less than A, 30% had MPCE more than or equal to A but less than B, 30% had MPCE more than or equal to B but less than C and the remaining 10% of the households had MPCE more than or equal to C.

6.8.2.2 The SSS for Sch. 18.1 in the urban sector were as follows:

- SSS 1: households with MPCE less than A
- SSS 2: households with MPCE equal to or more than A but less than B
- SSS 3: households with MPCE equal to or more than B but less than C
- SSS 4: households with MPCE equal to or more than C

6.9 Allocation and selection of sample households: Eight sample households were allocated to each sample FSU. In case of no hamlet-group formation, two households were selected from each of the four second-stage strata. In case of hamlet-group formation, one household was selected from each SSS of each hamlet-group. Sample households were selected by SRSWOR in each SSS of each hamlet-group.

7. Estimation procedure

7.1 Notations:

s = subscript for stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU

d = subscript for a hamlet-group (d = 1, 2)

j = subscript for second-stage stratum of an FSU/ h-g/ s-b

k = subscript for sample household of a particular second-stage stratum within an FSU/ h-g/ s-b

D = total number of h-g's formed in the sample FSU

$D^* = 1$ if $D = 1$

$= D \div 2$ for FSU's with $D > 1$

N = total number of FSU's in stratum 1

Z = total size of a stratum other than stratum 1 (= sum of sizes for all the FSU's of a stratum other than stratum 1)

z = size of sample FSU used for selection.

n = number of sample FSU's surveyed including zero cases but excluding casualty for a particular sub-sample and stratum.

H = total number of households listed in a second-stage stratum of a h-g/s-b of the sample FSU

h = number of households surveyed in a second-stage stratum of a h-g/s-b of the sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X}, \hat{Y} = estimate of population total X, Y for the characteristics x, y .

In terms of the above symbols,

y_{smidjk} = observed value of the characteristic y for the k^{th} household in the j^{th} second stage stratum of the d^{th} h-g ($d = 1, 2$) of the i^{th} FSU belonging to the m^{th} sub-sample for the s^{th} stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum:

Rural:

Estimation formula for stratum 1:

(i) For households selected in j^{th} second stage stratum ($j=1, 2, 3$ or 4):

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other strata:

(i) For households selected in j^{th} second stage stratum ($j=1,2,3$ or 4):

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Urban:

(a) Estimation formula for a stratum:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) *Estimates in respect of joint operational holdings:* In the case of joint operational holdings operated by the sample household jointly with other household(s), the value of a characteristic of the operational holding is first multiplied by the percentage share of land of the sample household(s) and then the higher estimates are built up.

7.3 Overall estimate of aggregates for a stratum:

Overall estimate for an aggregate for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

7.3.1 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

7.4 Estimates of ratios:

Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

7.5 Estimates of Error:

The variances of the above estimates are estimated as follows:

A) For aggregate \hat{Y} :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$$

where $V\hat{a}r(\hat{Y}_s)$ are as given below.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \sum_j V\hat{a}r(\hat{Y}_{sj})$$

$$\text{where } V\hat{a}r_{ppswr}(\hat{Y}_{sj}) = \frac{1}{n_{sj}(n_{sj} - 1)} \left[\sum_{i=1}^{n_{sj}} \frac{Z_s^2 \hat{Y}_{sij}^2}{z_{si}^2} - n_{sj} \hat{Y}_{sj}^2 \right]$$

$$\hat{Y}_{sij} = D_{si}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1 and all urban strata):

$$V\hat{a}r_{srswor}(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$$

where \hat{Y}_{s1} and \hat{Y}_{s2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's'.

B) For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[\sum_s M\hat{S}E_s(\hat{R}) + \sum_{s'} M\hat{S}E_{s'}(\hat{R}) \right]$$

where s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$M\hat{S}E_s(\hat{R}) = \frac{1}{n_s(n_s - 1)} \sum_{i=1}^{n_s} \left[\frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) - \frac{1}{n_s} \sum_{i=1}^{n_s} \frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) \right]^2$$

where

$$\hat{Y}_{si} = \sum_j \hat{Y}_{sij}, \quad \hat{X}_{si} = \sum_j \hat{X}_{sij},$$

$$\hat{Y}_{sij} = D_{si}^* \left[\frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} y_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} y_{si2jk} \right],$$

$$\hat{X}_{sij} = D_{si}^* \left[\frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} x_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} x_{si2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1 and all urban strata):

$$M\hat{S}E_{s'}(\hat{R}) = \frac{1}{4} \left[(\hat{Y}_{s'1} - \hat{Y}_{s'2})^2 + \hat{R}^2 (\hat{X}_{s'1} - \hat{X}_{s'2})^2 - 2\hat{R}(\hat{Y}_{s'1} - \hat{Y}_{s'2})(\hat{X}_{s'1} - \hat{X}_{s'2}) \right]$$

C) Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{\text{Var}(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

7.6 Multipliers:

The formulae for multipliers for a sub-sample are given below:

stratum	formula for multipliers	
	hg / sb 1	hg / sb 2
rural stratum 1 and all urban strata	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{N_s}{n_{sm}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4
rural s ≠ 1	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4

Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, an indicator variable is used.

(ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

7.7 Treatment for zero cases, casualty cases etc.

7.7.1 While counting the number of FSU's surveyed (n_{sm}) in a stratum, all the FSU's with survey codes 1 to 6 in listing schedule 0.0 are considered. In addition, if no household is available in the frame, the FSU is still treated as surveyed. However, if households are available in the frame of the FSU but none of them could be surveyed, then that FSU is treated as casualty.

7.7.2 *Casualty cases:* FSU's with survey code 7 as per listing schedule 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualty for a particular schedule type and a particular *second-stage stratum* as explained in the next paragraph.

7.7.3 FSU's with survey codes 1 and 4 as per listing schedule having number of households in the frame of j^{th} second-stage stratum greater than 0 but number of households surveyed according to data file, considering both h-g/s-b's together, as nil (i.e. $H_{i1j} + H_{i2j} > 0$ but $h_{i1j} + h_{i2j} = 0$) are taken as casualties for j^{th} second-stage stratum.

7.7.4 *All the FSU's with survey codes 1 to 6 as per listing schedule minus the number of casualties as identified above are taken as the number of surveyed FSU's (n_{smj}) for that stratum \times second stage stratum.*

7.7.5 When casualty for j^{th} second stage stratum occurs for a particular h-g/s-b but not for the other h-g/s-b, the FSU is not treated as casualty, but some adjustments in the value of H for the other h-g/s-b are done as follows:

(i) Suppose for h-g/s-b 1, $H_{i1j} > 0$ but $h_{i1j} = 0$ while for h-g/s-b 2, $H_{i2j} > 0$ and $h_{i2j} > 0$. In that case $D_i^* \times H_{i2j}$ is replaced by $H_{i1j} + D_i^* \times H_{i2j}$ in the formula for multiplier of segment 2.

(ii) Suppose for h-g/s-b 1, $H_{i1j} > 0$ and $h_{i1j} > 0$ while for h-g/s-b 2, $H_{i2j} > 0$ but $h_{i2j} = 0$. In that case H_{i1j} is replaced by $H_{i1j} + D_i^* \times H_{i2j}$ in the formula for multiplier of h-g/s-b 1.

It may be noted that n_{smj} will be the same for h-g/s-b 1 & 2 of an FSU.

7.8 Treatment in cases of void second-stage strata/sub-strata /strata/NSS region at FSU or household level

7.8.1 A stratum may be void because of the casualty of all the FSU's belonging to the stratum. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then the estimate for the void stratum is replaced with the estimate obtained from the other sub-sample for the same stratum.

7.8.2 When a stratum is void in both the sub-samples, the following procedure is used:

Case (I): Stratum void cases at FSU levels (i.e. all FSU's having survey code 7):

- i) If a stratum, other than stratum 1, is void then it may be merged with a similar stratum within the same NSS region. However, if stratum 1 is void for any State/UT, it is not merged with any other stratum.
- ii) If all the strata within an NSS region are void, it is regarded as excluded from the coverage of the survey. The state-level estimates are based on the estimates of NSS regions for which estimates are available.

Case (II): Stratum void case at second-stage stratum level (i.e. all the FSU's are casualties for a particular second-stage stratum):

An FSU may be a casualty for a particular *second-stage stratum* although survey code is not 7. If all the FSU's of a stratum become casualties in this manner for a particular *second-stage stratum*, the stratum becomes void. The adjustment for this type of stratum void case is done according to the following guidelines.

The adjustment is made involving other strata (within NSS region) of the State/UT. Suppose A, B, C, and D are the four strata in the State/UT/Region and stratum C is void for j-th *second stage stratum*. If \hat{Y}_{aj} , \hat{Y}_{bj} and \hat{Y}_{dj} are the aggregate estimates for the strata A, B and D respectively, then the estimate \hat{Y}_{cj} for stratum C is obtained as

$\left(\frac{\hat{Y}_{aj} + \hat{Y}_{bj} + \hat{Y}_{dj}}{Z_a + Z_b + Z_d} \times Z_c \right)$ where Z_a , Z_b , Z_c and Z_d are the sizes of strata A, B, C and D respectively.
