

Report No. 512(61/1.0/5)

Perceived Adequacy of Food Consumption in Indian Households 2004-2005

NSS 61st Round
July 2004- June 2005

**National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India**

February 2007

Preface

Data on household consumer expenditure are being collected every year by the National Sample Survey Organisation (NSSO) as part of its regular rounds, each round normally of a year's duration and including two or three subjects of survey. Data are collected by the household interview method from a randomly selected sample of households spread over all States and Union Territories of India.

While every round of NSS nowadays includes a consumer expenditure survey, the 61st round survey (July 2004 - June 2005), on which this report is based, belongs to the quinquennial series of consumer expenditure surveys, started in the 27th round of NSS (1972-73), and covering a larger-than-usual sample of households. The 61st round survey of consumer expenditure is the seventh survey of the quinquennial series.

This report is based on the Central sample, from which data were collected by NSSO officials, as opposed to the State sample, where officials of the State Government carried out the survey. For the Central sample, data were collected from 124,644 households spread over 7999 villages and 4602 urban blocks.

This report is one of the seven reports to be brought out from the data on consumer expenditure collected through this quinquennial survey. It presents data on whether its members had enough food to eat everyday throughout the year. The results of the survey do *not* constitute an objective measurement of food inadequacy in the country, but indicate the subjective perception of the population about it. However, another important aspect of this survey was the prior judgment or perception of the investigator *before* seeking response about a household's food adequacy status. It was left to the investigator's judgment whether he would ask about household's food availability status or not. The information was obtained by asking a direct question if the investigator suspected that the household might have experienced inadequacy of food. In case the investigator could judge that the household did not suffer from any food shortage, he or she was allowed to record this fact without asking direct question.

Most of the tables presented in this report relate to the estimated breakdown of population by perceived food availability status. There are three statuses. '*Getting enough food throughout the year*' (Food adequate in all months), '*not getting enough food in some months*' (food inadequate in some months of the year) and '*not getting enough food everyday in any month of the year*' (food inadequate in all months).

Chapter One of the report serves as the introduction. Chapter Two explains the concepts and definitions used in the survey. Chapter Three gives sample design and the estimation procedure of 61st round survey. Chapter Four gives the main findings of the survey. Detailed tables at the State/UT and all-India level are given in Appendix A. A facsimile of the schedule used for data collection is given as Appendix B.

Development of sampling design and survey instruments, and preparation of the report, was undertaken by the Survey Design and Research Division of the NSSO. The field work was handled by the Field Operations Division and the data processing and table generation by the Data Processing Division. The Coordination and Publication Division was responsible for overall

coordination. The Chairman and Members of the Steering Committee of NSSO, along with the Chairman and Members of the Working Group set up for this round, provided the technical directions and guidance at every stage of the survey. I am grateful to all of them.

The report, I hope, will be useful to planners, policy makers and researchers. Comments and suggestions are most welcome.

New Delhi
February 5, 2007

P. K. Ray
Director General & Chief Executive Officer

Highlights

- This report presents data on perception of Indian households by daily availability of enough food during the last 365 days based on a sample of 74298 households and 403207 persons in the rural area and 45346 households and 206529 persons in urban area.

- In rural areas, the percentage of households where all the members reported enough food everyday throughout the year rose from 94.5% to 97.4% during the period from 1993-94 to 2004-05.

- In urban areas, the percentage of households getting enough food everyday throughout the year increased from 98.1% to 99.4% over the period from 1993-94 to 2004-05.

- In rural areas, the 'agricultural labour' households reported the highest proportion of perceived seasonal inadequacy of food. The households 'self-employed in agriculture' showed the lowest percentage of seasonal inadequacy of food.

- Among the social groups, the percentage of households not getting enough food everyday in some months of the year was the highest for the ST households (3.7%) followed by SC households (3.3%) in rural area. However in urban areas, the corresponding percentages were equal and lower than their rural counterparts.

- The percentage of rural households 'not having enough food everyday in some months' was the highest in West Bengal (10.6%) followed by Orissa (4.8%), and the lowest in the States of Haryana and Rajasthan. In rural area, Assam reported the highest percentage of households (3.6%) 'not getting enough food every day in all months of the year' followed by Orissa and West Bengal (1.3%) as per perception of field officials. In the urban area highest percentage was reported by Assam (2.1%) followed by Bihar (1.1%).

- Among the deferent types of ration card holders the Antodaya Card holders had highest percentage of 'not having enough food everyday in some months of the year ' followed by BPL cardholders in the rural area. However, BPL card holders reported higher percentage of seasonal inadequacy of food than Antodaya Card holders in the urban area.

- Interestingly, in both the rural and the urban areas, there was a plausible association between the proportion of households reporting food adequacy status and certain objectively ascertained quantitative indicators of food availability, namely, level of monthly per capita (MPC) total expenditure, MPC food expenditure, MPC calorie intake and the ratio of intake of kilo-calorie (Kcal) per consumer unit to the norm level of 2700 Kcal. Surprisingly, however, it was not associated with MPC quantity of cereals consumed.

- In the rural areas, proportion of households reporting inadequacy of food during the months from December to March was higher than in other months. In the urban areas, such inadequacy was reported from December to February but by a much lower percentage of households.

Perceived Adequacy of Food Consumption in Indian Households

Chapter One

Introduction

- 1.0 The National Sample Survey Organisation (NSSO)** was set up in 1950, with the idea of having a permanent survey—conducting machinery to collect data on various facets of the economy through nationwide sample surveys. The National Sample Surveys (NSS) are organized in the form of successive "rounds", each round usually of a year's duration, covering several topics of current interest during a survey period. At present each NSS round covers, at the all-India level, about 12,000 to 14,000 villages and blocks in the *Central sample* (covered by the Central agency NSSO) and an independent sample of about 14,000 to 16,000 villages and blocks in the *State sample* (covered by the Governments of various states and union territories). The entire area of the country - rural and urban - is covered, with the exception of some interior areas of Nagaland and Andaman & Nicobar Islands, and Ladakh and Kargil districts of Jammu & Kashmir.
- 1.1** The present report is based on data collected in the 61st round of NSS (July 2004-June 2005). It was the seventh quinquennial survey on Consumer Expenditure and Employment-Unemployment. The present report on **Perceived Food Adequacy in India** is the fifth in the series being compiled on the results of consumer expenditure survey of that round.
- 1.2 Historical background:** The original practice was to collect data on household consumer expenditure in every round of NSS, starting from the very first round (1950-51). From 1972-73, according to a decision of the Governing Council of NSSO, the consumer expenditure survey became a quinquennial feature and was also integrated with the employment and unemployment survey in the sense that a common sample of households was canvassed for both the enquiries. However, independent samples of households for these two enquiries are being canvassed since the quinquennial 55th round. An annual series of consumer expenditure surveys was re-launched from the 42nd round (1986-87) to fill the data gaps reported by planners and researchers. It is the larger-scale quinquennial surveys, however, which are more widely used for the study of trends in the level of consumer expenditure and of the emergence of new spending patterns. So far, seven quinquennial surveys of consumer expenditure have been conducted in the 27th, 32nd, 38th, 43rd, 50th and 55th rounds of NSS. They relate, respectively, to the years 1972-73, 1977-78, 1983, 1987-88, 1993-94, 1999-2000 and 2004-05.
- 1.3** This report presents data on the *perception* of Indian households with regard to the availability of enough food everyday, information on which was collected during the survey, as in earlier

surveys on consumer expenditure. A similar report was brought out on the basis of results of NSS 55th round¹ survey (July 1999 – June 2000).

The basic data included in the present report are:

- Distribution of rural/urban households of each household type by food availability status.
- Distribution of households of each social group by food availability status
- Per 1000 distribution of households holding different kinds of ration card by food availability status
- Average MPCE and per capita food expenditure, cereal consumption and calorie intake of households by food availability status
- Number per 1000 of households not getting enough food every day for different calendar months of the year July 2004 – June 2005
- Per 1000 distribution of households of each State by number of calendar months of the year July 2004 – June 2005 during which there was not enough food every day for the household.

1.4 With a view to studying the movements over time, the estimates of food adequacy reported in the present survey have been compared with the estimates from last two quinquennial surveys on consumer expenditure conducted during NSS 50th round (July 1993 – June 1994) and NSS 55th round (July 1999 – June 2000), respectively.

1.5 The Sample Design and Estimation Procedure followed in the NSS 61st round survey is given in Chapter 2. Chapter 3 presents important concepts and definitions adopted in the survey and used in this report. The survey findings on the *perception* of Indian households regarding sufficiency of food are presented in Chapter 4. The detailed tables have been provided for each State, UT and all-India in Appendix tables.

¹ NSS Report No. 466: Reported Adequacy of Food Intake in India, 1999-00

Chapter Two

Sample Design and Estimation Procedure

2 Outline of Survey Programme

- 2.1 Subject Coverage:** The 61st round (July 2004-June 2005) of NSS was earmarked for survey on 'Household Consumer Expenditure' and 'Employment and Unemployment'. This quinquennial survey was the seventh in the series, the last one being conducted in the 55th round (1999-2000) of NSS.
- 2.2 Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.
- 2.3 Period of survey and work programme:** The period of survey was of one year duration starting on 1st July 2004 and ending on 30th June 2005. The survey period of this was divided into four sub-rounds of three months duration each as follows:

- sub-round 1 : July - September 2004
- sub-round 2 : October - December 2004
- sub-round 3 : January - March 2005
- sub-round 4 : April - June 2005

In each of these four sub-rounds equal number of sample villages/blocks (FSUs) was allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempt was made to survey each of the FSUs during the sub-round to which it has been allotted. *Because of the arduous field conditions, this restriction could not be strictly enforced in Andaman and Nicobar Islands, Lakshadweep, rural areas of Arunachal Pradesh and Nagaland.*

- 2.4 Schedules of enquiry:** During this round, the following schedules of enquiry was canvassed:

- Schedule 0.0 : list of households
- Schedule 1.0 : consumer expenditure
- Schedule 10 : employment and unemployment

2.5 Sample Design

2.5.1 Outline of sample design: A stratified multi-stage design had been adopted for the 61st round survey. The first stage units (FSU) were the 2001 census villages in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large villages/blocks requiring hamlet-group (hg)/sub-block (sb) formation, one intermediate stage was the selection of two hgs/sbs from each FSU.

2.5.2 Sampling Frame for First Stage Units: *For the rural sector*, the list of 2001 census villages (panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available Urban Frame Survey (UFS) blocks was used as the sampling frame.

2.5.3 Stratification: Within each district of a State/UT, two basic strata were formed: (i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. However, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them was formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum. There were 27 towns with population 10 lakhs or more at all-India level as per census 2001.

2.6 Sub-stratification:

2.6.1 Rural sector: If 'r' be the sample size allocated for a rural stratum, the number of sub-strata formed would be 'r/2'. The villages within a district as per frame would be first arranged in ascending order of population. Then sub-strata 1 to 'r/2' would be demarcated in such a way that each sub-stratum will comprise a group of villages of the arranged frame with more or less equal population.

2.6.2 Urban sector: If 'u' be the sample size for a urban stratum, 'u/2' number of sub-strata would be formed. The towns within a district, except those with population 10 lakhs or more, would be first arranged in ascending order of population. Next, UFS blocks of each town would be arranged by *Investigator unit no*¹. × block no. in ascending order. From this arranged frame of UFS blocks of all the towns, 'u/2' number of sub-strata would be formed in such a way that each sub-stratum would have more or less equal number of UFS blocks.

2.6.3 For towns with population 10 lakhs or more, the urban blocks would be first arranged by IV (investigator unit) unit no. × block no. in ascending order. Then 'u/2' number of sub-strata would be formed in such a way that each sub-stratum would have more or less equal number of blocks.

¹ One investigator unit (IV unit) amounts to 600 to 700 blocks. Codes for investigator unit is used as identification particular.

- 2.6.4 Sample size – first-stage units:** As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a “State sample” was surveyed by State Government officials in addition to the “Central sample” surveyed by NSSO. For rural India, 8124 villages formed the Central sample for this round. Of these, 7999 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 4660 blocks, of which 4602 were surveyed. This report ~~wa~~ is based on the estimates obtained from the Central sample only.
- 2.6.5 Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per census 2001 subject to the availability of investigators ensuring more or less uniform work-load.
- 2.6.6 Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample was allocated between two sectors in proportion to population as per *census 2001* with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu etc. should not exceed the rural sample size. A minimum of 8 FSUs would be allocated to each state/UT separately for rural and urban areas.
- 2.6.7 Allocation to strata:** Within each sector of a State/UT, the respective sample size would be allocated to the different strata in proportion to the stratum population as per census 2001. Allocations at stratum level would be adjusted to a multiple of 4 with a minimum sample size of 4.
- 2.6.8 Selection of FSUs:** Two FSUs were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 2001 from each sub-stratum of a district of rural sector. For urban sector, from each sub-stratum two FSUs were selected by using Simple Random Sampling Without Replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors.
- 2.6.9 Criterion for hamlet-group/sub-block formation:** After identification of the FSU, it is to be determined whether listing was to be done in the whole sample FSU or not. In case the population of the selected village or block was found to be 1200 or more, it was divided into a suitable number (say, D) of ‘hamlet-groups’ in the rural sector and ‘sub-blocks’ in the urban sector as stated below.

approximate present population of the sample village/block	no. of hgs/sbs to be formed
less than 1200 (no hamlet-groups/sub-blocks)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

Two hamlet-groups/sub-blocks were selected from a large village/UFS block wherever hamlet-groups/sub-blocks had been formed, by SRSWOR. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

2.6.10 Listing of households: Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those found to be temporarily locked after ascertaining whether locking was temporary through local enquiry). The hamlet-group/sub-block with sample hg/sb number 1 would be listed first and that with sample hg/sb number 2 will be listed next.

2.7 Formation of Second Stage Strata and allocation of households

For both Schedule 1.0 and Schedule 10, households listed in the selected village/block/hamlet-groups/sub-blocks would be stratified into three second stage strata (SSS) as given below.

2.7.1 Rural: The three second-stage-strata (SSS) in the rural sector were formed in the following order:

- SSS 1: relatively affluent households
- SSS 2: from the remaining households, households having principal earning from non- agricultural activity
- SSS 3: other households

2.7.2 Urban: In the urban sector, the three second-stage strata (SSS) were formed as under:

Two cut-off points, say 'A' and 'B', based on MPCE of NSS 55th round, were determined at **NSS Region level** in such a way that top 10% of households have MPCE more than 'A' and bottom 30% have MPCE less than 'B'. Then three second-stage-strata (SSS) were formed in the urban sector in the following order:

- SSS 1: households with MPCE more than A (i.e. $MPCE > A$)
- SSS 2: households with MPCE equal to or less than A but equal to or more than B (i.e. $B \leq MPCE \leq A$)
- SSS 3: households with MPCE less than B (i.e. $MPCE < B$)

2.7.3 The number of households to be surveyed in each FSU is 10 for each of the schedules 1.0 and 10. Composition of SSS with number of households to be surveyed for both schedule 1.0 and schedule 10 would be as follows:

SSS	composition of SSS	no. of hhs to be surveyed	
		without hg/sb formation	with hg/sb formation (for each hg/sb)
rural			
SSS 1:	relatively affluent households	2	1
SSS 2:	of the rest, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	4	2

urban			
SSS 1:	households with MPCE > A	2	1
SSS 2:	other households with MPCE equal to or less than A but equal to or more than B (i.e. $B \leq MPCE \leq A$)	4	2
SSS 3:	households with MPCE less than B	4	2

2.8 Selection of households for Schedules 1.0 and 10: From each SSS the sample households for both the schedules was selected by SRSWOR. If a household was selected both for schedule 1.0 and schedule 10 only schedule 1.0 was canvassed in that household and the household was replaced by next household in the frame for schedule 10.

2.8.1 Table P1 shows the number of villages and urban blocks allotted for survey and the numbers actually surveyed, and the number of households in which the consumer expenditure schedule, “Schedule 1.0”, was canvassed.

P 1: Number of villages/blocks allotted and surveyed for Schedule 1.0 and number of households and persons surveyed: Central sample

State/UT	no. of villages		no. of blocks		sample households		sample persons	
	allotted	surveyed	allotted	surveyed	rural	urban	rural	urban

Pondicherry	16	16	56	56	160	560	640	2292
All India	8128	7999	4660	4602	79298	45346	403207	206529

2.8.2 In rural area total number of villages surveyed was 7999. Out of which 55 villages were found to be either uninhabited or became urbanized ('0' cases). In urban area the total number of de-urbanized or uninhabited blocks were 44. As a result, household level data were available for 7944 villages and 4558 urban blocks.

2.9 Estimation Procedure

2.9.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU [village (panchayat ward) / block]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb (j = 1, 2 or 3)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample village (panchayat ward) / block

$D^* = 1$ if $D = 1$

= $D / 2$ for FSUs with $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural sub-stratum (sum of sizes for all the FSUs of a rural sub-stratum)

z = size of sample village used for selection.

n = number of sample village / block surveyed including zero cases but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

y_{smidjk} = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum;

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

2.9.2 Formulae for Estimation of Aggregates for a particular sub-sample and stratum in Rural / Urban sector:

2.9.2.1 Rural:

Estimation formula for a sub-stratum:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

2.9.2.2 Urban:

Estimation formula for a sub-stratum:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

2.9.3 Estimate for a stratum:

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

2.9.4 Overall Estimate for Aggregates:

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

2.9.5 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

2.9.6 Estimates of Ratios:

Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

Chapter Three

Concepts and Definitions

3.0 The concepts and definitions followed in the seventh quinquennial survey on household consumer expenditure are more or less the same as in the earlier rounds. The concepts and definitions of the terms used or relevant in the report are given below.

3.1 Household: A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

3.2 Adult: A person who has completed 15 years of age.

3.3 Household size: The size of a household is the total number of persons in the household.

3.4 Household consumer expenditure: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

3.5 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made in cash or credit during the

reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the expenditure made during the reference period for the purchase or acquisition of goods and services is considered as consumption.

3.6 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household *and also* by the guests during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan advance, etc. made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in the household kitchen and served to the employees and/or guests would automatically get included in domestic consumption of employer (server) household. There is a practical difficulty for the employees/guests in estimating the quantities and values of individual items used for preparing the meals served to them by their host. Thus, for the convenience of collecting reliable information and as a convention to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are *not* recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests and employees will also be recorded in the purchaser household.

3.7 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, donors of free cooked meals are likely to be concentrated at the upper end of the per capita expenditure range and the corresponding recipients at the lower end of the same scale. Consequently, the derived nutrition intakes may get inflated for the rich (net donors) and understated for the poor (net recipients). This point has to be kept in mind while interpreting the NSS consumer expenditure data for any studies relating to the nutritional status of households².

3.8 Value of consumption: Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

3.9 Monthly per capita consumer expenditure (MPCE): For a household, this is the total consumer expenditure over all items divided by its size and expressed on a per month (30 days) basis. A person's MPCE is understood as that of the household to which he or she belongs.

² Minhas, B.S.(1991):*On Estimating the Inadequacy of Energy Intakes: Revealed Food Consumption Behaviour Versus Nutritional Norms (Nutritional Status of Indian People In 1983), The Journal of Development Studies, Vol.28, no.1(october), pp.1-38.*

3.10 MPCE class: The MPCE classes are normally revised during quinquennial surveys of Consumer Expenditure. Usually, 12 MPCE classes are formed from a table giving estimated cumulative percentage frequency distribution of persons by MPCE for each sector separately and also The upper limits of these classes correspond broadly to cumulative frequencies 5%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 95% and 100% of the population. The class limits are given below:

sl. no.	rural (in Rs)	urban (in Rs)
1	0 – 235	0 – 335
2	235 – 270	335 – 395
3	270 – 320	395 – 485
4	320 – 365	485 – 580
5	365 – 410	580 – 675
6	410 – 455	675 – 790
7	455 – 510	790 – 930
8	510 – 580	930 – 1100
9	580 – 690	1100 – 1380
10	690 – 890	1380 – 1880
11	890 – 1155	1880 – 2540
12	1155 & more	2540 & more

3.11 Reference periods: The reference periods used for collection of consumption data for different groups of items are given below:

Item of consumption	Reference period
clothing, footwear, education, medical care (institutional) and durable goods (Infrequent-expenditure Categories)	“last 30 days” and “last 365 days”
all other items (viz all food, pan, tobacco & intoxicants, fuel and light, miscellaneous goods and services including non-institutional medical care, rents and taxes)	last 30 days

3.12 Adjusted and unadjusted MPCE: Apart from a reference period of “last 30 days” which was used to collect data, an additional reference period of “last 365 days” was also used for 5 infrequently purchased item groups: clothing (and bedding), footwear, education, medical care

(institutional) and durable goods. Discussion of the basic results of the survey uses data collected with “month” (last 30 days) as reference period for all items of consumption. But, for each sample household, the overall level of living indicator or MPCE has also been worked out using the last-365- day recall estimates for those categories for which such data had been collected. This gives an alternative figure for MPCE of each household. The MPCE worked out with last 30-day reference period for all items is sometimes referred to, for contrast, as “unadjusted MPCE” or simply MPCE without any adjective.

3.13 Major States: This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Together, these States accounted for nearly 94.7% of India’s population in 2001.

3.14 Household type: Rural households were classified into five types and urban households into four types on the basis of the major source of household income during the last 365 days from occupations pursued by the household members. The five types of rural households are *self-employed in non-agriculture, agricultural labour, other (rural manual) labour, self-employed in agriculture, and other households*. The four types of urban household are: *self-employed, regular wage / salary earner, casual labour, and other households*.

3.15 The “type” of a household was determined as follows.

Rural

A household was classified as “agricultural labour”, if its income from that source was 50% or more of its total income. The same criterion was followed to classify a household as “self-employed in agriculture”. A household was classified as “self-employed in non-agriculture” if its income from that source was greater than that from rural labour as well as that from all other gainful sources put together. If a household was not one of these three types but its income from total rural labour was greater than that from all self-employment and from other gainful sources, it was classified as “other labour”. The remaining households were classified as “other households”.

Urban

A household was classified as “self-employed”, “regular wage or salary earning”, or “casual labour”, according to the major sources of its income from “gainful employment” during the 365 days preceding the date of survey. A household not having any income from gainful employment was classified under “others”.

3.16 Social group: Three social groups were distinguished - scheduled tribe, scheduled caste, other backward class and other (residual) households. In case different members of a household belong

to different social groups, the group to which the head of the household belongs has been considered as the social group of the household.

- 3.17 Perception of household regarding sufficiency of food:** The expression ‘getting enough food every day’ - as used in common parlance, conveys that the concerned person gets, by and large, sufficient food to eat. This question is asked in order to record the subjective perception of the household regarding sufficiency of food. While putting this question to the informant, it is thus presumed that the informant has a clear understanding of its meaning. There are equivalent phrases conveying the same meaning in regional languages. It is, therefore, important the proper question is put in the local language and recorded the answer given by the informant in the appropriate code. It may be noted that appropriate codes have been specified to record this information in the schedule.
- 3.18** If the members of the household reported getting enough food every day throughout the year, the code to be entered in the specified box is 1. If adequate food was available in only a few months of the year, code 2 will be noted. Code 3 will indicate that the household did not usually get enough food every day for all its members. Here the reference period is last 12 calendar months preceding the date of enquiry. The instructions indicated that this block of questions was to be canvassed *after* completing all the preceding blocks. The idea was to find the subjective perception of the household regarding sufficiency/ adequacy of food to all its members during the last 12 months preceding the date of survey. While seeking response on food adequacy, it was presumed that informant has a clear understanding of its meaning which was to be conveyed in equivalent phrases in regional local languages.
- 3.19 Consumer Unit:** Consumer unit is a unit used to measure the calorie requirement of a group of persons of different sexes and ages. Taking the calorie requirement of an average male in the age group 20-39 doing sedentary work as the norm, the average calorie requirements of males and females of other age groups are expressed as a ratio to this norm (see table below). Thus a household consisting of two men aged 35 and 65 has 1.8 consumer units while a household with one woman aged 28 and a child aged 3 has only 1.25 consumer units.

sex	Consumer Unit											
	age in completed years											
	<1	1-3	4-6	7-9	10-12	13-15	16-19	20-39	40-49	50-59	60-69	70+
male	0.43	0.54	0.72	0.87	1.03	0.97	1.02	1.00	0.95	0.90	0.80	0.70
female	0.43	0.54	0.72	0.87	0.93	0.80	0.75	0.71	0.68	0.64	0.51	0.50

Chapter four

Survey Findings

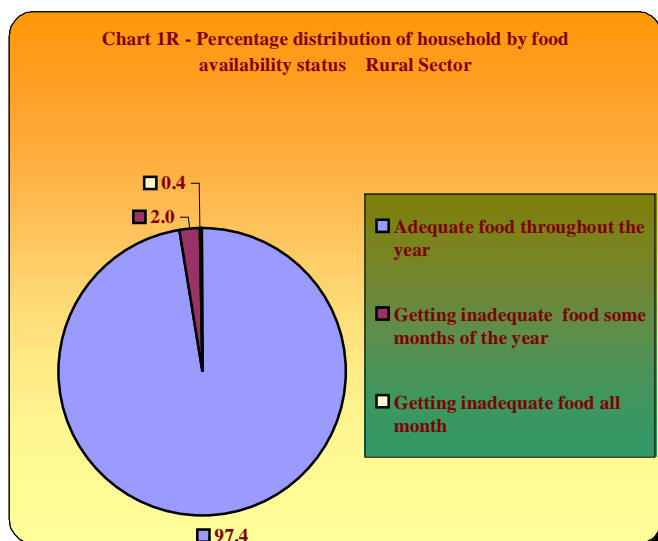

- 4.0 **This chapter presents** the summary of survey findings. As mentioned in chapter one, the survey ascertained for each sample household, whether its members had enough food to eat everyday throughout the year and if not, which were the months of the year for which enough food was not available to them. The information was obtained by asking a direct question if the investigator suspected that the household might have experienced inadequacy of food. In case the investigator could judge that the household did not suffer from any food shortage, he or she was allowed to record this fact without asking direct question. Whether a direct question was asked or not was also recorded.
- 4.0.1 Thus the survey did not adopt any definition or measure of adequacy of food. What it ascertained was the perception of the households visited regarding adequacy of food in different months of the year. As such, these results of the survey do *not* constitute an objective measurement of food inadequacy in the country, but indicate the subjective perception of the population about it. However, another important aspect of this survey was the prior judgment or perception of the investigator *before* seeking response about a household's food adequacy status. It was left to the investigator's judgment whether he would ask about household's food availability status or not. Most of the tables presented in this report relate to the estimated breakdown of population by perceived food availability status. There are three statuses. '*Getting enough food throughout the year*' (Food adequate in all months), '*not getting enough food in some months*' (food inadequate in some months of the year) and '*not getting enough food everyday in any month of the year*' (food inadequate in all months).
- 4.0.2 Differences in the distribution of population by food availability status are studied for different sectors, different states, different household occupational types, different social groups and holding of different types of ration card.
- 4.0.3 Further, analysis of other indicators of household's level of living and food adequacy such as household's monthly per capita expenditure, per capita cereal consumption, per capita calorie intake, per consumer unit calorie intake and Percentage of a "norm" level of 2700 Kcal per consumer unit per day are compared for the different categories of households with respect to food availability status.
- 4.0.4 The results at the national level have been compared with those from past quinquennial surveys on consumer expenditure, namely NSS 50th round (July 1993 – June 1994) and NSS 55th round (July 1999 - June 2000).
- 4.0.5 Since the survey reported very small size of samples for those households facing inadequacy of food throughout the year any further classification on the basis of these results has generally been avoided in this presentation.

The Results:

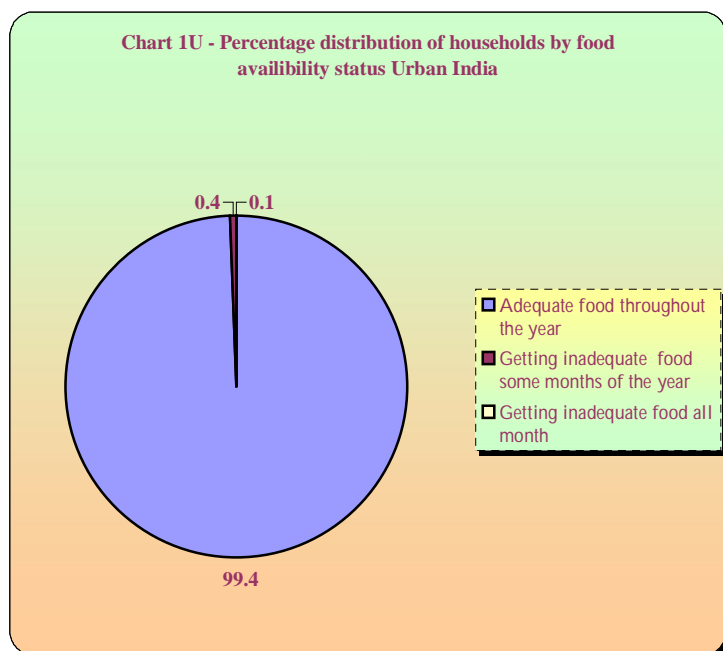

4.1 The food availability status of Rural and Urban sector of the country has been given in the **statement 1**. It is interesting to note that around 47% of the households in rural area, whose reported adequacy of food throughout the year was, ascertained by asking direct question. However, in urban area the percentage of such households was less than 30%

4.2 **Summary results: all India rural and urban sector.**

Statement 1: food availability status by sectors								
sector	characteristic	adequate food throughout the year			getting inadequate food some months of the year	getting inadequate food all month	n.r	all
		as ascertained by a direct question	as judged by the investigator	all				
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
RURAL	Per 1000 no. of households	472	502	974	20	4	2	1000
	estimated.household(00)	708754	753397	1462151	30263	6740	2443	1501598
	sample household	36258	41375	77633	1213	311	141	79298
URBAN	Per 1000 no. of households	297	697	994	4	1	1	1000
	estimated.household(00)	69336	396907	566243	2120	771	404	569538
	sample household	17473	27531	45004	172	112	58	45346

4.2.1 At the all India level the percentage of rural households where all the members got enough food everyday throughout the year was around 97.4%, as revealed from the 61st round survey (chart 1R). The corresponding percentage for households who did not get enough food everyday for some months of the year was 2.0% and the percentage of households not getting enough food everyday in any month of the year was 0.4%.

4.2.2 In urban India, the overall percentage of households where all the members *got enough food everyday throughout the year* was around 99.4%, as revealed from the 61st round survey (chart 1U). The corresponding figure for households where at least one member did *not get enough food everyday for some months of the year* was 0.4% and the percentage of households *not getting enough food everyday in any month of the year* was 0.1%.

Overall, the perception of the people in the country was similar to that in 1999 – 2000 (55th round). They felt in general, that they were getting enough food everyday throughout the year. The percentage of such households was above 97% for both rural and urban areas.

4.3 **Statement 2.** Gives the state wise position of food availability status.

4.3.1 The percentage of rural households *not getting enough food everyday in some months of the year* was the highest in West Bengal (10.6%) followed by Orissa (4.8%) and the least effected by food inadequacy were Haryana and Rajasthan. The proportion of those households who did *not get enough food every day in any month of the year* was highest in the state of Assam (3.6%) followed by Orissa and West Bengal (1.3 % each).

4.3.2 In the **urban sector** the State of Kerala had maximum percentage of dissatisfied households (1.7%) followed by Bihar (0.8%) who reported that food was scarce in some months of the year. About 2.1% of households reported that they did *not get enough food in any month of the year* in the state of Assam followed by Bihar (1.1%).

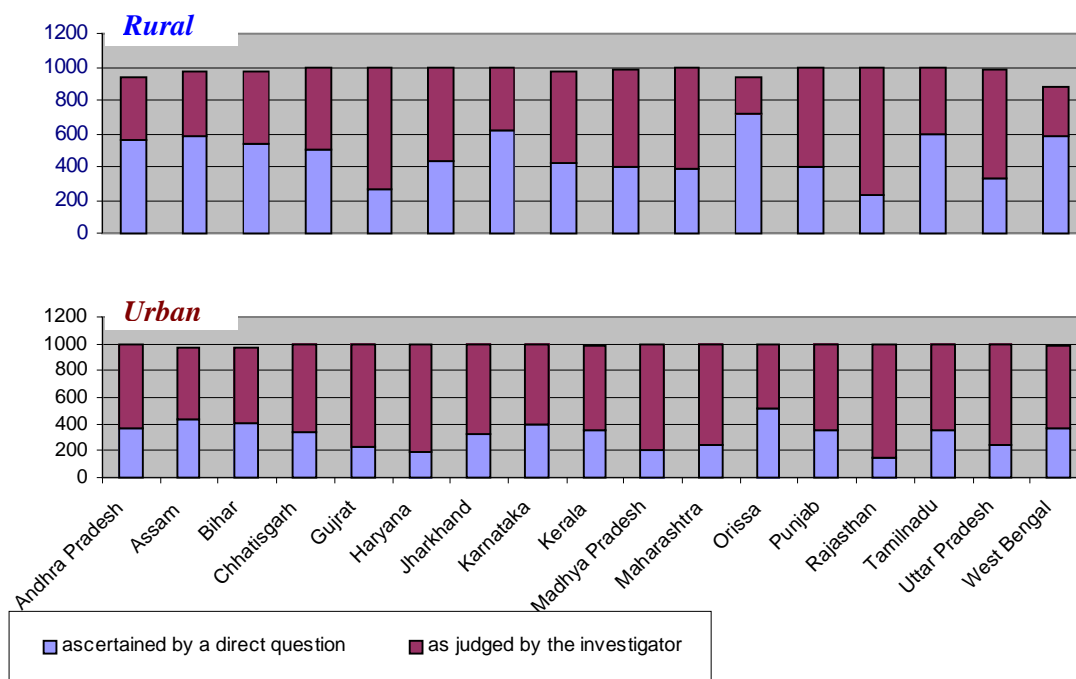

Statement 2: State wise food availability status.									
states	no. per 1000 of households							no. of households	
	adequate food throughout the year			getting inadequate food some months of the year	getting inadequate food all month	n.r	all	estimated (00)	sample
	as ascertained by a direct question	as judged by the investigator	all

4.4 Although the report is about the perception of Indian households about the adequacy of food in the reference year, one useful information can be derived from the data i.e. investigators' *hesitation* about asking food shortage from Indian household. The statement 3 shows in about 50% rural household the investigator, by his or her own judgment, ascertained food adequacy. The corresponding percentage for urban area was more than 69%. Among the states, more than 73% of the households in the rural area and more than 80% in the urban area of Haryana and Rajasthan had been judged by the investigator as having food adequacy. At the lower end, the state of Orissa and West Bengal where less than 30% of households were judged to be food sufficient by the investigator in the rural area. In urban area, Orissa and Assam were assessed to be in a similar situation by the investigators.

Statement 3: investigators perception about food availability status for few major states in rural and urban sectors

Sector	states	adequate food throughout the year		
		ascertained by a direct question	as judged by the investigator	all
	(1)	(2)	(3)	(4)
R	Haryana	265	735	1000
U	Orissa	725	209	934
R	Rajasthan	234	765	999
A	West			
L	Bengal	582	298	880
	all	472	502	974
U	Assam	435	538	973
R	Haryana	197	801	998
B	Orissa	522	472	994
A	Rajasthan	149	851	1000
N	all	297	697	994

chart 2: Extent of food adequacy judged by investigators.

- 4.5 As mentioned earlier, these results reflect the combined judgment of the investigators in the first stage and respondents in the second stage. Data do not reveal as to what prompted the investigator to arrive at spontaneous conclusion that the household was food sufficient and not ask further question. The reasons might be the casual look at the visible consumer durables in the household or the some key responses to the earlier blocks in the consumer expenditure schedule. However investigator's judgment may vary from state to state and person to person.
- 4.6 **Temporal Variation:** The distributions of households by food availability status for NSS 50th, 55th and 61st rounds are given in **Statement 4**. The proportions of 'not recorded' cases are also included in the Statement. As the proportion of 'not recorded' cases remained more or less the same, the figures for different NSS rounds are comparable.

Statement 4 : Percentage distribution of households by food availability status over time

all-India					
sector/round	% of households				
	Getting enough food everyday throughout the year	not getting enough food everyday		not recorded	All
		some months of the year	all months of the year		
(1)	(2)	(3)	(4)	(5)	(6)
Rural					
NSS 61 st round (July 2004 – June 2005)	97.4	2.0	0.4	0.2	100
NSS 55 th round (July 1999 – June 2000)	96.2	2.6	0.7	0.5	100
NSS 50 th round (July 1993 – June 1994)	94.5	4.2	0.9	0.4	100
Urban					
NSS 61 st round (July 2004 – June 2005)	99.4	0.4	0.1	0.1	100
NSS 55 th round (July 1999 – June 2000)	98.6	0.6	0.3	0.4	100
NSS 50 th round (July 1993 – June 1994)	98.1	1.1	0.5	0.3	100

- 4.6.1 In **rural** areas, the percentage of households where all the members got enough food everyday throughout the year rose from 94.5% to 97.4% from 1993-94 to 2004-05. The percentage of households with at least one of the household members not getting enough food everyday

during **some months** of the year fell from 4.2% to 2.0% between 1993-94 and 2004-05. The percentage of households with at least one member did not get enough food everyday **in all the months** of the year also declined from 0.9% to 0.4% over the period from 1993-94 to 2004-05.

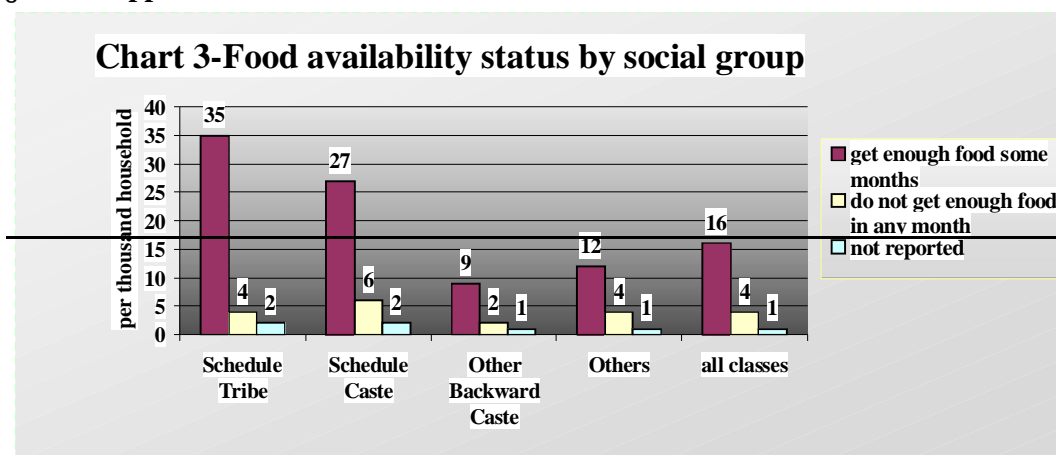

4.6.2 In **urban** areas also, the pattern of adequacy of food everyday to the members of households was similar. The percentage of households getting enough food everyday throughout the year increased from 98.1% to 99.4% from 1993-94 to 2004-05.

4.6.3 The percentage of households not getting enough food everyday in **some months** of the year decreased from 1.1% to 0.4% over the eleven year period 1993-94 – 2004-05. The percentage of households not getting enough food everyday in **any month** of the year also declined from 0.5% to 0.1%.

4.7 **Food adequacy by household type:** The distribution of households by food availability status for different household types at all-India level are given in **Statement 5 at** page 28 for rural and urban areas, respectively. In **rural areas**, households belonging to household type self employed in agriculture had highest percentage for adequate food availability throughout the year. The agricultural labour households had the highest percentages (5.1%) of seasonal inadequacy of food, followed by ‘other (rural) labour’ households (2.1%).

4.7.1 In **urban areas** the households belonging to regular salary and wage earner category reported the highest percentage for ‘*getting enough food throughout the year*’. For ‘casual labour’, percentage for inadequate availability of food everyday was relatively high compared to other types of households. However a large percentage of ‘type not recorded’ category of households reported ‘*not getting enough food everyday for some months of the year*’.

4.7.2 The detailed results on per 1000 distribution of households by three main food adequacy statuses for each household type for rural and urban areas of each State, UT and all-India are given in **Appendix Tables 1**

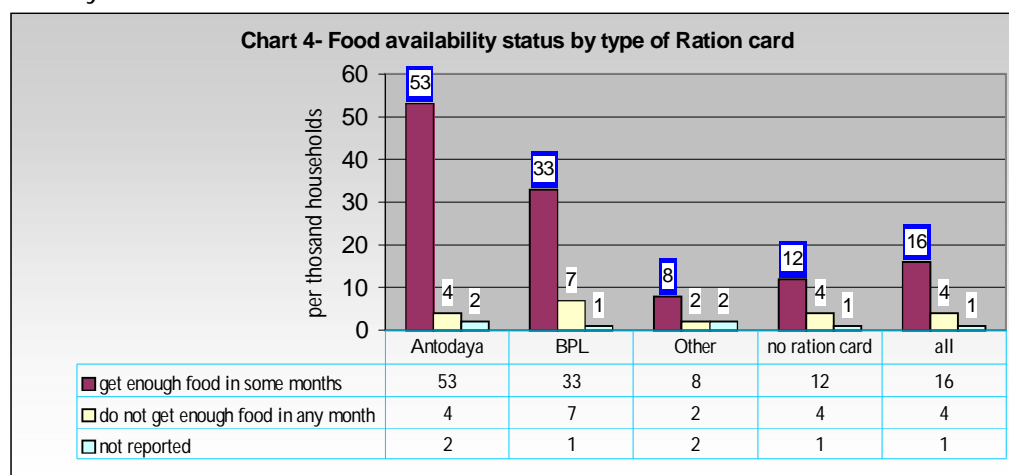

4.8 **Food adequacy by social group:** Till the 55th round the classification of households into different social groups was limited only to Scheduled Caste, Scheduled Tribe and rest of the households. However, from 59th round onward Other Backward Caste (OBC) households had been classified into a new social group. Thus the whole population had been divided into four

social groups. They are ‘Scheduled Caste’, ‘Scheduled Tribe’, ‘Other Backward Class’ and residual ‘others’. The above chart (chart 3) gives all India picture of food inadequacy status by social group.

- 4.8.1 As shown in the **chart 3**, in the country as a whole, the scheduled tribe households reported highest percentage suffering seasonal inadequacy of food (3.5%). The scheduled caste households recorded highest perennial inadequacy of food (0.6%).
- 4.8.2 The distributions of households by food availability status for different social groups for rural and urban areas at all-India level have been given in **Statement 6** at page29. In the rural area about 3.7% of scheduled tribe household perceived that they did not have sufficient food for some months of the year, followed by scheduled caste households (3.3%). The percentage of households ‘*not getting enough food everyday in any month*’ was reported to be the highest for SC households (0.7%), followed by Other households (0.6%) in rural areas and in urban areas ‘*not getting enough food everyday in any month of the year*’ was the highest for SC households.
- 4.8.3 Further, the detailed results on per 1000 distribution of households by three main food availability statuses i.e. ‘*Getting enough food throughout the year*’, ‘*not getting enough food in some months*’ and ‘*not getting enough food everyday in any month of the year*’ for each social group for rural and urban areas of each State, UT and all-India are given in **Appendix Table 2**
- 4.8.4 **Food adequacy status by types of ration card.**

The government of India undertakes various measures and programmes to uplift condition of the poorer section of the society. The 61st round NSS, for the first time made it possible to relate the reported subjective adequacy of food to the three types of ration card holders in the Public Distribution System (PDS), namely, ‘antodaya’, BPL (Below Poverty level) and ordinary ration card holders.

- 4.8.5 The reported food adequacy by ration card type possessed by the households is given in the **Statement 7** at page 30. The Antodaya cardholders reported the highest percentage (5.8%) of households who believed they were ‘*not getting enough food for some months the of year*’ followed by BPL cardholders (3.6%) in the rural area. In urban area reverse is the case with the

BPL cardholders (1.5%) who believed that they faced food shortage in some month of the year. However BPL cardholders were reported to be to be most food-deprived both in rural and in urban areas in terms of households 'not getting enough food everyday in any month of the year'.

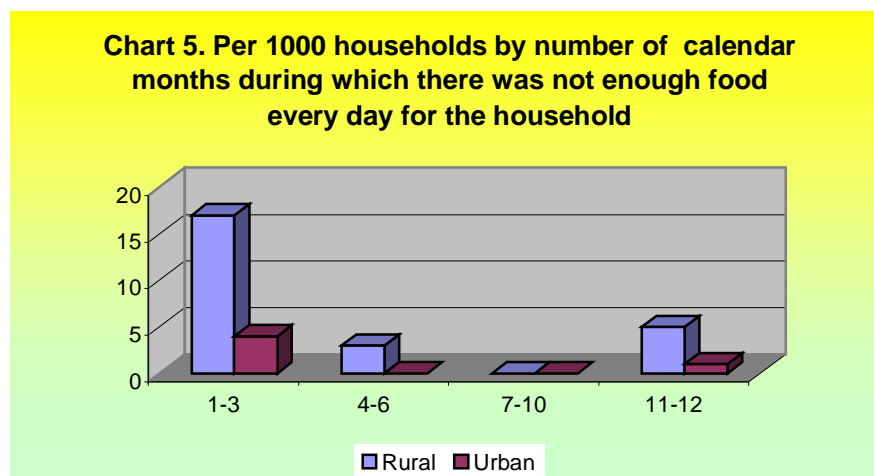

- 4.8.6 It is interesting to note that the category of households who did not possess any ration card were not much better off. About 1.8% of households perceived seasonal inadequacy of food and about 0.5% of households did feel perennial food shortage in the rural area whereas 0.2% of households in urban area felt that they perennially suffered from food shortage.
- 4.8.7 Further, detailed results on per 1000 distribution of households by three main food availability statuses for each social group for rural and urban areas of each State, UT and all-India are given in **Appendix Table 3**.
- 4.9 **The statement 8** shows average MPCE and food expenditure, quantity of cereal consumption and calorie intake in terms of per capita month as also percentage of reported calorie intake per consumer unit to the "norm" level of 2700 Kcal. per day calorie intake of households by food availability statuses.

Statement 8	Adequate availability of food			Inadequate availability of food	
	Asking direct question	As judged by the investigator	All including Judged	Inadequate food for some months	Inadequate food for all months
RURAL					
Per 1000 number of households	472	502	974	20	4
Monthly per capita expenditure	486.51	629.19	560.03	389.16	334.51
Monthly per capita food expenditure	280.92	334.18	308.36	231.58	208.48
Monthly per capita quantity of cereal consumption	12.11	12.08	12.10	13.08	10.60
Monthly per capita calorie intake	58707	63964	61416	57048	47691
Percentage of a "norm" level of 2700 Kcal per consumer unit per day	89.96	97.99	94.10	88.03	74.03
URBAN					
Per 1000 number of households	297	697	994	4	1
Monthly per capita expenditure	797.61	1164.84	1055.02	440.99	371.22
Monthly per capita food expenditure	377.92	478.34	448.31	248.84	220.37
Monthly per capita quantity of cereal consumption	10.21	9.82	9.94	10.20	9.90
Monthly per capita calorie intake	56916	62261	60663	49282	44941
Percentage of a "norm" level of 2700 Kcal per consumer unit per day	86.21	94.09	91.74	75.04	70.34

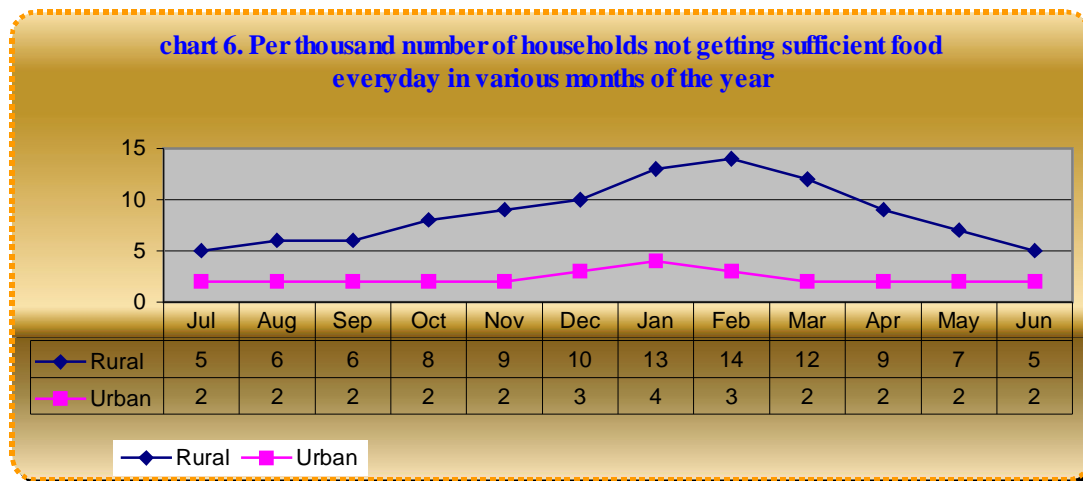

- 4.9.1 It is interesting to note a plausible association between percentage of households reporting three types of subjective assessment of food adequacy status during the last year and average quantitative measures of food availability and general level of living as reported during the last 30 days. Thus, the highest levels of objective indicators (except for the per capita quantity of cereals) are reported for the most affluent households as judged by investigators, followed by

those to whom direct question on food availability was asked. Next in ranking came those households with inadequate food for some months while the lowest indicators are observed for those households reporting inadequate food availability in all months of the year. This is true for both the rural and urban households.

- 4.9.2 Even the most impoverish category of households who perceived that they do not get sufficient food through out the year did not fall in to the lowest MPCE class of the respective sectors. As far as the sector-wise MPCE classes are concerned the rural lot (MPCE class 04) were better off than their urban counter part (MPCE class 02). (see MPCE class in chapter 3).
- 4.10 In the rural areas about 1.7% of households perceived that they went half fed for 1 to 3 calendar months (chart 5). The perception of about 0.3% of households suffering food insufficiency for 4 to 6 months had also been recorded. About 0.5% did ‘not get enough food throughout the year’. In urban areas about 0.4% suffered food inadequacy for 1 to 3 months. About 0.1% felt that they did not have sufficient food through out the year. [Reference to Statement 10 at page 32]

- 4.10.1 Among the states West Bengal reported the highest percentage (9.1%) of households who did not get sufficient food for 1-3 months. Assam had about 3.6% households who reported half fed through out the year. In contrast Haryana and Rajasthan reported absolutely no food inadequacy problems. This has been given in **statement 10** at page 32.
- 4.11 Per thousand number of households not getting sufficient food in different calendar months of the year 2004-05 is in Statement 11. As given in the **chart 6**, in the rural sector, during December and March, highest number of households did not get sufficient food. In urban areas phenomenon of food inadequacy was reported between December and February with considerably lower intensity.

4.11.1 Among the rural households in almost all the states, the maximum number of households suffering from the phenomenon of ‘not getting enough food’ were concentrated during December – March segment of the agricultural year. The corresponding percentages were much lower in the urban areas and were concentrated between December and February. West Bengal and Assam (rural) and Assam and Bihar (urban) reported maximum incidence of hunger during these months. (Statement 11). This has been stated in **statement 11** at page 33.

4.12 As explained in the beginning of this chapter, this report presented the subjective perceptions of food adequacy in Indian households through out the year without probing the underlying reasons for such perception. The general presumption was that people in the country were getting two square meals a day. The investigators were asked to take care that the question on food adequacy should not offend the respondent and if they felt so they should record this without asking direct question. Thus not one but two perceptions were at work in a sequential fashion in the data.

The investigator’s perceptions about food adequacy of a household ascertained without asking a question were indeed subjective and might have varied from person to person, state to state. What might have prompted them to record the food adequacy might be a quick inference from the level of living of a given household. The respondent’s perception about seasonal or perennial inadequacy of food might also be, largely through experience and introspection. It is reassuring, however, that this two-stage sequential process of perceptions shows a plausible association with most, if not all, the objectively ascertained indicators of food availability as observed from Statement 8.

Consumer Expenditure Schedule

RURAL		*
URBAN		

CENTRAL		*
STATE		

**GOVERNMENT OF INDIA
NATIONAL SAMPLE SURVEY ORGANISATION
SOCIO-ECONOMIC SURVEY
SIXTY-FIRST ROUND: JULY 2004 - JUNE 2005**

SCHEDULE 1.0: CONSUMER EXPENDITURE

[0] descriptive identification of sample household	
1. state/u.t.:	5. hamlet name:
2. district:	6. ward/inv. unit/block:
3. tehsil/town:	7. name of head of household:
4. village name:	8. name of informant:

[1] identification of sample household							
item no.	item	code			item no.	item	code
1.	srl. no. of sample village/ block				11.	sub-sample	
2.	round number	6		1	12.	FOD sub-region	
3.	schedule number	0	1	0	13.	sample hamlet-group/sub-block number	
4.	sample (central-1, state-2)				14.	second stage stratum	
5.	sector (rural-1, urban-2)				15.	sample household number	
6.	state-region				16.	srl. no. of informant (as in col.1, block 4)	
7.	district				17.	response code	
8.	stratum				18.	survey code	
9.	sub-stratum				19.	reason for substitution of original household (code)	
10.	sub-round						

CODES FOR BLOCK 1

item 17: response code : informant: co-operative and capable -1, co-operative but not capable -2, busy -3, reluctant - 4, others - 9

item 18: survey code : original – 1, substitute – 2, casualty – 3

item 19: reason for substitution of original household : informant busy -1, members away from home -2, informant non-cooperative -3, others - 9

* tick mark (✓) may be put in the appropriate place.

[2] particulars of field operations												
srl. no.	item	investigator			assistant superintendent			superintendent				
(1)	(2)	(3)			(4)			(5)				
1.	i) name (block letters)											
	ii) code											
2.	date(s) of :	DD	MM	YY	DD	MM	YY	DD	MM	YY		
	(i) survey/inspection											
	(ii) receipt											
	(iii) scrutiny											
	(iv) despatch											
3.	number of additional sheets attached											
4.	total time taken to canvass schedule 1.0 (in minutes)											
5.	signature											

[12] perception of household regarding sufficiency of food					
1.	do all members of your household 'get enough food every day'?				
	<i>(yes: every month of the year-1, some months of the year -2; no: no month of the year-3)</i>				
2.	if code is 2 in item 1, during which calendar months did any member of the household not 'get enough food every day'?				
	<i>(applicable month codes may be recorded in the box spaces: Jan-01, Feb-02, Mar-03, Apr-04, May-05, Jun-06, Jul-07, Aug-08, Sep-09, Oct-10, Nov-11, Dec-12)</i>				
3.	whether information on item 1 was actually obtained from the informant <i>(yes-1, no-2)</i>				

[3] household characteristics									
1. household size					16. dwelling unit code (<i>owned-1, hired-2, no dwelling unit-3, others-9</i>)				
2. principal industry (NIC-1998)	description:				primary source of energy for		17. cooking (code)		
	code (5-digit)								
3. principal occupation (NCO-1968)	description:				19. is any member of the household a regular salary earner? (<i>yes-1, no -2</i>)		18. lighting (code)		
	code (3-digit)								
4. household type (code)					20. does the household possess ration card? (<i>yes-1, no -2</i>)				
5. religion (code)					21. if yes in item 20, type of ration card (code)				
6. social group (code)					22. Food for Work				
7. whether owns any land (<i>yes-1, no -2</i>)					23. Annapoorna				
8. if yes in item 7, type of land owned (<i>homestead only – 1, homestead and other land – 2, other land only – 3</i>)	9. owned and possessed				during the last 365 days whether any member of the household is a beneficiary of: (yes-1, no-2)		24. ICDS		
	10. leased-in						25. Midday Meal		
	11. neither owned nor leased-in						26. did the household perform any ceremony during the last 30 days? (<i>yes – 1, no – 2</i>)		
	12. leased-out						27. no. of meals served to non-household members during the last 30 days		
	13. total possessed [items (9+10+11-12)]						monthly per capita expenditure (Rs.0.00)		28. 30 days (item 36, bl.13)
14. land cultivated (0.000 ha)					29. 365 days (item 46, bl.13)				
15. land irrigated (0.000 ha)									
during July 03 to June 04									

CODES FOR BLOCK 3

item 4: **household type** : for rural areas: *self-employed in non-agriculture-1, agricultural labour-2, other labour-3, self-employed in agriculture-4, others-9*

for urban areas: *self-employed-1, regular wage/salary earning-2, casual labour-3, others-9*

item 5: **religion** : *Hinduism-1, Islam-2, Christianity -3, Sikhism-4, Jainism-5, Buddhism-6, Zoroastrianism-7, others-9*

item 6: **social group** : *scheduled tribe-1, scheduled caste-2, other backward class-3, others-9*

item 17: **primary source of energy for cooking** : *coke, coal-01, firewood and chips-02, LPG-03, gobar gas-04, dung cake-05, charcoal-06, kerosene-07, electricity-08, others-09, no cooking arrangement-10*

item 18: **primary source of energy for lighting** : *kerosene-1, other oil -2, gas-3, candle-4, electricity-5, others-9, no lighting arrangement-6*

item 21: **ration card type**: *Antodaya -1, BPL – 2, others - 3*

Note: 1 acre = 0.4047 hectare
