

Household Consumer Expenditure Among Socio-Economic Groups: 2004 - 2005

NSS 61st Round
(July 2004 - June 2005)

National Sample Survey Organisation
Ministry of Statistics and Programme Implementation
Government of India

August 2007

Preface

The National Sample Survey Organisation (NSSO) conducts socio-economic surveys covering various subjects on regular basis. Subjects are selected keeping in view their importance. As part of the NSS 61st round, the Household Consumer Expenditure survey was conducted on large sample basis during the period July 2004 – June 2005 and this was the seventh quinquennial survey on the subject.

The present report is the last report of the series of seven reports to be brought out on the basis of the survey. Reports already published include Level and Pattern of Consumer Expenditure (No.508), Household Consumption of Various Goods and Services in India (No.509), Public Distribution System and Other Sources of Household Consumption (No. 510), Energy Sources of Indian Households for Cooking and Lighting (No.511), Perceived Adequacy of Food Consumption in Indian Households (No.512) and Nutritional Intake in India (No.513). In the present report, the level of consumption i.e. the average monthly per capita expenditure for various socio-economic groups has been presented. The distribution of households and persons over different ranges of consumption level is also presented. All estimates are provided separately for rural and urban sectors of each State and Union Territory.

Chapter One of the report is introduction. Chapter Two explains the sample design in brief. Chapter Three gives the concepts and definitions used in the survey. Chapter Four gives the main findings of the survey. Detailed tables at the State/UT and all-India level are given in Appendix-A and the sample design and the estimation procedure are explained in detail in Appendix-B. A facsimile of the schedule 1.0 is given in Appendix-C.

Tasks like development of sampling design and survey instruments, and preparation of the report, were undertaken by the Survey Design and Research Division of the NSSO. The field work was handled by the Field Operations Division and the data processing and table generation was taken up by the Data Processing Division. The Coordination and Publication Division was responsible for overall coordination of all activities of NSSO, including the data dissemination and release of the reports. The Chairman and Members of the then Governing Council of NSSO, along with the Chairman and Members of the Working Group set up for this round, provided the technical directions and guidance at every stage of the survey. I am grateful to all of them.

I hope, the report will be useful to planners, policy makers and researchers. Comments and suggestions are most welcome.

New Delhi
August 2007

S. K. Sinha
Director General & Chief Executive Officer
National Sample Survey Organisation

Highlights

The highlights are based on the national sample survey of 79298 rural households and 45346 urban households across 7999 villages and 4602 urban blocks covered in the Consumer Expenditure Survey in the 61st round of NSS (the seventh in the quinquennial series) carried out during July 2004 and June 2005.

1. The estimated share of rural population in the total population was 74.68%. The shares of the social groups¹ - Scheduled Tribe (ST), Scheduled Castes (SC), Other Backward Classes (OBC), and the residual class (Others) - in the Indian population (rural and urban combined) was found to be 8.63%, 19.59%, 40.94% and 30.80% respectively.
2. The rural-urban distribution of persons belonging to different social groups is as given below:

Percentage distribution of population by sector for each social group					
Sector	Social Group				
	ST	SC	OBC	OTHERS	ALL
Rural	91.4	79.8	78.0	62.3	74.7
Urban	8.6	20.2	22.0	37.7	25.3
All	100.0	100.0	100.0	100.0	100.0

3. In rural India, 64.3% of the population is dependent on agriculture as a major source of livelihood, either as self-employed in agriculture (39.4%) or as agricultural labour (24.9%). In this sector, population dependent on self-employment (in agriculture plus non-agriculture) was reported to be 49.0% for ST, 36.6% for SC, 60.7% for OBC and 66.4% for 'others' and that dependent on rural (agricultural or non-agricultural) labour was 56.4% for SC, 45.2% for ST, 30.7% for OBC and 21.8% for 'others'.
4. In urban India, the proportion of population located in regular wage/salary earning households was almost the same (42.0% – 42.9%) for all social groups except the OBC (34.3%). Dependence on self-employment was more prevalent for OBC (46.4%), as well as for the residual class (45.3%), than the SC (30.9%) and ST (27.4%).

¹ The social group reported by informant for head of any given household was taken to be the social group of all members of that household and was not ascertained from any official list of social groups.

5. Rural-urban differential in the level of average MPCE was the least in cereals and most in non-food items. This was also true with minor variations across social groups.

Average MPCE (Rs.) and its break-up in MPCE (cereals), MPCE (food) and MPCE (non-food)

Social Group	Rural				Urban			
	MPCE (C)	MPCE (F)	MPCE (NF)	MPCE	MPCE (C)	MPCE (F)	MPCE (NF)	MPCE
ST	97.4	250.9	175.3	426.2	110.5	398.8	458.6	857.5
SC	97.6	271.8	202.9	474.7	99.7	364.2	394.2	758.4
OBC	98.7	305.7	251.1	556.7	104.0	400.5	470.4	870.9
OTHERS	107.7	363.3	322.0	685.3	109.0	515.4	790.7	1306.1
ALL	100.7	307.6	251.2	558.8	105.8	447.4	605.0	1052.4

6. The percentage shares of cereals, food and non-food items in total MPCE of the rural population were 18.01%, 55.05%, and 44.95%, while for the urban population they were 10.05%, 42.51% and 57.49%.
7. With minor exceptions, the general level of total MPCE of Scheduled Castes and Scheduled Tribes in a State/UT was lower than the level enjoyed by OBC or the residual class while that of the social group OBC was lower than that of the residual 'others' but closer to the average for the rural or urban sector.
8. In the rural areas, the proportion of the population having MPCE below the average level (Rs. 558.8) was found to be 65.7% for the entire population, 77.4% for population located in SC households, 79.6% for ST, 64.1% for OBC and 53.3% for 'others'. Similarly, in urban areas, the proportion of the population having MPCE below the average level (Rs. 1052.4) was found to be 67.1% for the entire population, 84.0% for population located in SC households, 74.3% for ST, 75.4% for OBC and 54.5% for 'others'.
9. In rural India, the average MPCE (Rs.415.65) of persons belonging to the household type 'agricultural labour' is the lowest among all the household types. This is followed by the average MPCE (Rs.519.81) of persons belonging to the household type 'other (rural) labour' - lower than the average MPCE (Rs.583.48) of persons belonging to the household type 'self-employed in agriculture' or the average MPCE (Rs.604.41) of persons belonging to the household type 'self-employed in non-agriculture'. Thus, the self-employed households are better-off than the rural labour households. The average

MPCE (Rs.818.19) of persons belonging to the household type 'others' is the highest among all the household types.

10. In urban India, the average MPCE (Rs.579.63) of persons belonging to the household type 'casual labour' is the lowest among all the household types. This is followed by the average MPCE (Rs.982.35) of persons belonging to the household type 'self-employed'. The average MPCE (Rs.1212.66) of persons belonging to the household type 'regular wage/salary earning' is lower than the average MPCE (Rs.1444.97) of persons belonging to the household type 'others'.

Chapter One

Introduction

1.1 The seventh quinquennial Consumer Expenditure Survey conducted by the National Sample Survey Organisation between July 2004 and June 2005 collected information on the level and pattern of consumer expenditure of rural and urban households in India. Monthly per capita consumer expenditure (MPCE) based on this survey provides a reliable measure for comparison of the level of living of different socio-economic groups of households.

1.2 In each rural/urban sector, households are divided into four social groups, viz., (i) Scheduled Tribes (ST); (ii) Scheduled Castes (SC); (iii) Other Backward Classes (OBC) and (iv) the residual class (Others). It is important to note that the social group reported for head of any given household was taken to be the social group of all members of that household. Consequently, information recorded in this regard was based entirely on the response of the informant and not ascertained from any official list of social groups. The broad economic groups or household types (in NSS terminology) distinguished on the basis of major source of livelihood are five in the rural areas and four in the urban areas. The five household types in rural areas are: self-employed in agriculture; self-employed in non-agriculture; agricultural labour; other (than agricultural) rural labour and others (residual). The four household types in urban areas are: self-employed households; regular wage and salary earning households; casual labour households and other (residual) households.

1.3 In rural areas, land being the major asset, the households have also been classified on the basis of the land possessed by the household. For this purpose, six classes of 'size of land possessed' are households having land (i) less than 0.01 hectare, (ii) between 0.01 hectare and 0.40 hectare, (iii) between 0.41 hectare and 1.00 hectare, (iv) between 1.01 hectare and 2.00 hectare, (v) between 2.01 hectare to 4.00 hectare and (vi) more than or equal to 4.01 hectare. The above size classes of land possessed are similar to the one used in earlier rounds and have correspondence with the class intervals adopted in the Agricultural Censuses of India.

1.4 In the case of each of the above social and economic groups, population located in each type of households has been classified on the basis of Monthly Per Capita Expenditure (MPCE) to assess the distribution of each group over different MPCE classes.

1.5 Readers familiar with NSS data are well aware that the NSSO carries out regular consumer expenditure surveys in each round of its continuing large scale national survey activity. Each round is normally of a year's duration and is usually a multi-subject enquiry. The surveys are conducted through household interviews, using a stratified random sample of households covering practically the entire geographical area of the country. The NSSO also conducts consumer expenditure surveys on larger-than-usual-scale every 5 years or so, to generate more disaggregated data on various aspects of the household consumption. This is popularly known as "consumption data of quinquennial series". The present survey (61st Round of NSS) is the seventh in this series.

1.6 This is the seventh report on the 61st round of the consumer expenditure survey.¹ Similar reports on the earlier two quinquennial rounds already published are NSS Report No. 472 (55th round, 1999-2000) and Report No 422 (50th round, 1993-94). It is important to note that in NSS Surveys the social group 'Other Backward Classes' has been separately distinguished only from 55th round onwards. Prior to the 55th round, while comparing the residual class over different rounds, OBC was clubbed with the residual class, viz., 'others'.

¹ *The other reports are: Level and Pattern of Consumer Expenditure (No.508), Household Consumption of Various Goods and Services in India (No.509), Public Distribution System and Other Sources of Household Consumption, (No.510), Energy Sources of Indian Households for Cooking and Lighting (No.511), Perceived Adequacy of Food Consumption in Indian Households (No.512) and Nutritional Intake in India (No.513).*

Chapter Two

Sample Design

2. The Survey in Brief

2.1 General: The 61st round of NSS survey was devoted to the collection of data on household consumer expenditure and employment-unemployment. In the earlier quinquennial rounds till the 50th, schedules on employment-unemployment and on consumer expenditure were canvassed in the same set of sample households. The objective was to enable employment-unemployment data to be cross-classified by information on consumption level. From the 55th round (1999-2000) onwards, this practice has been discontinued to minimise respondent fatigue from very long interviews. Since the 55th round (including the present one), the two schedules are being canvassed on two independent sets of sample households from the same First Stage Units (villages / blocks.).

2.2 Geographical Coverage: In the survey, the entire country was covered except (i) Leh and Kargil districts of Jammu & Kashmir, (ii) villages situated beyond 5 km. of a bus route in the State of Nagaland, (iii) inaccessible villages of Andaman and Nicobar Islands.

2.3 Sample Design: A stratified multi-stage sampling design was adopted for the survey. In rural India, census villages (Panchayat wards in Kerala), and in urban India, urban frame survey (UFS) blocks were taken as First Stage Units (FSUs). Households in the selected villages/blocks were taken as Second Stage Units. Detailed sample design along with the estimation procedure is given in Annexure-I.

2.4 Schedule of Enquiry: Data on household consumer expenditure was obtained from selected households through Schedule 1.0. Information on socio-economic characteristics of sample households was noted in Block 3 of the schedule. A copy of Schedule 1.0 appears as Annexure – II.

2.5 Sample Size: The sample sizes (FSUs) allotted and surveyed in different sectors were as follows.

Number of FSUs	Sector		
	Rural	Urban	All
Allotted	8128	4660	12788
Surveyed	7999	4602	12601

The allocation of the above sample size to different states / union territories can be seen from the table 2.2 given on the next page.

Table 2.2: Number of villages/blocks allotted and surveyed for schedule 1.0 and number of sample households and persons surveyed [Central sample]

State/UT	no. of villages		no. of urban blocks		no. of sample

* Note that as many as 98 out of 129 allotted villages that could not be surveyed belonged to the disturbed areas of Jammu and Kashmir.

2.6 Concepts and Definitions: Many terms used in the survey have specific meanings and for clear understanding of the report, they have been explained in Chapter Three.

2.7 Spread of Field Work: To eliminate seasonal effects from the survey results, the entire survey period (1st July 2004 to 30th June 2005) was divided into four sub-rounds of three months' duration each (Sub-round 1: July-September 2004, Sub-round 2: October-December 2004, Sub-round 3: January-March 2005, Sub-round 4: April-June 2005) and an equal number of sample villages and blocks were allocated to each sub-round.

Chapter Three

Concepts and Definitions

3.1 Categories of consumption items

3.1.1. **Beverages, refreshments, etc.:** This stands for “beverages, refreshments and processed food”. It includes tea, coffee, mineral water, soft drinks, fruit juice (not prepared at home), green coconut water, soda water, other beverages such as cocoa, biscuits, cakes, pastries, pickles, sauce, jam, jelly, and other salted refreshments and sweets not prepared at home. Refreshments prepared at home are not included here. Instead, the ingredients of the refreshments (such as flour, sugar, milk, etc.) are accounted under “cereals” (e.g. against “wheat”), “sugar”, etc. Food purchased in the form of cooked meals is also included in “processed food”.

3.1.2. **Cereals:** Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether.

3.1.3. **Cereal substitutes:** Cereals are usually a person's staple food in India. But sometimes, by choice or due to scarcity, a person may consume little or no cereal. The food requirement is partially or wholly met in such cases by consumption of food items which could be treated as substitutes for cereals. Tapioca, for example, is consumed in some parts of the country as a substitute for cereals. Similarly, jackfruit seed, mahua, etc. are also consumed as substitute for cereals. Potato or sweet potato consumed as substitutes for cereals are not, however, shown here. These are included in “vegetables”.

3.1.4. **Clothing:** The term “clothing” is used in this report as a short form of “clothing and bedding”. Besides clothing proper, it includes bedding (pillows, quilts, mattresses, mosquito nets, etc.), as well as rugs, blankets, curtains, towels, mats, cloth for upholstery, etc. It excludes footwear and raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are accounted in “consumer services”. Consumption of an article of clothing is considered to take place when it is brought into first use. However, clothing purchased second-hand is considered as consumed as soon as it is purchased. Imported ready-made garments, even if purchased second-hand, are shown as first-hand purchase. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

3.1.5. **Conveyance:** This includes expenditure incurred on account of journeys undertaken and/or transportation of goods made by any means of conveyance. The expenditure is the actual fare paid except in case of railway season tickets, for which expenditure is calculated as the cost of the season ticket divided by the number of months for which it is valid. Expenditure on journeys undertaken by household members as part of official tours is not considered as consumer expenditure of the household. But journeys to commute to and from place of work are included here. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

3.1.6. **Durable goods:** Items included here have a lifetime of one year or more. However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that glassware, earthenware and plastic goods such as buckets are excluded from durable goods and included in “other household consumables”. Consumption expenditure on durable goods includes both expenditure on purchase and expenditure on repair and construction of household durables. For land and residential building only expenditure on repairs and maintenance is included. Durable goods include furniture and fixtures, “entertainment” durables such as radios, TV, VCR/VCP/DVD players, tape recorders and CD players, cameras, musical instruments, jewellery and ornaments, crockery and utensils, cooking and other household appliances such as fans, air conditioners, air coolers, sewing machines used for household work, washing machines, stoves, pressure cookers, fridges, water purifiers, electric irons, heaters, toasters and ovens, household transport equipment including two-wheelers, four-wheelers and their parts, therapeutic appliances, clocks, watches, computers for household use, mobile phone handsets, and bathroom and sanitary equipment.

3.1.7. **Edible oil:** Edible oils used for toilet purposes by the household are not included here. Oilseeds are sometimes purchased or grown by a household for extracting edible oil (by crushing) for consumption. The value of oilseeds so used is included in “edible oil”.

3.1.8. **Education:** This includes expenditure on goods purchased for the purpose of education, viz., books and journals, newspapers, paper, pen, pencil, etc., and also magazines, novels and other fiction. It also includes fees paid to educational institutions (e.g., schools, colleges, universities, etc.) on account of tuition and other fees like game fees, library fees, etc., and payment to private tutors. Expenditure on Internet other than telephone charges is included here. Occasional payments to the school fund made on account of charities, and “donations” generally, are not included here, as they are regarded as transfer payments.

3.1.9. **Entertainment:** This includes expenditure on cinemas, theatres, melas, fairs and picnics, expenditure incurred on processing, developing, etc., of photographic film, charges paid for hiring of video cassette/VCR/VCP, and charges for viewing a video show. Expenses incurred on subscription to dish antenna, cable TV facilities, etc. are also included. Club fees are included here.

3.1.10. **Footwear:** This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

3.1.11. **Medical expenses:** This includes expenditure on medicine of different types and on medical goods; also, payments made to doctor, nurse, etc., as professional fees and those made to hospital, nursing home, etc. for medical treatment, and expenditure incurred for clinical tests, including X-rays, ECG, pathological tests, etc.). Expenditure on all family planning appliances is included.

3.1.12. **Medical:** institutional and non-institutional expenditure: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (non-institutional). Medical institution here covers private as well as Government institutions such as hospitals and nursing homes. It is to be noted that medical expenditure can be either institutional or non-institutional.

3.1.13. **Milk and milk products:** Milk products include ghee, butter, curd, etc. Milk used in home preparation of sweetmeats, etc., is also accounted here. This category also includes those baby foods of which the principal constituent is milk. Further, milk (liquid) includes ice-cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included in this category.

3.1.14. **Minor personal effects:** These include spectacles, torches, locks, umbrellas, raincoats, gas lighters, etc. In the consumer expenditure schedule, this group was called "goods for personal care and effects". These are not included in "durable goods" but in "miscellaneous goods and services".

3.1.15. **Miscellaneous goods and services:** This is a residual category covering all items other than food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, education, medical care, rent, taxes and cesses.

3.1.16. **Other consumer services:** This includes expenditure on domestic servants, cooks, attendants, sweepers, barbers and beauticians, laundry, ironing, tailors, priests, legal services, telephone charges, postal charges, grinding charges, and repair charges for non-durable goods. Apart from conveyance, it excludes the consumer services coming under "entertainment".

3.1.17. **Other household consumables:** These include electric bulbs, tubelights, batteries, earthenware, glassware, plastic goods such as buckets, water bottles and feeding bottles, coir and rope, washing soap, washing soda, other washing requisites, incense, room fresheners, flowers, acid and insecticides. In the consumer expenditure schedule, this group was called "sundry articles".

3.2 Household and related concepts

3.2.1 A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

3.2.2 **Household size:** The size of a household is the total number of persons in the household irrespective of age.

3.2.3 **Household group:** Four social groups were distinguished - scheduled tribe (ST), scheduled caste (SC), other backward class (OBC) and other (residual) households. In case different members of a household belong to different social groups, the group to which the head of the household belongs has been considered as the social group of the household.

3.2.4 Household type: Rural households were classified into five economic categories or household types (in the NSS terminology) and urban households into four types on the basis of the occupations pursued by the household members. The five types of rural households are self-employed in non-agriculture, agricultural labour, other labour, self-employed in agriculture, and other households. The four types of urban household are: self-employed, regular wage / salary earner, casual labour, and other households. The “type” of a household was determined as follows.

Rural: A household was classified as “agricultural labour”, if its income from that source was 50% or more of its total income. The same criterion was followed to classify a household as “self-employed in agriculture”. A household was classified as “self-employed in non-agriculture” if its income from that source was greater than that from rural labour as well as that from all other gainful sources put together. If a household was not one of these three types but its income from total rural labour was greater than that from all self-employment and from other gainful sources, it was classified as “other labour”. The remaining households were classified as “other households”.

Urban: A household was classified as “self-employed”, “regular wage or salary earning”, or “casual labour”, according to the major sources of its income from “gainful employment” during the 365 days preceding the date of survey. A household not having any income from gainful employment was classified under “others”.

3.2.5 Household consumer expenditure: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods *actually consumed* during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the *ex farm* or *ex factory* rate. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the *expenditure* made during the reference period for the purchase or acquisition of goods and services is considered as consumption.

It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan advance, etc. made by the household are *not* considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item “*cooked meals*” is an *exception* to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical

difficulty for the employees/guests in estimating the quantities and values of individual items used for preparing the meals served to them in other households. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift, or charity or on ceremonial occasions are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests and employees will also be recorded in the purchaser household.

This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, donors of free cooked meals are likely to be concentrated at the upper end of the per capita expenditure range and the corresponding recipients at the lower end of the same scale. Consequently, the derived nutrition intakes may get inflated for the rich (net donors) and understated for the poor (net recipients). *This point has to be kept in mind while interpreting the NSS consumer expenditure data for studies relating to the nutritional status of households.*

3.3 Reference period: Reference period means the period of time for which data on consumption was collected. The reference period used for the survey was a “moving” one, varying from household to household, although its pre-specified duration was fixed for each item. The reference periods used for collection of consumption data for different groups of items are given below:

Sl. No.	Item of consumption	Reference period
1	clothing, footwear, education, medical care (institutional) and durable goods	“last 30 days” and “last 365 days”
2	all other items (viz., all food, pan, tobacco & intoxicants, fuel and light, miscellaneous goods and services including non-institutional medical care, rents and taxes)	last 30 days

3.4 Monthly per capita expenditure (MPCE): For a household, this is household consumer expenditure over a period of 30 days divided by household size. A person's MPCE is understood as that of the household to which he/she belongs.

3.5 MPCE classes: Readers familiar with NSS practice are aware that quinquennial series data is used to form MPCE classes separately for rural as well as urban India in such a way that the first two and the last two classes each contain 5% of the rural/urban population and the remaining classes each contain 10% population. The MPCE classes so formed during the present round are given in Table 4.4 (page 23). The MPCE classes have been assigned to the households on the basis of data with reference period of “365 days” (normalised to 30 days) for items of education, institutional medical expenses, clothing, footwear and durable goods and of “last 30 days” for the rest of the items.

3.6 **Major States:** This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Together, these States accounted for nearly 94.7% of India's population in 2001.

3.7 **Sector:** This word used for the rural-urban demarcation: rural and urban are the only two sectors as far as this report is concerned.

3.8 **Valuation of consumption:** Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at *ex farm* or *ex factory* rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period. Consumption out of home produce is evaluated at *ex farm* or *ex factory* rate.

3.9 **Land possessed:** The area of land possessed (in hectares) includes land owned, leased in, and land neither owned nor leased in, but excludes land leased out.

Chapter Four

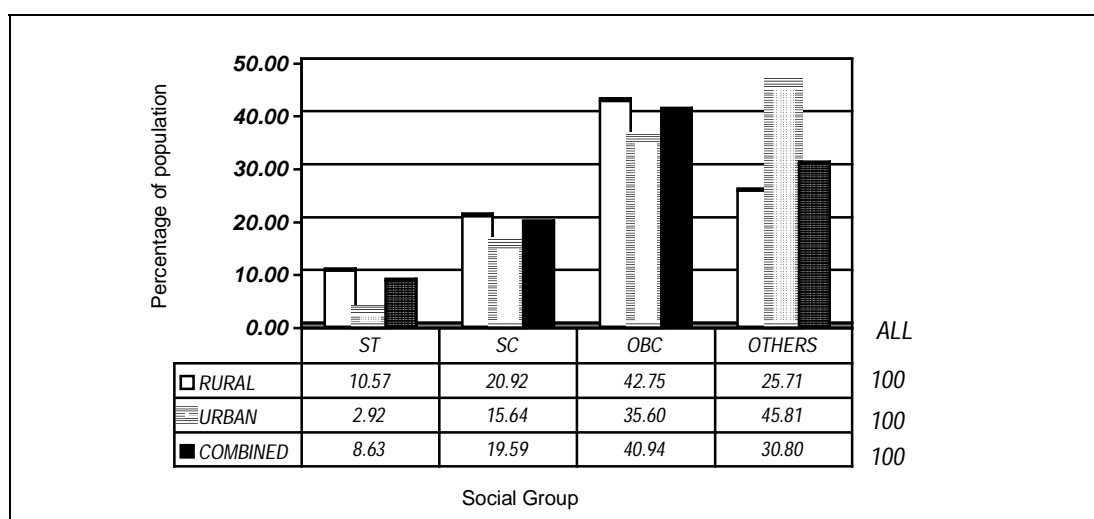

Summary of findings

4.1 The composition of the population

4.1.1 As a perspective, we note that the estimated shares of social groups Scheduled Tribes (ST), Scheduled Castes (SC), Other Backward Classes (OBC) and the residual class (Others) in the Indian population (rural & urban combined) are 8.63%, 19.59%, 40.94% and 30.80% respectively (Appendix Table 1*).

4.1.2 Chart 4.1 depicts the composition of rural and urban population by social group at all-India level. Statement 1 provides percentage distribution of population by social group for each state/UT separately for each sector. Combined rural plus urban share for different social groups has been derived from the sector-wise population estimates obtained from the survey. We may caution that the NSS estimates of aggregate population, unlike the ratio-estimates, have been noted to be on the lower side as compared to corresponding population census based estimate/projection with possibly different degrees of rural and urban extent of underestimation.

Chart 4.1: Composition of rural and urban population by social group

The rural-urban distributions of each social group separately can be seen from Table 4.1.

Table 4.1: Percentage distribution of population by sector for each social group

Sector	Social Group				
	ST	SC	OBC	OTHERS	ALL
Rural	91.4	79.8	78.0	62.3	74.7
Urban	8.6	20.2	22.0	37.7	25.3
All	100.0	100.0	100.0	100.0	100.0

* derived from the table

4.1.3 The degree of urbanisation measured by the urban component of the population can be seen to differ across social groups. It is the highest at 37.7 percent among the residual others and the lowest (8.6%) among the ST population. The degree of urbanisation among SC (20.2%) and OBC (22.0%) population can also be seen to be lower than average (25.3%) for the entire Indian population. As a result of this uneven urbanisation, the social compositions in two sectors (rural and urban) are strikingly different (Chart 4.1). The impact of urbanisation on levels of living would be examined shortly.

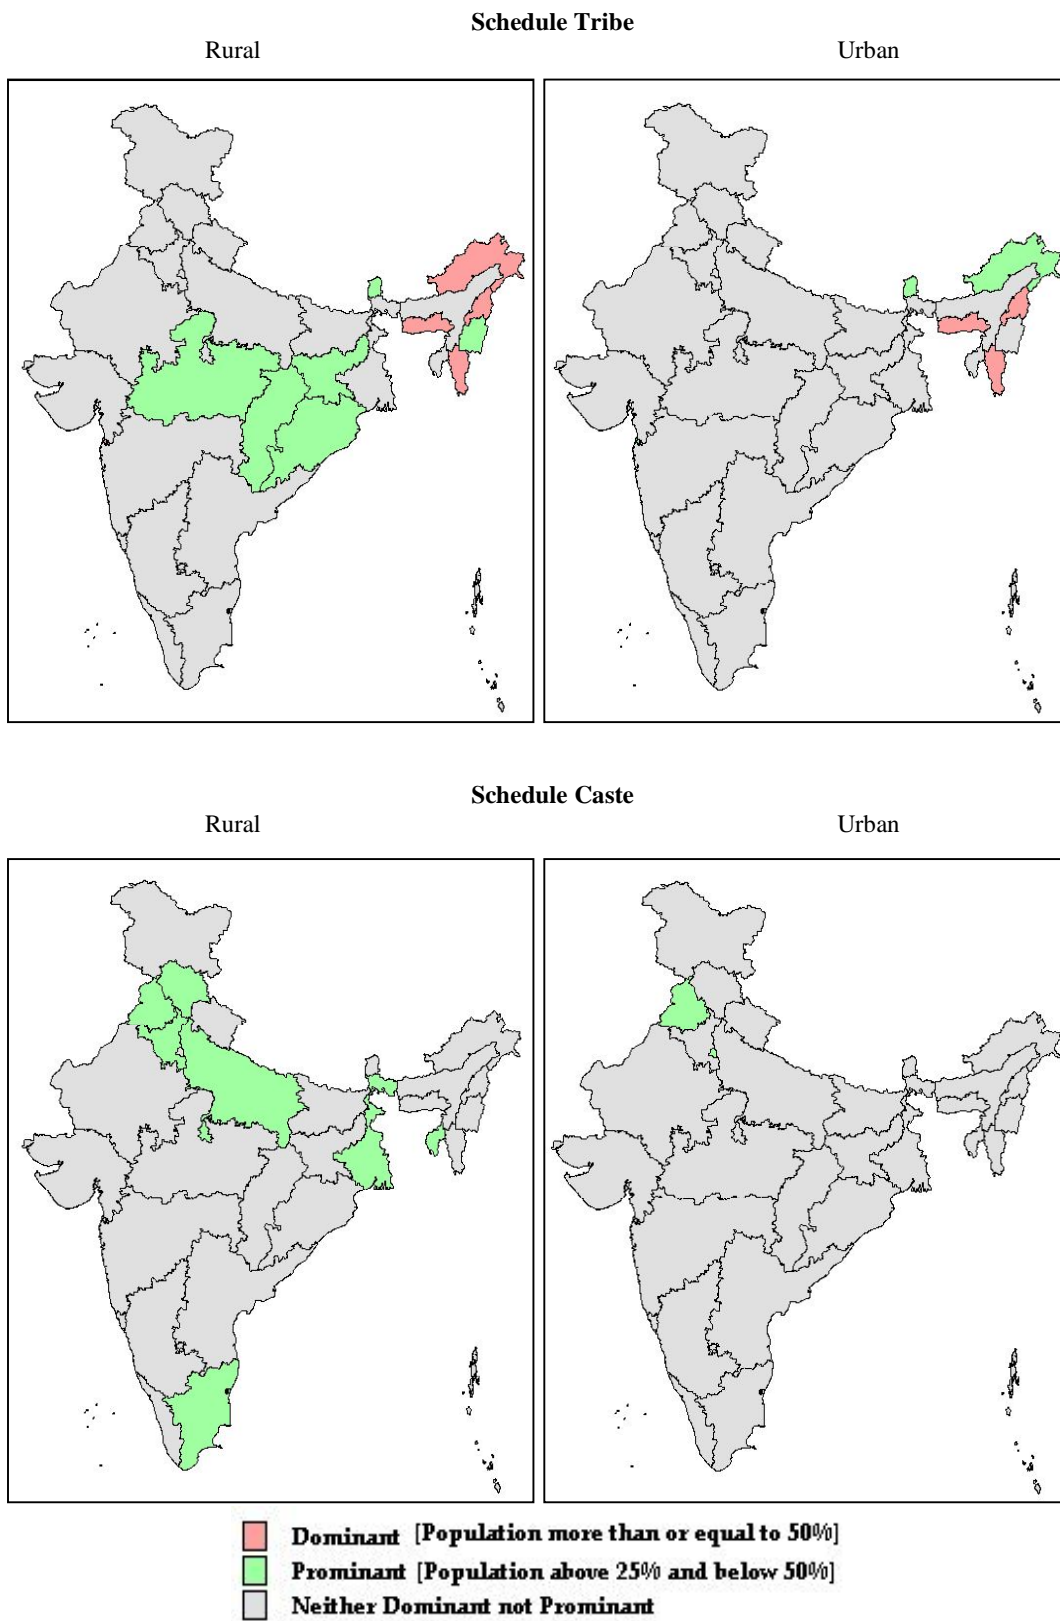

4.1.4 Statement 1 (page 36) shows the distribution of rural and urban population across social groups. If we define higher than 50 per cent share of a given social group to be *dominant*, a share between 25 and 50 per cent to be *prominent* and below 25 per cent to be *neither dominant nor prominent*, Table 4.2 gives for each social group the names of states (with share in bracket) where that social group is dominant. Chart 4.2 provides a visual picture of the inter-state distribution of each social class according to the three defined categories for rural and urban areas separately.

Social Group	Sector	State/UT with dominance (population share more than 50%)
ST	<i>Rural</i>	Mizoram (98.15), Nagaland (96.91), Lakshadweep (96.59), Meghalaya (92.76), Dadra & N. Haveli (88.64), and Arunachal Pradesh (76.36)
	<i>Urban</i>	Mizoram (98.85), Lakshadweep (97.22), Nagaland (80.37), and Meghalaya (77.62)
OBC	<i>Rural</i>	Tamil Nadu (70.54), Bihar (59.94), Kerala (59.39), Pondicherry (56.44), Uttar Pradesh (54.64), and Sikkim (50.08)
	<i>Urban</i>	Pondicherry (85.90), Manipur (77.38), Tamil Nadu (74.74), Kerala (62.88), and Bihar (57.64)
Others	<i>Rural</i>	A & N Islands (99.24), Goa (85.11), Jammu & Kashmir (69.44), Delhi (64.80), West Bengal (55.79), Chandigarh (53.82), Assam (53.76), Uttaranchal (53.40), and Himachal Pradesh (52.46).
	<i>Urban</i>	A & N Islands (97.83), Jammu & Kashmir (88.37), Goa (74.30) West Bengal (73.83), Himachal Pradesh (69.30), Chandigarh (68.83), Daman & Diu (66.72), Uttaranchal (63.72), Delhi (62.30), Assam (60.36), Gujarat (58.18), Haryana (56.20), Maharashtra (55.88), Dadra & N. Haveli (55.79), Punjab (54.08), Arunachal Pradesh (51.30) and Tripura (50.53).

* Actual shares in brackets

The social group SC is not dominant in any state/UT but in the case of rural areas it is prominent (share between 25% and 50%) in the state of Pondicherry (40.47), Punjab (40.07), West Bengal (28.92), Haryana (28.01), Tamil Nadu (27.06), Himachal Pradesh (26.97), Tripura (26.34), and Uttar Pradesh (25.40) and in the case of urban areas in the state/UT of Punjab (27.15) and Delhi (25.27).

Chart 4.2: Status of different social groups in the Indian population

4.1.5 Appendix Tables 4 and 5 provide the composition of the population for each social group across household types according to major source of livelihood for each State/UT and for rural and urban sectors separately. Table 4.3 provides the picture at a glance for all-India. In rural India, 64.3% of the population is still dependent on agriculture either as self-employed in agriculture (39.4%) or as agricultural labour (24.9%). From another angle, in rural India 55.9% the population is dependent for livelihood on self-employment in agriculture or in non-agriculture. The corresponding figure for urban India is 42.9%. Agricultural or other labour is least common source of major livelihood among the residual class (21.8%). It is much more common among ST (45.2%) and SC (56.4%) than among OBC (30.7%). In urban India, the proportion of regular wage/salary earning households is same for all social groups except the OBC. The most common means of livelihood among OBC as well as the residual class is self-employment.

Social Group	Rural						Urban				
	self-employed in non-agriculture	agricultural labour	other labour	self-employed in agriculture	'others'	all	Self-employed	regular wage/salary earning	casual labour	others	all
ST	6.7	33.6	11.6	42.3	5.6	100	27.4	42.5	22.0	7.9	100
SC	15.4	41.1	15.3	21.2	6.9	100	30.9	42.9	22.5	3.5	100
OBC	18.7	21.2	9.5	42.0	8.4	100	46.4	34.3	13.8	5.4	100
OTHERS	17.7	14.1	7.7	48.7	11.8	100	45.3	42.0	5.7	6.8	100
ALL	16.5	24.9	10.4	39.4	8.7	100	42.9	39.4	11.7	5.8	100

4.1.6 Statement 2 (page 37) presents inter-state (and rural-urban separately) percentage distribution of population across household type for each state/UT. One can observe the regional variation in the distribution and trace its linkage with the region's economic geography.

In rural areas, the states/UTs having at least 20% of the population belonging to the household type 'self-employed in non-agriculture' are Chandigarh (44.96%), Delhi (30.10%), West Bengal (22.63%) and Manipur (20.48). The corresponding states/UTs for the household type 'other labour' are Dadra & N. Haveli (42.5%), Kerala (30%), Tripura (29.9%), Goa (29.1%), Pondicherry (28%), A & N Islands (24.4) and Himachal Pradesh (22.3) and for the household type 'others' are Delhi (59.73%), Daman & Diu (43.46%), Lakshadweep (38.23%), Chandigarh (34.88%), Goa (30.16%), Nagaland (27.55%), A & N Islands (24.45%) and Sikkim (21.86%). The states/UTs having at least 25% of the population belonging to the household type 'agricultural labour' are Tamil Nadu (40.90%), Chhattisgarh (39.30%), Karnataka (39.20%), Pondicherry (39.00%), Andhra Pradesh (37.1%),

Maharashtra (36.7%), Gujarat (33.9%), West Bengal (31.8%), Bihar (29.8%), Madhya Pradesh (28.9%) and Orissa (28%). Similarly, states/UTs having more than 50% population belonging to the household type 'self-employed in agriculture' are Mizoram (76.94%), Arunachal Pradesh (69%), Nagaland (60.74%), Meghalaya (60.47%), Manipur (60.06%), Uttaranchal (54.4%), Rajasthan (52.61%), Assam (51.99%), Uttar Pradesh (50.78%) and Madhya Pradesh (50.07%).

In urban areas, the states/UTs having more than 43% (above national average of 42.93%) population belonging to the household type 'self-employed' are Bihar (57.28%), Uttar Pradesh (52.82%), Punjab (52.68%), Haryana (50.54%), Rajasthan (47.53%), Gujarat (47.51%), Manipur (45.68%), Orissa (45.12%), Jammu & Kashmir (44.18%), Himachal Pradesh (43.71%), West Bengal (43.61%) and Uttaranchal (43.1%). Similarly, the states/UTs having more than 40% (above national average of 39.42%) population belonging to the household type 'regular wage/salary earning' are Chandigarh (64.64%), Lakshadweep (62.85%), Meghalaya (62.35%), A & N Islands (61.11%), Sikkim (52.82%), Nagaland (52.37%), Dadra & N. Haveli (51.24%), Delhi (51.22%), Maharashtra (47.34%), Arunachal Pradesh (47.19%), Mizoram (47.01%), Daman & Diu (45.17%), Tamil Nadu (43.24%), Goa (42.6%), Gujarat (41.77%), Tripura (41.53%), Assam (41.29%) and Andhra Pradesh (41.14%). Although, the state-wise share of other types of households are at the lower side, in case of the household type 'casual labour' names of Kerala (28.5%) and Pondicherry (19.1%) and in the case of residual type of households the name of Manipur (17.12%), Assam (14.13%), Jharkhand (12.32%) and Tripura (12.32%) need to be mentioned.

4.1.7 Readers familiar with NSS practice are aware that quinquennial series data is used to form MPCE classes separately for rural as well as urban India in such a way that the first two and the last two classes each contain around 5% of the rural/urban population and the remaining classes each contain around 10% population. Therefore, in each sector we get twelve MPCE classes. The MPCE classes so formed in the present round are given below for easy comprehension. These classes are based on a *uniform reference period of 30-days for all the items of household expenditure*.

Table 4.4: MPCE classes for 61 st round			
Rural		Urban	
MPCE class (Rs.)	Percentage population	MPCE class (Rs.)	Percentage population
0 – 235	4.8	0 – 335	5.0
235 – 270	5.1	335 – 355	5.1
270 – 320	9.9	355 – 485	9.8
320 – 365	10.5	485 – 580	10.3
365 – 410	10.2	580 – 675	9.7
410 – 455	9.4	675 – 790	9.9
455 – 510	9.9	790 – 930	10.3
510 – 580	10.2	930 – 1100	9.7
580 – 690	10.4	1100 – 1380	10.2
690 – 890	9.8	1380 – 1880	9.9
890 – 1155	5.0	1880 – 2540	5.1
1155 & more	5.0	2540 & more	4.9
all classes	100	all classes	100

The average MPCE of each MPCE class is a good indicator of the level of living of the population group belonging to that MPCE class. Therefore, *per thousand distribution* of population in a given socio-economic group over different MPCE classes can be used to study the intra-group inequality. While comparing two or more than two socio-economic groups, the proportion of people of different groups enjoying a level higher/lower than the national average (level) serves as a useful indicator.

4.1.8 Appendix Table 1 shows per 1000 distributions of rural and urban persons in different states by MPCE class separately for different social groups with the "all groups" column provided for comparison. The concentration of population within a group of MPCE classes needs special attention. The group of MPCE classes having concentration of population is different for different social groups. For the social group with lower average MPCE, the proportion of its population belonging to higher MPCE classes is lower than the corresponding proportion for the socio-economic group having higher average MPCE. In rural India, the distribution of the population belonging to the social group 'OBC' by MPCE is almost similar to that of for all social groups (national average). In urban India though this similarity has not been observed, this group is still closer to the national average than any other group.

4.1.9 Land is an important natural resource. It acquires a special role in an agrarian economy. As rural India is still mainly dependent on agriculture, it is important to examine the composition of the population by size classes of land possessed. Statement 3 (page 38) shows the percentage distribution of persons by size class of land possessed for rural areas of different states/UTs and all-India. It reveals that just half the population in the rural India have less than 0.40 hectare land out of which 36.87% (18.47% of total) have land less than 0.01 hectare. Only 4.96% of the rural population have land more than or equal to 4.01 hectare.

4.1.10 Appendix Table 4 shows estimated number of households and persons by household type, social group and size class of land possessed for each state in rural areas. It provides following population distribution at all India level.

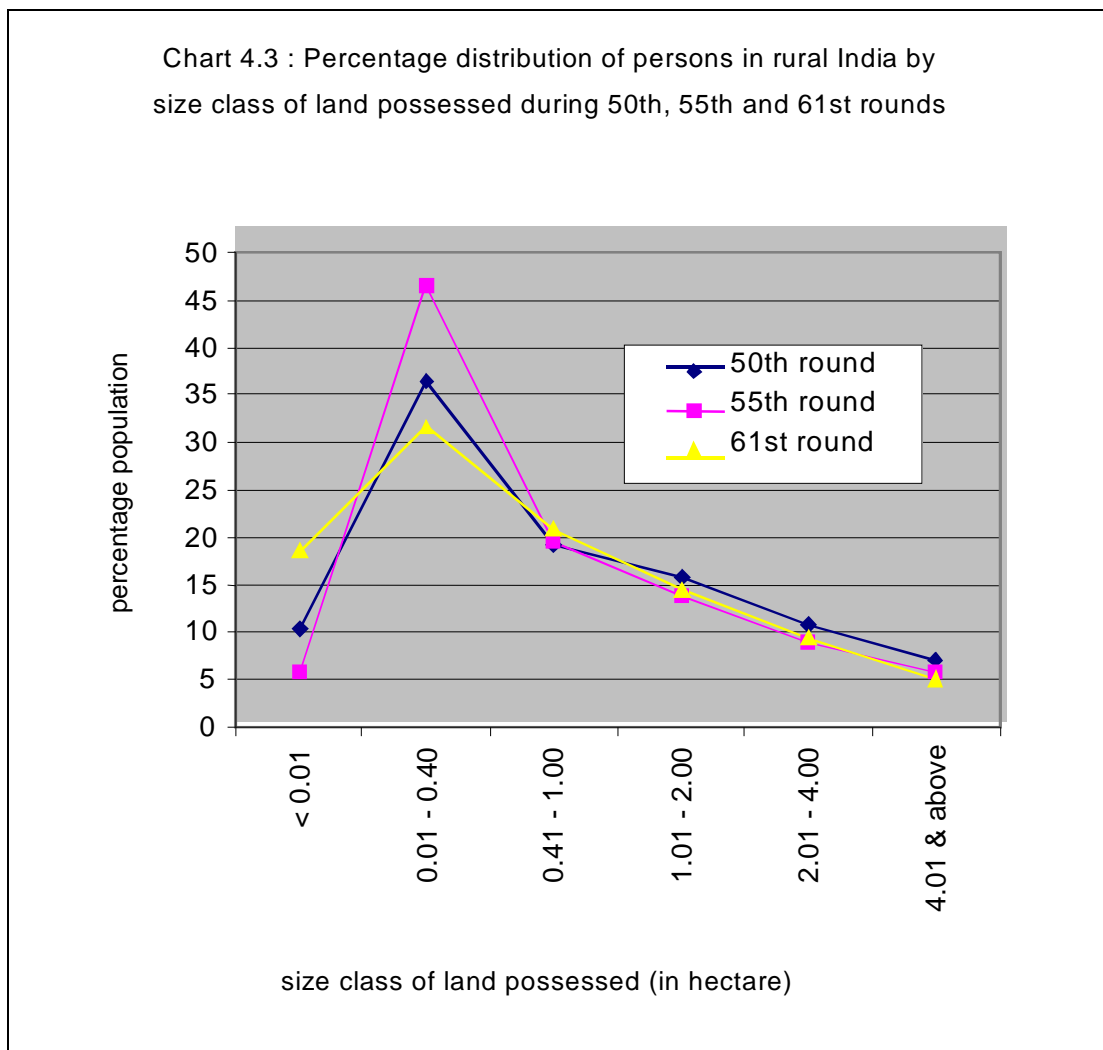

Size class of land possessed (hectares)	Percentage distribution of households by size of land possessed					Percentage distribution of persons by size of land possessed				
	Social Group					Social Group				
	ST	SC	OBC	OTHERS	All	ST	SC	OBC	OTHERS	All
<0.01	20.4	33.6	22.4	17.0	23.2	15.0	29.0	17.6	12.7	18.5
0.01-0.40	22.1	39.8	32.1	32.8	32.8	20.8	39.9	30.8	30.6	31.6
0.41-1.00	25.9	15.8	20.6	19.7	19.9	27.0	17.7	21.3	20.4	20.9
1.01-2.00	17.5	6.9	13.2	14.3	12.6	20.0	8.4	15.2	16.2	14.5
2.01-4.00	11.3	2.8	8.0	10.4	7.8	13.4	3.4	9.8	12.3	9.5
4.01+	2.8	1.1	3.7	5.8	3.6	3.9	1.6	5.2	7.8	5.0
all sizes	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Clearly, the social group SC is the most disadvantaged group. In this group 29% population have land less than 0.01 hectare and 68.9% population have land less than 0.41 hectare. The position of the social group ST is worth noting. If we ignore the land class '4.01 hectare and more', this social group leads over all other social groups. The social group OBC is not far behind the residual class (Others). Here one should not forget that the social group ST is even today concentrated in the specific geographical location (hills and forest areas of the country) of their origin and hence remains excluded from the mainstream. Therefore, the land under the possession of this group is significantly different from the other land.

The regional variation in the case of possession of land by its size class can be seen from Statement 3 (page 38). We observe that in many states, the majority of the population possesses land less than 0.41 hectare. Haryana (27.87%), Maharashtra (28.03%), Andhra Pradesh (28.78%), Punjab (29.76%), Gujarat (35.68%), Tamil Nadu (36.43%), Daman & Diu (41.87%), Pondicherry (53.77%), Chandigarh (64.45%) and Delhi (91.20%) are states/UTs where more than one-fourth rural population are located in size class of land less than 0.01 hectare. Only in some states like Rajasthan (16.64%), Nagaland (15.57%), Arunachal Pradesh (14.38%) and Madhya Pradesh (12.51%) do we have a sizeable population with land '4.01 hectare and more'.

As land is a fixed asset which is subjected to continuous division with splitting of households, the population is expected to shift continuously from higher land-possessed classes to lower land-possessed classes. However, there are many other factors influencing the shift. Table 4.6, as well as Chart 4.3, depicts the changes between 1993-94 (50th round) and 2004-05 (61st round). The progressively skewed nature of the size distribution over time is brought out by the rising shares of the bottom two-size classes.

Table 4.6: Percentage distribution of persons in rural areas by size class of land possessed during 50 th , 55 th and 61 st rounds							
Round	Land possessed classes (hectares)						
	< 0.01	0.01 - 0.40	0.41 - 1.00	1.01 - 2.00	2.01 - 4.00	4.01 & above	All classes
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
50 th round	10.29	36.55	19.19	15.92	10.89	7.16	100
55 th round	5.67	46.57	19.48	13.71	8.93	5.64	100
61 st round	18.47	31.63	20.90	14.55	9.48	4.96	100

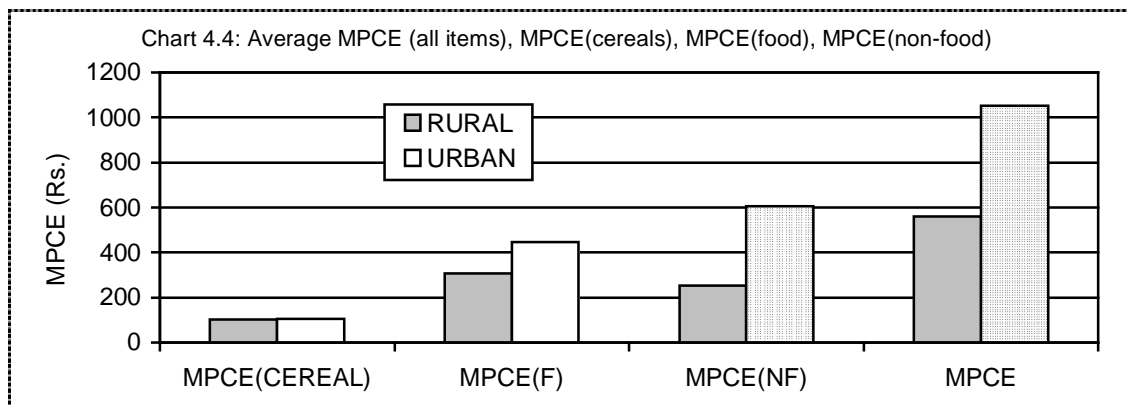

4.2 Differences in Level of Consumption

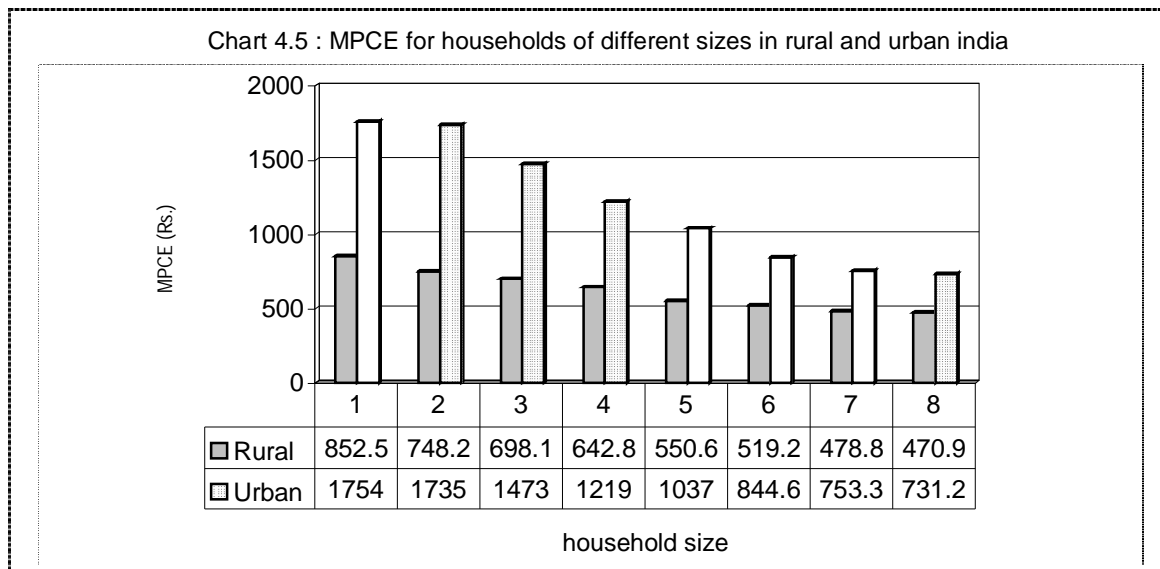

4.2.1 Rural Urban Differences

4.2.1.1 The first report of the 61st round, namely, Report Number 508: Level and Pattern of Consumer Expenditure, has examined the differences in the level and pattern of the consumption in the two sectors. To avoid repetition, we discuss only special features of the differences.

4.2.1.2 Statement 4 (page 39) provides break-up of average MPCE into average MPCE (Cereals), MPCE (Food) and MPCE (Non-Food) for each state/UTs and all India both for rural as well as urban areas. Chart 4.4 too depicts the rural-urban differences in the level of consumption in terms of average MPCE (Food) and MPCE (Non-Food) at all India level. The rural-urban difference in MPCE in the case of cereals is almost negligible (101:106). It is higher in the case of food group and the highest for the non-food group. It is important to note that the percentage share of cereals, food and non-food items in total MPCE of the rural population is 18.01%, 55.05%, and 44.95% against the corresponding percentage shares of 10.06%, 42.51% and 57.49% for the urban population.

4.2.1.3 The rural-urban differences in average MPCE for households formed on the basis of household size, can be seen from the Chart 4.5(c.f. NSS Report No. 508). Urban average MPCE is higher than the rural one for each household size though the difference tends to narrow down for bigger households.

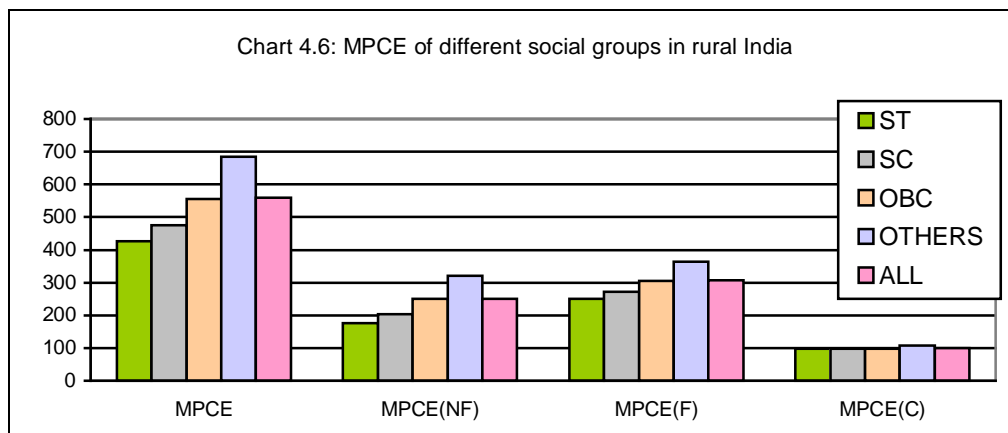

4.2.1.4 When we examine the rural-urban differences state-wise (statement 4, page 39), we observe that the rural-urban differential in average MPCE observed at all India level does prevail at state level too. The level of differential varies over states. In the case of Dadra & Nagar Haveli, Chhattisgarh, Jharkhand, Madhya Pradesh, Tripura, Chandigarh, Karnataka, Maharashtra and West Bengal the MPCE for urban population is more than double that of rural population. In case of Arunachal Pradesh, Manipur, Kerala and Haryana, the difference is less pronounced. In the case of Daman & Diu, the MPCE (rural) is more than MPCE (urban). With only 80 sample households each for the rural and urban areas of Daman & Diu, the sampling variability in the average MPCE estimates is expected to be very large.

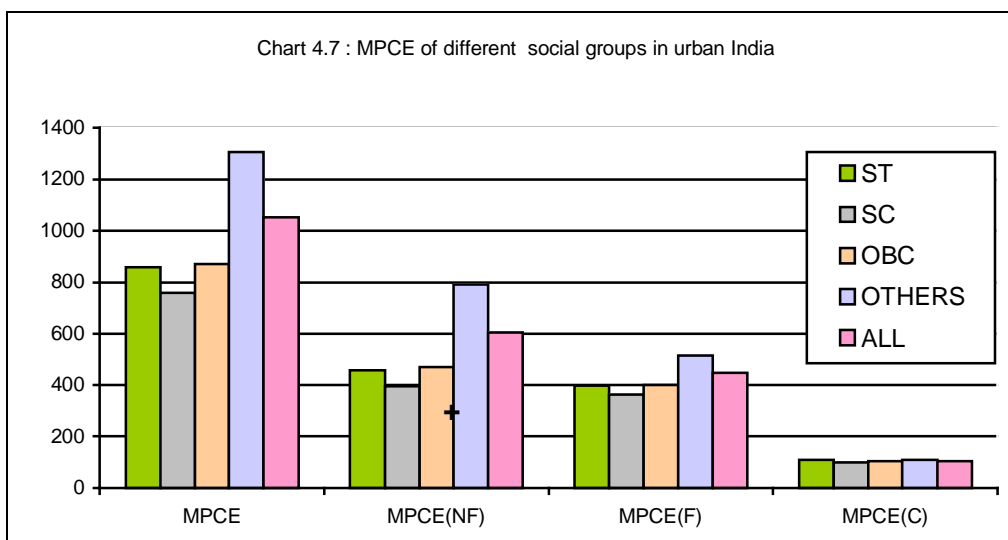

4.2.2 Differences in Consumption across Social Groups

4.2.2.1 Average MPCE (cereals), MPCE (food) and MPCE (non-food) for each social group in different state/UT and sector may be seen from statement 6(R) (page 41), statement 6(U) (page 42) for major states and statement 7(R) (page 43) and statement 7(U) (page 44) for smaller states/UTs. In rural India (Chart 4.6), the households belonging to the social group

Scheduled Tribes (ST) have the lowest MPCE (Rs. 426.19) followed by the households belonging to the social group Scheduled Castes (SC) with Rs. 474.72. In urban India (Chart 4.7), the households belonging to the social group Scheduled Castes have the lowest MPCE (Rs. 758.38) followed by the households belonging to the social group Scheduled Tribes (Rs. 857.46). In the case of both the sectors, the households belonging to the social group Other Backward Classes (OBC) has lower MPCE than that of the residual class. It is interesting to note that in the case of rural India, the average MPCE (Rs. 556.72) of OBC is almost equal to the national average (Rs. 558.78) for rural India and in case of urban India it is closer to the national average (Rs. 558.78) for urban India than any other social group. In the case of the social group ST the rural-urban average MPCE differential is the largest.

MPCE (C) = MPCE (cereals)	MPCE (F) = MPCE (food)
MPCE (NF) = MPCE (non-food)	MPCE = MPCE (food + non-food)

4.2.2.2 It is seen that inter-social-group differential in MPCE is the least in the case of cereals and the highest in the case of non-food on the same lines as the rural-urban differential observed earlier.

4.2.2.3 Regional variation in the differences in consumption level of different social groups can be studied from Statement 6(R), Statement 6(U), Statement 7(R) and Statement 7(U) referred earlier. It can be seen that though the observations noted in paragraphs 4.2.2.1 &

4.2.2.2 above apply to many states/UTs, some descriptive examples highlighting the departures from the general pattern are noted below. *These examples have to be interpreted in the light of the underlying numbers of sample households (given in Statement 10 / 11, page 47 / 48); if these are small, the estimates are subject to wide margins of sampling error. They are also subject to inter-state variations in prices of the same commodities, which again are known to be wide.*

A *Inter se rural differentials:* Although, in rural India, at the all-India level, the households belonging to the social group Scheduled Tribes have the lowest MPCE followed by the households belonging to the social group Scheduled Castes, in the following cases the social group 'Scheduled Tribes' has a higher average MPCE than the social group 'Scheduled Caste'.

Uttar Pradesh, Uttaranchal, Assam, Bihar, Goa, Haryana, Himachal Pradesh, Jharkhand, Karnataka, Tamil Nadu and Meghalaya.

Similarly, in the following cases the social group 'Scheduled Tribes' has higher average MPCE than the social group 'OBC'.

Arunachal Pradesh, Goa, Haryana, Himachal Pradesh, Mizoram, Nagaland, Daman & Diu and Lakshadweep.

It is interesting to note that in the case of Goa (rural) the social group 'Scheduled Tribes' has higher MPCE than any other social group. Similarly, in the rural sector of Assam, Manipur, Meghalaya and West Bengal, the MPCE for the social group OBC is higher than any other social group.

B *Inter se urban differentials:* Although in urban India, at all-India level, the households belonging to the social group Schedule Castes have lowest MPCE followed by the households belonging to the social group Scheduled Tribes, in the following cases the social group 'Scheduled Castes' has higher MPCE than the social group 'Scheduled Tribes'

Chandigarh, Daman & Diu, Gujarat, Jharkhand, Karnataka, Lakshadweep, Manipur, Meghalaya, and Mizoram.

In the state of Bihar, Haryana, Jammu & Kashmir, Nagaland and Sikkim the MPCE of the social group 'Scheduled Tribes' is higher among urban households than the MPCE of any other social group in the state.

Similarly, in the following cases the MPCE of the social group 'Scheduled Tribes' is higher than the MPCE of the social group 'OBC'.

Bihar, Delhi, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Kerala, Madhya Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Rajasthan, Sikkim, Tripura, Uttar Pradesh, Uttaranchal, Daman & Diu, and Lakshadweep.

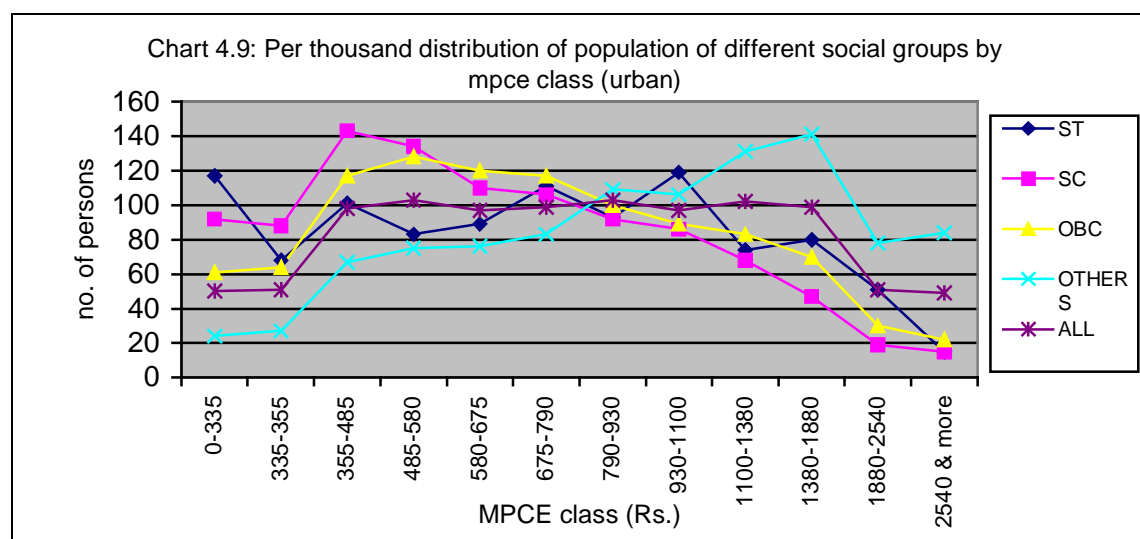

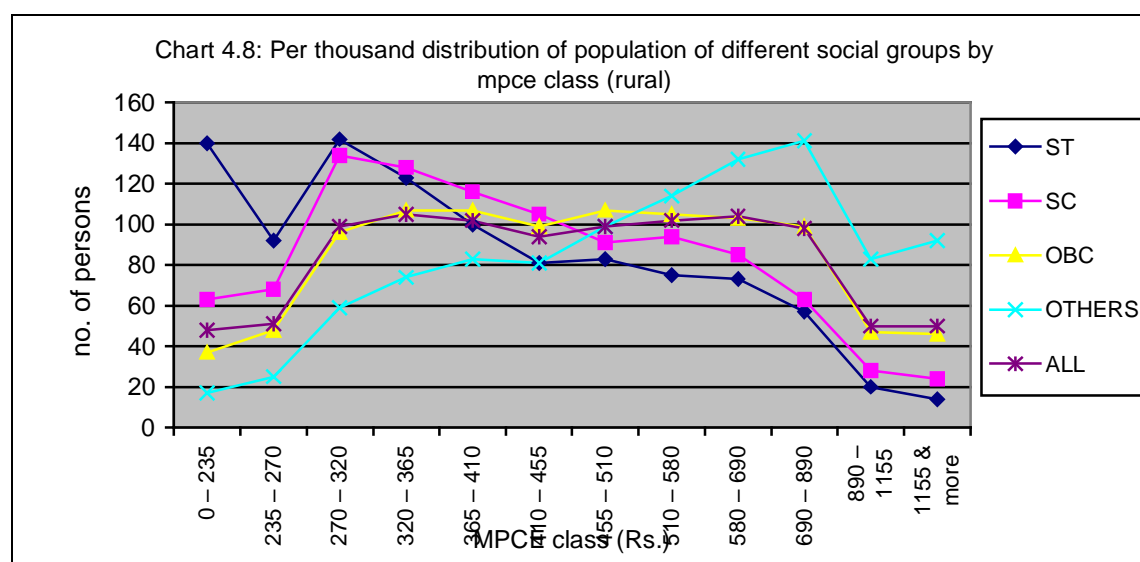

It is interesting to note that in the case of the urban sector of Arunachal Pradesh and Dadra & N. Haveli the MPCE for the social group OBC is higher than that of any other social group.

C *Inter-state/UT variations:* In the sector-wise inter-state comparison, we observe the dominance of the regional variation over the within-state inter-social-group variation. For example, in the case of Haryana (rural) the MPCE (Rs.986.69) of the social group Scheduled Tribes is higher than the MPCE of any social group in Jharkhand, Chhattisgarh, Bihar, Tripura, Orissa, Assam, West Bengal, Madhya Pradesh, Karnataka, Mizoram, Uttar Pradesh,

Manipur, Maharashtra, Rajasthan, Meghalaya, Uttarakhand, Andhra Pradesh, Arunachal Pradesh, Sikkim, Jammu & Kashmir, Gujarat and Chandigarh.

Similarly in the case of Punjab (rural) the MPCE (Rs.640.64) of the social group Scheduled Tribes is higher than the MPCE of any social groups in Jharkhand, Chhattisgarh, Bihar, Tripura, Orissa, Assam, West Bengal, Madhya Pradesh, and Karnataka. In case of Scheduled Castes also, the MPCE (Rs. 753.11) in the state of Kerala (rural) is higher than the MPCE of any social group in the states of Jharkhand, Chhattisgarh, Bihar, Tripura, Orissa, Assam, West Bengal, Madhya Pradesh, Karnataka, Uttar Pradesh, Manipur, Maharashtra and Rajasthan. Similarly, In the case of OBC too the MPCE (Rs. 640.49) in the state of Tamil Nadu (rural) is higher than the MPCE of any social group in the states of Jharkhand, Chhattisgarh, Bihar, Tripura, Orissa, Assam, West Bengal, Madhya Pradesh, and Karnataka.

4.2.2.4 Appendix Table 1 provides average MPCE for different social groups by MPCE class in both the sectors. Charts 4.8 and 4.9 depict the picture at all-India level. State level variations can be seen from the Appendix Table.

In the above diagram for the rural sector, apart from other facts, the closeness of the yellow line (OBC) with the violet line (national average) needs special mention. In the case of urban India, the closeness is not so striking.

4.2.2.5 In rural India, the average MPCE is Rs. 558.78 and 65.7% of the rural population is below this level. In the case of the social group 'ST', 79.6% of the population has average MPCE less than the national average for rural India. The corresponding figures for SC, OBC and OTHERS are 77.4%, 64.1%, and 53.3% respectively. Similarly, in urban India, the average MPCE is Rs.1052.36 and 67.1% of the urban population is below this level. In the case of the social group 'SC', 84.0% of the population is having average MPCE less than the national average for the rural India. The corresponding figures for ST, OBC and OTHERS are 74.3%, 75.4%, and 54.5% respectively. Statement 5 (page 40) presents the corresponding figures state-wise for each sector separately.

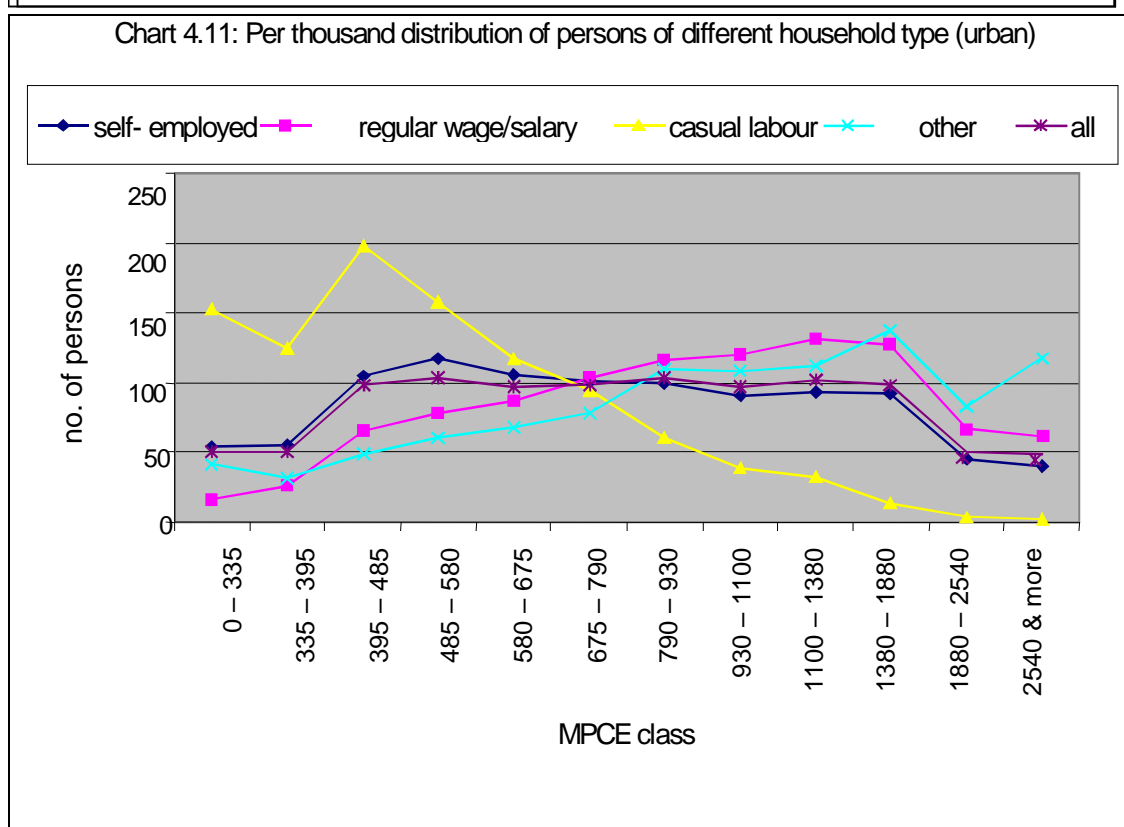

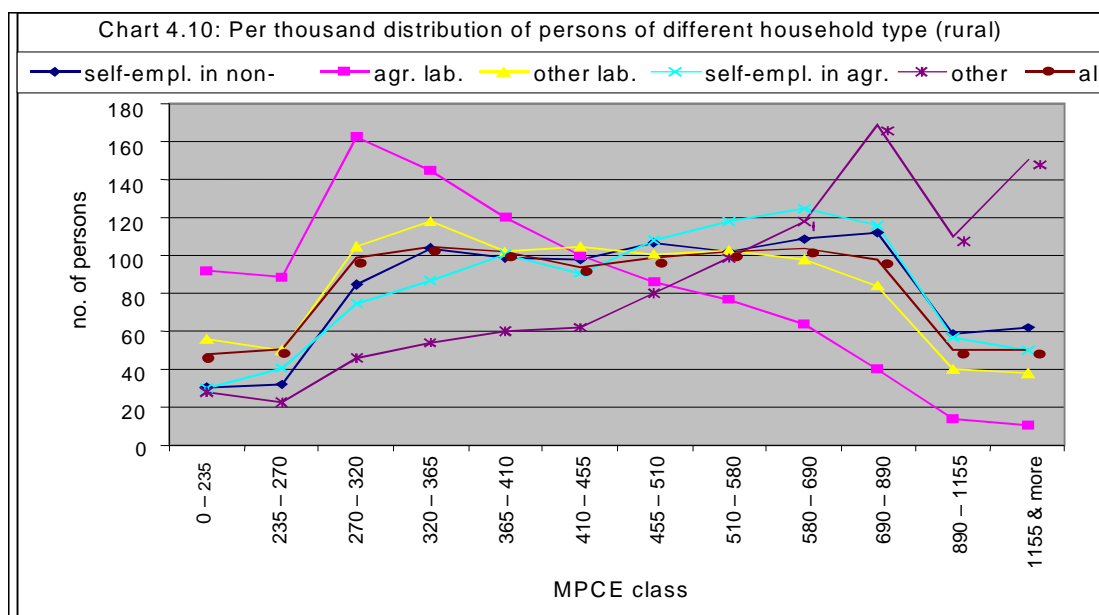

4.2.2.6 Table 4.7 presents a comparison across the 55th and the 61st round in terms of distribution of social groups in the population and average MPCE for the rural and urban sectors separately. The only noteworthy feature is the rise in the share of OBCs in the population between the two rounds for both the rural and the urban population.

Table 4.7: level of living over time for different social groups												
Social Group	Percentage share in population						Average MPCE (Rs.)					
	55 th round			61 st round			55 th round			61 st round		
	rural	urban	all	rural	urban	all	rural	urban	all	rural	urban	all
ST	10.49	3.40	8.7	10.57	2.92	8.6	386.69	608.79	417.42	426.19	857.46	463.15
SC	20.42	14.35	18.9	20.92	15.64	19.6	418.51	690.52	454.85	474.72	758.38	532.07
OBC	37.52	30.38	35.7	42.75	35.60	40.9	473.65	734.82	529.50	556.72	870.93	625.89
OTHERS	31.41	51.70	36.5	25.71	46.00	30.8	577.22	1004.75	729.45	685.31	1306.10	919.09
ALL	100	100	100	100	100	100	485.88	854.70	578.62	558.78	1052.36	683.75

4.2.3 The Differences in Consumption across Economic Groups

4.2.3.1 Statements 8 (page 45) shows average MPCE of different household types in different states/UTs and all-India for each sector. In rural India, the average MPCE (Rs.415.65) of households belonging to the household type 'agricultural labour' is the lowest among all the household types. This is followed by the average MPCE (Rs.519.81) of households type 'other labour'. This depicts the overall poor economic condition of the rural labour class in rural India. The average MPCE (Rs.583.48) of households belonging to the type 'self-employed in agriculture' is lower than the average MPCE (Rs.604.41) of persons belonging to the household type 'self-employed in non-agriculture'. The average MPCE (Rs.818.19) of persons belonging to the household type 'others' is the highest among all the household types.

In urban India, the average MPCE (Rs.579.63) of households belonging to the household type 'casual labour' is the lowest among all the household types. This is followed by the average MPCE (Rs.982.35) of household type 'self-employed'. The average MPCE (Rs.1212.66) of households belonging to the household type 'regular wage/salary earning' is lower than the average MPCE (Rs.1444.97) of households belonging to the household type 'others'. The following charts reveal the picture at all India level.

An examination of the above two charts reveals the relative position of persons belonging to the different household types. The overall closeness of the household type 'other labour' with the national average in rural India and of the household type 'self-employed' with the national average in urban India may be noted. Similarly, the poor economic position of the household type 'agricultural labour' in rural India and of the 'casual labour' in urban India should be obvious.

4.2.3.2 State-wise variation in level of consumption of different household types can be seen from Statement 8 (page 45). We would like to draw the attention of readers to the following observations.

- A In rural areas, in most of the cases including all major states except Bihar, the MPCE of persons belonging to the household type 'others' is higher than the MPCE of persons belonging to any other household type. In case of Arunachal Pradesh, Goa, Mizoram, A & N Islands, Dadra & N. Haveli and Lakshadweep, the MPCE of persons belonging to the household type 'self-employed in non-agriculture' is higher than the MPCE of persons belonging to any other household type. Similarly, in case of Delhi and Chandigarh the MPCE of persons belonging to the household type 'agricultural labour' is higher than the MPCE of persons belonging to any other household type. In the case of Bihar the MPCE of persons belonging to the household type 'self-employed in agriculture' is higher than the MPCE of persons belonging to any other household type.

In the case of all major states except Assam the MPCE of persons belonging to the household type 'agricultural labour' is the lowest. It is followed by the MPCE of the household type 'other labour'.

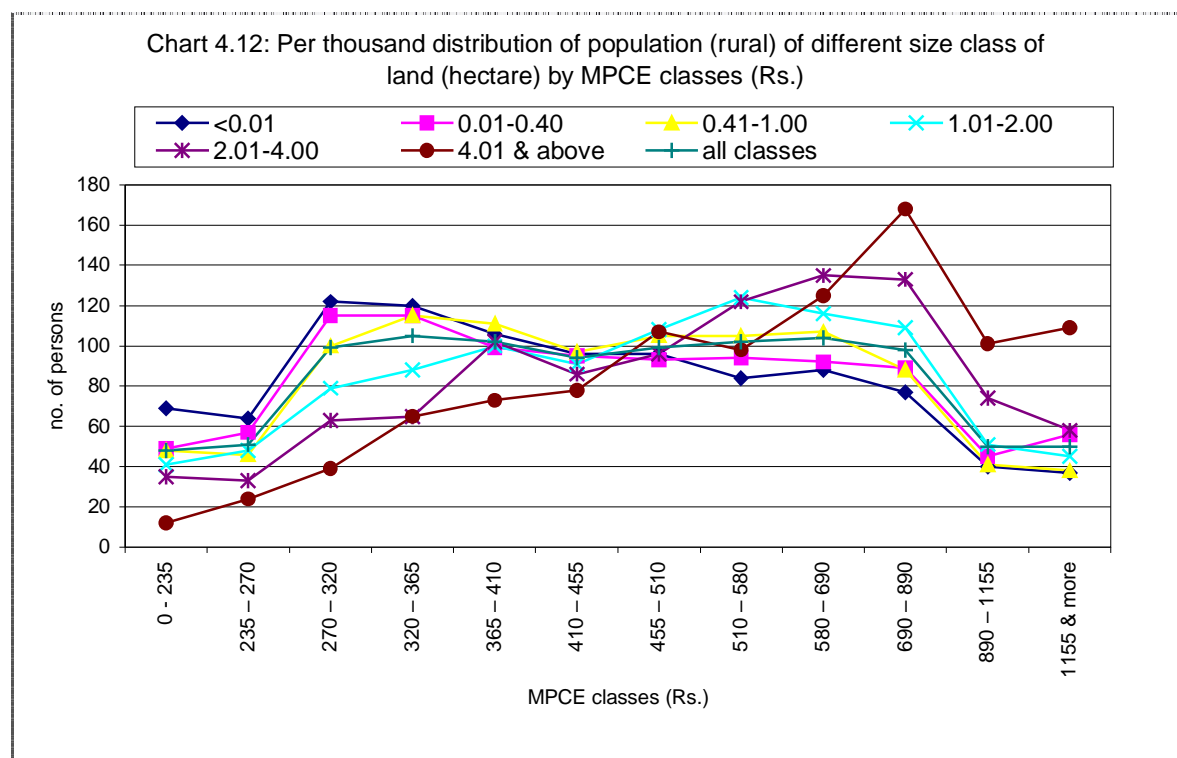

- B In the case of urban areas, as expected, the MPCE of persons belonging to the household type 'casual labour' is lower than the MPCE of persons belonging to any other household type. In the case of all major states except Kerala this is followed by the MPCE of persons belonging to the household type 'self-employed'. With the exception of Goa, in all the states/UTs, the MPCE of persons belonging to the household type 'regular wage/salary earning' is higher than that of persons belonging to the household type 'self-employed'. In all the states except Goa the highest position (MPCE) has been occupied either by regular wage / salary earning households or by household type 'others'. In the case of Goa, the highest MPCE has been reported by the household type 'self employed'.

The above estimates have to be seen in the light of the underlying numbers of sample households (given in Statement 10 / 11, page 47 / 48); if these are small, the estimates are subject to wide margins of sampling error. They are also subject to inter-state variations in prices of the same commodities, which again are known to be wide.

4.2.4 Land Possessed and Consumption:

4.2.4.1 The importance of land in the rural economy needs no emphasis. In general, average MPCE is supposed to increase with increase in the land under possession. However, many factors other than ownership of land (which makes no allowance for wide inter-regional variations in land quality and productivity) play an important role in determining the MPCE. This is why, even at all India level, there are exceptions to the general perception that average

MPCE increases with increase in the area of land possessed (Statement 9, page 46). This aspect is very clearly visible in case of social groups. Though, in the case of land possessed, the social group ST has a significant lead over the social group SC, the average MPCE (Rs.426.19) of the households belonging to the social group ST is less than the average MPCE (Rs.474.72) of the households belonging to the social group SC. Chart 4.12 presents per thousand distributions of persons by MPCE class for different size-classes of land for the population belonging to all social groups in rural India. It brings out the weak association of land possessed with MPCE.

5 Conclusion

Adopting average MPCE of a socio-economic group as a broad parameter for measuring differences in the level of living/economic status, the following major points emerge:

- A There are wide within-social group variations across MPCE.
- B With some exceptions, in general, the average level of living of the social group Scheduled Castes as well as the Scheduled Tribes in a State/UT appears to be on the lower side in comparison to the level enjoyed by OBC or the residual class.
- C The average level of living of the social group OBC, in general, is lower than the one achieved by the residual class but it is closer to the national average than any other group.
- D Wide inter-regional variations in a country of wide agro-climatic and cultural diversities add to the inter-social group variations.

6. Limitations:

Finally, some major limitations that need to be taken into account in interpreting the detailed results of the survey are given below.

- 6.1 The precision of any estimate depends upon the actual sample size used for the estimation. The present survey was a general household survey of consumer expenditure in which identification of social and economic group was, among others, one of the household characteristics on which data were collected. The report is based on the classification of general household sample according to social/economic groups. Consequently, sample sizes for different estimates are different, and therefore, the estimates may not possess the same level of precision. *For enabling **informed interpretation**, readers' attention is particularly drawn to the Statement 10 (page 47) and Statement 11 (page 48) that indicate the sample size for each socio-economic category at all-India level. Similar data for states are presented in Appendix Tables 6 and 7 for interested readers.*
- 6.2 Data for 'all classes' are not necessarily the total of data for different classes because of the inclusion of households with characteristic 'not recorded' in the former.
- 6.3 Inter-state comparisons of levels of living as reflected in the level of MPCE have to be qualified by the inter-state variations in prices of goods and services.

Statement 1: Percentage distribution of population by social group for each state/UT (sector-wise)										
States & UTs	Rural					Urban				
	Social Group					Social Group				
	ST	SC	OBC	Others	ALL	ST	SC	OBC	Others	ALL

Sample Design and Estimation Procedure

1. **Outline:** A stratified multi-stage design was adopted for the 61st round survey. The first-stage units (FSU) were the 2001 Census villages in the rural sector and Urban Frame Survey blocks in the urban sector. The ultimate stage units, in both sectors, were households. In the case of large villages/ blocks requiring formation of hamlet-groups (hg)/ sub-blocks (sb), the selection of two hg's/ sb's from each FSU formed an intermediate stage of sampling.
2. **Sampling Frame for First-Stage Units:** *For the rural sector*, the list of 2001 Census villages (*panchayat* wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available Urban Frame Survey (UFS) blocks was considered as the sampling frame.
3. **Stratification:** Within each district of a State/UT, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of these also formed a separate basic stratum and the remaining urban areas of the district was considered as another basic stratum. There are 27 towns with population 10 lakhs or more at all-India level as per Census 2001.
4. **Sub-stratification:**

Rural sector: If 'r' be the sample size allocated for a rural stratum, the number of sub-strata formed was 'r/2'. The villages within a district as per frame were first arranged in ascending order of population. Then sub-strata 1 to 'r/2' were demarcated in such a way that each sub-stratum comprised a group of successive villages of the arranged frame and had more or less equal population.

Urban sector: If 'u' be the sample size for an urban stratum, 'u/2' sub-strata were formed. The towns within a district, except those with population 10 lakhs or more, were first arranged in ascending order of population. Next, UFS blocks of each town were arranged by IV unit no. × block no. in ascending order. From this arranged frame of UFS blocks of all the towns, 'u/2' sub-strata were formed in such a way that each sub-stratum had more or less equal number of UFS blocks.

For towns with population 10 lakhs or more, the urban blocks were first arranged by IV unit no. × block no. in ascending order. Then 'u/2' number of sub-strata were formed in such a way that each sub-stratum had more or less equal number of blocks.
5. **Sample size (FSUs):** 12784 FSUs were allocated at all-India level on the basis of investigator strength in different States/UTs for the Central sample and 14992 FSUs were allocated for the State sample.
6. **Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to the availability of investigators ensuring more or less uniform work-load.
7. **Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger States like Maharashtra, Tamil Nadu etc. should not exceed the rural sample size. A minimum of 8 FSUs was allocated to each State/UT separately for rural and urban areas.
8. **Allocation to strata:** Within each sector of a State/UT, the sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 4 with a minimum sample size of 4.

9. **Selection of FSUs:** Two FSUs were selected from each sub-stratum of a district of the rural sector with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 2001. For the urban sector, two FSUs were selected from each sub-stratum by using Simple Random Sampling Without Replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both rural and urban sectors.
10. **Selection of hamlet-groups/sub-blocks/households: important steps**
11. **Criterion for hamlet-group/sub-block formation:** Large villages/blocks having approximate present population of 1200 or more were divided into a suitable number (say, D) of 'hamlet-groups' (hg) in the rural sector and 'sub-blocks' (sb) in the urban sector. The number of hg's/sb's to be formed was decided as shown below.

approximate present population of the sample village/block	no. of hgs/sbs to be formed (D)
less than 1200*	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
...and so on	

* i.e., no hamlet-group/sub-block formation

For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur, Doda districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups formed was as follows.

approximate present population of the sample village	no. of hgs to be formed
less than 600	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
...and so on	

Each hamlet-group/sub-block was formed by grouping contiguous areas so that the hg's/ sb's had more or less equal population content. To form the sampling frame for selection of households, two hamlet-groups/sub-blocks were selected by SRSWOR from those formed in a large village/block. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

12. **Formation of Second Stage Strata and allocation of households**

For both Schedule 1.0 and Schedule 10, households listed in the selected village/block/ hamlet-groups/sub-blocks were stratified into three second-stage strata (SSS) as given below.

Rural: The three second-stage strata (SSS) in the rural sector were formed as follows:

- SSS 1: relatively affluent households
 SSS 2: from the remaining households, households having principal earning from non- agricultural activity
 SSS 3: other households

Urban: In the urban sector, the three second-stage strata (SSS) were formed using information collected on the Monthly Per Capita Expenditure (MPCE) of households, as follows:

- SSS 1: households with MPCE more than A (i.e. $MPCE > A$)
 SSS 2: households with MPCE equal to or less than A but equal to or more than B (i.e. $B \leq MPCE \leq A$)
 SSS 3: households with MPCE less than B (i.e. $MPCE < B$)

where A and B were values of MPCE chosen separately for each NSS Region such that, according to data collected in the 55th round of NSS, the top 10% of households in the region had MPCE more than A and the bottom 30% had MPCE less than B.

Schedule 1.0 was surveyed in 10 households in each FSU. The allocation of sample households to second-stage strata was as follows:

SSS	composition of SSS	no. of hhs to be surveyed	
		without hg/sb formation	with hg/sb formation (for each hg/sb)
rural			
SSS 1:	relatively affluent households	2	1
SSS 2:	of the rest, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	4	2
urban			
SSS 1:	households with $MPCE > A$	2	1
SSS 2:	other households with MPCE equal to or less than A but equal to or more than B (i.e. $B \leq MPCE \leq A$)	4	2
SSS 3:	households with MPCE less than B	4	2

13. **Selection of households for Schedule 1.0:** From each SSS the sample households for Schedule 1.0 were selected by SRSWOR.

14. Estimation Procedure

Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

m = subscript for sub-sample ($m = 1, 2$)

i = subscript for i-th FSU [village (panchayat ward) / block]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb (j = 1, 2 or 3)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample village (panchayat ward) / block

$D^* = 1$ if $D = 1$

= $D / 2$ for FSUs with $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes for all the FSUs of a rural sub-stratum)

z = size of sample village used for selection.

n = number of sample village / block surveyed including zero cases but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

y_{stmijk} = observed value of the characteristic y for the k^{th} household in the j^{th} second-stage stratum of the d^{th} hg/sb (d = 1, 2) of the i^{th} FSU belonging to the m^{th} sub-sample for the t^{th} sub-stratum of s^{th} stratum;

However, for ease of understanding, a few symbols are suppressed in the following paragraphs where they are obvious.

Formulae for estimation of aggregates based on Schedule 1.0 for a particular sub-sample and stratum in rural/ urban sector:

Rural:

Estimation formula for a sub-stratum:

For households selected in j^{th} second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Urban:

Estimation formula for a sub-stratum:

For households selected in j^{th} second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Estimate for a stratum:

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

Overall Estimate for Aggregates:

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

Estimates of Ratios:

Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as.

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

Estimates of Error: The estimated variances of the above estimates are as follows:

For aggregate \hat{Y} :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$$

where $V\hat{a}r(\hat{Y}_s)$ are as given below.

For strata with PPSWR selection at first stage:

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{Z_{sti} \hat{Y}_{sti}}{z_{sti}} - \hat{Y}_{st} \right)^2 \right],$$

where $\hat{Y}_{sti} = \sum_j Y_{stij}$,

$$\hat{Y}_{stij} = D_{sti}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

For strata with SRSWOR selection at first stage:

$$Var_{srswor}(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2,$$

where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[\sum_s M\hat{S}E_s(\hat{R}) + \sum_{s'} M\hat{S}E_{s'}(\hat{R}) \right]$$

where s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

For strata with PPSWR selection at first stage:

$$M\hat{S}E_s(\hat{R}) = \sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left[\frac{Z_{st}}{z_{sti}} (\hat{Y}_{sti} - \hat{R} \hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R} \hat{X}_{st}) \right]^2$$

where

$$\hat{Y}_{sti} = \sum_j \hat{Y}_{stij}, \quad \hat{X}_{sti} = \sum_j \hat{X}_{stij}$$

$$\hat{Y}_{stij} = D_{sti}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right],$$

$$\hat{X}_{stij} = D_{sti}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} x_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} x_{i2jk} \right]$$

For strata with SRSWOR selection at first stage:

$$M\hat{S}E_{s'}(\hat{R}) = \sum_t \frac{1}{4} \left[(\hat{Y}_{s't1} - \hat{Y}_{s't2})^2 + \hat{R}^2 (\hat{X}_{s't1} - \hat{X}_{s't2})^2 - 2\hat{R} (\hat{Y}_{s't1} - \hat{Y}_{s't2}) (\hat{X}_{s't1} - \hat{X}_{s't2}) \right]$$

where $\hat{Y}_{s't1}$ and $\hat{Y}_{s't2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

Multipliers:

The formulae for multipliers for a sub-sample are given below for Schedule 1.0:

sub-stratum	formula for multipliers	
	hg / sb 1	hg / sb 2
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi1j}}{h_{stmi1j}}$ j = 1, 2, 3	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$ j = 1, 2, 3
urban	$\frac{N_{st}}{n_{stmj}} \times D_{stmi}^* \times \frac{H_{stmi1j}}{h_{stmi1j}}$, j = 1, 2, 3	$\frac{N_{st}}{n_{stmj}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$, j = 1, 2, 3

Notes:

(i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.

(ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

**GOVERNMENT OF INDIA
NATIONAL SAMPLE SURVEY ORGANISATION
SOCIO-ECONOMIC SURVEY
SIXTY-FIRST ROUND: JULY 2004 - JUNE 2005**

SCHEDULE 1.0: CONSUMER EXPENDITURE

[0] descriptive identification of sample household	
1. state/u.t.:	5. hamlet name:
2. district:	6. ward/inv. unit/block:
3. tehsil/town:	7. name of head of household:
4. village name:	8. name of informant:

[1] identification of sample household											
item no.	item	code				item no.	item	code			
1.	srl. no. of sample village/ block					11.	sub-sample				
2.	round number	6		1		12.	FOD sub-region				
3.	schedule number	0	1	0		13.	sample hamlet-group/sub-block number				
4.	sample (central-1, state-2)					14.	second stage stratum				
5.	sector (rural-1, urban-2)					15.	sample household number				
6.	state-region					16.	srl. no. of informant (as in col.1, block 4)				
7.	district					17.	response code				
8.	stratum					18.	survey code				
9.	sub-stratum					19.	reason for substitution of original household (code)				
10.	sub-round										

CODES FOR BLOCK 1

item 17: response code : informant: co-operative and capable -1, co-operative but not capable -2, busy -3, reluctant - 4, others - 9

item 18: survey code : original – 1, substitute – 2, casualty – 3

item 19: reason for substitution of original household : informant busy -1, members away from home -2, informant non-cooperative -3, others 9

* tick mark (✓) may be put in the appropriate place.

[2] particulars of field operations												
srl. no.	item	investigator			assistant superintendent			superintendent				
(1)	(2)	(3)			(4)			(5)				
1.	i) name (block letters)											
	ii) code											
2.	date(s) of :	DD	MM	YY	DD	MM	YY	DD	MM	YY		
	(i) survey/inspection											
	(ii) receipt											
	(iii) scrutiny											
	(iv) despatch											
3.	number of additional sheets attached											
4.	total time taken to canvass schedule 1.0 (in minutes)											
5.	signature											

[12] perception of household regarding sufficiency of food				
1.	do all members of your household 'get enough food every day'? (yes: every month of the year-1, some months of the year - 2; no: no month of the year-3)			
2.	if code is 2 in item 1, during which calendar months did any member of the household not 'get enough food every day'? (applicable month codes may be recorded in the box spaces: Jan-01, Feb-02, Mar-03, Apr-04, May-05, Jun-06, Jul-07, Aug-08, Sep-09, Oct-10, Nov-11, Dec-12)			
3.	whether information on item 1 was actually obtained from the informant (yes-1, no-2)			

[3] household characteristics										
1. household size					16. dwelling unit code (<i>owned-1, hired-2, no dwelling unit-3, others-9</i>)					
2. principal industry (NIC-1998)	description:				primary source of energy for	17. cooking (code)				
	code (5-digit)					18. lighting (code)				
3. principal occupation (NCO-1968)	description:				19. is any member of the household a regular salary earner? (<i>yes-1, no -2</i>)					
	code (3-digit)				20. does the household possess ration card? (<i>yes-1, no -2</i>)					
4. household type (code)					21. if yes in item 20, type of ration card (code)					
5. religion (code)					22. Food for Work					
6. social group (code)					23. Annapoorna					
7. whether owns any land (<i>yes-1, no -2</i>)					24. ICDS					
8. if yes in item 7, type of land owned (<i>homestead only - 1, homestead and other land - 2, other land only - 3</i>)					25. Midday Meal					
land as on the date of survey (in 0.000 hectares)	9. owned and possessed					26. did the household perform any ceremony during the last 30 days? (<i>yes - 1, no - 2</i>)				
	10. leased-in					27. no. of meals served to non-household members during the last 30 days				
	11. neither owned nor leased-in					28. 30 days (item 36, bl.13)				
	12. leased-out					29. 365 days (item 46, bl.13)				
	13. total possessed [items (9+10+11-12)]					monthly per capita expenditure (Rs.0.00)				
during July 03 to June 04	14. land cultivated (0.000 ha)									
	15. land irrigated (0.000 ha)									

CODES FOR BLOCK 3

item 4: **household type** : for rural areas: *self-employed in non-agriculture-1, agricultural labour-2, other labour-3, self-employed in agriculture-4, others-9*

for urban areas: *self-employed-1, regular wage/salary earning-2, casual labour-3, others-9*

item 5: **religion** : *Hinduism-1, Islam-2, Christianity -3, Sikhism-4, Jainism-5, Buddhism-6, Zoroastrianism-7, others-9*

item 6: **social group** : *scheduled tribe-1, scheduled caste-2, other backward class-3, others-9*

item 17: **primary source of energy for cooking** : *coke, coal-01, firewood and chips-02, LPG-03, gobar gas-04, dung cake-05, charcoal-06, kerosene-07, electricity-08, others-09, no cooking arrangement-10*

item 18: **primary source of energy for lighting** : *kerosene-1, other oil -2, gas-3, candle-4, electricity-5, others-9, no lighting arrangement-6*

item 21: **ration card type**: *Antodaya -1, BPL - 2, others - 3*

Note: 1 acre = 0.4047 hectare
