## प्राक्कथन

राष्ट्रीय प्रतिदर्श सर्वेक्षण (एनएसएस) के परिवार उपभोक्ता व्यय संबंधी सर्वेक्षण राष्ट्रीय तथा राज्य स्तर पर आबादी के अलग-अलग वर्गों के जीवन-स्तर के विभिन्न संकेतकों के बारे में आंकड़ों के बुनियादी स्रोत होते हैं। इन आंकड़ों का उपयोग नियोजन, नीति निर्माण एवं निर्णय लेने में मदद के लिए किया जाता है तथा विभिन्न सरकारी संगठन, शिक्षाविद, शोधकर्ता और विद्वान इनका उपयोग सांख्यिकी प्रक्रियाओं में इनपुट के रूप में करते हैं। परिवारों के बड़े प्रतिदर्श आकार के साथ परिवार उपभोक्ता व्यय संबंधी एनएसएस सर्वेक्षण, 27वें दौर (अक्टूबर 1972-सितम्बर 1973) से पंचवार्षिक आधार पर आयोजित किए जा रहे हैं। जुलाई 2009-जून 2010 के दौरान किया गया एनएसएस का 66वें दौर का सर्वेक्षण, इस श्रृंखला का आठवा पंचवार्षिक सर्वेक्षण था जिसमें (i) परिवार उपभोक्ता व्यय तथा (ii) रोजगार एवं बेरोजगारी विषयों को सम्मिलित किया गया था। इस सर्वेक्षण का क्षेत्र-कार्य राष्ट्रीय प्रतिदर्श सर्वेक्षण कार्यालय (एनएसएसओ) के क्षेत्र संकार्य प्रभाग (एफओडी) द्वारा किया गया था। अधिकांश राज्य सरकारों ने भी आकार में केंद्रीय प्रतिदर्श के बराबर के प्रतिदर्श के आधार पर इस सर्वेक्षण में सहभागिता की थी।

केंद्रीय प्रतिदर्श के आधार पर एनएसएसओ ने उपभोक्ता व्यय संबंधी पंचवार्षिक सर्वेक्षण के निष्कर्ष कई प्रतिवेदनों के रूप में प्रकाशित किए हैं। एनएसएसओ ने जुलाई 2011 में परिवार उपभोक्ता व्यय, 2009-2010 के मुख्य संकेतक जारी किए थे। इसके अलावा एनएसएस के 66वें दौर के सर्वेक्षण आंकड़ों के आधार पर परिवार उपभोक्ता व्यय के विभिन्न पहलुओं पर सात विस्तृत प्रतिवेदन जारी करने की योजना बनाई गई है। उपभोक्ता व्यय का स्तर एवं पैटर्न, भारत में पोषिक आहार का अन्तर्गहन, भारत में विविध वस्तुओं एवं सेवाओं का पारिवारिक उपभोग, भारतीय परिवारों में खाना पकाने और प्रकाश के लिए ऊर्जा के स्रोत तथा विभिन्न सामाजिक समूहों में परिवार उपभोग व्यय नाम से पांच प्रतिवेदन पहले ही जारी किये जा चुके हैं। वर्तमान प्रतिवेदन जो श्रृंखला में छठा है, मुख्यतया उपभोग के दो विशेष स्रोतों: सावजनिक वितरण प्रणाली (पीडीएस) से उपभोग और ग्रामीण परिवारों द्वारा घरेलू-उत्पाद स्टॉक से उपभोग, से सम्बन्धित है। पीडीएस से उपभोग से जुड़े अध्ययन में केवल उन चार मटों, यथा, चावल, गेहूँ/आटा, चीनी और केरोसीन को शामिल किया गया है, जिन्हें सावजनिक वितरण प्रणाली के जरिए पूरे देश में वितरित किया जाता है। इस प्रतिवेदन में ग्रामीण व शहरी दोनों क्षेत्रों के लिए पीडीएस से उपभोग की औसत मात्रा तथा मूल्य और साथ ही 30 दिन की अवधि के दौरान इस प्रकार की खपत की व्यापकता के अनुमानों पर चर्चा की गई है। प्रतिवेदन में ग्रामीण परिवारों के संबंध में खरीद कर उपभोग की व्यापकता और मुफ्त संकलन से उपभोग की व्यापकता, मजदूरी के रूप में प्राप्त सामान, उपहार, आदि के उपभोग के अनुमान भी प्रस्तुत किए गए हैं।

इस प्रतिवेदन में तीन अध्याय और तीन परिशिष्ट हैं। पहले अध्याय में परिचय और दूसरे अध्याय में सर्वेक्षण में इस्तेमाल की गई अवधारणाओं/परिभाषाओं को शामिल किया गया है। प्रतिवेदन के तीसरे अध्याय में मुख्य निष्कर्ष प्रस्तुत किए गए हैं। राज्य/संघ राज्यक्षेत्र तथा अखिल भारत स्तर की विस्तृत तालिकाएं प्रतिवेदन के परिशिष्ट A में संलग्न सीडी में दी गई हैं। परिशिष्ट B में प्रतिदर्श डिजाइन और अनुमान प्रक्रिया को समझाया गया है। परिशिष्ट C में आंकड़ा संग्रहण में इस्तेमाल की गई अनुसूचियों की प्रतिकृति दी गई है।

एनएसएसओ के विभिन्न प्रभागों द्वारा विभिन्न कार्यकलापों के बेहतरीन नियोजन और निष्पादन तथा एनएसएसओ के सहायक अधिकारियों और स्टाफ के प्रयासों से यह प्रतिवेदन वर्तमान रूप में संभव हो सका है। मैं दिल्ली स्कूल ऑफ इकॉनॉमिक्स के सेवानिवृत्त प्रोफेसर के, सुन्दरम और भारतीय सांख्यिकीय संस्थान के सेवानिवृत्त प्रोफेसर डी. कुन्डू, जिन्होंने प्रतिवेदन के मसौदे की पुनरीक्षा की है और इसमें सुधार के लिए उपयोगी सलाह और सुझाव दिए हैं, को धन्यवाद देता हूँ।

आशा है कि यह प्रतिवेदन योजनाकारों, नीतिनिर्माताओं, शोधकर्ताओं तथा अन्य निर्णय-कर्ताओं के लिए उपयोगी होगा।

## Preface

The Household Consumer Expenditure Surveys of the National Sample Survey (NSS) are the primary source of data on various indicators of level of living of different segments of the population at National and State levels. They are used for planning, policy formulation, decision support and as input for further statistical exercises by various Government organizations, academicians, researchers and scholars. NSS surveys on Household Consumer Expenditure with a large sample of households have been conducted quinquennially from the 27<sup>th</sup> round (October 1972 - September 1973) onwards of NSS. The NSS 66<sup>th</sup> round survey, carried out during July 2009 - June 2010, was the eighth quinquennial survey in the series, covering (i) Household Consumer Expenditure and (ii) Employment and Unemployment. The field work of this survey was carried out by the Field Operations Division (FOD) of the National Sample Survey Office (NSSO). Most of the State Governments also participated by surveying a sample matching the Central sample in size.

Based on the Central sample data, the results of the quinquennial surveys of Consumer Expenditure are being brought out by NSSO in a number of reports. *Key Indicators of Household Consumer Expenditure in India, 2009-10*, were released in July 2011. Apart from this, seven detailed reports are planned to be released on varied aspects of household consumer expenditure based on NSS 66<sup>th</sup> round data. The five reports already released are: *Level and Pattern of Consumer Expenditure, Nutritional Intake in India, Household Consumption of Various Goods and Services in India, Energy Sources of Indian Households for Cooking and Lighting*, and *Household Consumer Expenditure across Socio-Economic Groups*. The present report, the sixth in the series, deals mainly with two special sources of consumption: consumption from the Public Distribution System (PDS), and consumption of rural households from home-produced stock. The study of consumption from PDS is restricted to four items distributed through PDS throughout the country viz. rice, wheat/atta, sugar and kerosene. State/UT and all-India level estimates of average quantity and value of consumption from PDS, as well as estimates of incidence of such consumption during a 30-day period, are discussed for both rural and urban sectors. Estimates of prevalence of consumption from purchase and consumption from free collection, wages in kind, gifts, etc. are also provided for rural households.

This report contains three Chapters and three Appendices. Chapter One gives the introduction and concepts/definitions used in the survey are given in Chapter Two. The main findings are presented in Chapter Three of the report. Detailed tables at State/UT and all India level are given in Appendix A in a CD attached with the report. Sampling Design and Estimation Procedure are explained in Appendix B. A facsimile of schedule used for data collection is given in Appendix C.

This report in its present form has been possible because of the efforts made by the different divisions of NSSO in meticulous planning and execution of various activities involved, and the hard work done by the supporting officials and staff of NSSO. I thank Prof. K. Sundaram, Retd. Professor, Delhi School of Economics, and Prof. D. Coondoo, Retd. Professor, Indian Statistical Institute, who reviewed the draft report and provided valuable comments and suggestions for improvement.

I hope that this report will be found useful by planners, policy makers and researchers.

#### गहूआटा: राज्यों में पीडीएस का उपयोग

- जहाँ अनाज का खपत का मुख्य मद गहू है ऐसेप्रमुख राज्यों में ग्रामीण क्षेत्र का लिए मध्य प्रदेश में पीडीएस गहूआटा (46% परिवार) का खपत का प्रचलन सबसेअधिक था, तत्पश्चात् महाराष्ट्र (44%) एवंगुजरात (35%)। कर्नाटक एवंग्रामीण नाडू का लिए, जहांचावल मुख्य अनाज है, पीडीएस आटा/गहूकी खपत का तदनुसार भार क्रमवार, 69% एवंग57% था।

## RICE: UTILISATION OF PDS ACROSS STATES

● The major States with relatively high incidence of PDS purchase of rice in the rural sector were Tamil Nadu (91% households), Andhra Pradesh (84%), Karnataka (75%), and Chhattisgarh (67%), followed by Kerala and Odisha (51-54%), and Maharashtra (47%).

● In the urban sector, Tamil Nadu (67% households) again had the highest proportion of households reporting purchase during a 30-day period, followed by Andhra Pradesh and Kerala (about 43%), Chhattisgarh (35%) and Karnataka (25%).

● In quite a few States where rice is the main cereal item, very low proportions of households reported PDS purchase of rice. Examples are Bihar (rural: 12%, urban: 4%), West Bengal (rural: 26%, urban: 7%), and Jharkhand (rural: 26%, urban: 9%).

● The contribution of PDS purchases to total rice consumption was highest in Tamil Nadu (rural: 53%, urban: 41%), followed by Karnataka (rural: 45%, urban: 18%), Chhattisgarh (rural: 41%, urban: 26%), Maharashtra (rural: 34%, urban: 7.5%), Andhra Pradesh (rural: 33%, urban: 21%), and Kerala (rural: 28%, urban: 24%).

● In Tamil Nadu, the ratio of unit values (unit cost of rice from non-PDS sources to PDS unit cost) was 19.7 in the rural sector and 25.6 in the urban sector. In Kerala and rural Maharashtra, participation in PDS was high though the cost advantage of PDS was not very great. In West Bengal, on the other hand, the share of PDS in quantity of rice consumed was very low although the cost advantage of PDS was above average.

## WHEAT/ATTA: UTILISATION OF PDS ACROSS STATES

● For the rural sector, among the major States for which wheat is the major item of cereal consumption, Madhya Pradesh had the highest incidence of consumption of PDS wheat/atta (46% households), followed by Maharashtra (44%) and Gujarat (35%). For Karnataka and Tamil Nadu, for which rice is the major cereal item, the corresponding incidences of consumption of PDS wheat/atta were 69% and 57%, respectively.

● In the urban sector, Tamil Nadu had the highest incidence of consumption of PDS wheat/atta (51% households), followed by Kerala (29%), Chhattisgarh (25%), Madhya Pradesh (24%) and then Karnataka (23%).

● The proportion of households reporting PDS purchase of wheat/atta was quite low for the urban sector of Haryana (9%), Punjab (10%) and Rajasthan (12%), where wheat is the main item of cereal consumption. The proportion was also quite low for urban Bihar (5%), for which wheat forms a large part of total cereal consumption. The corresponding incidences for the rural sector of these States were also below the all-India average.

● The share of PDS purchases of wheat/*atta* in consumption was largest for Tamil Nadu (rural: 86%, urban: 65%). This share was also large for Karnataka, West Bengal, Kerala and Chhattisgarh, all States for which rice and not wheat is the main cereal item.

● Among States for which wheat is an important cereal item, PDS share in consumption was relatively high in Maharashtra (rural: 33%, urban: 9%) and Madhya Pradesh (rural: 22%, urban: 13%), but elsewhere, below the all-India average of 14.6% for the rural sector and 9% for the urban sector. It was noticeably low in Bihar (rural: 5%, urban: 2%), rural Uttar Pradesh (7%), urban Gujarat (5%), and urban Rajasthan (6%).

● The ratio of unit cost of wheat/*atta* obtained from other sources to unit cost of wheat/*atta* obtained through PDS varied from 1.7 in Assam to 7 in urban Odisha. Tamil Nadu and rural Chhattisgarh, with a large share of PDS in wheat/*atta* consumption, showed a strong cost advantage for PDS. But there were a number of States where high or low incidence of PDS purchase was not in tune with the cost advantage of PDS.

#### SUGAR: UTILISATION OF PDS ACROSS STATES

● The proportion of households reporting consumption of PDS sugar was highest in Tamil Nadu (rural: 86%, urban: 78%), followed by Andhra Pradesh (rural: 57%, urban: 32%), Chhattisgarh (rural: 54%, urban: 31%), Assam (rural: 53%, urban: 27%) and rural Karnataka (47%).

● The incidence of PDS purchase was very low in both rural and urban areas of Punjab, Bihar and Rajasthan, and in urban Jharkhand (0-2% households), and also in both rural and urban Haryana, rural Jharkhand and urban areas of Uttar Pradesh, Gujarat and West Bengal (3-6%).

● Among the major States, by far the largest share of PDS purchases in consumption was seen in Tamil Nadu (rural: 73%, urban: 63%). This was followed by Assam (rural: 53%, urban: 31%), Chhattisgarh (rural: 29%, urban: 11%), and Andhra Pradesh (rural: 24.5%, urban: 12%). The share of PDS was as low as 0-2% in Punjab, Rajasthan, Bihar, Haryana, and urban areas of Jharkhand and Uttar Pradesh.

#### KEROSENE: UTILISATION OF PDS ACROSS STATES

● In all major States except Punjab and Haryana, the proportion of households reporting consumption of kerosene from PDS purchase ranged from 72% to 94% in the rural sector and from 18% to 62% in the urban sector.

● In urban India, use of kerosene from PDS was most widespread in West Bengal (61.5% households), Kerala (59%), Bihar (53%), and Uttar Pradesh (49%).

● In the rural sector, the contribution of PDS purchases to total kerosene consumption was 80% or more in all but two major States: Jharkhand and Assam. In the urban sector, the share of PDS purchases varied much more: from 23.5% in Punjab to 90% in Kerala.

## CONSUMPTION FROM HOME-GROWN STOCK IN RURAL INDIA

- About 30.4% of total cereal consumption and 10.6% of total pulse consumption in rural India in 2009-10 came from home-grown stock.
- For rice, the share of home produce in quantity of consumption fell from 30% to 25%, and for wheat/*atta*, from 40% to 37% between 2004-05 and 2009-10.
- The share of home produce in total consumption dropped quite sharply for most of the pulse varieties: by about 3-5 percentage points (from 13-18% in 2004-05) for arhar, split gram, moong and urd.
- For milk, the share of home produce has dropped by about 3 percentage points since 2004-05 to about 59%, though the percentage of households reporting home consumption of milk among those reporting any milk consumption is only a little more than 33%.
- The contribution of home produce to quantity of rice consumed was highest (among the major States) in Assam (52%), followed by Uttar Pradesh (40%), while it was 34% in Odisha and 30-32% in Chhattisgarh, Jharkhand and Bihar. In case of wheat, the contribution of home produce was nearly 52% in Uttar Pradesh, 44% in Madhya Pradesh, and 43% in Haryana.
- For all cereals taken together, the percentage coming from home produce was highest in Assam (49%), followed by Uttar Pradesh (47%), Madhya Pradesh (42%), Haryana (41%), and Rajasthan (39%). The percentage coming from home produce was extremely low in Kerala (1.6%), Tamil Nadu (5%), and Andhra Pradesh (9%). It may be recalled that in these three States, especially Kerala, a very large share of rice consumption came from PDS.
- For milk, the share of home produce in consumption was 20% in Andhra Pradesh, 12-14% in Tamil Nadu and Kerala, and over 34% in all other States, including States where per capita consumption is very low, such as Chhattisgarh, Jharkhand and West Bengal.
- Households reporting consumption of rice from home-grown stock alone – which formed 21% of all rural rice-consuming households in India as a whole – made up 46% of such households in Assam, 45% in Chhattisgarh, 38% in Odisha, 36% in Uttar Pradesh, and 31% in Jharkhand.
- Households reporting consumption of wheat from home-grown stock alone – accounting for 26% of all rural wheat-consuming households in the country – formed nearly 49% of such households in Uttar Pradesh, 43% in Madhya Pradesh, 38% in Haryana, and about 34% in Rajasthan.
- The percentage of rural households consuming milk from home produce alone (33% of all rural milk-consuming households at the all-India level) was 8-9% in Tamil Nadu and Kerala, 12% in Andhra Pradesh, and 19-46% in all other major States except Rajasthan (62%) and Assam (59%).

# Chapter One

## Introduction

### 1.1 Background

1.1.1 The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure surveys at regular intervals as part of its “rounds”, each round normally of a year’s duration. These surveys are conducted through interviews of a representative sample of households selected randomly through a scientific design and cover almost the entire geographical area of the country.

1.1.2 The household consumer expenditure survey (CES) is generally conducted as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES’s. The 66<sup>th</sup> round survey (July 2009 - June 2010) was the eighth such survey of this quinquennial series, the seventh having been conducted during the 61<sup>st</sup> round (July 2004 - June 2005).

### 1.2 Objective of the survey

1.2.1 The NSS consumer expenditure survey (CES) aims at generating estimates of average household monthly per capita consumer expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, at national and State/UT level, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the States/UTs and socio-economic groups, and are used extensively for the study of poverty and inequality. Other uses of the CES include the use of budget shares as revealed by the NSS CES to prepare the weighting diagram for official compilation of consumer price indices (CPIs), and the measurement of elasticity or responsiveness of demand to change in total expenditure. The data on quantities of consumption of different food items are used to study the level of nutrition of populations of different regions and disparities therein, and trends in nutritional intake over time.

### 1.3 Reports of the 66<sup>th</sup> round CES

1.3.1 The results of NSS rounds are released in reports based on comprehensive tabulation of the Central sample<sup>1</sup> data. The results of the 66<sup>th</sup> round quinquennial survey of household consumer expenditure are planned for release in seven reports. The titles of these reports are:

1. Level and Pattern of Consumer Expenditure
2. Household Consumption of Various Goods and Services in India
3. Public Distribution System and Other Sources of Household Consumption

---

<sup>1</sup> See paragraph 1.7.3.1

4. Energy Sources of Indian Households for Cooking and Lighting
5. Nutritional Intake in India
6. Household Consumer Expenditure across Socio-Economic Groups
7. Perceived Adequacy of Food Consumption in Indian Households

Reports 1-2 and 4-6 have already been released.

## 1.4 Contents of this report

1.4.1 The present report covers a few aspects of household consumption which can broadly be clubbed under the heading of “source of consumption”. The sources of consumption considered here are: (a) purchase from Public Distribution System (PDS); (b) purchase from other sources; (c) home produce; (d) exchange of goods and services; (e) free collection; (f) gifts and charities.

1.4.2 The report presents, for each State/UT and all-India:

- (i) for rice, wheat/*atta*, sugar and kerosene, estimate of (a) average consumption per household (both quantity and value) from PDS and from other sources, and (b) proportion of households making any consumption from PDS during the past 30 days;
- (ii) for each item of consumption, estimate of (a) proportion of rural households using different sources of consumption (viz., purchase, home produce, free collection, gifts, etc.) and (b) the corresponding proportion of quantity and value of consumption (in rural areas) coming from home produce.

For (i), estimates are given separately for 10 classes of population demarcated by MPCE level (decile classes of the distribution of population by MPCE), the classes being formed separately for each sector of each State/UT.

1.4.3 Following the present introductory chapter, Chapter Two explains the concepts, definitions and procedures of data collection and tabulation that are relevant to the subject of this report. Chapter Three presents the salient findings on extent of use of the Public Distribution System in the consumption of rice, wheat/*atta*, sugar and kerosene, and on the contribution of home produce to consumption of different items of food and fuel. Appendix A (in the enclosed CD) gives the detailed tables generated from the survey data – of these, only the all-India tables are printed in the report. Appendix B explains in detail the sample design and estimation procedure followed. Appendix C consists of the schedule of enquiry (Schedule 1.0, Type 2) through which the data on which this report is based were collected.

## 1.5 Precursors of the present report

1.5.1 The 42<sup>nd</sup> Round (1986-87) NSS survey of social consumption made a more detailed study of the Public Distribution System than is done in the consumer expenditure surveys. The report *Utilisation of Public Distribution System* (NSS Report No.362) of the 42<sup>nd</sup> Round gave

information on PDS purchase of rice, wheat, bajra, jowar, other cereals, pulses, edible oil, sugar, coal, kerosene and standard cloth. For each of these items, the report gave estimated distributions of persons over seven MPCE fractile groups for three categories of households: those consuming wholly from PDS, those consuming wholly from other sources, and those consuming from both. Further, estimated percentages of quantity and value of consumption coming from PDS were provided separately for the seven fractile groups. Finally, the report gave percentage distribution of persons not wholly dependent on the public distribution system by reason for not relying (wholly or partly) on PDS purchases.

1.5.2 In the consumer expenditure surveys, data on consumption from PDS and consumption from home produce were, at first, collected merely to help the reporting of consumption of the relevant items. The first NSS report based on tabulation of data on source of consumption from Sch.1.0 was Report No.474, entitled *Sources of Consumption in India*, based on 55<sup>th</sup> round data (1999-2000). This gave averages of consumption from home produce of selected items, distribution of households by source of consumption for each item, average household consumption from PDS of rice, wheat/atta, sugar and kerosene, and incidence of consumption from PDS, by State/UT and sector, but not by classes of MPCE.

1.5.3 This was followed by the report *Public Distribution System and Other Sources of Household Consumption*, based on the next quinquennial CES, that of the 61<sup>st</sup> round. In this report, the tabulation of data on consumption from PDS was extended considerably, with estimates being provided separately for 12 classes of population demarcated by MPCE level. Estimates were also provided separately for households possessing BPL or Antyodaya ration cards and the rest. In the table providing itemwise distributions of households by source of consumption, the share of consumption coming from home produce (in quantity as well as value terms) was also added, itemwise<sup>2</sup> and State/UT-wise, for the rural sector. An additional subject covered by this report was the distribution of population by type of ration card held.

1.5.4 In the present report, the tabulation of PDS data, as in the 61<sup>st</sup> round, is done separately for different classes of population formed on the basis of MPCE, with 10 classes being formed for each sector of each State, each representing one-tenth of the population. The tabulation of households by source of consumption has been done for the rural sector only, in view of the fact that for the urban population, sources of consumption other than purchase play a very minor role.

---

<sup>2</sup> Sub-total items such as “total cereals”, were, however, excluded; these have been included in the tabulation for the present report.

## 1.6 Features of the survey: schedules of enquiry

1.6.1 The household consumer expenditure schedule (“Schedule 1.0”) used for the survey collected information on quantity<sup>3</sup> and value of household consumption. The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used ‘last 365 days’ (only) for the infrequently purchased categories, ‘last 7 days’ for some categories of food items, as well as pan, tobacco and intoxicants, and ‘last 30 days’ for other food items, fuel, and the rest. This was in line with the recommendations of an Expert Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption<sup>4</sup>. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table I1.

1.6.2 Schedule Type 1 and Schedule Type 2 were canvassed in two independent samples of matching size drawn from each stratum/sub-stratum<sup>5</sup>.

1.6.3 The present report is based on Schedule Type 2 only. This means that the data used for this report were collected with the following reference periods: Category I items: Last 365 days; Category II items: Last 7 days; Category III items: Last 30 days.

**Table I1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2**

Category	Item groups	Reference period for	
		Schedule Type 1	Schedule Type 2
I	Clothing, bedding, footwear, education, medical (institutional), durable goods	‘Last 30 days’ and ‘Last 365 days’	Last 365 days
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days

<sup>3</sup> For education, medical care, and some goods and services listed in the schedule as “miscellaneous goods and services”, no data on quantity of consumption are collected in the NSS CES’s.

<sup>4</sup> See NSS Report no. 475; entitled “Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption”.

<sup>5</sup> See Appendix B.

## 1.7 Features of the survey: scope and coverage

1.7.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. *However, although planned, no sample could actually be surveyed in the districts of Leh (Ladakh), Kargil and Poonch of Jammu & Kashmir by NSSO.*

### 1.7.2 *Population coverage:*

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Chapter Two, paragraph 2.3.2, for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

1.7.3.1 *Sample size: first-stage units:* As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a “State sample” was surveyed by State Government officials in addition to the “Central sample” surveyed by NSSO. For rural India, 7,524 villages formed the Central sample for this round. Of these, 7,428 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 5,284 blocks, of which 5,263 were surveyed. This report is based on the estimates obtained from the Central sample only.

1.7.3.2 *Sample size: second-stage units:* From each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2 of Schedule 1.0. The features of the sample design are explained in Appendix B.

1.7.3.3 Table I2 shows the numbers of villages and urban blocks surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed.

## Chapter Two

### Concepts and Definitions

#### 2.1 Household consumption and its measurement in NSS surveys

2.1.1 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

2.1.1.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member.

2.1.1.2 For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption.

2.1.1.3 All goods and services received as payment in kind or perquisites are included in the consumption of the recipient household as goods and services received in exchange of services, except for meals received from other households' kitchens.

2.1.1.4 To simplify data collection, consumption of food processed *in the home* from one "item" into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

**2.1.2 Consumption from PDS:** For four consumption goods – rice, wheat, sugar and kerosene – consumption from “PDS” purchase and consumption from “other sources” were recorded against separate items in the schedule. Here PDS stands for Public Distribution System, which means the distribution of some essential commodities by the government at subsidised rates through ration shops, fair price shops and control shops. These shops may be owned by the government, local government, a government undertaking, the proprietor of a firm, co-operatives or private persons (individually or jointly) or other bodies like club, trust, etc. The following procedure was followed while classifying a *purchase* as “PDS” or otherwise.

- "Super Bazaars" and co-operative stores were not generally included under public distribution system. However, when these also sold rationed commodities at controlled prices against ration cards, they were taken as ration shops for particular commodities.
- For kerosene, "PDS" also included kerosene depots selling kerosene at controlled prices.
- Distribution of some controlled price commodities such as kerosene may in some areas be made without a system of presentation of ration card. Except in such situations, a purchase which was not made against a ration card was not considered as a PDS purchase.
- A purchase was considered as “PDS” irrespective of whether the household had used its own ration card or that of some other household.
- Purchase from PDS shops at prices higher than the PDS prices was also considered as purchase from PDS as long as the price paid was perceptibly lower than the market price.

**2.1.3 Consumption from home-grown stock:** This refers to consumption by producer households of the produce of cultivation or produce of livestock (e.g. milk) and not food obtained in the home by processing of other food items (e.g. curd from milk, or pickles from vegetables, spices, etc., or milk-based sweets from milk and sugar). Thus there is no concept of home-grown stock (home produce) of curd or ghee, home produce of pickles, or home produce of liquid tea. On the other hand *atta* obtained in the home from home-grown wheat, or *chira* and other grains produced in the home from home-grown paddy, are treated as “home-grown stock” of wheat, *chira*, etc.

**2.1.4 Home processing of food:** To simplify data collection, consumption of food processed *in the home* from one “item” into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). Thus consumption of purchased *ghee* (or *ghee* received as gift, say) is recorded against “*ghee*” but that of home-made *ghee* against “milk: liquid”; consumption of purchased *muri* is recorded against “*muri*” but that of home-made *muri* against “rice”; consumption of purchased pickles is recorded against “pickles” but that of home-made pickles against “salt”, “mango”, “chilli”, etc. This procedure leads, of course, to an underestimation of consumption of some items or item

groups, such as intoxicants, with a corresponding overestimation of the consumption of the major ingredients, such as cereals.

**2.1.5 Source of consumption:** An item consumed by a household during the reference period of last 30 days or last 7 days may have been acquired from several possible sources: namely, purchase, home-grown stock, exchange of goods and services, gifts or charities, and free collection. These are referred to as the source of consumption of the item for the household. Note that an item consumed by a household during the reference period of a week or a month may have been obtained from more than one source, e.g., from purchase as well as from gifts. For the four items “rice”, “wheat/atta”, “sugar” and “kerosene”, purchase from PDS is a special additional source which, though clubbed with other purchases for most purposes, has been intensively studied in this report.

**2.1.6 Value of consumption:** For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and rules of valuation have to be specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services, is imputed at the rate of average local retail prices prevailing during the reference period.

## **2.2 Monthly per capita expenditure (MPCE)**

2.2.1 Normally, the concept of per capita income – or per capita (overall) expenditure, if income data are not available – is used for comparison of average living standards between countries, between regions, and between social or occupational groups. For studies of poverty and inequality *within* populations, however, average income or average expenditure is not enough. One needs to assign a value that indicates level of living to *each individual*, or at least to each household, in a population in order to know the level of inequality in living standards of the population, or the proportion living in poverty.

2.2.1.1 The NSS concept of MPCE, therefore, is defined first at the household level (household monthly consumer expenditure ÷ household size). This measure serves as the indicator of the household’s level of living.

2.2.1.2 Next, each *individual’s* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level.

**2.2.2 Deciles and decile classes of MPCE:** The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population

lie, the second decile, the level below which 20% of the population lie, and so on. Thus the population can be divided into 10 “decile classes of MPCE” as follows: those with MPCE below the 1<sup>st</sup> decile of the MPCE distribution (the bottom 10% of the population ranked by MPCE), from the 1<sup>st</sup> decile to the 2<sup>nd</sup> decile (the next 10%), from the 2<sup>nd</sup> decile to the 3<sup>rd</sup> decile (the next 10%), and so on. Averages of other variables of interest, computed separately for the 10 decile classes, help to portray the variation of such variables with variation in MPCE. In line with usual NSS practice, decile classes of MPCE are formed separately for the rural and the urban sector, both for India as a whole and for the States.

## 2.3 Other concepts and definitions

**2.3.1 Reference period:** The consumption of any good or service by a household or person occurs in the form of a flow over time. The survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period.

**2.3.2 Household:** A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

**2.3.3 Household size:** The size of a household is the total number of persons in the household.

**2.3.4 Major States:** This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Together, these States accounted for nearly 94.7% of India's population in 2001.

## 2.4 Notes on coverage of different consumption items<sup>6</sup>

2.4.1 Clarifications of some item and item group descriptions used in the schedule of enquiry and in the tables of the report are given below:

**106 Other rice products:** Foods which are obtained from rice by splitting, frying, powdering, or parching of the grain. Rice used for home preparation of sweets, etc., is shown against “rice” and not against this item.

**114 Other wheat products:** Does not include wheat preparations like biscuits, cakes, etc., which are shown separately in “beverages, etc.”

**117 Maize products:** This includes cornflakes, popcorn, etc., made of maize.

**118 Barley products:** This includes *sattu* prepared by frying and powdering of barley.

**129 Cereals:** Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether. Note also that the estimate of cereal consumption does not include the cereal content of food that is received by the household from outside in the form of meals obtained free or by purchase, or as cereal preparations or snacks (e.g. in purchased burgers, samosas, etc). Such food is accounted in “beverages, refreshments and processed food”. To the extent that such food forms part of the household’s consumption, its cereal consumption is understated in the estimate of cereals provided.

**139 Cereal substitutes:** This item includes tapioca, when consumed as a substitute for cereals, as is common in some parts of the country. Jackfruit seed, *mahua*, etc., when consumed as substitute for cereals, will also be included here. Potato or sweet potato consumed as substitutes for cereals are, however, not shown here but included in “vegetables”.

**150 Gram products:** This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, a separate item.

**152 Other pulse products:** Includes soyabean meal and soya flour.

**160 Milk: liquid:** This covers milk as directly obtained from cow, buffalo, goat or any other livestock. Milk sold in bottle or polypack, as well as readily drinkable flavoured and bottled

---

<sup>6</sup> The number at the start of each paragraph is the code used for the item in the schedule of enquiry (see Appendix C: Schedule 1.0).

milk, is included. Milk transformed at home into curd, casein, *ghee*, butter, etc. for the purpose of household consumption is also included. Milk used in home preparation of sweetmeats, etc., is also accounted here.

**190-194, 199 Edible oil:** Excludes edible oils used for toilet purpose by the household.

**268 Other fresh fruits:** This includes sugarcane consumed like fruits.

**296 Fruit juice and shake:** Excludes fruit juice obtained at home by crushing the fruit.

**301 Prepared sweets:** Excludes sweets prepared at home; consumption of such sweets is accounted against the ingredients.

**305-308 Pickles, sauce, jam, jelly, etc.:** Excludes pickles, jam, etc. prepared at home; these are accounted against the ingredients (flour, sugar, vegetables, oil, etc.).

**308 Other processed food:** Includes items like purchased snacks, food packets, chowmein (cooked), soup powder, etc.

**309 Beverages, etc.:** Short for “beverages, refreshments and processed food”.

**312 Ingredients for *pan*:** Includes *supari*, lime, *katha*, etc., but excludes tobacco, *zarda*, *surti*, *kimam*, etc. even if consumed with *pan*, as these are accounted in the tobacco group.

**322 Leaf tobacco:** Includes all leaf tobacco consumed in any form, and also tobacco leaf burnt and powdered for brushing teeth.

**330 Ganja:** Includes *ganja* consumed in the form of cigarettes.

**332 Country liquor:** Note that country liquor prepared at home from its ingredients and consumed is accounted against the ingredients.

## 2.5 A note on data comparability

2.5.1 The present report is based on Schedule 1.0, Type 2 (see next section). Readers interested in comparison of estimates from this report with those from earlier rounds would need to bear in mind that earlier reports were based on a schedule which, like Schedule Type 1, used a ‘30 days’ reference period for all food items. This should not affect the findings on PDS consumption because for all four PDS items covered by the survey – rice, wheat, sugar and kerosene – a ‘30 days’ reference period was used in both Schedule Type 1 and Schedule Type 2. But the itemwise

estimates of consumption from home-grown stock and estimates of proportion of households reporting consumption include all the items for which a ‘7 days’ reference period was used in the 66<sup>th</sup> round (but not in earlier rounds).

2.5.2 The data on food, pan, tobacco and intoxicants collected through Schedule Type 2 of this survey differs from that collected in the earlier quinquennial surveys in that a reference period of “last 30 days” was used only for cereals, pulses, milk, sugar and salt, and for all other food items, as well as for pan, tobacco and intoxicants, a reference period of “last 7 days” was used. This was according to the recommendations of an Expert Group that had been formed to suggest a suitable reference period for each item of consumption. The Expert Group had noted that a 7-day reference period gives somewhat higher estimates of per capita consumption for the item groups for which it is used, and hence for the food group as a whole, as well as of household MPCE (all items) itself, but expected these estimates to be closer to the true consumption levels of households than are obtainable by the usual (30-day recall period) method.<sup>7</sup>

## Chapter Three

### Summary of Findings

3.0.0 This chapter presents the main findings of the NSS 66<sup>th</sup> round consumer expenditure survey relating to

- (a) Incidence of consumption out of purchase from the Public Distribution System and consumption from all other sources, for four commodities: rice, wheat/*atta*, sugar and kerosene;
- (b) Share of purchase from the Public Distribution System in consumption of rice, wheat/*atta*, sugar and kerosene;
- (c) Share of consumption from home-grown stock for different items of food and fuel;
- (d) Proportions of households reporting consumption from home-grown stock for different items of food and fuel.

3.0.1 Appendix A of this report has two tables. Table 1 (R & U) gives quantity and value of average monthly household consumption from PDS and from other sources, and proportions of households reporting consumption from PDS and consumption from other sources for each of the four commodities: rice, wheat/*atta*, sugar and kerosene, separately for ten fractile (decile) classes of population ranked by MPCE in each sector of each State/UT. Table 2R gives per 1000 break-up of rural households of each State and all-India by source of acquisition of items of food and fuel consumed by them (separately for each item of consumption), and also the share of consumption of each item coming from home-grown stock. The findings presented in this chapter are drawn from these tables. Note that this report is based on data collected through Schedule Type 2, which used a reference period of last 7 days for many items, unlike the schedule of enquiry used in earlier rounds (see Section 2.5, A Note on Data Comparability).

#### 3.1 Change in utilisation of PDS compared to 2004-05

3.1.1 Table S1 shows contribution of PDS to total quantity of consumption for each of the 4 items: rice, wheat/*atta*, sugar and kerosene, and also percentage of households reporting consumption from PDS during a 30-day period in 2004-05 and 2009-10.

3.1.2 *Change in share of PDS in quantity of consumption:* It is seen from Table S1 that:

- The contribution of PDS purchases to total consumption in 2009-10 shows a considerable rise compared to 2004-05, particularly for rice and wheat/*atta*.
- The PDS share in rice consumption in 2009-10 was about 23.5% in the rural sector (1.41 kg out of 6.00 kg per person) and about 18% in the urban (0.81 kg out of 4.52 kg per person). In 2004-05, the PDS share in rice consumption had been about 13% in the rural sector and 11% in the urban.

- The share of PDS in wheat/*atta* consumption in 2009-10 was about 14.6% (0.62 out of 4.25 kg per person) in the rural sector, double what it was in 2004-05 (7.3%), and about 9% in the urban sector, compared to only 3.8% in 2004-05.
- PDS purchases accounted for 14.7% of consumption of sugar in 2009-10 compared to 9.6% in 2004-05 in the rural sector, and for 10.3% compared to only 6.6% in the urban sector.
- For kerosene, too, the contribution of PDS purchase was higher in 2009-10, by about 9 percentage points in the rural sector and 7 percentage points in the urban sector.

### 3.1.3 Incidence of purchase from PDS:

- The percentage of households reporting consumption of rice from PDS during a 30-day period increased from 24.4% to 39% in rural India and from 13% to 20.5% in urban India.
- For wheat/*atta*, the increase in the percentage of households reporting consumption from PDS was even sharper: the percentage increased two-and-a-half-fold from 11% to 27.6% for rural India and threefold, from 5.8% to 17.6% for urban India.
- For sugar, too, the percentage of reporting households increased noticeably – from 15.9 to 27.8% for rural India and from 11.5 to 18.7% for urban India.
- For kerosene, the percentage of households reporting consumption from PDS rose noticeably in the rural sector by 9 percentage points but remained stable in the urban sector.

### 3.2 Consumption from PDS of different expenditure classes of population, 2009-10

3.2.1 Table S2 shows the percentage share of consumption from PDS purchases in total household consumption of rice, wheat/*atta*, sugar and kerosene for each expenditure (MPCE) decile class of rural and urban population of India, and for rural and urban India as a whole.

3.2.2 Table S2 shows, clearly, that:

- The contribution of consumption from PDS purchases to total quantity of consumption was: for rice, about 23.5% in rural India and 18% in urban India; for wheat/*atta*, 14.6% for rural and 9% for urban; for sugar, 14.7% for rural and 10% for urban; and for kerosene, 86% for rural and 64% for urban India.
- The contribution of consumption from PDS purchases to quantity consumed was, in case of each commodity, highest for the bottom expenditure class (MPCE decile class) of population and fell gradually with rise in expenditure level. This decline, which is steeper for the urban sector, is largest as one moves from the lowest decile class to the next and is very little for kerosene in the rural sector.

3.2.3 In the next few sections we turn to inter-State differences in consumption from PDS. Compared to differences across population expenditure classes, these differences are less predictable and therefore, perhaps, more interesting.

### 3.3 Features of inter-State differences in consumption from PDS: rice

3.3.1 In this and the next three sections, the following aspects of inter-State differences in consumption from PDS will be discussed:

- Incidence of PDS purchases, in terms of proportion of households reporting such purchase;
- Share of PDS in total quantity of purchase of the commodity;
- Cost per unit quantity of PDS purchase vis-à-vis cost per unit quantity of consumption from other sources.

Table S3-1 gives percentage of households reporting consumption of rice from PDS and from other sources, share of PDS and (for rural) of home produce in quantity consumed (*considering all households, including those with zero PDS consumption*) and unit value of consumption from PDS and from other sources, for the major States and India, separately for rural and urban sector.

3.3.2 *Incidence of PDS purchases:* From columns 2 and 3 of Table S3-1 above, it is seen that

- At the all-India level, the proportion of households reporting PDS purchase of rice during a 30-day period was 39% in the rural sector and about 21% in the urban sector;
- For the rural sector, the incidence of PDS purchase of rice was highest for Tamil Nadu (91% of households), followed by Andhra Pradesh (84%), Karnataka (75%), Chhattisgarh (67%), Kerala and Odisha (51-54%), and Maharashtra (47%);
- For the urban sector, this incidence was again highest for Tamil Nadu (67% households), followed by Andhra Pradesh and Kerala (about 43%), Chhattisgarh (35%), and Karnataka (25%);
- The proportion of households reporting PDS purchase of rice is quite low for a few States where rice is the main cereal item consumed. Examples are Bihar (rural: 12%, urban: 4%), West Bengal (rural: 26%, urban: 7%), and Jharkhand (rural: 26%, urban: 9%).

3.3.3 *Share of PDS purchases in total consumption:* It was seen in the previous section that PDS purchases accounted for 23% of total consumption of rice in rural India and 18% in urban India. The variation across States of this share may be summarised as follows:

- The contribution of PDS purchases was highest in Tamil Nadu (rural: 53%, urban: 41%), followed by Karnataka (rural: 45%, urban: 18%), Chhattisgarh (rural: 41%, urban: 26%), Andhra Pradesh (rural: 33%, urban: 21%), and Kerala (rural: 28%, urban: 24%). Interestingly, in all four Southern States, less than 10% of rice consumption in the rural sector was from home produce.
- Among States where rice is the main item of cereal consumption, the share of PDS purchases in consumption was low in Bihar (rural: 5%, urban: 2%), West Bengal (rural: 6%, urban: 3%), Assam (rural: 11%, urban: 5%), and Jharkhand (rural: 14%, urban: 7%). Of these, Bihar and Jharkhand had about 31% of rice consumption in rural areas coming from home-grown stock, and West Bengal, 23%.

3.3.4 Variation in use of PDS may arise from difference in PDS price relative to cost of obtaining the item from other sources, from differences in quality of PDS supplies compared to what is available in the market, and from inadequacy in quantity supplied through PDS. The NSS survey of consumer expenditure was (see Chapter One) not specifically intended to provide data for a study of the Public Distribution System, and locating the true reasons for observed differences in PDS use is beyond the scope of this report. However, the available data can possibly throw some light on the role of PDS prices vis-à-vis market prices in the following way. Although PDS prices were not recorded in the survey, the unit cost of PDS purchases of, say, rice ( $=$  total value of consumption of rice from PDS  $\div$  total quantity of consumption of rice from PDS) can be compared with the unit cost of consumption from other sources. Towards this end, columns 9 and 10 of Table S3-1 give unit value of PDS consumption of rice in rural and urban India, and columns 11 and 12 give unit value of consumption of rice from all other sources. For the rural sector, Statewise unit value of consumption from three sources – PDS, home-grown stock and other sources – has been shown separately in Section 3.8 for rice and wheat.

3.3.5 *Unit cost differentials*: In Table S3-2 the information in Table S3-1 on incidence of rice consumption from PDS and share of PDS in rice consumption is shown again, this time with the States arranged in ascending order of the cost advantage in using PDS, as measured by the ratio of unit cost of PDS rice to unit cost of rice obtained from other sources. It is seen that

- In general, the States with greater proportions of households reporting PDS purchase of rice and larger share of PDS in rice consumption are also those with the greatest cost advantage of PDS use; in particular, in Tamil Nadu, which was seen earlier to rank highest in terms of both incidence of PDS use and share of PDS in consumption, the ratio of unit values (market unit cost to PDS unit cost) was 19.7 in the rural sector and 25.6 in the urban sector.
- In some States such as Kerala and rural Maharashtra, participation in PDS is seen to be high though the cost advantage of PDS is not very great, in fact, lower than the average cost advantage considering all States together.
- In West Bengal, the share of PDS in quantity of rice consumed is very low although the cost advantage of PDS is above average.

### 3.4 Features of inter-State differences in consumption from PDS: wheat/atta

3.4.1 For wheat/atta, Table S4-1 shows inter-State and rural-urban differences in percentage share of PDS purchases in total household consumption, share of PDS and (for rural) of home produce in total consumption, and unit values of consumption from PDS and from other sources.

3.4.2 *Incidence of PDS purchases:* It is seen from columns 2 and 3 of Table S4-1 that:

- At the all-India level, the proportion of households reporting PDS purchase of wheat/atta during a 30-day period was about 28% in the rural sector and about 18% in the urban sector.
- Among the major States where wheat is the major cereal food, the States with the highest incidence of PDS purchase of wheat/atta in the rural sector were Madhya Pradesh (46%

households), Maharashtra (44%), and Gujarat (35%). Two States where rice and not wheat is the predominant cereal food, but with high incidence of PDS purchase of wheat/*atta* in the rural sector, were Karnataka (69%) and Tamil Nadu (57%).

- In the urban sector, it was Tamil Nadu (51% households) that had the highest incidence of PDS purchase, followed by another predominantly rice-consuming State, Kerala (29%), Chhattisgarh (25%), and then by Madhya Pradesh (24%) and Karnataka (23%).
- Low proportions of households reported PDS purchase of wheat/*atta* in urban areas of Haryana (9%), Punjab (10%) and Rajasthan (12%), where wheat is the main cereal food, and also in Bihar (5%), where wheat forms a large part of cereal consumption. The rural incidence of PDS consumption of wheat/*atta* in these States was also below the all-India average.

3.4.3 *Share of PDS purchases in total consumption:* It was seen in Section 3.2 that PDS purchases accounted for 14.6% of total consumption of wheat/*atta* in rural India and 9% in urban India. Columns 6 and 7 of Table S4-1 show the inter-major-State variation in these shares.

- The contribution of PDS purchases was greatest in Tamil Nadu (rural: 86%, urban: 65%), and also large in Karnataka, West Bengal, Kerala and Chhattisgarh, all States where rice and not wheat is the main cereal food.
- Among States where wheat is an important cereal food, the PDS share in consumption was relatively high in Maharashtra (rural: 33%, urban: 9%) and Madhya Pradesh (rural: 22%, urban: 13%), but elsewhere, below the all-India average of 14.6% in the rural sector and 9% in the urban sector. It was noticeably low in Bihar (rural: 5%, urban: 2%), rural Uttar Pradesh (7%), urban Gujarat (5%), and urban Rajasthan (6%). In the States where more than 40% of rural consumption was from home produce, viz., Uttar Pradesh, Madhya Pradesh and Haryana, only Madhya Pradesh had a PDS share exceeding 15%.

3.4.4 *Unit cost differentials:* In Table S4-2 the information in Table S4-1 on incidence of wheat/*atta* consumption from PDS and share of PDS in wheat/*atta* consumption is shown again, this time with the States arranged in ascending order of the cost advantage in using PDS, as measured by the ratio of unit cost of PDS wheat/*atta* to unit cost of wheat/*atta* obtained from other sources. It is seen that:

- The ratio of unit cost of wheat/*atta* obtained from other sources to unit cost of wheat/*atta* obtained through PDS varied from 1.7 in Assam to 7 in urban Odisha. The ratio was 2.8 for India as a whole.
- In the rural sector, Tamil Nadu and Chhattisgarh, two States where the share of PDS in wheat/*atta* consumption is substantial, show a strong cost advantage for PDS. For Tamil Nadu this is true for the urban sector as well.
- The high incidence of PDS purchase in Karnataka and Madhya Pradesh relative to all-India is not explained by the cost advantage of PDS, as the unit cost ratio in these States was very close to the all-India ratio in both sectors. In urban Kerala, incidence of PDS purchase was relatively high though it had a relatively low cost advantage.

- The cost advantage of PDS for Bihar, Rajasthan and urban Haryana, though lower than the all-India average, does not appear low enough to account for the low incidence of PDS purchase in these States.
- In West Bengal, the ratio of unit costs is 3.5 (on the high side) in both sectors. This appears to have had some impact on PDS purchases in the rural sector (where the share of PDS in total consumption is as high as 41%), but little in the urban.

### 3.5 Features of inter-State differences in consumption from PDS: sugar

3.5.1 Table S5 shows inter-State and rural-urban differences in percentage share of PDS purchases in total household consumption of sugar, share of PDS in total sugar consumption, and unit values of consumption of sugar from PDS and from other sources.

3.5.2 *Incidence of PDS purchases:* It is seen from columns 2 and 3 of Table S5 that:

- At the all-India level, the proportion of households reporting PDS purchase of sugar during a 30-day period was about 28% in the rural sector and about 19% in the urban sector.

- The proportion was highest in Tamil Nadu (rural: 86%, urban: 78%), followed by Andhra Pradesh (rural: 57%, urban: 32%), Chhattisgarh (rural: 54%, urban: 31%), Assam (rural: 53%, urban: 27%) and rural Karnataka (47%).

- The incidence of PDS purchase was very low in Punjab, Bihar, Rajasthan and urban Jharkhand (0-2% households), and also low in Haryana, rural Jharkhand and urban areas of Uttar Pradesh, Gujarat and West Bengal (3-6%).
- In Tamil Nadu, more households reported consumption of sugar from PDS than consumption of sugar from other sources.

3.5.3 *Share of PDS purchases in total consumption:* It was seen in Section 3.2 that PDS purchases accounted for 14.7% of total consumption of sugar in rural India and 10% in urban India. Columns 6 and 7 of Table S5 show the inter-major-State variation in these shares.

- Among the major States, by far the greatest share of PDS purchases in consumption was seen in Tamil Nadu (rural: 73%, urban: 63%). This was followed by Assam (rural: 53%, urban: 31%), Chhattisgarh (rural: 29%, urban: 11%), and Andhra Pradesh (rural: 24.5%, urban: 12%).
- The share of PDS was as low as 0-2% in Punjab, Rajasthan, Bihar, Haryana, and urban areas of Jharkhand and Uttar Pradesh.

3.5.4 *Market-price-PDS-price differentials*: A look at the unit costs of PDS purchases (cols. 8 and 9 of Table S5) with unit costs of sugar obtained from other sources (cols.10 and 11) reveals that both the PDS price and the market of price of sugar exhibited very little inter-State variation, implying that the wide inter-State variation in use of the public distribution system was not due to price differentials across States.

### 3.6 Features of inter-State differences in consumption from PDS: kerosene

3.6.1 Table S6 shows inter-State and rural-urban differences in percentage share of PDS purchases in total household consumption of kerosene, share of PDS in total kerosene consumption, and unit values of consumption of kerosene from PDS and from other sources.

3.6.2 *Incidence of PDS purchases*: It is seen from columns 2, 3, 4 and 5 of Table S6 that:

- In both rural and urban sectors of each State, a considerably larger proportion of households reported consumption of kerosene from PDS purchase than from other sources. For India as a whole, 82% rural households and 33% urban households reported consumption of kerosene from PDS purchases, while only 18% rural households and 15% urban households reported consumption of kerosene from other sources.
- Use of kerosene both from PDS and from other sources was least in Punjab and Haryana. In Punjab, PDS purchase was reported by 23% rural and 7% urban households and in Haryana, by 39% rural and 6% urban households.
- In all major States except Punjab and Haryana, the proportion of households reporting consumption of kerosene from PDS purchase ranged from 72% to 94% in the rural sector and from 18% to 62% in the urban sector.
- In urban India, use of kerosene from PDS was most widespread in West Bengal (61.5% households), Kerala (59%), Bihar (53%), and Uttar Pradesh (49%).

3.6.3 *Share of PDS purchases in total consumption*: It was seen in Section 3.2 that PDS purchases accounted for 86% of total consumption of kerosene in rural India and 64% in urban India. Columns 6 and 7 of Table S6 show the inter-major-State variation in these shares.

- In the rural sector, the contribution of PDS purchases varied within a relatively narrow range of 67% to 96% across the major States, being 80% or more in all but two major States: Jharkhand and Assam.
- In the urban sector, the share of PDS purchases varied much more: from 23.5% in Punjab to 90% in Kerala.

3.6.4 *Market-price-PDS-price differentials*: As in case of sugar, the unit cost of PDS purchases of kerosene (cols. 8 and 9 of Table S6) varied little across the major States. Unit costs of kerosene obtained from the market (cols.10 and 11) varied somewhat more, from about Rs.16 per litre in Chhattisgarh to Rs.30 in urban Tamil Nadu. The inter-State variation in use of kerosene from PDS does not appear to have been along the lines of the variation in market-price-PDS-price differentials.

### 3.7 Contribution of consumption from home-grown stock: all-India

3.7.1 Items of consumption may be acquired through purchase, as gifts, in exchange of goods or of services rendered, and through free collection in case of natural products. For certain items, mainly items of food, there is also the option, for farmers, of consuming from their own produce. Thus a household that grows rice on its farm may consume home-grown rice, a household that

grows vegetables may consume home-grown vegetables, poultry-farming households may consume home-grown chicken, and so on. In this way, in each State/UT a fraction, large or small, of the produce of each item is not marketed but consumed by the producing households.

3.7.2 The NSS household consumer expenditure schedule used in the quinquennial surveys records, for each item, not only the total quantity and value of consumption by the household during the reference period, but also the quantity and value of consumption, if any, coming from home produce. This allows one to tabulate the percentage of consumption (in quantity or value terms) of any item coming from home produce, separately for different geographical or socio-economic segments of population. Table 2R of the Appendix (cols. 3 & 4) gives the results of such tabulation for the rural sector of each State and UT and for rural India as a whole.

3.7.3 Table S7-1 shows share of quantity of consumption of rural households in 2004-05 and 2009-10 coming from home produce for rice, wheat, milk, and the most commonly consumed pulses, as well as the percentages of households reporting consumption from home produce only, from purchase only, and from both home produce and purchase, during the last 30 days. The table shows that:

- About 30.4% of total cereal consumption and 10.6% of total pulse consumption in rural India in 2009-10 came from home-grown stock.
- For rice, the share of home produce in quantity of consumption fell from 30% to 25%, and for wheat/atta, from 40% to 37% between 2004-05 and 2009-10;

**Table S7-1: Some aspects of consumption from home produce in rural India: selected cereals and pulses, milk**

milk (liquid)	61.6	58.8	32.8	0.5	66.1	76.4

- The share of home produce in total consumption has dropped quite sharply for most of the pulse varieties since 2004-05: by about 3-5 percentage points (from 13 to 18% in 2004-05) for arhar, split gram, moong and urd.
- For milk, the share of home produce has dropped by about 3 percentage points since 2004-05 to about 59%, though the total percentage of households reporting any home consumption of milk is only a little more than 33%.

Note:

1. For rice and wheat, the percentages were not directly available from Table 2R (where rice is split into two items “rice – PDS” and “rice – other sources”, and wheat likewise) and had to be computed from the relevant information in Table 2R.
2. Milk converted to curd, butter, etc. in the home is accounted against milk (liquid) in the survey schedule and not against curd, butter, etc. If the milk is obtained from home produce (own farm animals), then such consumption becomes part of consumption from home-grown stock; if the milk is obtained through purchase, then such consumption is treated as from purchase, and so on.
3. Apart from home produce and purchase, consumption may be from free collection, gifts, etc. Therefore the percentages in columns 4, 5 and 6 will generally add up to less than 100.

3.7.4 Table S7-2 gives estimates of the same parameters as given in Table S7-1, for a different set of items: eggs, chicken and some common vegetables for which the share of quantity of

consumption coming from home produce is relatively large. For these items, percentages of households reporting consumption is available for a *7-day period*.

3.7.5 Table S8-1 shows, for each of the major States, percentage share of consumption coming from home-grown stock for nine items, including rice, wheat, arhar, urd, whole gram, milk, eggs and chicken. Table S8-2 shows the corresponding estimates for six common vegetables, coconut, and firewood.

3.7.6 The contribution of home produce to quantity of rice consumed was greatest (among the major States) in Assam (52%), followed by Uttar Pradesh (40%), while it was 34% in Odisha and 30-32% in Chhattisgarh, Jharkhand and Bihar. In case of wheat, the contribution of home produce was nearly 52% in Uttar Pradesh, 44% in Madhya Pradesh, and 43% in Haryana.

3.7.7 For all cereals taken together, the percentage coming from home produce was highest in Assam (49%), followed by Uttar Pradesh (47%), Madhya Pradesh (42%), Haryana (41%), and Rajasthan (39%). The percentage coming from home produce was extremely low in Kerala (1.6%), Tamil Nadu (5%), and Andhra Pradesh (9%). It may be recalled that in these three States, especially Kerala, a very large share of rice consumption came from PDS (see Section 3.3, Table S3-1).

3.7.8 For milk, the share of home produce in consumption was 20% in Andhra Pradesh, 12-14% in Tamil Nadu and Kerala, and over 34% in all other States, including States where per capita consumption is very low, such as Chhattisgarh, Jharkhand and West Bengal.

### 3.8 Comparison of unit values of consumption of rice and wheat in the rural sector from PDS, from home-grown stock, and from other sources

3.8.1 Table S9 shows, for the major States and all-India, the share of consumption of rice and wheat in the rural sector coming from home-grown stock alongside unit value of consumption from PDS, from home-grown stock and from other sources. Here unit value of consumption from home-grown stock has been separated out (through special tabulation), so that “other sources” here means non-PDS non-home-produce consumption.

3.8.2 The PDS-non-PDS differential in unit value of consumption of rice and wheat has already been discussed in Sections 3.3 and 3.4 respectively. On the whole, Table S9 does not appear to indicate that the propensity to consume from home produce was correlated, across States, with

the difference in unit values of consumption from home-grown stock and unit value of consumption from non-PDS market purchases.

### 3.9 Incidence of dependence on home-grown stock alone

3.9.1 Table S10-1 shows, for eight items – rice, wheat, arhar, urd, whole gram, milk, eggs and chicken – the percentage, in each of the major States, of households (among households reporting consumption) reporting consumption of the item from home-grown stock alone. Table S10-2 shows corresponding estimates for six common vegetables, coconut, firewood and dung cake.

## **Sample Design and Estimation Procedure**

# Sample Design and Estimation Procedure

## 1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its sixty-sixth round from 1<sup>st</sup> July 2009 to 30<sup>th</sup> June 2010.

## 2. Outline of survey programme

2.1 **Subject coverage:** The 66<sup>th</sup> round (July 2009-June 2010) of NSS was for the survey on 'Household Consumer Expenditure' and 'Employment and Unemployment' and it was the eighth quinquennial survey in the series, the last one having been conducted in the 61<sup>st</sup> round (2004-2005) of NSS.

2.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units (FSUs) for the 'Central sample'. For these two districts, sample FSUs drawn as 'State sample' were treated as Central sample. However, no first-stage unit was surveyed in Leh, Kargil and Poonch districts of J&K due to various reasons.

2.3 **Period of survey and work programme:** The period of survey was of one year duration starting on 1<sup>st</sup> July 2009 and ending on 30<sup>th</sup> June 2010. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

- sub-round 1 : July - September 2009
- sub-round 2 : October - December 2009
- sub-round 3 : January - March 2010
- sub-round 4 : April - June 2010

In each of these four sub-rounds equal numbers of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

2.4 **Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

- Schedule 0.0 : list of households
- Schedule 1.0 : consumer expenditure
- Schedule 10 : employment and unemployment

Two variants of Schedule 1.0, called Schedule Type 1 and Schedule Type 2, were canvassed in this round. Schedule Type 1 was similar to Schedule 1.0 of NSS 61<sup>st</sup> round. Compared to

Schedule Type 1, Schedule Type 2 had a different reference period (7 days) for some items of food, pan, tobacco and intoxicants.

**2.5 Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. The scale of the survey conducted by a State/UT relative to the Central sample survey in the State/UT was as follows:

Nagaland (Urban)	: triple
J&K, Manipur, Delhi & Uttar Pradesh	: double
Maharashtra (Urban) & Kerala	: one and half
Gujarat	: less than equal
Remaining States/UTs	: equal

### 3. Sample design

**3.1 Outline of sample design:** A stratified multi-stage design was adopted for the 66<sup>th</sup> round survey. The first stage units (FSUs) were the 2001 Census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/sub-blocks (sbs) from each rural/urban FSU.

**3.2 Sampling frame for first stage units:** *For the rural sector*, the list of 2001 Census villages (henceforth the term 'village' will mean Panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available UFS blocks was considered as the sampling frame. For non-UFS towns, the frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame).

**3.3 Stratification:** Within each district of a State/UT, generally speaking, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, within the urban areas of a district, wherever there were one or more towns with population 10 lakhs or more as per Census 2001 in a district, each of these formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

**3.4 Sub-stratification:** Each rural stratum was divided into 2 sub-strata as follows:

sub-stratum 1: all villages with proportion of child workers ( $p$ )  $> 2P$  (where  $P$  is the average proportion of child workers for the State/UT as per Census 2001)

sub-stratum 2: remaining villages

**3.5 Total sample size (FSUs):** At all-India level, 12784 FSUs were allocated to the Central sample and 15132 FSUs to the State sample. Further, the data of 24 State sample FSUs of Leh and Kargil districts of J&K surveyed by DES, J&K, were included in the Central sample.

**3.6 Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a

minimum sample allocation to each State/UT, and subject to resource availability in terms of field investigators.

**3.7 Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with double weightage to urban sector, subject to the restriction that the urban sample size for bigger States like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each State/UT separately for rural and urban areas. Further, the State-level allocations for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum/sub-stratum got a minimum allocation of 4 FSUs.

**3.8 Allocation to strata/sub-strata:** Within each sector of a State/UT, the sample size was allocated to different strata/sub-strata in proportion to population as per Census 2001. Allocations at stratum/sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal-sized samples were allocated to the four sub-rounds.

**3.9 Selection of FSUs:** For the rural sector, from each stratum/sub-stratum, the required numbers of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For the urban sector, FSUs were selected from each stratum using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

### 3.10 Formation and selection of hamlet-groups/sub-blocks

**3.10.1 Criterion for hamlet-group/sub-block formation:** Selected FSUs with approximate population 1200 or more were divided into a suitable number of geographically compact ‘hamlet-groups’ (having more or less equal population) in the rural sector and ‘sub-blocks’ in the urban sector as shown below.

approximate present population of the sample FSU	no. of hg's/sb's formed
less than 1200 (no hg/sb formation)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for four districts –Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approximate present population of the sample village	no. of hg's formed
less than 600 (no hg formation)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	

**3.10.2 Selection of hamlet-groups/sub-blocks:** Hamlet-groups (hg)/sub-blocks (sb) were selected from FSUs where hamlet-groups/sub-blocks were formed, two in the following manner. The hg/sb with maximum percentage share of population was always selected and termed hg/sb 1; one more hg/sb was selected from the remaining hg's/sb's by simple random sampling (SRS) and termed hg/sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

#### 4. Listing of households

4.1 Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those found through local enquires to be temporarily locked). The hamlet-group/sub-block with sample hg/sb number 1 was considered for listing first, followed by sample hg/sb number 2.

#### 5. Formation of second stage strata and allocation of sample households

5.1 Two cut-off points 'A' and 'B' (in Rs.) were determined from NSS 61<sup>st</sup> round data for each NSS region for urban areas in such a way that the top 10% of the population had MPCE more than B and the bottom 30% of the population had MPCE less than A.

5.2 For Schedule 1.0, households listed in the selected FSU/hamlet-group/sub-block were stratified into three second stage strata (SSS). Composition of the SSS and number of households to be surveyed from different SSSs for each of the two schedule types was as follows:

SSS	composition of SSS	number of households surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
<b>Rural</b>			
SSS 1	relatively affluent households	2	1
SSS 2	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3	other households	2	1
<b>Urban</b>			
SSS 1	households having MPCE of top 10% of urban population ( $MPCE > B$ )	2	1
SSS 2	households having MPCE of middle 60% of urban population ( $A \leq MPCE \leq B$ )	4	2
SSS 3	households having MPCE of bottom 30% of urban population ( $MPCE < A$ )	2	1

5.3 Thus, for each schedule type, a total of 8 households were selected for survey from each FSU – 4 from each selected hamlet-group/sub-block in FSUs where hg/sb's were formed.

## 6. Selection of households

6.1 From each SSS the sample households for each of the schedules were selected by SRSWOR. If a household was selected for Schedule 1.0 (Type 1), it was not allowed to be selected for Schedule 1.0 (Type 2) or Schedule 10. Similarly, if a household was not selected for Schedule 1.0 (Type 1) but selected for Schedule 1.0 (Type 2) it was not allowed to be selected for Schedule 10. If a household got selected for more than one schedule, only one schedule was canvassed in that household in the priority order of Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 and in that case the household was replaced by selecting another household for the other schedule.

6.2 However, at least one household was to be surveyed from each SSS for each of the three schedules of enquiry. To adhere to this restriction, the condition of not canvassing more than one schedule in the same household was waived in the extreme cases where there was an insufficient number of households in the frame of a particular second stage stratum.

## 7. Estimation procedure

### 7.1 Notations:

s = subscript for stratum

t = subscript for sub-stratum (only for rural sector)

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU [village (panchayat ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for second stage stratum in an FSU/ hg/sb [j = 1, 2 or 3]

k = subscript for sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample FSU

$D^* = 0$  if  $D = 1$

= (D – 1) for FSUs with  $D > 1$

N = total number of FSUs in any urban stratum

Z = total size of a rural stratum/sub-stratum (= sum of sizes for all the FSUs of a stratum/sub-stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

$\hat{X}$ ,  $\hat{Y}$  = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$  = observed value of the characteristic y for the  $k^{\text{th}}$  household in the  $j^{\text{th}}$  second stage stratum of the  $d^{\text{th}}$  hg/sb (d = 1, 2) of the  $i^{\text{th}}$  FSU belonging to the  $m^{\text{th}}$  sub-sample for the  $t^{\text{th}}$  sub-stratum of  $s^{\text{th}}$  stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

## 7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum (for urban)/ sub-stratum (for rural)

### 7.2.1 Rural

(i) For  $j^{\text{th}}$  second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum ( $\hat{Y}_s$ ) will be obtained by adding sub-stratum level estimates ( $\hat{Y}_{st}$ ).

### 7.2.2 Urban

(i) For  $j^{\text{th}}$  second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Note:  $N = 1$  in the above formula in the case of Leh and Kargil districts of J&K.

## 7.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples was obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

#### 7.4 Overall estimate of aggregates at State/UT/all-India level

The overall estimate  $\hat{Y}$  at the State/UT/all-India level was obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/UT/all-India.

#### 7.5 Estimates of ratios

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/UT/all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) was obtained as  $\hat{R} = \frac{\hat{Y}}{\hat{X}}$ .

#### 7.6 Estimates of error

The estimated variances of the above estimates were as follows:

##### 7.6.1 For aggregate $\hat{Y}$

$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$  where  $V\hat{a}r(\hat{Y}_s)$  is given by

$V\hat{a}r(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$  for rural stratum, where  $\hat{Y}_{st1}$  and  $\hat{Y}_{st2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't',

and

$V\hat{a}r(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$  for urban stratum,  $\hat{Y}_{s1}$  and  $\hat{Y}_{s2}$  being the stratum estimates for sub-sample 1 and 2 respectively.

##### 7.6.2 For ratio $\hat{R}$ :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[ (\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R} (\hat{Y}_{st1} - \hat{Y}_{st2}) (\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for rural and

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[ (\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R} (\hat{Y}_{s1} - \hat{Y}_{s2}) (\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for urban.

### 7.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

### 8. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below for Schedule 1.0:

sector	formula for multipliers	
	hg /sb 1	hg /sb 2
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$ ,	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$ ,

(j = 1, 2, 3)

- Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, indicator variable was used.
- (ii) Multipliers were computed on the basis of information available in the listing schedule irrespective of any misclassification observed between listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic,  $D_{stmi}^* = 0$  in the relevant multipliers and there was only one multiplier for the village.
