## प्राक्कथन

राष्ट्रीय प्रतिदर्श सर्वेक्षण (एनएसएस) के परिवार उपभोक्ता व्यय संबंधी सर्वेक्षण राष्ट्रीय तथा राज्य स्तर पर आबादी के अलग-अलग वर्गों के जीवन-स्तर के विभिन्न संकेतकों के बारे में आंकड़ों के बुनियादी स्रोत हैं। इन आंकड़ों का उपयोग नियोजन, नीति निर्माण एवं निर्णय में मदद के लिए किया जाता है तथा विभिन्न सरकारी संगठन, शिक्षाविद, शोधकर्ता और विद्वान इनका उपयोग सांख्यिकी प्रक्रियाओं में इनपुट के रूप में करते हैं। परिवारों के बड़े प्रतिदर्श आकार के साथ परिवार उपभोक्ता व्यय संबंधी एनएसएस सर्वेक्षण, 27वें दौर (अक्टूबर 1972-सितम्बर 1973) से पंचवार्षिक आधार पर आयोजित किए जा रहे हैं। जुलाई 2009-जून 2010 के दौरान किया गया एनएसएस का 66वें दौर का सर्वेक्षण, इस श्रृंखला का आठवां पंचवार्षिक सर्वेक्षण था। इसमें (i) परिवार उपभोक्ता व्यय तथा (ii) रोजगार तथा बेरोजगारी विषयों को सम्मिलित किया गया था। इस सर्वेक्षण का क्षेत्र कार्य राष्ट्रीय प्रतिदर्श सर्वेक्षण कार्यालय (एनएसएसओ) के क्षेत्र संकार्य प्रभाग (एफओडी) द्वारा किया गया था जिसमें केन्द्रीय प्रतिदर्शों को सम्मिलित किया गया था। अधिकांश राज्य सरकारों ने भी समान प्रतिदर्श आकार के आधार पर इस सर्वेक्षण में सहभागिता की थी।

केन्द्रीय प्रतिदर्श के आधार पर एनएसएसओ ने उपभोक्ता व्यय संबंधी पंचवार्षिक सर्वेक्षणों के निष्कर्ष कई प्रतिवेदनों के रूप में प्रकाशित किए हैं। एनएसएसओ ने जुलाई 2011 में परिवार उपभोक्ता व्यय, 2009-2010 के मुख्य संकेतक जारी किए थे। इसके अलावा एनएसएस के 66वें दौर के सर्वेक्षण आंकड़ों के आधार पर परिवार उपभोक्ता व्यय के विभिन्न पहलुओं पर सात विस्तृत प्रतिवेदन जारी करने की योजना बनाई गई है। चार प्रतिवेदन जो पहले ही जारी किये जा चुके हैं, वे हैं: प्रथम 'उपभोक्ता व्यय का स्तर एवं प्रणाली' जिसमें राष्ट्र तथा राज्य स्तर के परिवार उपभोक्ता व्यय के औसतों, वितरण एवं संघटनों के सम्बन्ध में अनुमान दिए गए हैं, दूसरा प्रतिवेदन 'भारत में पौष्टिक अन्तर्ग्रहण', जिसमें भारतीय आबादी द्वारा पौष्टिक अन्तर्ग्रहण पर जानकारी प्रस्तुत की गई है और तीसरे प्रतिवेदन 'भारत में विविध वस्तुओं एवं सेवाओं का पारिवारिक उपभोग', जिसमें सभी मदों, जिनके लिए अनुसूची में आंकड़े अलग से दर्ज किए गए थे, के उपभोग की प्रति व्यक्ति मासिक व्यय की अनुमानित सूचना पिछले 30 दिनों के दौरान प्रत्येक मद का उपभोग करने वाले अनुमानित परिवारों के अनुपात के साथ प्रस्तुत की गई है, पहले ही जारी किये जा चुके हैं। और, चौथा प्रतिवेदन 'भारतीय परिवारों के, रसोई और प्रकाश के लिए ऊर्जा स्रोत' जिसमें (क) रसोई के लिए ऊर्जा के प्राथमिक स्रोत, (ख) प्रकाश के लिए ऊर्जा के प्राथमिक स्रोतों द्वारा भारतीय परिवारों का वितरण दिया गया है। वर्तमान रिपोर्ट जो श्रृंखला में पांचवीं है, में 'समाजार्थिक समूहों में परिवार उपभोक्ता व्यय' विभिन्न समाजार्थिक समूहों में उपभोक्ता व्यय के स्तरों एवं पद्धतियों में उतार-चढ़ाव की जांच करता है। परिवारों को विभिन्न समाजार्थिक समूहों के आधारों पर (i) सामाजिक समूह (ii) पारिवारिक (व्यवसाय) प्रकार, और ग्रामीण क्षेत्रों में (iii) अधिगृहीत भूखंड के आकार के आधार पर भी श्रेणीकृत किया गया है। इस रिपोर्ट में तीन अध्याय और पांच परिशिष्ट हैं। इस रिपोर्ट के विषय से संबंधित सर्वेक्षण के प्रमुख निष्कर्ष अध्याय तीन में हैं।

एनएसएसओ के विभिन्न प्रभागों द्वारा विभिन्न कार्यकलापों के बेहतरीन नियोजन और निष्पादन तथा एनएसएसओ के सहायक अधिकारियों और स्टाफ की कठिन मेहनत से यह प्रतिवेदन वर्तमान रूप में संभव हो सका है। मैं दिल्ली स्कूल ऑफ इकॉनामिक्स के सेवानिवृत्त प्रोफेसर के. सुन्दरम और भारतीय सांख्यिकीय संस्थान के सेवानिवृत्त प्रोफेसर डी. कुन्दु, जिन्होंने प्रतिवेदन के मसौदे की समीक्षा की है और इसमें सुधार के लिए उपयोगी सलाह और सुझाव दिए हैं, को धन्यवाद देता हूँ।

आशा है कि यह प्रतिवेदन योजनाकारों, नीतिनिर्माताओं, शोधकर्ताओं तथा अन्य निर्णय-कर्ताओं के लिए उपयोगी होगा।

(एस. के. दास)

## Preface

The Household Consumer Expenditure Surveys of the National Sample Survey (NSS) are the primary source of data on various indicators of level of living of different segments of the population at national and State levels. These are used for planning, policy formulation, decision support and as input for further statistical exercises by various Government organizations, academicians, researchers and scholars. NSS surveys on Household Consumer Expenditure with a large sample size of households have been conducted quinquennially from the 27<sup>th</sup> round (October 1972 – September 1973) of NSS onwards. The NSS 66<sup>th</sup> round survey, carried out during July 2009 – June 2010, was the eighth quinquennial survey in the series, covering subjects of (i) Household Consumer Expenditure and (ii) Employment and Unemployment. The field work of this survey was carried out by the Field Operations Division (FOD) of the National Sample Survey Office (NSSO), which surveyed the Central sample. Most of the State Governments also participated in the survey on a matching sample size basis.

Based on the Central sample data, the results of the quinquennial surveys of Consumer Expenditure are being brought out by NSSO in a number of reports. *Key Indicators of Household Consumer Expenditure in India, 2009-10*, was released in July 2011. Apart from this, seven detailed reports are planned to be released on varied aspects of household consumer expenditure based on NSS 66<sup>th</sup> round data. The four reports already released/finalised are: first, *Level and Pattern of Consumer Expenditure*, giving estimates of averages, distribution and composition of household consumer expenditure at national and State levels; second, *Nutritional Intake in India*, giving estimates of nutritional intake by the Indian population; third, *Household Consumption of Various Goods and Services in India*, giving estimates of per capita expenditure for all items of consumption for which data was separately recorded in the schedule of enquiry, along with the estimated proportions of households consuming each item during the reference period; and fourth, *Energy Sources of Indian Households for Cooking and Lighting*, giving distribution of Indian households by a) primary source of energy for cooking and b) primary source of energy for lighting. The present report, *Household Consumer Expenditure across Socio-Economic Groups*, the fifth in the series, investigates the variation in level and pattern of consumer expenditure across various socio-economic groups of households. Households are categorised into different socio-economic groups on the basis of (i) social group (ii) household (occupation) type and in rural areas, also by (iii) size of land possessed. This report contains three chapters and five appendices. The main findings of the survey relating to the subject of this report are presented in Chapter Three.

This report in its present form has been possible because of the efforts made by the different divisions of NSSO in meticulous planning and execution of various activities involved, and the hard work done by the supporting officials and staff of NSSO. I thank Prof. K. Sundaram, Retd. Professor, Delhi School of Economics and Prof. D. Coondoo, Retd. Professor, Indian Statistical Institute, who reviewed the draft report and provided valuable comments and suggestions for improvement.

I hope that this report will be found useful by planners, policy makers, researchers and other decision makers.

National Sample Survey Office

New Delhi  
October 2012

## मुख्य बातें

यह रिपोर्ट जुलाई - 2009 - जून 2010 के दौरान सम्पूर्ण देश में फैले हुए, 7428 ग्रामों एवं 5263 नगरीय खंडों में 100794 परिवारों के रा.प्र.स. के अनुसूची 1.0 (उपभोक्ता व्यय), टाइप 2 के माध्यम से एकत्रित सूचना पर आधारित है।

### जनसंख्या एवं परिवारों का वितरण :-

- भारतीय जनसंख्या का क्रमशः करीब 9 प्रतिशत अनुसूचित जन जातियाँ(अ.ज.जा.), 20 प्रतिशत अनुसूचित जातियाँ(अ.जा.) एवं 42 प्रतिशत अन्य पिछड़ी जातियाँ (अ.पि.ज.) थी।
- ग्रामीण परिवारों का करीब 31% कृषि में स्व-कार्यरत था एवं 27% कृषि श्रमिक परिवार थे। नगरीय भारत में करीब 38% परिवार नियमित मजदूरी/वेतनभोगी थे एवं 36% स्व-कार्यरत परिवार थे।
- ग्रामीण भारत में, वे परिवार जिनके पास 0.4 हेक्टेयर से कम भूमि थी, उनकी जनसंख्या का लेखा करीब 55% था, जबकि करीब 25% जनसंख्या उन परिवारों की थी जिनके पास एक हेक्टेयर से अधिक भूमि थी।

### सामाजिक-आर्थिक समूहों में औसत मासिक प्रति व्यक्ति उपभोक्ता व्यय (मा.प्र.उ.व्यय) :-

- ग्रामीण भारत में, औसत मा.प्र.उ.व्यय क्रमशः अनु. जन जा. के लिए रु. 873 अनु जा के लिए रु. 929 एवं अ.पि.जा. के लिए रु. 1036 था। नगरीय भारत में यह अ.ज.जा. के लिए 1797 रु. अ. जा. के लिए 1444 रु. एवं अ.पि.जा. के लिए 1679 रु. था।
- अखिल-भारतीय स्तर पर 'अन्य' का औसत मा.प्र.उ.व्यय (ग्रामीण में करीब रु. 1281 एवं नगरीय में करीब रु 2467) दोनों क्षेत्रों के सम्पूर्ण-वर्गों के औसत स्तर से अधिक था।
- ग्रामीण पारिवारिक प्रारूप में, औसत मा.प्र.उ.व्यय 'गैर-कृषि' में स्व-कार्यरत के लिए रु. 1111 था, कृषि श्रमिक के लिए रु. 828, अन्य श्रमिक के लिए रु. 968, कृषि में स्व कार्यरत के लिए रु 1102 एवं अन्यो के लिए रु. 1557 था।
- नगरीय भारत में, औसत मा.प्र.उ. व्यय "स्वनियोजित" के लिए रु 1806 था, नियमित मजदूरी या वेतन भोगी के लिए रु. 2326, आकस्मिक श्रमिक के लिए रु. 1090, 'अन्य श्रमिक' के लिए रु. 3012 एवं 'अन्यो' परिवार के रूप के लिए रु. 1984 था।
- ग्रामीण पारिवारों में धारित भूमि के आकार द्वारा वर्गीकृत सर्वोच्च श्रेणी (> हेक्टेयर) परिवारों का औसत मा.प्र.उ. व्यय रु. 1438 था।
- कई मुख्य राज्यों के ग्रामीण क्षेत्रों में औसत मा.प्र.उ.व्यय एवं धारित भूमि के आकार के बीच एक सकारात्मक संबंध दिखाई दिया। यह पंजाब एवं हरियाणा और केरल में भी प्रमुख था। यह संबंध पश्चिम बंगाल, गुजरात एवं तामिल नाडू में भी दृष्टिगोचर हुआ, परन्तु झारखण्ड एवं छत्तीसगढ़ में थोड़ा कमजोर था।

### मा.प्र.उ. व्यय का वितरण :

- दोनों क्षेत्रों में कुल जनसंख्या की तुलना में मा.प्र.उ.व्यय रेंज में अ.ज.जा एवं अ.जा. की जनसंख्या के प्रतिशत में मा.प्र.उ.व्यय बढ़ने के साथ गिरावट आई (खासकर ग्रामीण क्षेत्र के अ.ज.जा. में)। जो कि कुल जनसंख्या के सापेक्ष 'अन्य' के जनसंख्या के प्रतिशत में मा.प्र.उ.व्यय बढ़ने के साथ बढ़ोत्तरी

हुई। नगरीय क्षेत्र में कुल जनसंख्या के सापेक्ष अ.पि.जा. के जनसंख्या के प्रतिशत में मा.प्र.उ.व्यय बढ़ने के साथ बढ़ोत्तरी हुई, जबकि ग्रामीण क्षेत्र में कमोबेश कोई परिवर्तन नजर नहीं आया।

- पूरे जनसंख्या के सापेक्ष में मा.प्र.उ.व्यय के बढ़ने के साथ ही ग्रामीण क्षेत्र में कृषक श्रमिक परिवारों के प्रतिशत में उल्लेखनीय गिरावट आई। इसके विपरीत मा.प्र.उ.व्यय श्रेणी में पारिवारिक प्रारूप 'अन्य' के मा.प्र.उ.व्यय बढ़ने के साथ जनसंख्या में उल्लेखनीय वृद्धि हुई।
- नगरीय क्षेत्र में सम्पूर्ण जनसंख्या के सापेक्ष मा.प्र.उ.व्यय श्रेणी में आकस्मिक श्रमिक की जनसंख्या प्रतिशत में तीव्र गिरावट देखी गई, जैसे पूरे मा.प्र.उ.व्यय रेंज में प्रति 1000 में 275 के स्तर से निचले मा.प्र.उ.व्यय स्तर में प्रति 1000 में 6 के स्तर तक। नियमित मजदूरी/वेतनभोगियों के लिए, एक निर्बाध ऊर्ध्वमुखी प्रवृत्ति दिखाई दिया।
- ग्रामीण क्षेत्र में पूरे जनसंख्या के सापेक्ष उच्च दो धारित भूमि के आकार वाले वर्ग में (2 हेक्टेयर से 4 हे. एवं 4 हे. से अधिक) मा.प्र.उ.व्यय की श्रेणी में व्यक्तियों के मा.प्र.उ.व्यय बढ़ने के साथ व्यक्तियों के अनुपात में वृद्धि हुई। यह वृद्धि 4.01 हे. से अधिक श्रेणी में ज्यादा था।

**खपत का स्वरूप : सामाजिक-आर्थिक, समूहों के बीच विविधता :-**

- सामाजिक वर्गों में खाद्येतर भाग अजजा वर्ग के लिए 40% एवं ग्रामीण क्षेत्र में अन्य के लिए 45% था, एवं नगरीय क्षेत्र में अ.जा. वर्ग के लिए 51% से अन्य के लिए 58% तक था।
- ग्रामीण परिवारों में 'कृषि श्रमिक' परिवारों के उपभोक्ता व्यय के लिए अनाज का कुल लेखा 16%, 'अन्य' के लिए 10%, एवं अन्य तीन पारिवारिक प्रारूप के लिए 14% तक था। नगरीय परिवारों के बीच 'आकस्मिक श्रमिक' परिवारों ने अपने उपभोक्ता व्यय का 12% अनाजों पर खर्च किया, स्व-कार्यरत ने 9%, 'नियमित मजदूरी/वेतन भोगियों' ने 7%, एवं 'अन्य' ने केवल 5% तक का व्यय किया।
- ग्रामीण क्षेत्रों के धारित भूमि आकार वाले श्रेणी का, निम्न चार श्रेणियों में (जिसका रेंज 0-2 हेक्टेयर), काफी मिलते जुलते खपत का स्वरूप देखा गया। इस रेंज से परे, परिवारों का उपभोक्ता स्वरूप अपेक्षाकृत समृद्ध परिवारों के विशेषताओं जैसा था (जैसे सम्पूर्ण व्यय में खाने का हिस्सा कम होना)

**सामाजिक समूहों में मा.प्र.उ.व्यय में भिन्नताओं की प्रवृत्ति :**

- 1999-2000, 2004-05 एवं 2009-10 में चलाये गए पंच-वार्षिक उपभोक्ता व्यय के सर्वेक्षणों से यह पता चलता है कि 1999-2000, 2004-05 के बीच में उपभोक्ता के अन्तरसामाजिक वर्ग विविधता के स्तर में वृद्धि हुई इसके बाद 2009-10 में सभी वर्ग समूहों के मा.प्र.उ.व्यय प्रतिशत के विविधता के मान में मुख्य रूप से 1999-2000 की तुलना में कमी आई।
- पूरे तीन वर्षों में जहां ग्रामीण अ.पि.जा. का औसत मा.प्र.उ.व्यय कुल ग्रामीण औसत से 0 से 3 प्रतिशत कम था, जो कि नगरीय क्षेत्र के अ.पि.जा. के औसत मा.प्र.उ.व्यय कुल नगरीय औसत से 14 से 17 प्रतिशत कम था। अ.ज. का औसत मा.प्र.उ.व्यय, ग्रामीण भारत के कुल-वर्ग समूहों के औसत से 12 से 15 प्रतिशत कम था, परन्तु नगरीय भारत में 2004-05 एवं 2009-10 में कुल-वर्ग समूहों के औसत से लगभग 27-28 प्रतिशत कम था।

घर में इन्टरनेट की पहुँच :

- ग्रामीण भारत में 0.4% परिवारों में इन्टरनेट का पहुँच था, अलग-अलग सामाजिक वर्ग समूहों में अनु.जन.जा. के लिए 0.1% से "अन्यों" के लिए 0.6% का बदलाव हुआ ।
- नगरीय भारत में, इन्टरनेट के पहुँच परिवारों का अनुपात सभी वर्गों को मिलाकर 6.24% था, यह प्रतिशत अनु.जा. के लिए 2.2% से 'अन्यों' के लिए 10.5% परिवर्तित हुआ । ऐसे परिवारों का अनु.ज.जा के लिए 4% और अ.पि.वर्ग के लिए 3.1% था ।
- नगरीय भारत में 'नियमित मजदूरी/वेतनभोगी' परिवारों में इन्टरनेट का पहुँच 9% से अधिक था स्व-नियोजित परिवारों का 5.0% की तुलना 'अन्यों' के लिए करीब 6.7% से की गई ।

# Highlights

---

The report is based on information collected through NSS Schedule 1.0 (Consumer Expenditure), Type 2, during July 2009-June 2010 from 100794 households in 7428 villages and 5263 urban blocks spread over the entire country.

## DISTRIBUTION OF POPULATION AND HOUSEHOLDS

- About 9 per cent of Indian population belonged to the Scheduled Tribes (ST), 20 per cent to the Scheduled Castes (SC), and 42 percent to the Other Backward Classes (OBC) respectively.
- Around 27% of rural households were *agricultural labour* households and 31% were *self-employed in agriculture*. In urban India about 36% of households were *self-employed* and 38% were *regular wage/salary earning* households.
- In rural India, households possessing less than 0.4 hectare of land accounted for nearly 55% of population, while around 25% of population belonged to households possessing more than one hectare of land.

## AVERAGE MPCE ACROSS SOCIO-ECONOMIC GROUPS

- In rural India, the average MPCE was Rs.873 for ST, Rs.929 for SC and Rs.1036 for OBC. In urban India it was Rs.1797 for ST, Rs.1444 for SC, and Rs.1679 for OBC.
- The average MPCE of 'Others' at all-India level (Rs.1281 in rural and Rs.2467 in urban) was more than the all-groups average in both sectors.
- Among the rural household types, average MPCE was Rs.1111 for 'self-employed in non-agriculture', Rs.828 for 'agricultural labour', Rs.968 for 'other labour', Rs.1102 for 'self-employed in agriculture' and Rs.1557 for 'others'.
- In urban India, average MPCE was Rs.1806 for the 'self-employed', Rs.2326 for the 'regular wage or salary earning', Rs.1090 for 'casual labour', Rs.3012 for 'other labour' and Rs.1984 for the 'others' household type.
- Among rural households classified by size of land possessed, the topmost class (>4 hectares) had an average MPCE of Rs.1438.
- A positive association between size of land possessed and average MPCE in the rural sector was observed in most major States. It was prominent in Punjab and Haryana, and also in Kerala. The association was also marked in West Bengal, Gujarat and Tamil Nadu, but noticeably weak in Jharkhand and Chhattisgarh.

## DISTRIBUTION OF MPCE

- Compared to the overall population, the percentage of ST and SC population in an MPCE range fell in both sectors (more steeply in case of ST in the rural sector) with rise in MPCE, while the percentage of the 'Others' population increased relative to the overall population with rise in MPCE. For OBCs, the percentage of persons in an MPCE class rose gradually relative to the overall population with rise in MPCE for the urban sector but remained more or less unchanged in the rural sector.
- In the rural sector the percentage of agricultural labour households declined noticeably relative to the entire population as MPCE increased. In contrast, the percentage of population in an MPCE class was seen to increase markedly with increase in MPCE for the household type 'others'.
- In the urban sector, a steep fall was observed in the percentage of population of 'casual labour' households in an MPCE class, relative to the entire population, throughout the MPCE range, from a level of 275 per 1000 to 6 per 1000 in the bottom MPCE class. For the regular wage/salaried, a smooth upward trend was seen.
- In the rural sector, for the top two land possessed size classes (between 2 to 4 hectares and more than 4 hectares), the proportion of persons in an MPCE class increased with MPCE relative to the entire population, and the rise was steeper for the 4.01+ class.

## PATTERN OF CONSUMPTION: VARIATION ACROSS SOCIO-ECONOMIC GROUPS

- The share of non-food varied over social groups from 40% for the ST group to 45% for 'Others' in the rural sector and from 51% for SC to 58% for Others in the urban sector.
- Among rural households cereals accounted for 16% of consumer expenditure for 'agricultural labour' households, 10% for 'others', and 14% for the other three household types. Among urban households 'casual labour' households spent 12% of their consumer expenditure on cereals, the self-employed spent 9%, the 'regular wage/salary earning' spent 7%, and 'others', only 5%.
- Among the land possessed size classes in rural areas, the lowest four size classes (spanning the 0-2 hectares range) showed very similar consumption patterns. Beyond this range, consumption patterns showed the characteristics of the relatively affluent, with the share of food falling.

## TRENDS IN MPCE DIFFERENCES AMONG SOCIAL GROUPS

- Estimates from the quinquennial consumer expenditure surveys conducted in 1999-2000, 2004-05 and 2009-10 indicate that inter-social-group disparities in level of consumption widened between 1999-2000 and 2004-05, and narrowed thereafter, with

the magnitude of the percentage difference from all-groups MPCE in most cases coming down to a lower value in 2009-10 than what it was in 1999-2000.

- While the rural OBCs' average MPCE was 0 to 3 percent less than the overall rural average in all three years, that of urban OBCs was 14 to 17 percent less than the overall urban average. The average MPCE of SCs, too, was 12 to 15 percent less than the all-groups average in rural India but as much as 27-28 percent less than the all-groups average in urban India in 2004-05 and 2009-10.

#### ACCESS TO INTERNET AT HOME

- In rural India, where the percentage of households having internet access at home was only 0.4%, the percentage for individual social groups varied from 0.1% for ST to 0.6% for Others.
- In urban India, where the proportion of households having internet access at home was 6.24% for all groups taken together, the percentage varied from 2.2% for SC to 10.5% for 'Others'. The proportion of such households was 4% for ST and 3.1% for OBC.
- In urban India, more than 9% for 'regular wage/salary earning' had internet access at home, compared to 5.0% of the 'self-employed' households compared to and about 6.7% for 'others'.

# Chapter One

## Introduction

### 1.1 Background

1.1.1 The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure surveys at regular intervals as part of its 'rounds', each round normally of a year's duration. These surveys are conducted through interviews of a representative sample of households selected randomly through a scientific design and cover almost the entire geographical area of the country.

1.1.2 The household consumer expenditure survey (CES) is generally conducted as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES's. The 66<sup>th</sup> round survey (July 2009 - June 2010) was the eighth such survey of this quinquennial series, the seventh having been conducted during the 61<sup>st</sup> round (July 2004 - June 2005).

### 1.2 Objective of the survey

1.2.1 The NSS consumer expenditure survey (CES) aims at generating estimates of average household monthly per capita consumer expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, at national and State/UT level, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the respective domains of the population, and are used extensively for the study of poverty and inequality. Other uses of the CES include the use of budget shares as revealed by the NSS CES to prepare the weighting diagram for official compilation of consumer price indices (CPIs), and the measurement of elasticity or responsiveness of demand to change in total expenditure. The data on quantities of consumption of different food items are used to study the level of nutrition of populations of different regions and disparities therein, and trends in nutritional intake over time.

### 1.3 Reports of the 66<sup>th</sup> round CES

1.3.1 The results of NSS rounds are released in reports based on comprehensive tabulation of the Central sample<sup>1</sup> data. The results of the 66<sup>th</sup> round quinquennial survey on household consumer expenditure are planned for release in seven reports. The titles of these reports are:

1. Level and Pattern of Consumer Expenditure
2. Household Consumption of Various Goods and Services in India
3. Public Distribution System and Other Sources of Household Consumption
4. Energy Sources of Indian Households for Cooking and Lighting

---

<sup>1</sup> see paragraph 1.7.3.1

5. Nutritional Intake in India
6. Household Consumer Expenditure across Socio-Economic Groups
7. Perceived Adequacy of Food Consumption in Indian Households

Reports 1, 2, 4 and 5 have already been released.

## 1.4 Contents of this report

1.4.1 This report investigates the variation in level and pattern of consumer expenditure over various socio-economic groups of households. Households are categorised into different socio-economic groups on the basis of (i) social group (ii) household (occupation) type, and, in rural areas, also by (iii) size of land possessed.

1.4.2 The classification of social groups in both rural and urban areas is: *Scheduled Tribes (ST)*; *Scheduled Castes (SC)*; *Other Backward Classes (OBC)*; and *Others*.

1.4.3 Five broad economic groups or household types (in NSS terminology) are distinguished on the basis of major source of livelihood in the rural areas and four in the urban areas.

The five household types in rural areas are: *self-employed in agriculture*; *self-employed in non-agriculture*; *agricultural labour*; *other rural labour*; and *others* (residual).

The four household types in urban areas are: *self-employed*; *regular wage and salary earning*; *casual labour* and *others* (residual).

1.4.4 The six size classes used for classification of households by land possessed are given in Chapter Two.

1.4.5 The term ‘socio-economic category’ is sometimes used to refer to a particular combination of household type and social group (and size class of land possessed in case of rural households). Thus the urban self-employed Scheduled Tribe households form a socio-economic category distinct from, say, the urban casual labour Scheduled Tribe households.

## 1.5 Organization of the report

1.5.1 Chapter Two outlines the concepts and definitions that are relevant for this report. It also contains the basic definitions and procedures followed in the survey. The salient findings on household consumer expenditure across socio-economic groups are presented in Chapter Three, based on consumption data collected through Schedule 1.0, Type 2. Appendix A gives the detailed tables generated from the survey data. Appendix B explains in detail the sample design and estimation procedure followed. In order to facilitate computation of the absolute figures of aggregate consumption in different population domains, the projected population at the mid-year reference 1<sup>st</sup> January 2010 based on the population projections by the Registrar-General of India are provided in Appendix C. (Note that the RG’s projections pre-

date the release of the *provisional* results of the 2011 Population Census.) Appendix D consists of the schedule of enquiry (Schedule 1.0, Type 2) that was canvassed in the surveyed households. Appendix E gives estimated relative standard errors of State-sectorwise estimates of MPCE.

1.5.2 The detailed State-sectorwise and all-India-sectorwise tables presented in Appendix A of this report relate to 2009-10. They give

- Average MPCE of rural and urban households by type, social group and area of land possessed
- Distribution of persons by MPCE class for different household types, different social groups, and different size classes of land possessed
- Estimated number of rural and urban households and persons by household type, social group and area of land possessed
- Average MPCE of urban households by household type and social group
- Distribution of households and persons of each socio-economic category by MPCE
- Break-up of average MPCE by item group for each socio-economic category of households
- Distribution of households having access to internet at home by MPCE class for each social group and household type

1.5.3 For most of the parameters presented in this report, estimates are provided for all-India and for the States and UTs. It should be noted that (a) the sizes of the socio-economic groups vary considerably across the States and UTs of India, and (b) the NSS consumer expenditure survey not being specifically oriented towards estimation of parameters related to socio-economic groups as defined in this report, the sample of households selected for survey from different States and UTs is not specially allocated among various socio-economic groups with a view to obtaining accurate estimates for each group in each State/UT. The allocation to different socio-economic categories is, rather, the result of a process of random selection. It may be kept in mind, therefore, that the samples of households on which estimates are based may not always be large enough to get estimates of desired accuracy and such estimates are to be used with caution.

## 1.6 Features of the survey: schedules of enquiry

1.6.1 The schedule of enquiry ('Schedule 1.0') used in the household consumer expenditure survey used for the survey collects information on household consumption of various goods and services, using appropriate reference periods, with a view to obtaining the household's Monthly Per Capita consumer Expenditure (MPCE). The schedule also records some particulars of individual household members, such as age, sex and educational level, and some socio-economic characteristics of the household: principal industry-occupation, religion, social group, occupational type, area of land possessed, etc.

1.6.2 The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table T1.

1.6.3 The present report is based on data collected through Schedule Type 2. The data on food, pan, tobacco and intoxicants collected through Schedule Type 2 of this survey differs from that collected in the earlier quinquennial surveys in that a reference period of 'last 30 days' was used only for cereals, pulses, milk, sugar and salt, and for all other food items, as well as for pan, tobacco and intoxicants, a reference period of 'last 7 days' was used. This was in line with the recommendations of an Expert Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption. The Expert Group had noted that a 7-day reference period gives somewhat higher estimates of per capita consumption for the item groups for which it is used, and hence for the food group as a whole, as well as of household MPCE (all items) itself, but expected these estimates to be closer to the true consumption levels of households than are obtainable by the usual (30-day recall period) method.<sup>2</sup> Users of the present report interested in studying trends in consumption level over time would need to bear this fact in mind. Users may also note that estimates comparable to earlier rounds (on URP and MRP) can be computed by them from the Unit Record data now available.

**Table T1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2**

Category	Item groups	Reference period for	
		Schedule Type 1	Schedule Type 2
I	Clothing, bedding, footwear, education, medical (institutional), durable goods	'Last 30 days' and 'Last 365 days'	Last 365 days
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days

## 1.7 Features of the survey: scope and coverage

1.7.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. *However, although planned, no sample could actually be surveyed in the districts of Leh (Ladakh), Kargil and Poonch of Jammu & Kashmir by NSSO.*

<sup>2</sup> See NSS Report No. 475: *Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption.*

1.7.2 *Population coverage:* The following procedures were observed:

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Chapter Two, paragraph 2.4.1, for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

1.7.3.1 *Sample size: first-stage units:* As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a 'State sample' was surveyed by State Government officials in addition to the 'Central sample' surveyed by NSSO. For rural India, 7,524 villages formed the Central sample for this round. Of these, 7,428 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 5,284 blocks, of which 5,263 were surveyed. This document is based on the estimates obtained from the Central sample only.

1.7.3.2 *Sample size: second-stage units:* For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2. While selecting the households in each selected first-stage unit, the second-stage stratification of households is in-built in the sample design. The features of the sample design are explained in Appendix B.

1.7.3.3 Table T2 shows the numbers of villages and urban blocks surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed.

**Table T2: Number of villages/blocks surveyed and number of households surveyed for Schedule 1.0 Type 1 and Type 2: NSS 66<sup>th</sup> round, Central sample**

State/UT	no. of fsu's (villages/blocks) surveyed		no. of sample households

## Chapter Two

### Concepts and Definitions

#### 2.1 Conceptual framework

**2.1.1 Reference period:** The consumption of any good or service by a household or person occurs in the form of a flow over time. The survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period.

**2.1.2 Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

**2.1.2.1** For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

**2.1.2.2** For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption. However, for a few items of expenditure such as rent, telephone charges, consumer taxes and railway season tickets, expenditure during the month is recorded as the amount that was last paid divided by the number of months to which the payment related.

**2.1.2.3** It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests

during ceremonies or otherwise. Normally, transfers of food, fuel, clothing and footwear made by a household as charity, loan advance, etc. are not considered as consumption of that household, since consumption out of all transfer receipts of these items have to be included. However, meals prepared in a household and served to non-household members are an exception to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure.

2.1.2.4 All goods and services received as payment in kind or perquisites are included in the consumption of the recipient household as goods and services received in exchange of services, except for meals received from other households' kitchens.

2.1.2.5 To simplify data collection, consumption of food processed *in the home* from one 'item' into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

2.1.3 **Value of consumption:** For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

## 2.2 Monthly per capita expenditure (MPCE)

2.2.1 Normally, the concept of per capita income – or per capita (overall) expenditure, if income data are not available – is used for comparison of average living standards between countries, between regions, and between social or occupational groups. For studies of poverty and inequality *within* populations, however, average income or average expenditure is not enough. One needs to assign a value that indicates level of living to *each individual*, or at least to each household, in a population in order to know the level of inequality in living standards of the population, or the proportion living in poverty.

2.2.2 The NSS concept of MPCE, therefore, is defined first at the household level (household monthly consumer expenditure  $\div$  household size). This measure serves as the indicator of the household's level of living.

2.2.3 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level.

2.2.4 **Deciles and decile classes of MPCE:** The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population lie, the second decile, the level below which 20% of the population lie, and so on. Thus the population can be divided into 10 'decile classes of MPCE' as follows: those with MPCE below the 1<sup>st</sup> decile of the MPCE distribution (the bottom 10% of the population ranked by MPCE), from the 1<sup>st</sup> decile to the 2<sup>nd</sup> decile (the next 10%), from the 2<sup>nd</sup> decile to the 3<sup>rd</sup> decile (the next 10%), and so on. Averages of other variables of interest, computed separately for the 10 decile classes, help to portray the variation of such variables with variation in MPCE. In line with usual NSS practice, decile classes of MPCE are formed separately for the rural and the urban sector, both for India as a whole and for the States.

2.2.5 **Uniform Reference Period MPCE (or MPCE<sub>URP</sub>):** This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of 'last 30 days' (preceding the date of survey).

2.2.6 **Mixed Reference Period MPCE (or MPCE<sub>MRP</sub>)** This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of 'last 365 days', and expenditure on all other items is recorded with a reference period of 'last 30 days'.

### 2.3 Other concepts and definitions

2.3.1 **Household:** A group of person normally living together and taking food from a common kitchen constitutes a household. The word 'normally' means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. 'Living together' is usually given more importance than 'sharing food from a common kitchen' in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a

single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

**2.3.2 Household size:** The size of a household is the total number of persons in the household.

**2.3.3 Social group:** Four social groups were distinguished – Scheduled Tribe (ST), Scheduled Caste (SC), Other Backward Class (OBC) and Other (residual) households. In case different members of a household belonged to different social groups, the group to which the head of the household belongs was considered as the social group of the household.

**2.3.3.1** It is important to note that the social group reported for the head of any given household was taken to be the social group of all members of that household. Information recorded in this regard was based entirely on the response of the informant and not ascertained from any official list of social groups.

**2.3.4 Household type:** Rural households were classified into five economic categories or household types (in the NSS terminology) and urban households into four types on the basis of the occupations pursued by the household members. The five types of rural households are self-employed in non-agriculture, agricultural labour, other labour, self-employed in agriculture, and other households. The four types of urban household are: self-employed, regular wage / salary earner, casual labour, and other households. The ‘type’ of a household was determined as follows.

- **Rural:** A household was classified as ‘agricultural labour’, if its income from that source was 50% or more of its total income. The same criterion was followed to classify a household as ‘self-employed in agriculture’. A household was classified as ‘self-employed in non-agriculture’ if its income from that source was greater than that from rural labour as well as that from all other gainful sources put together. If a household was not one of these three types but its income from total rural labour was greater than that from all self-employment and from other gainful sources, it was classified as ‘other labour’. The remaining households were classified as ‘other households’.
- **Urban:** A household was classified as ‘self-employed’, ‘regular wage or salary earning’, or ‘casual labour’, according to the major sources of its income from ‘gainful employment’ during the 365 days preceding the date of survey. A household not having any income from gainful employment was classified under ‘others’.

**2.3.5 Land possessed:** The area of land possessed (in hectares) includes land owned, leased in, and land neither owned nor leased in, but excludes land leased out.

**2.3.5.1** The six classes of ‘size of land possessed’ used in this report are households having land (i) less than 0.01 hectare, (ii) between 0.01 hectare and 0.40 hectare, (iii) between 0.41

hectare and 1.00 hectare, (iv) between 1.01 hectares and 2.00 hectares, (v) between 2.01 hectares and 4.00 hectares and (vi) greater than or equal to 4.01 hectare. These size classes of land possessed are similar to those used in earlier rounds and have correspondence with the class intervals adopted in the Agricultural Censuses of India.

**2.3.7 Major States:** This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Together, these States accounted for nearly 94.7% of India's population in 2001.

### 2.3.8 Categories of consumption items (in alphabetical order)

**Beverages, refreshments, etc.:** This stands for 'beverages, refreshments and processed food'. It includes tea, coffee, mineral water, soft drinks, fruit juice (not prepared at home), soda water, other beverages such as cocoa, biscuits, cakes, pastries, pickles, sauce, jam, jelly, and other salted refreshments and sweets not prepared at home. Refreshments prepared at home are not included here. Instead, the ingredients of the refreshments (such as flour, sugar, milk, etc.) are accounted under 'cereals', 'sugar', etc. Food purchased in the form of cooked meals is also included in 'processed food'.

**Cereals:** Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether.

**Cereal substitutes:** Cereals are usually a person's staple food in India. But sometimes, by choice or due to scarcity, a person may consume little or no cereal. The food requirement is partially or wholly met in such cases by consumption of food items which could be treated as substitutes for cereals. Tapioca, for example, is consumed in some parts of the country as a substitute for cereals. Similarly, jackfruit seed, *mahua*, etc. are also consumed as substitute for cereals. Potato or sweet potato consumed as substitutes for cereals are not, however, shown here. These are included in 'vegetables'.

**Clothing and bedding:** This category includes bedding (pillows, quilts, mattresses, mosquito nets, etc.), as well as rugs, blankets, curtains, towels, mats, cloth for upholstery, etc. It excludes footwear and raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are accounted in 'consumer services'. Consumption of an article of clothing is considered to take place when it is brought into first use. However, clothing purchased second-hand is considered as consumed as soon as it is purchased. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

**Conveyance:** This includes expenditure incurred on account of journeys undertaken and/or transportation of goods made by any means of conveyance. The expenditure is the actual fare paid except in case of railway season tickets, for which expenditure is calculated as the cost

of the ticket divided by the number of months for which it is valid. Expenditure on journeys undertaken by household members as part of official tours is not considered as consumer expenditure of the household. But journeys to commute to and from place of work are included here. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

**Durable goods:** Items included here all have a lifetime of one year or more. However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that glassware, earthenware and plastic goods such as buckets are excluded from durable goods and included in 'other household consumables'. Consumption expenditure on durable goods includes both expenditure on purchase (both first-hand and second-hand) and expenditure on repair and construction of household durables. For land and residential building, only expenditure on repair and construction is included. Durable goods include furniture and fixtures, 'entertainment' durables such as radios, TV, VCR/VCP/DVD players, tape recorders and CD players, cameras, musical instruments, jewellery and ornaments, crockery and utensils, cooking and other household appliances such as fans, air conditioners, air coolers, sewing machines used for household work, washing machines, stoves, pressure cookers, fridges, water purifiers, electric irons, heaters, toasters and ovens, household transport equipment including two-wheelers, four-wheelers and their parts, therapeutic appliances, clocks, watches, computers for household use, mobile phone handsets, and bathroom and sanitary equipment.

**Edible oil:** Edible oils used for toilet purpose by the household are not included here.

**Education:** This includes expenditure on goods purchased for the purpose of education, viz., books and journals (first-hand or second-hand), newspapers, stationery, educational CD, etc, and also magazines, novels and other fiction. It also includes fees paid to educational institutions (e.g., schools, colleges, universities, etc.) on account of tuition and other fees like game fees, library fees, etc., and payment to private tutors. Fees for shorthand and typing courses, fees for music, dancing and swimming lessons, and fees for training in nursing, physiotherapy, etc., are included. Expenditure on Internet other than telephone charges is also included. Occasional payments to the school fund made on account of charities, and 'donations' generally, are not included here, unless they are charged by the educational institution as compulsory payments.

**Entertainment:** This includes expenditure on cinemas, theatres, *melas*, fairs and picnics, expenditure incurred on processing, developing, etc., of photographic film, charges paid for hiring of video cassette/VCD/DVD players, and charges for viewing a video show. Expenses incurred on subscription to dish antenna, cable TV facilities, etc. are also included. Club fees are included here.

**Footwear:** This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

**Gram:** This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, not included here, but in ‘other pulse products’.

**Medical expenses:** This includes expenditure on medicine of different types and on medical goods; also, payments made to doctor, nurse, etc., as professional fees and those made to hospital, nursing home, etc. for medical treatment, and expenditure incurred for clinical tests, including X-rays, ECG, pathological tests, etc. Expenditure on all family planning devices is included.

**Milk and milk products:** Milk products include ghee, butter, curd, etc. Milk used in home preparation of sweetmeats, etc., is also accounted here. This category also includes those baby foods of which the principal constituent is milk. Further, milk (liquid) includes ice-cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included in this category.

**Miscellaneous goods:** These include spectacles, torches, locks, umbrellas, raincoats, lighters, toilet articles, other non-food household consumables including washing and cleaning requisites, non-durable electrical goods, flowers and plastic goods.

**Other consumer services:** This includes expenditure on domestic servants, cooks, attendants, sweepers, barbers and beauticians, laundry, ironing, tailors, priests, legal services, telephone charges, postal charges, grinding charges, and repair charges for non-durable goods. Apart from conveyance, it excludes the consumer services coming under ‘entertainment’.

**Pan:** This includes, *pan* (betel leaves), *supari*, lime, *katha*, other ingredients of ‘finished’ *pan*, and *pan* purchased in finished form.

**Rent:** Rent includes house and garage rent, residential land rent and other consumer rent.

## 2.4 A note on data comparability

2.4.1 In the earlier reports of NSS on differences in level of consumption across socio-economic groups, consumption data collected with a uniform reference period of 30 days. In view of what has been said in Chapter One, paragraph 1.6.3, this would mean that estimates of average MPCE from this report are based on a method of MPCE measurement giving slightly higher values of MPCE than the earlier method. The exact magnitudes of the differences in average and distribution of MPCE obtained by different approaches to MPCE measurement involving different reference periods are available in *NSS Report No.538: Level and Pattern of Consumer Expenditure*.

## Chapter Three

### Summary of Findings

3.0.1 This chapter discusses the main findings of the survey relating to differences in consumption among socio-economic groups, under the following heads:

1. Distribution of population by social group
2. Average MPCE (monthly per capita consumer expenditure) across social groups
3. Distribution of households by household type
4. Average MPCE across household types
5. Average MPCE across social groups within each household type
6. Average MPCE across household land possessed size classes (rural)
7. Distribution of MPCE: variation across socio-economic groups
8. Pattern of consumption: variation across socio-economic groups
9. Trends in MPCE differences among social groups
10. Access to internet at home: variation over social groups and household types
11. Average household size at all-India level (R & U) for each socio-economic category (type×group×land possessed size class)

#### 3.1 Distribution of population by social group

3.1.1 Estimated numbers of rural and urban households and persons of different social groups are given for each State/UT in Tables 4-R and 5-U of Appendix A. Chart 1 indicates, for each social group, the States where the percentage share of the social group in total rural/urban population is either less than 5% or more than 50%.

3.1.2 It may be observed that in both rural and urban areas of some North-Eastern States (Arunachal Pradesh, Meghalaya, Mizoram and Nagaland) and also in Lakshadweep, the share of Scheduled Tribes (ST) in total population was more than 50%. For Bihar, Haryana, Kerala, Punjab, Tamil Nadu and Uttar Pradesh, the population share of ST was less than 5% in rural areas.

3.1.3 In no States was the proportion of Scheduled Castes (SC) in either rural or urban population more than 50%.

3.1.4 The Other Backward Classes (OBC) constituted the majority of population in the States of Tamil Nadu, Bihar, Kerala and Uttar Pradesh in rural India and in the States of Tamil Nadu, Bihar and Kerala in urban India.

3.1.5 The group 'Others' constituted the greater part of the population in West Bengal for both rural and urban areas and in urban areas of Assam, Gujarat, Haryana, Maharashtra and Punjab.

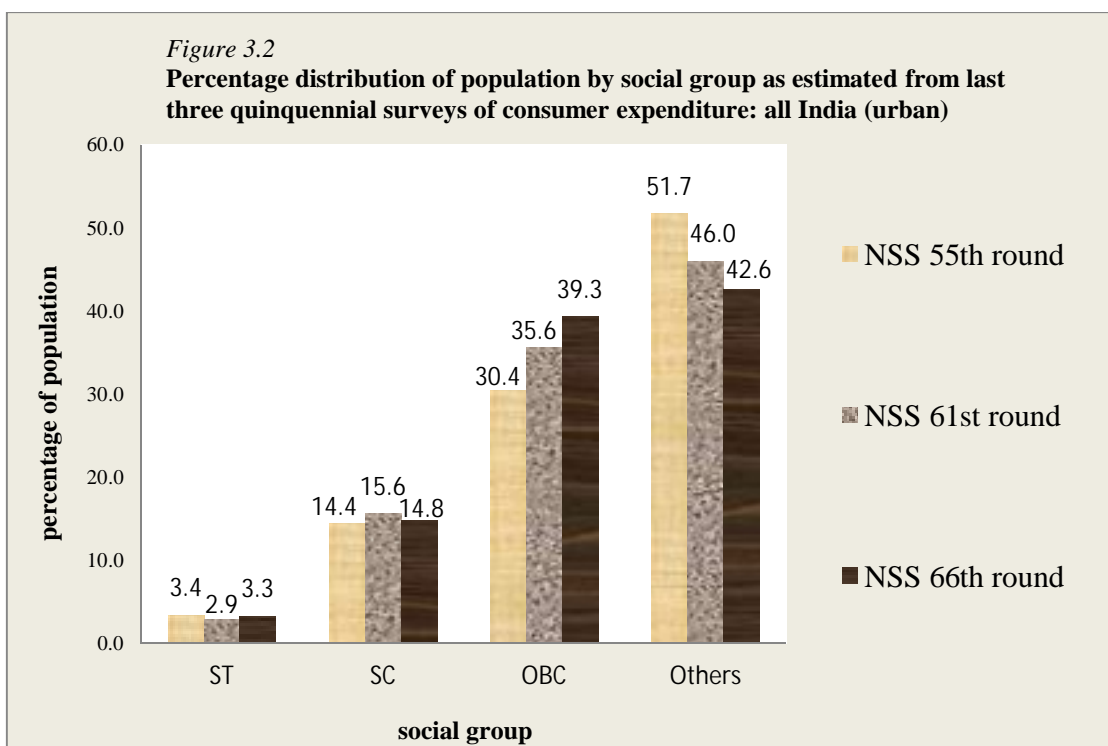

**Chart 1: States where representation of specific social groups in rural/urban population is (a) less than 5% (b) more than 50%**

3.1.6 Figures 3.1 to 3.3 depict the distribution of rural, urban and rural-plus-urban population by social group as estimated from the last three NSS consumer expenditure surveys of the quinquennial series, viz., the surveys of the 55<sup>th</sup> round (1999-2000), the 61<sup>st</sup> round (2004-05) and the 66<sup>th</sup> round (2009-10).

### 3.2 Average MPCE across social groups

3.2.1 Statement 3.1 presents Statewise average rural and urban MPCE across social groups (see also Appendix A, Tables 6-R and 7-U). The large difference that exists between average rural MPCE and average urban MPCE for all social groups taken together is seen to prevail within social groups as well.

3.2.2 At national level it is interesting to note that while in the rural sector the average MPCE of the ST group (Rs. 873) is less than that of the SC group (Rs.929), the inequality is reversed for the urban sector with the MPCE of STs (Rs.1797) exceeding that of the SCs (Rs.1444) as well as the OBCs (Rs.1679). The average MPCE of ‘Others’ at all-India level (Rs.1281 in rural and Rs.2467 in urban) is more than the all-groups average in both sectors.

3.2.3 For each of the four social groups, Figure 3.4 shows, through two maps of India with State boundaries, the States where average rural/urban MPCE of the social group in question is greater than the all-India average rural/urban MPCE of that State.

3.2.4 It is seen in rural areas of some North-Eastern States like Arunachal Pradesh, Meghalaya, Mizoram and Nagaland, where the proportion of ST population is more than 90%, the average MPCE is higher than the all-India rural average MPCE. In urban India, a similar phenomenon is observed for Meghalaya, Sikkim and Lakshadweep – all States with a significant presence of ST population.

3.2.5 Andhra Pradesh, Gujarat, Kerala, Punjab are seen to be the major States where the average MPCE of the rural SC population is more than the all-India rural average MPCE. Notably, there is no such State for urban sector with a sizeable presence of SC population.

**Statement 3.1: State/UT-wise average MPCE (Rs.) by social group for each sector**

\* including n.r.

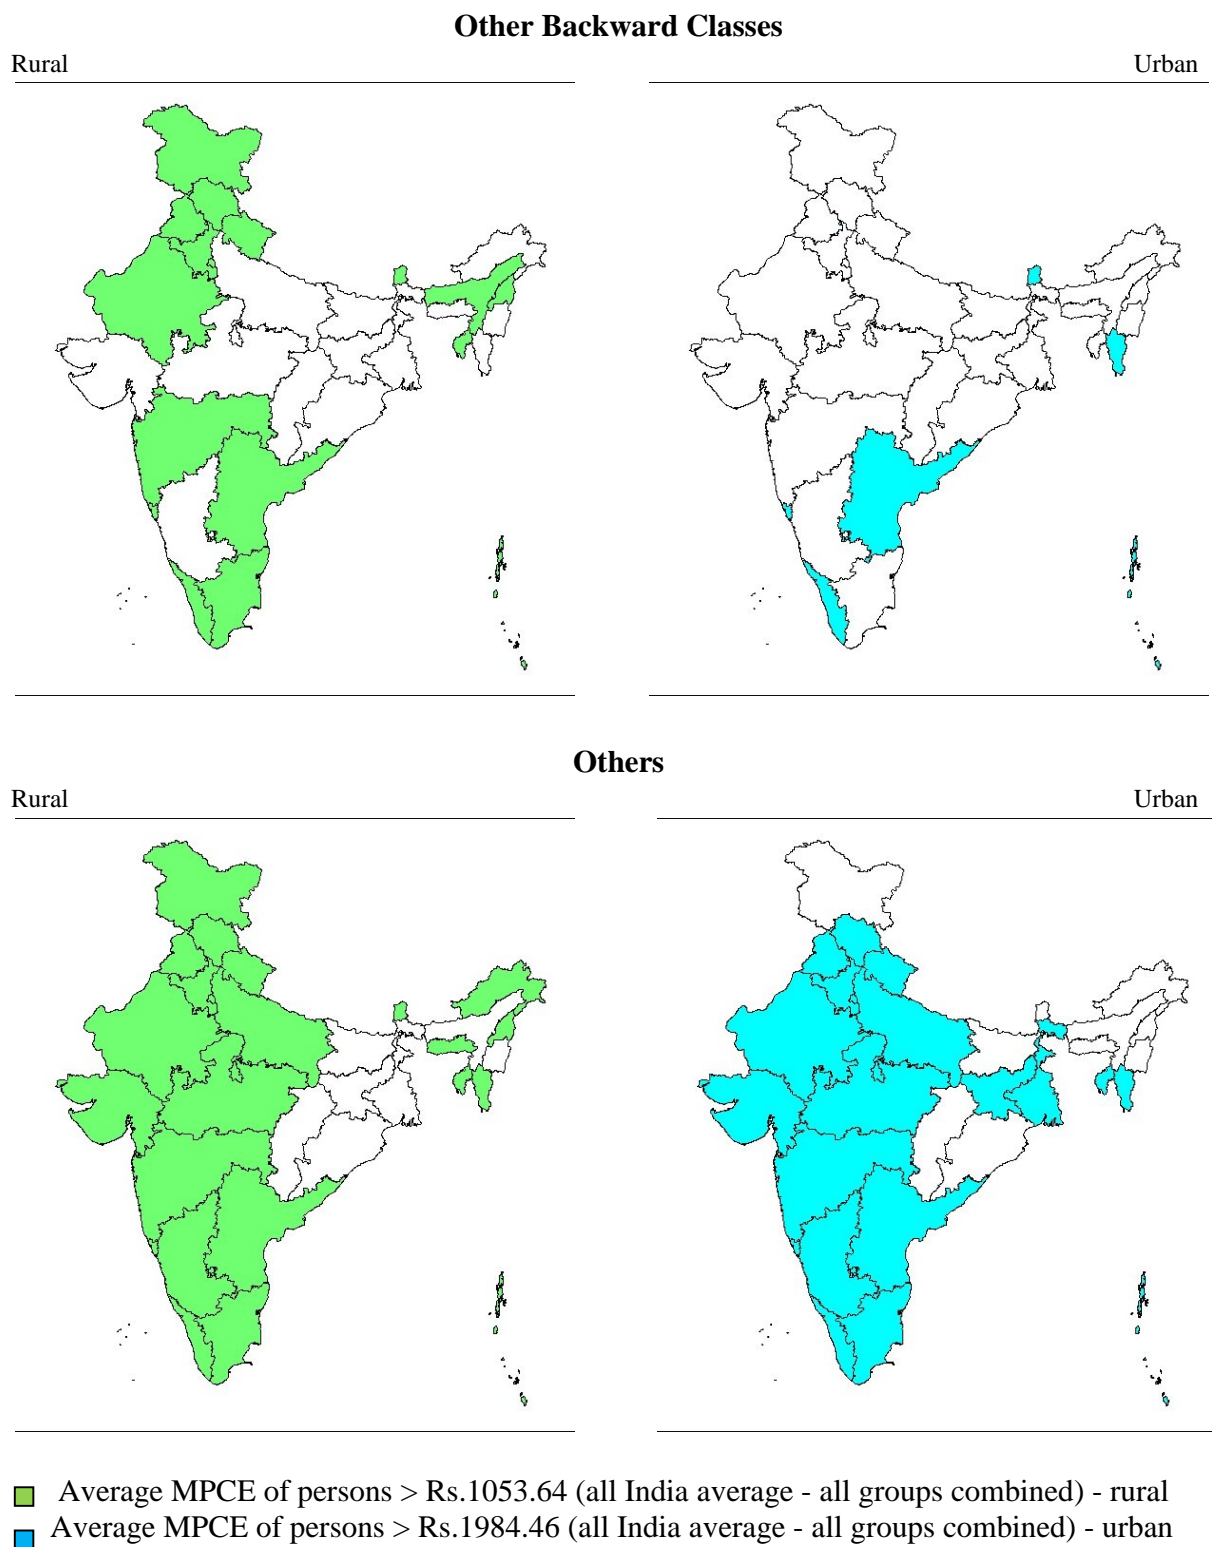

Ref: Appendix A, Tables 6-R & 7-U

3.2.6 For the OBC group, average MPCE of the rural population of Andhra Pradesh, Assam, Maharashtra, Punjab, Rajasthan and Tamil Nadu is above the all-India average rural MPCE. In urban India a similar phenomenon is seen in only two major States – Andhra Pradesh and Kerala.

**Figure 3.4: MPCE position of different social groups in India, 2009-10**

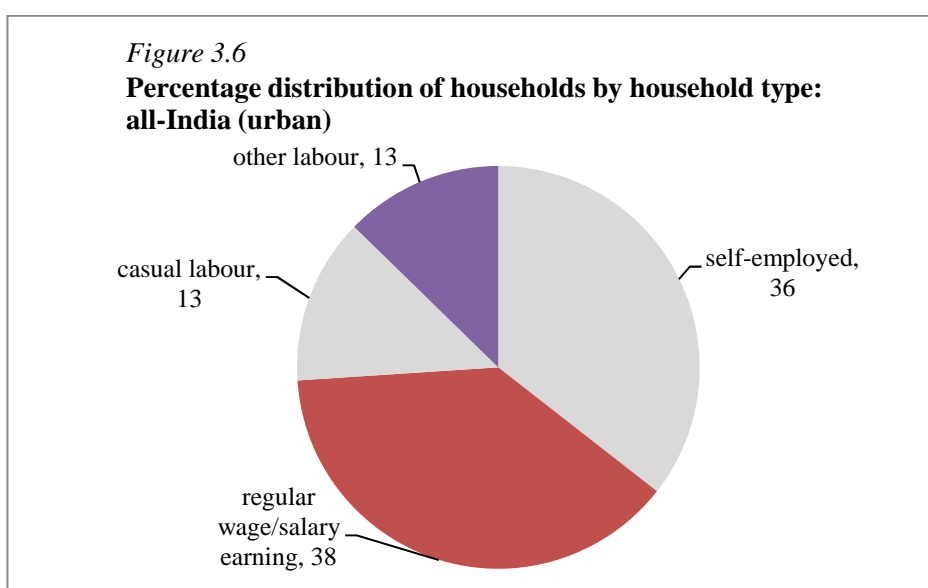

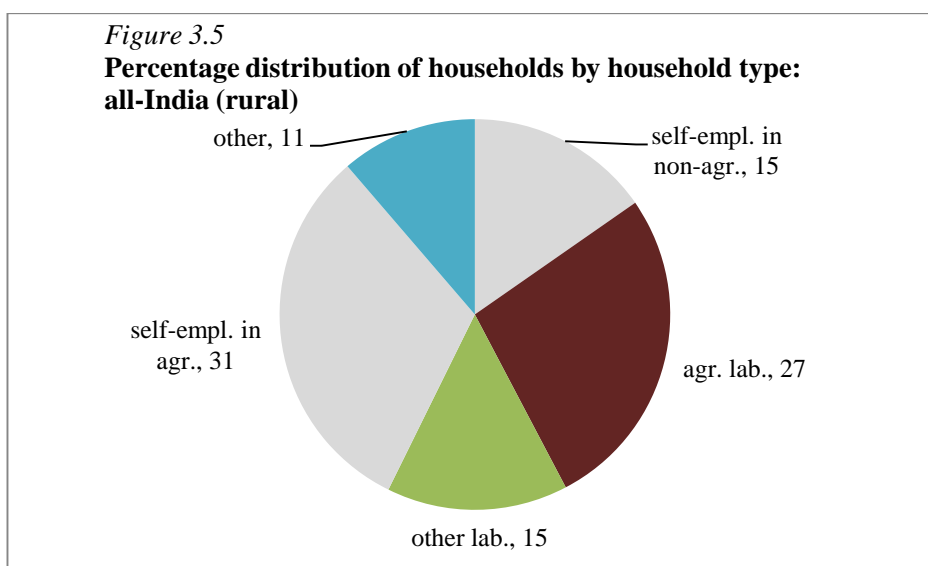

**Figure 3.4: MPCE position of different social groups in India, 2009-10**

3.2.7 Average MPCE of the 'Others' group in most States was above the all-India average MPCE in the rural sector, barring a few States in the Eastern and North-Eastern regions such as Assam, Bihar, Jharkhand and West Bengal. In the urban sector, Assam and Bihar are the only major States with average MPCE of the 'Others' group lower than the all-India urban average.

### 3.3 Distribution of households by household type

3.3.1 Estimated numbers of rural and urban households and persons of different household types are given for each State/UT in Tables 4-R and 5-U of Appendix A. Figures 3.5 & 3.6 depict the all-India distribution of households by household type at all-India level for rural and urban sectors respectively.

### 3.4 Average MPCE across household types

3.4.1 Statement 3.2 presents average MPCE (rural and urban) by household type for each State/UT (see also Appendix A, Tables 6-R and 7-U). It is observed that for all-India among the rural household types, the highest average MPCE was that of 'others' (Rs.1557), followed by the 'self-employed in agriculture' (Rs.1111) and the 'self-employed in non-agriculture' (Rs.1102), 'other labour' (Rs.968) and 'agricultural labour (Rs.828).

**Statement 3.2: State/UT-wise average MPCE (Rs.) by household type for each sector**

\* including n.r.

Ref: Appendix A, Tables 6-R & 7-U

3.4.2 The relative positions of the five rural household types in terms of average MPCE followed the all-India pattern in most major States. Inter-household-type variation in average MPCE appeared to be least in Bihar and Jharkhand. In the two major States with the highest average rural MPCE levels – Kerala and Punjab – the ‘self-employed in agriculture’ had a higher average MPCE than the ‘others’ category, while in a third high-rural-MPCE State, Haryana, the MPCEs of the two categories were very close. The dominance of the ‘others’ category over the rest was most marked in rural Andhra Pradesh and, to some extent, in Tamil Nadu.

3.4.3 In urban India, average MPCE was highest (Rs.3012) for the ‘others’ category, followed by the ‘regular wage or salary earning’ (Rs.2326). The ‘self-employed’ had a lower average MPCE (Rs.1806) than the all-India urban average (Rs.1984). ‘Casual labour’ households had an average MPCE of Rs.1090.

3.4.4 The relative positions of the four urban household types in terms of average MPCE closely followed the all-India pattern in most major States. The average MPCE of the regular wage-salaried household type was as high as that of the ‘others’ category in Jharkhand, and nearly as high in Odisha, Kerala and Chhattisgarh.

### 3.5 Average MPCE across social groups within each household type

3.5.1 Average MPCE of households belonging to each household type and social group combination is given for each State and UT in Appendix A, Tables 6-R and 7-U. The all-India estimates are shown in Statement 3.3.

**Statement 3.3: Average MPCE(Rs.) by household type and social group for each sector: all-India**

sector	household type	social group				
		ST	SC	OBC	Others	all groups*
(1)	(2)	(3)	(4)	(5)	(6)	(7)
rural	self-empl. in non-agr.	1069	972	1085	1260	1111
	agr. lab.	721	820	845	905	828

	all*	1797	1444	1679	2467	1984

\*including n.r.

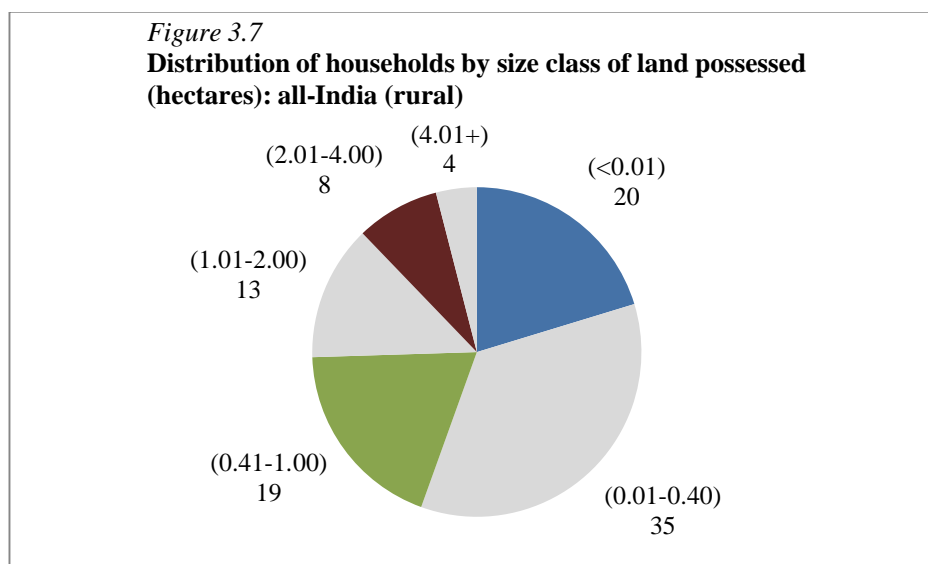

Ref: Appendix A, Tables 6-R & 7-U

3.5.2 In both rural and urban sectors, the relative positions in respect of average MPCE of the different household types observed in the entire population is closely paralleled within the individual social groups. Inter-household-type variation in average MPCE is greatest among the social group 'Others' and least among SCs.

3.5.3 Inter-social-group variation among individual household types is, in the rural sector, greatest among the 'others' category and least among 'agricultural labour' and 'other labour' households. In the urban sector, inter-social-group variation is least among 'casual labour' households.

### 3.6 Average MPCE across household land possessed size classes (rural)

3.6.1 Average MPCE of rural households classified into six size classes of land possessed is shown for each State/UT and all-India in Statement 3.4 (see also Appendix A, Table 6-R).

3.6.2 At all-India level, rural MPCE increases rapidly with the increase in size of land possessed class beyond one hectare, though it decreases marginally with the increase in size class of land possessed for classes up to one hectare (no doubt due to the greater proportion of households with other sources of income among those possessing very little or no land than among those possessing some land less than 1 hectare). Households possessing more than one hectare of land accounted for around 25% of the rural population at all-India level. Average MPCE is highest (Rs.1438) in the highest size class of (> 4 hectares), indicating a strong positive association between MPCE and land possessed (excluding the < 1 hectare range).

**Statement 3.4: Statewise average rural MPCE (Rs.) by size class of land possessed**

State	size class of land possessed (hectares)						
	<0.01	0.01-0.40	0.41-1.00	1.01-2.00	2.01-4.00	4.01+	all sizes*

Ref: Appendix A, Table 6-R

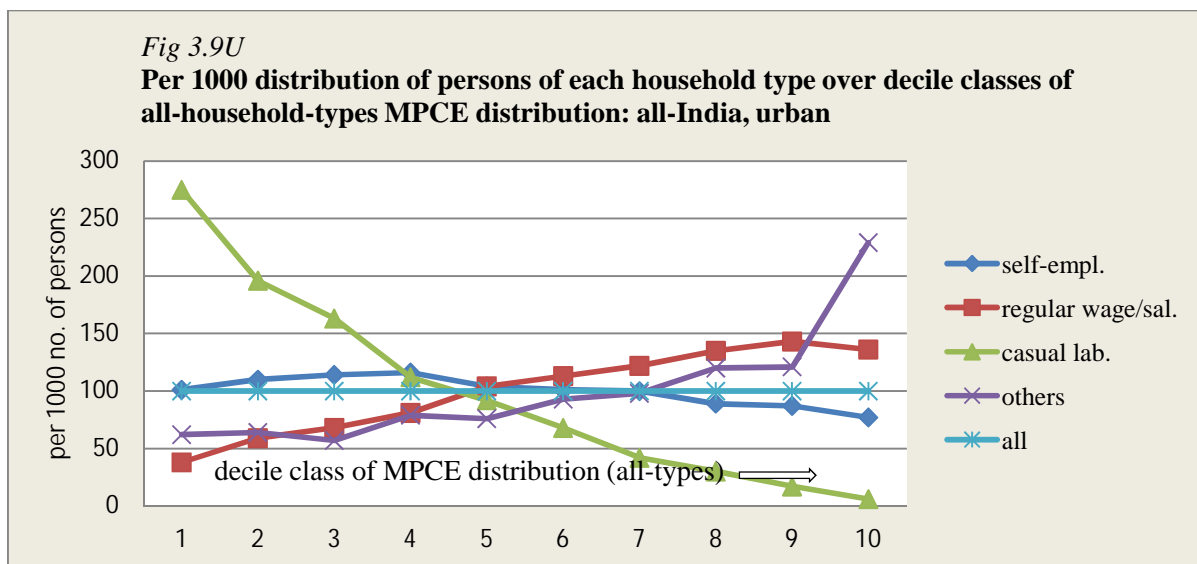

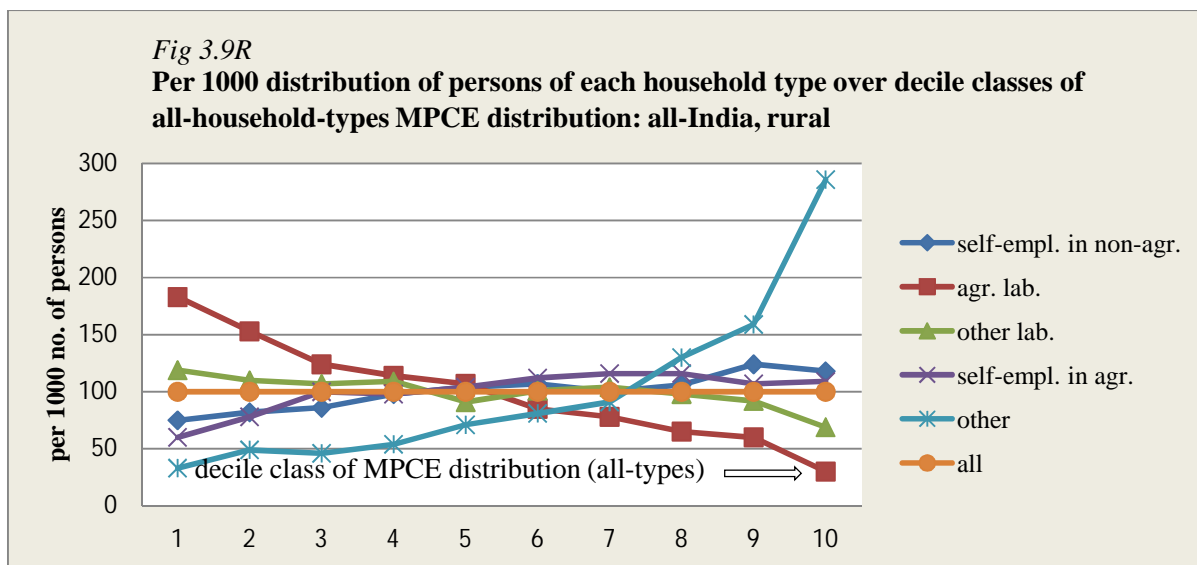

3.6.3 The association between size of land possessed and average MPCE in the rural sector is seen to prevail in most major States. It is strong in Punjab and Haryana, and also in Kerala, where the rise in MPCE with land possessed size class is very steep in the 0.01 to 4 hectares range. The association is also marked in West Bengal, Gujarat and Tamil Nadu. The association is noticeably weak in Jharkhand and Chhattisgarh, while an erratic pattern is seen in Karnataka and Rajasthan.

### 3.7 Distribution of MPCE: variation across socio-economic groups

3.7.1 Table 2 (R & U) of Appendix A gives, for each State/UT and all-India, the distribution of persons of different social groups over ten classes of MPCE. The MPCE classes used are the decile classes of the sector-State/UT/All-India level distributions of MPCE for the entire population (all social groups taken together). This means that the 'all' social groups population is equally distributed over these MPCE classes (approximately 100 per 1000 persons in each class). In Figures 3.8R and 3.8U, which depict the all-India distribution of population in each social group over these MPCE classes by means of line diagrams, the MPCE distribution of the 'all' category thus becomes a horizontal line, while the lines for ST and SC are downward-sloping (percentage of population in an MPCE class falls – more steeply in case of ST in rural areas – as one moves from lower to higher classes), the 'others' line is prominently upward-sloping, and the OBC line is downward-sloping for the urban sector but fairly horizontal for the rural.

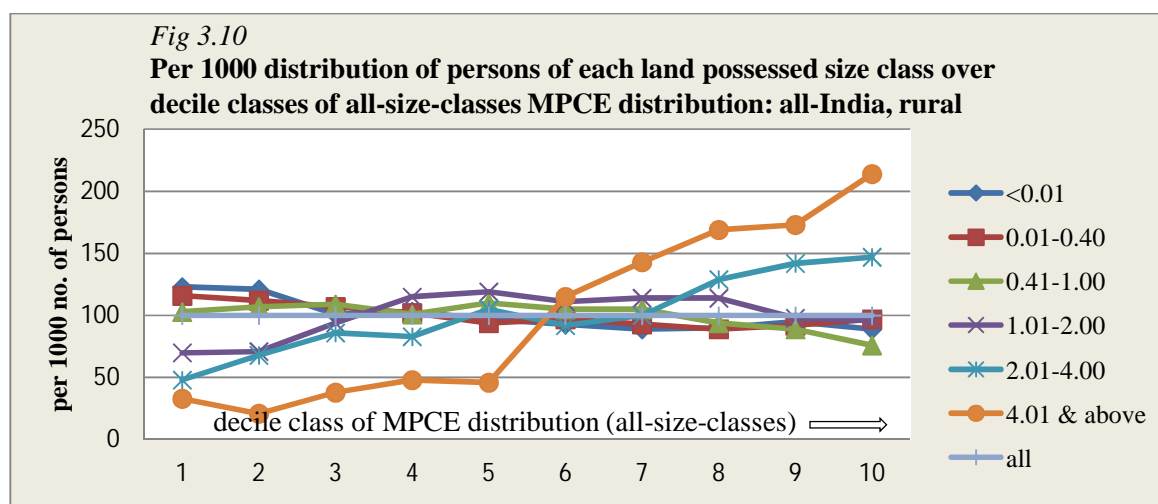

3.7.2 Table 1 (R & U) of Appendix A gives, for each State/UT and all-India, the distribution of persons of different household types over ten classes of MPCE. Here too the MPCE classes used are the decile classes of the sector-State/UT/All-India level distributions of MPCE for the entire population, with the consequence that the MPCE distribution of the ‘all’ category has 100 (or roughly 100) persons per 1000 in each class. Figures 3.9R and 3.9U depict the all-India distribution of population in each household type over these MPCE classes by line diagrams.

3.7.3 In the rural sector only the line for ‘others’ has a marked upward slope. The line for the ‘self-employed in non-agriculture’ has a gentle upward trend, but that of the ‘self-employed in agriculture’ tends to flatten out (as one moves up the MPCE range) not very far above the 100 (per 1000) level, the line for ‘other labour’ dips well below the 100 level in the top three or four classes, and the line for ‘agricultural labour’ has a prominent downward slope throughout.

3.7.4 In the urban sector the line for ‘casual labour’ falls steeply, throughout the MPCE range, down from a level of 275 per 1000 in the bottom MPCE class. The ‘regular wage/salaried’ line has a smooth upward movement and the ‘others’ line a somewhat erratic upward trend. The line for the ‘self-employed’, who have a lower-than-average MPCE in urban India, has a downward slope from the fourth MPCE class onwards.

3.7.5 Table 3-R of Appendix A gives, for each State/UT and all-India, the distribution of rural population in each of the six land possessed size classes over ten classes of MPCE. The MPCE classes used are again the decile classes of the State/UT/All-India level distributions of MPCE for the entire rural population, so that the MPCE distribution of the ‘all’ category has 100 or roughly 100 persons per 1000 in each class. Figure 3.10 depicts the distributions of all-India rural population in each land possessed size class over these MPCE classes by means of line diagrams.

3.7.6 It is clear from Figure 3.10 that for the top two land possessed size classes, the proportion of persons in an MPCE class increases as one moves to higher MPCE classes, and the rise is steeper for the 4.01+ class. The population in the size class 0.41-1.00 appears to have a lower proportion of persons in the highest MPCE class than the population of any other size class of land possessed.

### 3.8 Pattern of consumption: variation across socio-economic groups

3.8.1 Table 12 (R & U) of Appendix A gives, at all-India level, for each socio-economic category of households (that is, each combination of social group, household type and size class of land possessed in rural areas, and each combination of household type and social group in urban areas) the break-up of monthly per capita food expenditure by 14 groups of food items. Table 13 gives, likewise, the break-up of monthly per capita non-food expenditure by 12 groups of non-food items.

3.8.2 Statements 3.7, 3.8 and 3.9 show, respectively, the variation over social groups, household types, and land possessed size classes, in the percentage composition of MPCE by 4 broad groups of food items and 7 broad groups of non-food items.

3.8.3 Generally, the variation in percentage composition of MPCE is in tune with the average MPCE of the different socio-economic categories under examination. Thus the categories with relatively high average MPCE (such as the social group Others) are seen to have a greater share of their consumer expenditure allocated to non-food. The share of non-food varies, in fact, over social groups from 40% for the ST group to 45% for Others in the rural sector and from 51% for SC to 58% for Others in the urban sector.

**Statement 3.7: Percentage break-up of average MPCE over item groups for each social group of households: all-India, rural and urban**

3.8.4 Among rural household types, the share of non-food in MPCE varies from 39% for 'agricultural labour' to 49% for 'other' households. Among urban household types, the share of non-food varies from 45% for 'casual labour' to 62% for 'others'.

3.8.5 Variation across household types is very noticeable in the share of MPCE going to cereal consumption. Among rural households cereals accounted for 16% of consumer expenditure for 'agricultural labour' households, 10% for 'others', and 14% for the other three household types. Among urban households 'casual labour' households spent 12% of their consumer expenditure on cereals, the self-employed spent 9%, the 'regular wage/salary earning' spent 7%, and 'others', only 5%.

3.8.6 Among the land possessed size classes in rural areas, the lowest four size classes (spanning the 0-2 hectares range) show very similar consumption patterns. Beyond this range, consumption patterns show the characteristics of the relatively affluent, with the share of food falling to 55% of MPCE in the 2-4 hectares range and to 52% for the 4.01+ range. The share of cereals, too, falls from 14% to 13% and then to 11% as one moves beyond the 0-2 hectares range. Interestingly, while the share of milk and milk products does not rise above 8% of MPCE for any of the social groups or household types at the all-India level except for the 'self-employed in agriculture' (for whom it is 10%), it rises with size of land possessed in rural India from 6% in the lowest size class to as much as 13% in the 4.01+ range, while the share of vegetables falls from 9% to 6%.

**Statement 3.9: Percentage break-up of average MPCE over item groups for each size class of land possessed in rural areas**

### 3.9 Trends in MPCE differences among social groups

3.9.1 Disparities among consumption levels of different social groups may widen or shrink with the passage of time. Statement 3.10 shows differences in average MPCE of each social group from the average MPCE of the entire rural/urban population, expressed as a percentage, as estimated from the last three quinquennial NSS surveys of consumer expenditure: the 55<sup>th</sup> round (1999-2000), the 61<sup>st</sup> round (2004-05), and the 66<sup>th</sup> round (2009-10).

3.9.2 Generally, the estimates appear to indicate that inter-social-group disparities in level of consumption widened between 1999-2000 and 2004-05, with the differences of group-specific average MPCE from the all-groups MPCE increasing (with the exception of urban ST and rural OBC). Thereafter, the disparities narrowed, with the magnitude of the percentage difference from all-groups MPCE in most cases coming down to a lower value in 2009-10 than what it was in 1999-2000. In general, disparities were greater in urban than in rural India.

3.9.3 A consistent improvement is seen in the relative position of the Scheduled Tribes in the urban sector, the average MPCE improving from 29% less than the all-groups average in 1999-2000 to only 9.5% less in 2009-10. The 'Others' group in urban India also experienced a consistent improvement relative to the whole urban population, from 17.6% higher than the all-groups average in 1999-2000 to 24.3% higher in 2009-10. The relative position of the urban Scheduled Caste population experienced a decline over the period (actually a decline in the earlier part of the period followed by a very slight improvement), with average MPCE being 27% less than the overall average in 2009-10 compared to about 17% less in 1999-2000.

**Statement 3.10: Inter-social-group differences in average MPCE: change over time, all-India**

social group	percentage difference of average MPCE from average MPCE of all-social-groups population					
	rural			urban		
	1999-2000	2004-05	2009-10	1999-2000	2004-05	2009-10
(1)	(2)	(3)	(4)	(5)	(6)	(7)
ST	-20.4	-23.7	-17.2	-28.8	-18.5	-9.5
SC	-13.9	-15.0	-11.9	-19.2	-27.9	-27.2
OBC	-2.5	-0.4	-1.6	-14.0	-17.2	-15.4
Others	18.8	22.6	21.6	17.6	24.1	24.3
all	0	0	0	0	0	0

Source: NSS Report No. 514 (for NSS 55<sup>th</sup> & 61<sup>st</sup> round estimates)

3.9.4 While the rural OBCs' average MPCE was 0 to 3 percent less than the overall rural average in all three years, that of urban OBCs was 14 to 17 percent less than the overall urban average. The average MPCE of SCs, too, was 12 to 15 percent less than the all-groups average in rural India but as much as 27-28 percent less than the all-groups average in urban India in 2004-05 and 2009-10.

### 3.10 Access to internet at home: variation over social groups and household types

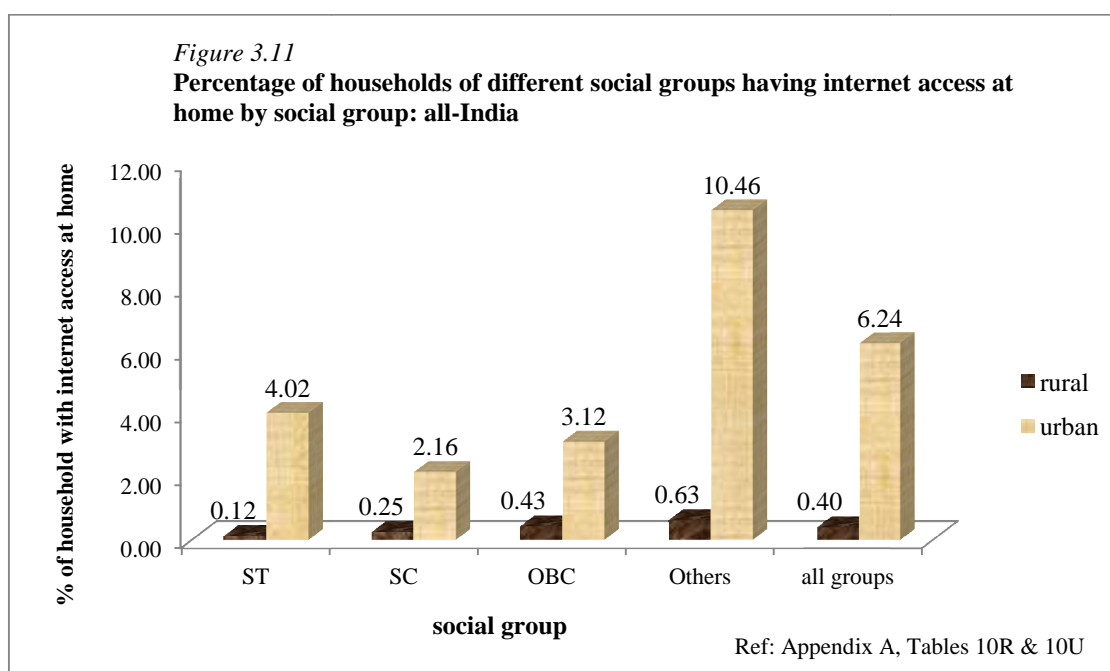

3.10.1 Table 10 (R & U) of Appendix A gives proportion and average MPCE of persons with internet access at home by social group and MPCE class for rural and urban India. Figure 3.11 shows the rural and urban percentages for all MPCE classes taken together.

3.10.2 In rural India, the percentage of households having internet access at home is lowest for social group ST (0.12%) and highest for Others (0.63%), with SC (0.25%) and OBC (0.43%) in between. The all-groups percentage is 0.40%.

3.10.3 In urban India, where the proportion of households having internet access at home is 6.24% for all groups taken together, the percentage is again highest for Others (about 10.5%). The proportion of such households is more for ST (4.02%) than for SC (2.16%) and OBC (3.12%).

3.10.4 Table 11 (R & U) of Appendix A gives proportion and average MPCE of persons with internet access at home by household type and MPCE class for rural and urban India. Statement 3.11 shows the rural and urban percentages for all MPCE classes taken together.

3.10.5 In urban India, more than 9% of 'regular wage/salary earning' households had internet access at home compared to about 6.7% for 'other labour' and 5.0% for the 'self-employed'.

3.10.6 In rural India, the percentage of households with internet access at home was 1.4% for the household type ‘Others’ and 0.4% or less for all other household types.

**Statement 3.11: Percentage of rural and urban households of different household types having access to internet at home: all India**

sector	household type	% of hhs with internet access at home
(1)	(2)	(3)
Rural	self-empl. in non-agr.	0.44
	agr. lab.	0.19
	other lab.	0.11
	self-empl. in agr.	0.36
	other	1.37
	<b>all types*</b>	<b>0.40</b>
Urban	self-employed	5.03
	regular wage/salary earning	9.29
	casual labour	0.24
	other	6.65
	<b>all types*</b>	<b>6.24</b>

\* including n.r.

Ref: Appendix A, Tables 11R & 11U

3.10.7 Tables 10 and 11 of Appendix A show that for individual social groups and household types, the estimated percentage of households having internet access varies erratically rather than regularly with MPCE class, indicating that larger sample sizes are needed for estimation of MPCE-classwise proportions with reasonable accuracy.

### 3.11 Average household size

3.11 Statements 3.12 and 3.13 below show the average household size at all-India level for each socio-economic category (type× group× land possessed size class for rural India and type× group for urban India respectively).

**Statement 3.12: Average household size at all-India level for each socio-economic category (household type × social group × land possessed size class)**

<b>rural</b>						
household type	size of land possessed (hectares)	average household size				
		social group

# **Appendix B**

## **Sample Design and Estimation Procedure**

# Sample Design and Estimation Procedure

## 1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its sixty-sixth round from 1<sup>st</sup> July 2009 to 30<sup>th</sup> June 2010.

## 2. Outline of survey programme

2.1 **Subject coverage:** The 66<sup>th</sup> round (July 2009-June 2010) of NSS was for the survey on 'Household Consumer Expenditure' and 'Employment and Unemployment' and it was the eighth quinquennial survey in the series, the last one having been conducted in the 61<sup>st</sup> round (2004-2005) of NSS.

2.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units (FSUs) for the 'Central sample'. For these two districts, sample FSUs drawn as 'State sample' were treated as Central sample. However, no first-stage unit was surveyed in Leh, Kargil and Punch districts of J&K due to various reasons.

2.3 **Period of survey and work programme:** The period of survey was of one year duration starting on 1<sup>st</sup> July 2009 and ending on 30<sup>th</sup> June 2010. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

- sub-round 1 : July - September 2009
- sub-round 2 : October - December 2009
- sub-round 3 : January - March 2010
- sub-round 4 : April - June 2010

In each of these four sub-rounds equal numbers of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

2.4 **Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

- Schedule 0.0 : list of households
- Schedule 1.0 : consumer expenditure
- Schedule 10 : employment and unemployment

Two variants of Schedule 1.0, called Schedule Type 1 and Schedule Type 2, were canvassed in this round. Schedule Type 1 was similar to Schedule 1.0 of NSS 61<sup>st</sup> round. Compared to

Schedule Type 1, Schedule Type 2 had a different reference period (7 days) for some items of food, pan, tobacco and intoxicants.

**2.5 Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. The scale of the survey conducted by a State/UT relative to the Central sample survey in the State/UT was as follows:

Nagaland (Urban)	: triple
J&K, Manipur, Delhi & Uttar Pradesh	: double
Maharashtra (Urban) & Kerala	: one and half
Gujarat	: less than equal
Remaining States/UTs	: equal

### 3. Sample design

**3.1 Outline of sample design:** A stratified multi-stage design was adopted for the 66<sup>th</sup> round survey. The first stage units (FSUs) were the 2001 Census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/sub-blocks (sbs) from each rural/urban FSU.

**3.2 Sampling frame for first stage units:** *For the rural sector*, the list of 2001 Census villages (henceforth the term 'village' will mean Panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available UFS blocks was considered as the sampling frame. For non-UFS towns, the frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame).

**3.3 Stratification:** Within each district of a State/UT, generally speaking, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, within the urban areas of a district, wherever there were one or more towns with population 10 lakhs or more as per Census 2001 in a district, each of these formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

**3.4 Sub-stratification:** Each rural stratum was divided into 2 sub-strata as follows:

sub-stratum 1: all villages with proportion of child workers (p) >2P (where P is the average proportion of child workers for the State/UT as per Census 2001)

sub-stratum 2: remaining villages

**3.5 Total sample size (FSUs):** At all-India level, 12784 FSUs were allocated to the Central sample and 15132 FSUs to the State sample. Further, the data of 24 State sample FSUs of Leh and Kargil districts of J&K surveyed by DES, J&K, were included in the Central sample.

**3.6 Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a minimum sample allocation to each State/UT, and subject to resource availability in terms of field investigators.

**3.7 Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with double weightage to urban sector, subject to the restriction that the urban sample size for bigger States like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each State/UT separately for rural and urban areas. Further, the State-level allocations for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum/sub-stratum got a minimum allocation of 4 FSUs.

**3.8 Allocation to strata/sub-strata:** Within each sector of a State/UT, the sample size was allocated to different strata/sub-strata in proportion to population as per Census 2001. Allocations at stratum/sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal-sized samples were allocated to the four sub-rounds.

**3.9 Selection of FSUs:** For the rural sector, from each stratum/sub-stratum, the required numbers of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For the urban sector, FSUs were selected from each stratum using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

### 3.10 Formation and selection of hamlet-groups/sub-blocks

**3.10.1 Criterion for hamlet-group/sub-block formation:** Selected FSUs with approximate population 1200 or more were divided into a suitable number of geographically compact 'hamlet-groups' (having more or less equal population) in the rural sector and 'sub-blocks' in the urban sector as shown below.

approximate present population of the sample FSU	no. of hg's/sb's formed
less than 1200 (no hg/sb formation)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for four districts –Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approximate present population of the sample village	no. of hg's formed
less than 600 (no hg formation)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	

**3.10.2 Selection of hamlet-groups/sub-blocks:** Hamlet-groups (hg)/sub-blocks (sb) were selected from FSUs where hamlet-groups/sub-blocks were formed, two in the following manner. The hg/sb with maximum percentage share of population was always selected and termed hg/sb 1; one more hg/sb was selected from the remaining hg's/sb's by simple random sampling (SRS) and termed hg/sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

#### 4. Listing of households

4.1 Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those found through local enquires to be temporarily locked). The hamlet-group/sub-block with sample hg/sb number 1 was considered for listing first, followed by sample hg/sb number 2.

#### 5. Formation of second stage strata and allocation of sample households

5.1 Two cut-off points 'A' and 'B' (in Rs.) were determined from NSS 61<sup>st</sup> round data for each NSS region for urban areas in such a way that the top 10% of the population had MPCE more than B and the bottom 30% of the population had MPCE less than A.

5.2: For Schedule 1.0, households listed in the selected FSU/hamlet-group/sub-block were stratified into three second stage strata (SSS). Composition of the SSS and number of households to be surveyed from different SSSs for each of the two schedule types was as follows:

SSS	composition of SSS	number of households surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
<b>Rural</b>			
SSS 1	relatively affluent households	2	1
SSS 2	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3	other households	2	1
<b>Urban</b>			
SSS 1	households having MPCE of top 10% of urban population (MPCE > B)	2	1
SSS 2	households having MPCE of middle 60% of urban population ( $A \leq MPCE \leq B$ )	4	2
SSS 3	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1

5.3 Thus, for each schedule type, a total of 8 households were selected for survey from each FSU – 4 from each selected hamlet-group/sub-block in FSUs where hg/sb's were formed.

## 6. Selection of households

6.1 From each SSS the sample households for each of the schedules were selected by SRSWOR. If a household was selected for Schedule 1.0 (Type 1), it was not allowed to be selected for Schedule 1.0 (Type 2) or Schedule 10. Similarly, if a household was not selected for Schedule 1.0 (Type 1) but selected for Schedule 1.0 (Type 2) it was not allowed to be selected for Schedule 10. If a household got selected for more than one schedule, only one schedule was canvassed in that household in the priority order of Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 and in that case the household was replaced by selecting another household for the other schedule.

6.2 However, at least one household was to be surveyed from each SSS for each of the three schedules of enquiry. To adhere to this restriction, the condition of not canvassing more than one schedule in the same household was waived in the extreme cases where there was an insufficient number of households in the frame of a particular second stage stratum.

## 7. Estimation procedure

### 7.1 Notations:

s = subscript for stratum

t = subscript for sub-stratum (only for rural sector)

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU [village (panchayat ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for second stage stratum in an FSU/ hg/sb [j = 1, 2 or 3]

k = subscript for sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample FSU

$D^* = 0$  if  $D = 1$

=  $(D - 1)$  for FSUs with  $D > 1$

N = total number of FSUs in any urban stratum

Z = total size of a rural stratum/sub-stratum (= sum of sizes for all the FSUs of a stratum/sub-stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

$\hat{X}$ ,  $\hat{Y}$  = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$  = observed value of the characteristic y for the  $k^{\text{th}}$  household in the  $j^{\text{th}}$  second stage stratum of the  $d^{\text{th}}$  hg/sb (d = 1, 2) of the  $i^{\text{th}}$  FSU belonging to the  $m^{\text{th}}$  sub-sample for the  $t^{\text{th}}$  sub-stratum of  $s^{\text{th}}$  stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

## 7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum (for urban)/ sub-stratum (for rural)

### 7.2.1 Rural

(i) For  $j^{\text{th}}$  second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum ( $\hat{Y}_s$ ) will be obtained by adding sub-stratum level estimates ( $\hat{Y}_{st}$ ).

### 7.2.2 Urban

(i) For  $j^{\text{th}}$  second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Note:  $N = 1$  in the above formula in the case of Leh and Kargil districts of J&K.

## 7.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples was obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

#### 7.4 Overall estimate of aggregates at State/UT/all-India level

The overall estimate  $\hat{Y}$  at the State/UT/all-India level was obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/UT/all-India.

#### 7.5 Estimates of ratios

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/UT/all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) was obtained as  $\hat{R} = \frac{\hat{Y}}{\hat{X}}$ .

#### 7.6 Estimates of error

The estimated variances of the above estimates were as follows:

##### 7.6.1 For aggregate $\hat{Y}$

$Var(\hat{Y}) = \sum_s Var(\hat{Y}_s)$  where  $Var(\hat{Y}_s)$  is given by

$Var(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$  for rural stratum, where  $\hat{Y}_{st1}$  and  $\hat{Y}_{st2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't',

and

$Var(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$  for urban stratum,  $\hat{Y}_{s1}$  and  $\hat{Y}_{s2}$  being the stratum estimates for sub-sample 1 and 2 respectively.

##### 7.6.2 For ratio $\hat{R}$ :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[ (\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for rural and

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[ (\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for urban.

## 7.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{\text{Var}(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

## 8. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below for Schedule 1.0:

sector	formula for multipliers	
	hg /sb 1	hg /sb 2
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$ ,	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$ ,

(j = 1, 2, 3)

- Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, indicator variable was used.
- (ii) Multipliers were computed on the basis of information available in the listing schedule irrespective of any misclassification observed between listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic,  $D_{stmi}^* = 0$  in the relevant multipliers and there was only one multiplier for the village (see paragraph 7.2.1.1).

# **Appendix C**

## **Population Projections**

Table C1: Projected population (000) as on 1<sup>st</sup> March 2009, 1<sup>st</sup> March 2010 and 1<sup>st</sup> January 2010 for each State/U.T

State/U.T/all-India	rural			urban			rural+ urban

Note: 1. Projected population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 for rural+urban combined and Table 9 provides projected population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 for urban.

3. Projected population as on 1<sup>st</sup> January 2010 has been derived using the formula,  $A = A_1 \times \left[ \left( \frac{A_2}{A_1} \right)^{\frac{1}{12}} \right]^{10}$ , where  $A_1$  is the population for 1<sup>st</sup> March 2009,  $A_2$  is the population for 1<sup>st</sup> March 2010 and  $A$  is the population for 1<sup>st</sup> January 2010.

4. Projected population as on 1<sup>st</sup> January 2010 has been derived for the rural+urban and urban separately and that for rural has been derived by subtracting these two.
