## PREFACE

The Employment and Unemployment Surveys of National Sample Survey (NSS) are the primary sources of data on various indicators of labour force at National and State levels. These are used for planning, policy formulation, decision support and as input for further statistical exercises by various Government organisations, academicians, researchers and scholars. NSS surveys on Employment and Unemployment with large sample size of households have been conducted quinquennially from 27<sup>th</sup> round (October 1972 – September 1973) onwards. The NSS 66<sup>th</sup> round carried out during July 2009- June 2010 was the eighth quinquennial round in the series, covering subjects of (i) Household Consumer Expenditure and (ii) Employment and Unemployment. Field work of this survey was carried out by the Field Operations Division (FOD) of National Sample Survey Office (NSSO) in which the central samples were covered. Most of the State Governments also participated in the survey on matching sample size basis.

Based on the central sample, the results of quinquennial surveys of Employment and Unemployment are brought out by NSSO in a number of reports. The NSSO released the *Key Indicators of Employment and Unemployment in India, 2009-10* in June 2011. Apart from this, eight detailed reports are planned to be released on varied aspects of employment and unemployment based on NSS 66<sup>th</sup> round data. The present report '*Employment and Unemployment Situation in India, 2009-10*' is the first in the series of eight reports. It presents the estimates pertaining to various facets of employment-unemployment at National and State levels. This report contains eight Chapters and four Appendices. The main findings relating to the estimates given in this report are presented in Chapters Three to Eight. Since the report is voluminous, the Appendix Tables are given in a CD along with the report.

As the maiden achievement, the NSSO brought out the Key results of the Survey within one year of completion of the Field work and released the unit level data for further analysis and research work by the economists, academia, scholars and all others who are interested in this subject. This was possible because of the efforts made by the officials of different divisions of NSSO for meticulous planning and execution of various activities involved and the hard work done by the supporting officials and staff of NSSO. However, by looking at the highly aggregated macro level indicators certain apprehension was observed about slow employment growth in the quinquennium of 2004-05 to 2009-10. Some people also expressed doubts about quality of data. But by looking at somewhat disaggregated data one arrives at different interpretation and conclusion. Disentangling distinct trends in subsidiary employment and employment in the young (up to 24 years of age), specially employment of women in that age group leads to an insightful comparison in the Employment growth. The temporal structural shifts in employment leading to reductions in subsidiary employment, child labour and women's labour, each of which has been identified as a form of employment would expect to see decline in employment with increase in household wellbeing. But if we focus only on employment in ages 25 or more, then far from a slowdown in growth of workers since 2004, we actually see a sharp increase in employment. This report presents more detailed analysis of the data and is expected to be useful to the planners, policy makers and researchers dispelling the earlier apprehensions about the slow growth of employment. Suggestions for improvement of its content and coverage will be highly appreciated.

I am also thankful to the National Statistical Commission (NSC) and Working Group of the 66<sup>th</sup> round for their valuable guidance at various stages of the survey. I specially thank Prof Ravi Srivastav of JNU who reviewed the draft report and provided valuable comments and suggestions for improvement.

(J. Dash)

Director General & Chief Executive Officer  
NSSO

## मुख्य विशेषताएं

यह प्रतिवेदन (रिपोर्ट) रा.प्र.सर्वे. के 66वें दौर के जुलाई 2009 से जून 2010 तक के रोजगार एवं बेरोजगारी पर चलाए गए आठवीं पंच वार्षिक सर्वेक्षण पर आधारित है। यह सर्वेक्षण 7402 ग्रामों एवं 5252 नगरीय खंडों, जिनमें 100957 परिवारों का समावेशन (59129-ग्रामीण क्षेत्रों के एवं 41828 नगरीय क्षेत्रों के) और 459784 व्यक्तियों (281327 ग्रामीण क्षेत्रों के एवं 178457 नगरीय क्षेत्रों के) को जोड़कर गणना किया गया। रोजगार एवं बेरोजगारी संकेतांकों की पैमाइश तीन तरह से किया गया - यथा - सामान्य स्थिति (यू एस), जिसकी संदर्भ अवधि एक वर्ष की है। चालू साप्ताहिक स्थिति (सी डब्ल्यू एस), जिसकी संदर्भ अवधि एक सप्ताह की है, एवं चालू दैनिक स्थिति (सी डी एस) जो कि संदर्भ सप्ताह के प्रत्येक दिन के दौरान किए गए दैनिक क्रियाकलाप पर आधारित है। श्रमिकबल संकेतांक की पैमाइश सामान्य स्थिति (यू एस) एवं सी डब्ल्यू एस में दर्शाए गए व्यक्तियों एवं व्यक्ति-दिनों में की गई है। अन्यथा, यदि नहीं कहने पर "सभी" सामान्य स्थिति श्रमिकों का मतलब, सामान्य मुख्य स्थिति के अनुसार सभी श्रमिकों और गौण स्थिति के अनुसार श्रमिक जो कि मुख्य स्थिति में कार्य करने की श्रेणी में नहीं है के साथ होगा। रा.प्र.सर्वे. के 66वें दौर (जुलाई 2009 - जून 2010) की कुछ मुख्य खोज नीचे दिए गए हैं :

### क. परिवार एवं जनसंख्या

- भारत में करीब 70 प्रतिशत परिवार ग्रामीण क्षेत्रों के थे जो कुल जनसंख्या का करीब 73 प्रतिशत परिलेखित हुआ।
- भारत में औसतन परिवार का आकार 4.4 था। यह ग्रामीण भारत में यह करीब 4.6 था एवं नगरीय भारत में 4.1 था। भारत में लिंग अनुपात (100 पुरुषों के मुकाबले महिलाओं का) 936 था। यह ग्रामीण भारत में 947 था एवं नगरीय भारत में 909 था।
- ग्रामीण एवं नगरीय दोनों क्षेत्रों में लगभग 12 प्रतिशत परिवार महिलाओं के अधीन था। सभी परिवारों के मुकाबले उनका औसतन रूप में, थोड़ा छोटा परिवार का आकार था (करीब 3.2 ग्रामीण क्षेत्रों में एवं करीब 3.1 नगरीय क्षेत्रों में) एवं उच्चतम लिंग अनुपात (करीब 1785 ग्रामीण क्षेत्रों में एवं 1808 नगरीय क्षेत्रों में) पाया गया।
- उन परिवारों में जिनमें करीब एक सदस्य 15 वर्षों या उससे अधिक का है, ग्रामीण क्षेत्रों में करीब 5 प्रतिशत एवं नगरीय क्षेत्रों में करीब 10 प्रतिशत में 15 वर्ष एवं उससे अधिक आयु का सामान्यतः नियोजित कोई सदस्य नहीं था
- 15-59 वर्ष के आयु की जनसंख्या में 59 प्रतिशत ग्रामीण पुरुष थे एवं 61 प्रतिशत ग्रामीण महिलाएं थीं। नगरीय क्षेत्रों में, करीब 66 प्रतिशत पुरुष एवं महिलाएं इस आयु वर्ग के थे।
- 2009-10 के दौरान, ग्रामीण क्षेत्रों में, करीब 71 प्रतिशत पुरुष एवं 53 प्रतिशत महिलाएं साक्षर थे। तदनुसार, नगरीय क्षेत्रों में यह 84 प्रतिशत एवं 74 प्रतिशत था।
- 2009-10 में, ग्रामीण परिवारों के करीब 35 प्रतिशत के पास महात्मा गाँधी राष्ट्रीय ग्रामीण रोजगार गारंटी (एमजीनरेगा) जॉब कार्ड थे। इस अवधि के दौरान, ग्रामीण परिवारों के करीब 24 प्रतिशत को एमजीनरेगा कार्यों में काम मिला एवं ग्रामीण परिवारों के 19 प्रतिशत ने एमजीनरेगा कार्यों में काम मांगा पर उन्हें एमजीनरेगा में कार्य नहीं मिला।

### बी. श्रमबल

- सामान्य स्तर (पीएस+एसएस) के अनुसार, करीब 56 प्रतिशत ग्रामीण पुरुष एवं 27 प्रतिशत ग्रामीण महिलाएं श्रमबल वर्ग के थे। नगरीय क्षेत्रों में, यह अनुपात तदनुरूप पुरुषों के लिए 56 प्रतिशत एवं महिलाओं के लिए 15 प्रतिशत था।
- इस अवधि में 2004-05 से 2009-10, तक सामान्य स्तर के अनुसार (पीएस+एसएस) एल.एफ.पी.आर. ग्रामीण पुरुषों के लिए लगभग समान था परन्तु ग्रामीण महिलाओं के लिए करीब 6 प्रतिशत कम हो गया। उस अवधि में, सामान्य स्तर पीएस+एसएस के अनुसार एल.एफ.पी.आर. नगरीय पुरुषों के लिए करीब 1 प्रतिशत बिन्दु से कम एवं नगरीय महिलाओं के लिए करीब 3 प्रतिशत बिन्दुओं से कम गए।

### सी कार्य बल

- भारत में जनसंख्या का करीब 39 प्रतिशत सामान्य तौर पर नियोजित था। ग्रामीण में इसका अनुपात 41 प्रतिशत था, एवं नगरीय में 35 प्रतिशत था।
- कामगार जनता अनुपात (का.ज.अ.) में लिंग की भिन्नता प्रमुख थी। (का.ज.अ.) ग्रामीण पुरुषों में 55 प्रतिशत था एवं ग्रामीण महिलाओं के लिए 26 प्रतिशत। नगरीय क्षेत्रों में, पुरुषों के लिए यह 54 प्रतिशत एवं महिलाओं के लिए 14 प्रतिशत था।
- दैनिक स्तर दर वर्तमान साप्ताहिक स्तर दरों, से कुछ कम थे, जो कि, सामान्य स्तर, दरों से काफी कम थे। ग्रामीण पुरुष के लिए वर्तमान साप्ताहिक स्तर का.ज.अ. 53 प्रतिशत था, ग्रामीण महिलाओं के लिए 22 प्रतिशत था, 54 प्रतिशत नगरीय पुरुषों के लिए था एवं 13 प्रतिशत नगरीय महिलाओं के लिए था। वर्तमान दैनिक स्तर दर क्रमशः 50 प्रतिशत, 18 प्रतिशत, 52 प्रतिशत एवं 12 प्रतिशत ग्रामीण पुरुषों, ग्रामीण महिलाओं, नगरीय पुरुषों एवं नगरीय महिलाओं के लिए था।
- सामान्य तौर पर कार्यरत में से (पीएस+एसएस), करीब 54 प्रतिशत ग्रामीण पुरुष एवं 56 प्रतिशत ग्रामीण महिलाएं स्वनियोजित थे। नगरीय क्षेत्रों में, यह अनुपात, तदनुरूप दोनों पुरुषों एवं महिलाओं के लिए 41 प्रतिशत था। नगरीय क्षेत्रों में, करीब 42 प्रतिशत सामान्य तौर पर कार्यरत पुरुष एवं 39 प्रतिशत सामान्य तौर पर नियोजित महिलाएं नियमित वेतन भोगी/मजदूरी पाने वाले थे।
- ग्रामीण क्षेत्रों में, 2004-05 एवं 2009-10 के बीच का का.ज.अ. की पहुँच सामान्य स्तर में पुरुषों के लिए करीब समान ही रहा एवं महिलाओं के लिए करीब 7 प्रतिशत बिन्दुओं से कम गया। नगरीय क्षेत्रों में, यह दर पुरुषों के लिए 1 प्रतिशत बिन्दु से कम एवं महिलाओं के लिए 3 प्रतिशत बिन्दु कम हो गया।
- ग्रामीण भारत में, सामान्य तौर पर कार्यरत पुरुष कामगार (पीएस+एसएस) जो कृषि कार्यकलापों में संलग्न थे 1977-78 में जो 81 प्रतिशत था वह 2009-10 में 63 प्रतिशत हो गया। जबकि महिला कामगारों के लिए इसी अवधि में 88 प्रतिशत से 79 प्रतिशत हो गया।

- नगरीय भारत में, 'व्यापार, होटल एवं रेस्तराँ' सेक्टर में करीब 27 प्रतिशत सामान्य पुरुष कामगार कार्यरत हुए (पीएस+एसएस) जबकि प्रत्येक 'विनिर्माण' एवं 'अन्य सेवाएं' क्षेत्र में करीब 22 प्रतिशत था। दूसरी तरफ, सामान्य तौर पर कार्यरत नगरीय महिलाओं के बीच, 'अन्य सेवाएं' क्षेत्र में उच्चतर अनुपात था (39 प्रतिशत)। तत्पश्चात् 'विनिर्माण' (28 प्रतिशत)।
- नगरीय महिलाओं का अनुपात जो कि 'अन्य सेवाएं' क्षेत्र में कार्यरत हैं 2004-05 में 36 प्रतिशत था वह 2009-10 में बढ़ कर 39 प्रतिशत हुआ। 'कृषि' क्षेत्र में इस अवधि में 4 प्रतिशत बिन्दुओं की गिरावट दर्ज की गई।

### डी. बेरोजगारी दर

- बेरोजगारी दर (श्रमबल में 1000 व्यक्तियों में बेरोजगारों की संख्या) सामान्य स्थिति के अनुसार (पीएस+एसएस) ग्रामीण क्षेत्रों में 16 एवं शहरी क्षेत्रों में 34 था। यह शहरी महिलाओं में 57 एवं शहरी पुरुषों में 28 और ग्रामीण क्षेत्रों में पुरुषों एवं महिलाओं दोनों में 16 था।
- चालू दैनिक स्थिति (सीडीएस) के अनुसार बेरोजगारी दर, सामान्य स्थिति एवं साप्ताहिक स्थिति के अनुसार प्राप्त दरों से अधिक है, उच्चस्तर के आंतरायिक बेरोजगारी को इंगित करता है। चालू साप्ताहिक स्थिति (सीडब्ल्यूएस) के अनुसार बेरोजगारी का दर ग्रामीण क्षेत्र में 33 एवं शहरी क्षेत्र में 42 था। चालू दैनिक स्थिति (सीडीएस) के अनुसार ग्रामीण क्षेत्र में 68 और शहरी क्षेत्रों में 58 था।
- **2004-05** और 2009-10 की अवधि के दौरान सामान्य स्थिति (पीएस+एसएस) में बेरोजगारी दर ग्रामीण क्षेत्रों के पुरुषों के लिए एक समान रहा, एवं शहरी पुरुषों के लिए 1 प्रतिशत कमी हुयी। ग्रामीण महिलाओं के लिए भी यह वैसा ही रहा, जबकि शहरी महिलाओं के लिए 1 प्रतिशत बिंदु की कमी हुयी।
- शहरी और ग्रामीण दोनों क्षेत्रों में 15 वर्ष या उससे अधिक के शिक्षित (माध्यमिक एवं उससे अधिक) व्यक्तियों में बेरोजगारी दर, जिनका शैक्षिक स्तर माध्यमिक स्तर से कम था, से अधिक था। सामान्य स्थिति (पीएस+एसएस) के लिए शिक्षित में बेरोजगारी दर, ग्रामीण एवं शहरी प्रत्येक के लिए पुरुषों का प्रतिशत 4 था जबकि ग्रामीण और शहरी महिला में प्रत्येक के लिए यह 12 प्रतिशत था।
- युवाओ (15-29) में बेरोजगारी दर पूरे जनसंख्या की तुलना में बहुत अधिक था। सामान्य स्थिति (पीएस+एसएस) के अनुसार युवाओं में बेरोजगारी दर ग्रामीण क्षेत्रों के पुरुषों एवं महिलाओं प्रत्येक के लिए 5 प्रतिशत था। जबकि शहरी पुरुष के लिए 8 प्रतिशत और शहरी महिलाओं के लिए 14 प्रतिशत था।
- शिक्षित युवकों (15-29 वर्ष आयु के और शैक्षिक स्तर-माध्यमिक एवं उससे अधिक) में बेरोजगारी दर शहरी एवं ग्रामीण दोनों क्षेत्रों में अपेक्षा अधिक था। सामान्य स्थिति (पीएस+एसएस) के अनुसार दरें ग्रामीण पुरुषों के लिए 8 प्रतिशत, ग्रामीण महिलाओं के लिए 18 प्रतिशत, शहरी पुरुषों के लिए 10 प्रतिशत एवं शहरी महिलाओं के लिए 23 प्रतिशत था।

### इ. अल्प रोजगार

- **2009-10** के दौरान सामान्यतः नियोजित (पीएस+एसएस) महिलाओं का अनुपात जो कि सर्वेक्षण की तिथि से पहले के सप्ताह के दौरान नियोजित नहीं पाये गये थे ग्रामीण भारत में 15 प्रतिशत एवं शहरी भारत में करीब 6 प्रतिशत था । तत्समान्यतः नियोजित पुरुषों का प्रतिशत 3 एवं 1 था ।
- सामान्यतः नियोजित (पीएस+एसएस) के जो शहरी एवं ग्रामीण क्षेत्रों में काम पर लगाए गए का व्यक्ति-दिनों का अनुपात 69 प्रतिशत एवं 85 प्रतिशत, महिलाओं के लिए और 92 एवं 96 प्रतिशत पुरुषों के लिए अनुमानित किया गया ।
- 2009-10 के दौरान 15 वर्ष और अधिक आयु वर्ग में करीब 11 प्रतिशत सामान्यतः नियोजित ग्रामीण पुरुष एवं 6 प्रतिशत सामान्यतः नियोजित शहरी पुरुषों को अतिरिक्त कार्यों के लिए उपलब्ध थे । ग्रामीण क्षेत्र के महिलाओं के लिए तत्समान प्रतिशत करीब 8 और शहरी क्षेत्रों में 6 था ।
- 2009-10 के दौरान 15 वर्षों और अधिक आयु वर्ग में करीब 10 प्रतिशत ग्रामीण पुरुषों 7 प्रतिशत ग्रामीण महिलाओं और 5 प्रतिशत प्रत्येक शहरी पुरुष एवं महिला वैकल्पिक कार्य के लिए उपलब्ध थे ।

### एफ. श्रम की गतिशीलता

- सर्वेक्षण की तिथि के पूर्ववर्ती दो वर्षों के दौरान नगण्य प्रतिशत (1 प्रतिशत से भी कम) सामान्यतः (पीएस) काम करने वाले व्यक्तियों में से अपना कार्य स्थिति बदला, जबकि सामान्यतः नियोजितों में से ग्रामीण क्षेत्रों के लिए 5 प्रतिशत पुरुष ग्रामीण महिला के लिए 6 प्रतिशत, 4 प्रतिशत शहरी पुरुष के लिए एवं 5 प्रतिशत शहरी महिला के लिए स्थापना बदलने के रिपोर्ट किया गया ।
- वैसे व्यक्तियों का अनुपात जिन्होंने अपना स्थापन बदल लिया उन लोगों से बहुतकम था, जिनका शैक्षणिक स्तर उच्चतर माध्यमिक और उससे ऊपर था, खास कर उनकी तुलना में शहरी या ग्रामीण दोनों क्षेत्रों में जिनका शैक्षणिक स्तर निम्न था ।
- सर्वेक्षण की तिथिके पूर्ववर्ती दो वर्षों के दौरान एक प्रतिशत ग्रामीण पुरुष, शहरी पुरुष, शहरी महिला और नगण्य सही अनुपात (0.3 प्रतिशत) शहरी महिला जो कि सामान्य स्थिति (पीएस) में श्रमिक थे, को अपना कार्य उद्योग बदलने का रिपोर्ट किया गया ।
- सर्वेक्षण की तिथि के पूर्ववर्ती दो वर्षों के दौरान करीब 1 प्रतिशत ग्रामीण पुरुष, शहरी पुरुष, शहरी महिलाएँ एवं नगण्य अनुपात (0.3 प्रतिशत) ग्रामीण महिलाओं जो कि सामान्य स्थिति (पीएस) के श्रमिक थे अपना पेशा बदलने का रिपोर्ट किया गया ।

## HIGHLIGHTS

This report is based on the eighth quinquennial survey on employment and unemployment conducted in the 66<sup>th</sup> round of NSS during July, 2009 to June, 2010. The survey was spread over 7402 villages and 5252 urban blocks covering 100957 households (59129 in rural areas and 41828 in urban areas) and enumerating 459784 persons (281327 in rural areas and 178457 in urban areas). Employment and Unemployment indicators are measured in three different approaches, viz. *usual status* (US) with a reference period of one year, *current weekly status* (CWS) with one week reference period and *current daily status* (CDS) based on the daily activity pursued during each day of the reference week. The labour force indicators measured in US and CWS are in persons and in CDS in person-days. Unless otherwise stated, 'all' *usual status* workers will mean all workers according to the *usual principal status* along with the workers according to the *subsidiary status* categorized 'not working' in the principal status. Some of the key findings of the NSS 66<sup>th</sup> round (July, 2009 - June, 2010) are stated below.

### A Household and Population

- About 70 per cent of the households in India belonged to the rural areas and accounted for about 73 per cent of the total population.
- The average household size in India was about 4.4. It was about 4.6 in rural India and about 4.1 in urban India. The sex ratio (females per 1000 of males) in India was 936. It was 947 in rural India and 909 in urban India.
- About 12 per cent of households in both the rural and urban areas were headed by females. Compared to all households, they had, on an average, a relatively smaller household size (about 3.2 in rural areas and about 3.1 in urban areas) and a much higher sex-ratio (about 1785 in rural areas and about 1808 in urban areas).
- Among those households having at least one member of age 15 years and above, about 5 per cent in the rural areas and 10 per cent in the urban areas had no usually employed member of age 15 years and above.
- The population in the age group 15-59 years comprised about 59 per cent of the rural males and 61 per cent rural females. In the urban areas, about 66 per cent each of the males and females belonged to this age group.
- In the rural areas, during 2009-10, about 71 per cent of males and 53 per cent of the females were literate. The corresponding proportions, in the urban areas, were 84 per cent and 74 per cent.
- In 2009-10, about 35 per cent of the rural households had MGNREG job cards. During this period, about 24 per cent of the rural households got work in MGNREG works and 19 per cent of the rural households sought but did not get MGNREG works.

## B Labour Force

- According to the *usual status* (ps+ss), about 56 per cent of rural males and 27 per cent of rural females belonged to the labour force. In the urban areas, the corresponding proportions were 56 per cent of males and 15 per cent for females.
- During the period 2004-05 to 2009-10, the LFPRs according to *usual status* (ps+ss) remained almost the same for rural males but decreased by about 6 percentage points for rural females. During that period, LFPRs according to *usual status* (ps+ss) decreased by about 1 percentage point for the urban males and decreased by about 3 percentage points for the urban females.

## C Work Force

- About 39 per cent of the population in the country was usually employed. The proportion was 41 per cent in the rural and 35 per cent in the urban.
- The gender differential in the worker population ratio (WPR) was distinct. The WPR for rural males was 55 per cent while it was 26 per cent for rural females. In the urban areas, it was 54 per cent for males and 14 per cent for females.
- The *daily status* rates were slightly lower than the *current weekly status* rates, which, in turn, were slightly lower than the *usual status* rates. The *current weekly status* WPR was 53 per cent for rural male, 22 per cent for rural females, 54 per cent for urban males and 13 per cent for urban females. The *current daily status* rates were 50 per cent, 18 per cent, 52 per cent and 12 per cent for rural males, rural females, urban males and urban females, respectively.
- Among the usually employed (ps+ss), about 54 per cent of the rural males and 56 per cent of rural females were self-employed. In the urban areas, corresponding proportions were 41 per cent for both males and females. In the urban areas, about 42 per cent of the usually employed males and 39 per cent of the usually employed females were regular salaried/wage employees.
- Between 2004-05 and 2009-10, in the rural areas, WPR in the *usual status* approach remained almost the same for the males and decreased by about 7 percentage points for the females. In the urban areas, the rates decreased by about 1 percentage point for the males and 3 percentage points for the females.
- In rural India, the proportion of usually employed (ps+ss) male workers engaged in the agricultural activities declined gradually from 81 per cent in 1977-78 to 63 per cent in 2009-10 whereas for the female workers, the decline was less - from 88 per cent to 79 per cent during the same period.
- In urban India, the 'trade, hotel and restaurant' sector engaged about 27 per cent of the usually employed (ps+ss) male workers while each of 'manufacturing' and 'other services' sector accounted for nearly 22 per cent of them. On the other hand, among the usually employed urban females, 'other services' sector

accounted for the highest proportion (39 per cent), followed by ‘manufacturing’ (28 per cent).

- The proportion of urban females employed in ‘other services’ sector increased from 36 per cent in 2004-05 to 39 per cent in 2009-10 and the ‘agriculture’ sector revealed a fall in its share by about 4 percentage points during this period.

## D Unemployment Rate

- The unemployment rate (number of person unemployed per 1000 persons in the labour force), according to *usual status* (ps+ss), was 16 in the rural areas and 34 in the urban areas. It was 57 for urban females, 28 for urban males and 16 for both males and females in the rural areas.
- The unemployment rates according to the *current daily status* (cds) approach are higher than the rates obtained according to *usual status* approach and *weekly status* approach, thereby indicating a high degree of intermittent unemployment. The unemployment rate according to the *current weekly status* (cws) approach was 33 in rural areas and 42 in the urban areas. According to the *current daily status* (cds) approach, it was 68 in the rural areas and 58 in the urban areas.
- During the period 2004-05 and 2009-10, the *unemployment rate* in terms of the *usual status* (ps+ss), remained almost the same for rural males and decreased by 1 percentage point for urban males. For rural females also it remained almost the same whereas for urban females it decreased by 1 percentage point.
- In both the rural and urban areas, unemployment rate among the *educated* (secondary and above) persons of age 15 years and above was higher than that among those whose education level was lower than *secondary*: for *usual status* (ps+ss), unemployment rate among the *educated* was 4 per cent for each of rural and urban males while it was 12 per cent for each of rural and urban female.
- The unemployment rate was much higher among the youth (15-29) as compared to that in the overall population. According to the *usual status* (ps+ss), unemployment rate among the youth was 5 per cent each for male and female in rural areas, 8 per cent for urban male and 14 per cent for urban female.
- Among the educated youth (age:15-29 years and level of education: secondary and above), the *unemployment rate* was predominantly high in both the rural and urban areas. According to the *usual status* (ps+ss), the rates were 8 per cent for rural males, 18 per cent for rural females, 10 per cent for urban males and 23 per cent for urban females.

## E Underemployment

- During 2009-10, the proportion of usually employed (ps+ss) females who were found not to be employed during the week preceding the date of survey was 15 per cent in rural India and nearly 6 per cent in urban India. The corresponding percentages for usually employed males were 3 and 1 only.

- The proportion of person-days of the usually employed (ps+ss) utilised for work, in the rural and urban areas, was estimated at about 69 per cent and 85 per cent, respectively for females, and 92 and 96 per cent, respectively for males.
- During 2009-10, in the age group 15 years and above, about 11 per cent of usually employed rural males and 6 per cent of usually employed urban males sought or were available for additional work. The corresponding percentages for females were around 8 in rural areas and 6 in urban areas.
- During 2009-10, in the age group 15 years and above, about 10 per cent of rural males, 7 per cent of rural females and 5 per cent each of urban males and females reported availability for alternative work.

## F Labour Mobility

- During the two years preceding the date of survey, only a negligible proportion (less than 1 per cent) among the usually (ps) working persons had changed work status while change of establishment among the usually (ps) employed was reported for 5 per cent for rural male, 6 per cent for rural female, 4 per cent for urban male and 5 per cent for urban female.
- The proportion of persons who changed their establishment is much less among those with education level *higher secondary and above* as compared to those with lower levels of education - be it in rural areas or in urban areas.
- During the two years preceding the date of survey, about 1 per cent of rural males, urban males, urban females, and negligible proportion (0.3 per cent) of rural females who were workers in *usual status* (ps) reported change in their industry of work.
- During the two years preceding the date of survey, about 1 per cent of rural males, urban males, urban females, and negligible proportion (.3 per cent) of rural females who were workers in *usual status* (ps) reported change in their occupation.

**II. Wage rates (Rs.) per day for persons of age 15-59 years**

all-India category of workers	NSS 66 <sup>th</sup> round (July 2009 – June 2010)					
	rural			urban		
	male	female	person	male	female	person
<b>Casual labour in MGNREGA public works</b>	90.93	87.20	89.03	-	-	-
<b>Casual labour in other public works</b>	98.33	86.11	93.11	-	-	-
<b>Casual labour in other type of works</b>	101.53	68.94	93.06	131.92	76.73	121.83
<b>Regular wage/ salaried persons</b>	249.15	155.87	231.59	377.16	308.79	364.95

**Labour force participation rate (LFPR):** LFPR is defined as the number of persons/person-days in the labour force per 1000 persons/person-days

**Worker Population Ratio (WPR):** WPR is defined as the number of persons/person-days employed per 1000 persons/person-days.

**Proportion Unemployed (PU):** It is defined as the number of persons/person-days unemployed per 1000 persons/person-days.

**Unemployment Rate (UR):** UR is defined as the number of persons/person-days unemployed per 1000 persons/person-days in the labour force (which includes both the employed and unemployed).

Table (68)	Distribution (per 1000) of usual status workers (15 and above) who had sought or were available for alternative work by duration and reason for seeking work/ availability for work for each activity status	A-724-A-732
Table (69)	Distribution (per 1000) of self-employed persons according to the usual status (ps+ss) reporting their earning from self-employment as remunerative/ non-remunerative by amount of earning regarded as remunerative for each decile class on household monthly per capita expenditure	A-733-A-738
Table (70)	Number per 1000 usual status workers of age 15 years and above i) with mostly full time work and ii) who have worked more or less regularly by activity status and broad industry division	A-739-A-765
Table (71)	Distribution (per 1000) of permanent workers (ps+ss) of age 15 years & above by level of education for different activity status and industry	A-766-A-771
Table (72)	Number of usual principal status workers who changed establishment of work, status of work during last 2 years per 1000 workers of age 15 years & above and distribution (per 1000) of those who changed their status of work by the last work activity status for each broad general education level and usual activity status	A-772-A-780
Table (73)	Number of usual principal status workers who changed industry (division) of work during last two years per 1000 workers of age 15 years & above and their distribution (per 1000) by industry of last work activity for each broad present usual principal status and broad industry division	A-781-A-789
Table (74)	Number of usual principal status workers who changed occupation (division) of work during last two years per 1000 workers of age 15 years and above and their distribution (per 1000) by occupation of last work activity for each broad present usual principal status and occupation division	A-790-A-807
Table (75)	Distribution (per 1000) of usual principal status workers of age 15 years and above who have changed industry or occupation during last 2 years by reason for such change of job for each broad education and age group	A-808-A-816

## NOTES ON TABLES

1. Estimates are provided separately for rural and urban areas and for males and females.
2. The estimates presented in the report, in general, refer to the mid-point of the survey period (July 2009 – June 2010) of NSS 66<sup>th</sup> round, i.e., 01.01.2010.
3. It may be noted that as the tables are generally presented as ‘per 1000 distribution’ or ‘estimates per 1000’, the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits.
4. If there are no sample households/persons in a particular category, the estimates/estimated proportions of households/persons in that category becomes 0. Estimated numbers per 1000 are also shown as 0, when they are greater than 0 but less than 0.5.
5. In the detailed tables, in some of the deeper classifications, some sample sizes may be small and this may have a bearing on the precision of the corresponding estimates.
6. The cell-level figures in the tables, when added up, may not exactly be equal to the figure shown against the ‘total’ column (or line) due to (i) rounding off and/or (ii) presence of non-response cases.

# Chapter One

## Introduction

### 1.0 The Report in Perspective

1.0.1 The National Sample Survey Office (NSSO), as a part of its 66<sup>th</sup> round survey programme during the period July 2009 - June 2010, carried out an all-India household survey on the subject of employment and unemployment in India. In this survey, the nation-wide enquiry was conducted to generate estimates of various characteristics pertaining to employment and unemployment and labour force characteristics at the national and State levels. Information on various facets of employment and unemployment in India was collected through a schedule of enquiry (Schedule 10) adopting the established concepts, definitions and procedures. Based on the data collected during the entire period of survey, estimates pertaining to employment-unemployment in India along with various characteristics associated with them have been presented in this report.

### 1.1 Objective of the survey on employment and unemployment

1.1.1 The main objective of the employment-unemployment surveys conducted by NSSO at periodic interval is to generate estimates of level parameters of various employment and unemployment characteristics at national and State level. These statistical indicators on labour market are required for planning, policy and decision making at various levels, both within the government and outside. The critical issues in the context of labour force enquiries pertain to defining the labour force and measuring participation of labour force in different economic activities. The activity participation of the people is not only dynamic but also multidimensional: it varies with region, age, education, gender, level of living, industry and occupational category. These aspects of the labour force are captured in detail in the NSS survey on employment and unemployment and estimates are generated for labour force participation rate, worker population ratio, unemployment rate, wages of employees, etc. The indicators of the structural aspects of the workforce such as status in employment, industrial distribution and occupational distribution are also derived from the survey. Besides, from the data collected on the particulars of enterprises and conditions of employment, the aspects of employment in the informal sector and informal employment are reflected through the conceptual framework of the survey.

### 1.2 Genesis of NSS Employment and Unemployment Survey

1.2.1 The quinquennial survey on employment-unemployment is one of the important surveys conducted regularly by the NSSO. The first such survey was done during September 1972 - October 1973 corresponding to the 27<sup>th</sup> round of NSSO. The present survey is the eighth in the series.

1.2.2 *Past Quinquennial Surveys*: The assessment of the volume and structure of employment and unemployment using large scale household surveys commenced with the NSS 9<sup>th</sup> round (May - September, 1955). Subsequently NSSO conducted a number of surveys on this subject to firm up the concepts and methods. The core conceptual framework for conducting such surveys was put in place by an “Expert Committee on Unemployment Estimates” (popularly known as the Dantwala Committee), set up by the Planning Commission. The Expert Committee reviewed these surveys and the indicators generated from such surveys conducted by NSS in the past. The concepts and definitions recommended by this committee formed the basis of the first quinquennial survey on employment and unemployment conducted in the 27<sup>th</sup> round of NSS (September 1972 – October 1973). Since then, six comprehensive quinquennial surveys on employment and unemployment situation in India have been carried out in the past by the NSSO prior to the present quinquennial survey. These were carried out during the 32<sup>nd</sup> round (July 1977 – June 1978), 38<sup>th</sup> round (January 1983 – December 1983), 43<sup>rd</sup> round (July 1987 – June 1988), 50<sup>th</sup> round (July 1993 – June 1994), 55<sup>th</sup> round (July 1999 – June 2000), 61<sup>st</sup> round (July 2004- June 2005) in which concepts, definitions and procedures were based primarily on the recommendations of the Dantwala Committee. The results of these surveys have been brought out in the form of NSS reports. In NSS 55<sup>th</sup> round, the aspects of enterprise characteristic of employment and in NSS 61<sup>st</sup> round the qualitative aspects of informal employment was added in the survey module of the quinquennial round.

1.2.3 *Other surveys on employment-unemployment*: Apart from these quinquennial surveys on employment and unemployment, NSSO had also been collecting information on certain key items on employment and unemployment, as a part of annual series, from a smaller sample of households in each round since its 45<sup>th</sup> round (July 1989 - June 1990) through the schedule on Household Consumer Expenditure (Schedule 1.0). The objective of data collected in the annual series was to measure employment and unemployment indicators in terms of the usual and current weekly statuses only and study of these indicators in respect of category of employment, industrial distribution of the usually employed, etc. These procedures continued till the 59<sup>th</sup> round (January-December 2003) of NSS. In the annual rounds, only activity status and industry of work according to usual principal status, subsidiary status and current weekly status approach were collected through a few columns of the demographic block of the Consumer Expenditure Schedule (Schedule 1.0). Particulars of employment and unemployment according to the usual principal status and usual subsidiary status were collected in the annual rounds by following a similar approach as in the quinquennial rounds. In the quinquennial rounds, particulars of current daily status of the household members are collected and current weekly status is derived from them, whereas in the annual rounds, current weekly status has been obtained through a direct query. In the 60<sup>th</sup> round (January-June 2004), a separate schedule on employment and unemployment was canvassed for the first time in an annual round and particulars on employment and unemployment was collected in the same manner as that of the quinquennial rounds. In NSS 62<sup>nd</sup> round (July 2005 - June 2006) and in NSS 64<sup>th</sup> round (July 2007- June 2008) also a separate schedule on employment and unemployment,

similar to the one canvassed during NSS 60<sup>th</sup> round, was canvassed and particulars on labour force were collected in the manner similar to the quinquennial rounds.

### **1.3 Scope of NSS 66<sup>th</sup> round Survey on Employment and Unemployment**

1.3.1 The critical issues in the context of labour force enquiries pertain to defining the labour force and measuring participation of labour force in different economic activities. The activity participation of the people is not only dynamic but also multidimensional; it varies over regions, age, education, gender, industry and occupational categories. In NSS surveys, persons are classified into various activity categories on the basis of activities pursued by them during certain specified reference periods. Three reference periods are used in NSS surveys, viz. (i) one year, (ii) one week and (iii) each day of the reference week. Based on these three periods, three different measures of activity status are arrived at. The activity status determined on the basis of the reference period of one year is known as the usual activity status (US) of a person, that determined on the basis of a reference period of one week is known as the current weekly status (CWS) of the person and the activity status determined on the basis of the engagement on each day during the reference week is known as the current daily status (CDS) of the person.

1.3.2 In NSS 66<sup>th</sup> round Employment & Unemployment schedule, the major features of data collected in NSS 61<sup>st</sup> round were retained. In addition, some information on 'Home based workers' was collected. There is another specific importance associated with the period of NSS 66<sup>th</sup> round. The present quinquennial round is the first one, since the major public intervention in the rural labour market made with the enactment of the Mahatma Gandhi National Rural Employment Guarantee Act 2005. The survey instruments for NSS 66<sup>th</sup> round appropriately incorporated the assimilation of data on some salient aspects relating to MGNREGA.

1.3.3 In NSS 66<sup>th</sup> round, data on employment-unemployment characteristics were collected through Schedule 10. The schedule captured a range of information on the following aspects:

- i) *Household characteristics*, like household size, religion, social group, land possessed, land cultivated, etc. For the rural households information was collected, on whether the household had Mahatma Gandhi National Rural Employment Guarantee (MGNREG) job card, whether got work in MGNREG works during the last 365 days, number of days got work in MGNREG works and mode of payment of the wages earned in MGNREG works. Information on household monthly consumer expenditure was also collected through a worksheet to study the employment-unemployment characteristics with the level of living of the population.
- ii) *Demographic particulars*, like age, sex, educational level, status of current attendance and vocational training.
- iii) *Usual principal activity status and subsidiary economic activity status* of the all persons.

iv) *Particulars of the enterprise* for all the usual status workers (excluding those engaged in growing of crops and growing of crops combined with farming of animals) viz., location of work place, type of enterprises, number of workers in the enterprise etc. and some *particulars on the conditions of employment* for the employees, like type of job contract, eligibility for paid leave, availability of social security benefits, etc. For self-employed persons in the usual status, some particulars were collected for identification of home-based workers.

v) Extent of *underutilization of the labour time* and on the *qualitative aspects of employment*, like changes in activity status, occupation /industry, existence of trade unions/associations, nature of employment (permanent/temporary), etc.

vi) *Participation in specified activities* by the household members who are classified as engaged in domestic duties in the usual principal activity status.

#### 1.4 The survey outline of NSS 66<sup>th</sup> round survey

1.4.1 *Geographical coverage*: The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remained inaccessible throughout the year. However, all the sample first stage units of both rural and urban areas of Leh, Kargil and Poonch districts of Jammu & Kashmir became casualty and therefore these districts were outside the survey coverage.

1.4.2 *Sub-round*: The fieldwork of the 66<sup>th</sup> round of NSSO started from 1<sup>st</sup> July, 2009 and continued till 30<sup>th</sup> June, 2010. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months, the 1<sup>st</sup> sub-round period ranging from July to September 2009, the 2<sup>nd</sup> sub-round period from October to December 2009 and so on. An equal number of sample villages/blocks (FSUs) was allotted for survey in each of these four sub-rounds. The survey used the interview method of data collection from a sample of randomly selected households.

#### 1.5 Sample Design

1.5.1 A stratified multi-stage design was adopted for the 66<sup>th</sup> round survey. The first stage units (FSU) were the 2001 census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. Hamlet-groups/sub-blocks constituted the intermediate stage whenever these were formed in the sample FSUs. For the rural sector, the list of 2001 census villages (Panchayat wards in case of Kerala) constituted the sampling frame. For the urban sector, the list of latest available UFS blocks constituted the sampling frame. For non-UFS towns, frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame). Within each district of a State/ UT, two basic strata were formed as follows: rural stratum

comprising all rural areas of the district and urban stratum comprising all the urban areas of the district. However, within the urban areas of a district, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum. There was no sub-stratification in the urban sector. However, to get adequate number of child workers, for all rural strata, each stratum was divided into 2 sub-strata. These were, sub-stratum 1: all villages with proportion of child workers ( $p$ )  $> 2P$  (where  $P$  is the average proportion of child workers for the state/ UT as per Census 2001) and sub-stratum 2: remaining villages.

1.5.2 At the all-India level, a total number of 12784 FSUs were allocated for survey in the central sample. This sample size was at par with the sample size of NSS 61<sup>st</sup> round. In addition, 24 State sample FSUs (16 for rural sector and 8 for urban sector) of Leh and Kargil districts of J & K were included in the central sample. The total number of sample FSUs was allocated to the States and UTs in proportion to population as per census 2001 subject to the availability of investigators and ensuring minimum sample allocation to each State/ UT. The State/ UT level sample size was allocated between two sectors in proportion to population as per *census 2001* with double weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc. did not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each state/ UT separately for rural and urban areas. Further the State level allocations for both rural and urban areas were adjusted marginally in a few cases to ensure that each stratum/ sub-stratum got a minimum allocation of 4 FSUs. Within each sector of a State/ UT, the respective sample size was allocated to the different strata/ sub-strata in proportion to the population as per census 2001. Allocations at stratum/ sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal number of samples was allocated among the four sub rounds.

1.5.3 For the rural sector, from each stratum/ sub-stratum, required number of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For urban sector, from each stratum FSUs were selected by using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples. All households listed in the selected village/block/ hamlet-groups/sub-blocks were stratified into three second stage strata (SSS). A total of 8 households were selected from each sample village/block for canvassing the employment and un-employment schedule. The sample households from each of the second stage strata were selected by SRSWOR.

1.5.4 Out of the total number of 12,808 FSUs (7,524 villages and 5,284 urban blocks) allotted for the central sample<sup>1</sup> (including 24 state sample FSUs of Leh and Kargil districts of J & K: 16 for rural sector and 8 for urban sector), 12,654 FSUs (7,402 villages and 5,252 urban blocks) could be surveyed at the all-India level for canvassing Schedule 10. The number of households surveyed was 1,00,957 (59,129 in rural areas and 41,828 in urban areas) and number of persons surveyed was 4,59,784 (2,81,327 in rural areas and 1,78,457 in urban areas). The sample design and estimation procedure used for the survey is given in Appendix B of this report.

1.5.5 The domains of rural and urban sector in the survey are co-terminus with the criterion adopted in census. The urban frame used in the survey is the latest updated UFS that takes into account the newly declared towns after the last census 2001. Accordingly the rural sector is the one that is not urban.

## **1.6 Contents of this report**

1.6.1 This report contains eight chapters, including the present introductory chapter, and four appendices. Chapter Two describes the concepts and definitions of those terms used in the survey in connection with the various items covered in this report. The main findings relating to the estimates given in this report are presented and discussed in Chapters Three to Eight. To start with, Chapter Three is on household and population characteristics. Discussions on the labour force, the work force and the unemployed are presented in Chapters Four, Five and Six, respectively. The next chapter, viz. Chapter Seven, deals with underemployment while the last chapter discusses the feature of labour mobility. In Chapters Three to Eight, wherever state level tables have been presented, those have been placed at the end of the respective chapters. The detailed tables forming the basis of this report are presented in Appendix A. Appendix B gives a detailed description of the sample design and estimation procedure used for the survey. In Appendix C, the Projected Population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 supplied by RGI Office have been presented along with those projected for 1<sup>st</sup> January 2010 using compound rate of growth. The projections have been given for, male and female, separately, for rural and urban for each State/U.T. Appendix D gives a facsimile of the schedule canvassed in the survey. The RSEs of worker population ratio (WPR) according to usual status (PS+SS) and current weekly status (CWS) have been presented in Appendix E for the major States.

1.6.2 The detailed tables turned out to be very voluminous. Hence, the hard-copy of the detailed tables (Appendix A) does not form a part of the Report and Appendix A of the report is provided in CD.

1.6.3 The estimates of key employment and unemployment characteristics are generally presented, as ratios. However, the estimates of aggregates are also given in the margin of the detailed tables presented for all-India levels. It may be noted that estimates of ratios are

---

<sup>1</sup> The sample selected for NSS 66<sup>th</sup> round which was surveyed by NSSO is termed "Central sample". As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: the sample surveyed by State Government officials is termed as "State sample".

generally expected to be robust and the estimates of aggregates may be used only to combine the ratios. However, to arrive at estimated absolute number in any category, the users may apply the survey estimates of ratios to the census population or projections<sup>2</sup>. It may also be noted that as the tables are generally presented as 'per 1000 distribution' or rates 'per 1000', the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in such ratios. The estimates presented in this report, in general, refer to the mid-point of the survey period (July 2009 – June 2010) of NSS 66<sup>th</sup> round, i.e., 01.01.2010.

1.6.4 The estimates of key indicators of employment and unemployment have been presented for all the States and U.Ts. While using the estimates for the smaller States, it may be kept in mind that the sample sizes for them may not be adequate enough for getting sufficiently reliable estimates.

## 1.7 NSS 66<sup>th</sup> Round Reports on Employment and Unemployment

1.7.1 The results of NSS rounds are released in reports based on comprehensive tabulation of subject parameters and indicators in various cross classifications generated from the central sample data. Corresponding to NSS 66<sup>th</sup> round quinquennial survey on Employment and Unemployment, the results are planned for release in eight reports. In addition to these eight reports planned, a document on Key Indicators of Employment and Unemployment in India, 2009-10 has already been released in June 2011. Of the eight reports, the present one - first in the series of reports - deals in some detail, with the employment-unemployment estimates measured in terms of the three basic approaches of usual status, current weekly status and current daily status and their patterns along with their correlates. It also covers some aspects of underemployment. The report gives the results generated at all-India level and some important results for different states/union territories. The tentative titles of the other seven reports planned to be released are:

- (i) *Informal Sector and Conditions of Employment in India: 2009 – 10*
- (ii) *Employment and Unemployment situation among Social Groups in India: 2009 – 10*
- (iii) *Status of Education and Vocational Training in India: 2009 – 10*
- (iv) *Participation of Women in Specified Activities along with Domestic Duties: 2009 - 10*
- (v) *Employment and Unemployment situation in Cities and Towns in India: 2009 – 10*
- (vi) *Home-based Workers in India 2009-10*
- (vii) *Employment and Unemployment situation among Major Religious groups in India: 2009 – 10.*

---

<sup>2</sup> In Appendix C, the Projected Population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 supplied by RGI Office have been presented along with those projected for 1<sup>st</sup> January 2010 using compound rate of growth. The projections have been given for, male and female, separately, for rural and urban for each State/U.T.

## Chapter Two

### Concepts and Definitions

2.0 The concepts and definitions of some important terms used in the survey and relevant to this report are explained in the following paragraphs.

2.1 **Household:** A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.

2.2 **Age (years):** The age in completed years, as on the date of survey, of the household members were recorded.

2.3 **Land owned by the household as on date of survey:** A piece of land was considered as 'owned by the household' if permanent heritable possession with or without the right to transfer the title was vested in a member or members of the household. Land held in owner-like possession say, under perpetual lease, hereditary tenure, long-term lease for 30 years or more, etc., was also considered as land owned.

2.4 **Land possessed by the household as on date of survey:** The area of land possessed included land 'owned', 'leased in' and 'land neither owned nor leased in' (i.e. encroached) by the household but excluded land 'leased out'. For a piece of land under the possession of the household, if the household did not have the title of ownership and also did not have lease agreement for the use of land transacted, either orally or in writing, such land was considered as 'neither owned nor leased in'. In collecting information regarding land possessed, the actual position as obtained on the date of survey was considered. The 'area of land possessed' did not include the area of land owned, leased-in, etc. by the

servants/paying guests who were considered as normal members of the household, as per the definition of household taken up for the survey.

**2.5 Land cultivated (including orchard and plantation) during July 2008-June 2009:**

Land cultivated (including orchard and plantation) during the agricultural year 2008-2009, i.e., July 2008 to June 2009 was recorded considering cultivation of land from the land 'owned', 'land leased-in' or from 'land neither owned nor leased-in'. Area with field crops and area under orchards and plantations was counted only once in the same year/ season. It may be noted that information on land owned, possessed or cultivated as described above was collected in hectares upto 3 places of decimals.

**2.6 General educational level:** A person was considered as literate if he/she could both read and write a simple message with understanding in at least one language. For all the individuals who were found to be literate, the general level of education was collected in terms of highest level of education successfully completed. Highest level of education successfully completed by each member of the household was decided by considering his/her all general/ technical/ vocational educational level and was recorded in terms of 12 categories viz. (i) not literate, (ii) literate without formal schooling: (a) Education Guarantee Scheme (EGS)/Non-formal Education Courses (NFEC)/ Adult Literacy Centres (AEC), (b) Total Literacy Campaign (TLC), (c) others; (iii) literate but below primary, (iv) primary (v) middle, (vi) secondary, (vii) higher secondary, (viii) diploma/certificate course, (ix) graduate, and (x) postgraduate and above. The criterion for deciding primary, middle, secondary, etc. levels were the same as that has been followed in the concerned states/union territories. The category 'diploma or certificate course' meant diploma or certificate courses in general education, technical education or vocational education, which is below graduation level. Diploma or certificate courses in general education, technical education or vocational education, which is equivalent to graduation level, was considered under the category 'graduate'. Similarly, diploma or certificate courses in general education, technical education or vocational education, which is equivalent to post-graduation level and above were considered under the category 'post-graduate and above'.

**2.7 Technical educational level:** The highest level of technical education successfully completed by each member of the household was recorded in terms of 12 categories viz. (i) no technical education, (ii) technical degree in agriculture / engineering / technology / medicine etc. (iii) diploma or certificate below graduate level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, and (iv) diploma or certificate equivalent to graduate and above level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects. Technical diploma or certificate in 'other subjects' included diploma or certificate in management, applied arts, etc.

**2.8 Status of current attendance in educational institution:** Particulars of current attendance in educational institution were recorded for persons of age below 30 years. It was first ascertained whether the person was currently attending any educational

institutions (government or private) or not. For persons who were not currently attending any educational institutions, reason for not attending viz. (i) *school too far*, (ii) *to supplement household income*, (iii) *education not considered necessary*, (iv) *to attend domestic chores*, and (v) *others*, was recorded. For those who were currently attending any educational institution, the course of study pursued by them was recorded in terms of 23 categories viz. (i) *EGS/NFEC/AEC*, (ii) *TLC*, (iii) *pre-primary (nursery/Kinder garten, etc.)*, (iv) *primary (class I to IV/V)*, (v) *middle*, (vi) *secondary*, (vii) *higher secondary*, (viii) *graduate in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) other subjects; (ix) post graduate and above, (x) diploma or certificate (below graduate level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, (xi) diploma or certificate (graduate level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subject; (xii) diploma or certificate in post graduate and above level*. Persons who were registered for any regular correspondence courses or distance education courses for a stipulated period at the end of which, were allowed to appear in the examination for the course, was also considered as ‘currently attending’. Persons who were awaiting results were also considered as ‘currently attending’.

**2.9 Type of institution:** The type of institution referred to the type of management by which the institution was run. For those who were currently attending any educational institution, the type of institution was recorded in terms of 5 categories viz. (i) *Government*, (ii) *Local body*, (iii) *Private and aided*, (iv) *Private and unaided*, and (v) *not known*. All schools/ institutions run by the State, Central Government, Public Sector Undertakings or Autonomous Organisations, which are completely financed by the Government were treated as government institutions. Schools/ institutions where there was some intervention of government in the management and were mainly financed by the government, were also treated as government institutions. All institutions run by municipal corporations, municipal committees, notified area committees, zilla parishads, panchayat samitis, cantonment boards, etc. were treated as local body institutions. Institutions that were run by an individual or a private organisation and received maintenance grant partly or fully from the Government or local body were considered as private aided institution. Institutions that were managed by an individual or a private organisation and not receiving maintenance grant either from a Government or a local body were considered as private unaided institution.

**2.10 Vocational training:** The main objective of vocational education and training is to prepare persons, especially the youth, for the world of work and make them employable for a broad range of occupations in various industries and other economic sectors. A vocational training was broadly defined as a training, which prepared an individual for a specific vocation or occupation. It aims at imparting training to persons in very specific fields through providing significant ‘hands on’ experience in acquiring necessary skill in the specific vocation or trade, which make them employable or create for them opportunities of self-employment.

2.10.1 **Formal vocational training:** The vocational training that took place in education and training institutions which followed a structured training programme and led to certificates, diplomas or degrees, recognised by State/Central Government, Public Sector and other reputed concerns was considered as formal vocational training. By structured training programme, it was meant that (i) the training programme had a definite title with prescribed syllabus and curriculum and a specified duration of the training, and (ii) the training had some entry level eligibility in terms of education and age.

2.10.2 Non-formal vocational training:

(a) *Hereditary:* The expertise in a vocation or trade is sometimes acquired by the succeeding generations from other members of the households, generally the ancestors, through gradual exposures to such works as are involved in carrying out the profession by their ancestors. The expertise gained through significant ‘hands-on’ experience enables the individual to take up activities in self-employment capacity or makes him employable. These were considered as ‘non-formal’ vocational training’ acquired through ‘hereditary’ sources.

(b) *Self-learning:* The expertise in a vocation or trade when acquired by a person through his/her own effort, without any training under any person or organisation, was considered non-formal vocational training acquired through ‘self-learning’.

(c) *Learning on the job:* The expertise acquired by a person while in employment (current and/or past), either through informal training by the employer or organisation or through the exposure to the type of job that he/she was performing, was considered non-formal vocational training through ‘learning on the job’.

(d) *Other:* ‘Other’ sources included cases where the expertise for a vocation or trade was developed even from the household members or ancestors, provided the said vocation or trade was different from the one relating to their ancestors.

2.11 **Economic activity:** The entire spectrum of human activity falls into two categories – economic activities and non-economic activities. Any activity resulting in production of goods and services that add value to national product was considered as an economic activity for the employment and unemployment survey. Such activities included production of all goods and services for market (i.e. for pay or profit) including those of government services, and, the production of primary commodities for own consumption and own account production of fixed assets.

2.11.1 The full spectrum of economic activities as defined in the UN system of National Accounts was not covered in the definition adopted for the NSS 66<sup>th</sup> round survey of Employment and Unemployment. Production of any good for own consumption is considered as economic activity by UN System of National Accounts but production of only primary goods for own consumption was considered as economic activity by NSSO. While the former considers activities like own account processing of primary products as

economic activities, in the NSS surveys, processing of primary products for own consumption was not considered as economic activity.

2.11.2 The term 'economic activity' as defined in the employment and unemployment survey of NSS 66<sup>th</sup> round, therefore, included:

(i) all the market activities performed for pay or profit which result in production of goods and services for exchange.

(ii) of the non-market activities,

(a) all the activities relating to the primary sector (i.e. industry Divisions 01 to 14 of NIC-2004) which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption

and

(b) activities relating to the own-account production of fixed assets, which include production of fixed assets including construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labourer or a supervisor.

As per the practice followed in earlier rounds, certain activities like prostitution, begging, etc., which though fetched earnings, were not considered as economic activities. Activity status of a person was judged irrespective of the situation whether such activity was carried out illegally in the form of smuggling or not.

2.12 **Activity status:** It is the activity situation in which a person was found participated in economic and non-economic activities during the reference period. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:

- (i) working or being engaged in economic activity (work) as defined above,
- (ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and
- (iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

2.12.1 Identification of each individual in terms of a unique activity status could pose a problem when more than one of the three broad activity statuses listed above were concurrently obtained in a person. In such an eventuality, the identification uniquely under any one of the three broad activity statuses was done by adopting either *the major time* or *priority criterion*. The former was used for classification of persons according to the 'usual activity status' approach and the latter for classification of persons according to the 'current activity status' approach. Each of the three broad activity statuses was further sub-divided into several detailed activity categories. If a person categorised as engaged in economic activity by adopting one of the two criteria mentioned above was found to be pursuing more than one economic activity during the reference period, the appropriate detailed activity status code was connected to that activity in which relatively long time had been spent. A similar procedure was adopted for assigning detailed activity code for persons categorised as engaged in non-economic activity and pursuing more than one non-economic activities.

2.12.2 The detailed activity statuses under each of the three broad activity statuses (viz. 'employed', 'unemployed' and 'not in labour force') and the corresponding codes used in the survey are given below:

<u>code</u>	<u>description</u>
<b>working (or employed)</b>	
<i>self-employed</i>	
11	worked in household enterprises (self-employed) as own-account worker
12	worked in household enterprises (self-employed) as an employer
21	worked in household enterprises (self-employed) as helper
<i>regular wage/ salaried employee</i>	
31	worked as regular wage/salaried employee
<i>casual labour</i>	
41	worked as casual wage labour in public works other than Mahatma Gandhi NREG public works
42	worked as casual wage labour in Mahatma Gandhi NREG public works
51	worked as casual wage labour in other types of works
61	did not work owing to sickness though there was work in household enterprise
62	did not work owing to other reasons though there was work in household enterprise
71	did not work owing to sickness but had regular salaried/wage employment
72	did not work owing to other reasons but had regular salaried/wage employment
<b>not working but seeking/available for work (or unemployed)</b>	
81	sought work or did not seek but was available for work (for usual status approach)
81	sought work (for current weekly status approach)
82	did not seek but was available for work (for current weekly status approach)

**neither working nor available for work (or not in labour force)**

- 91 attended educational institutions
- 92 attended to domestic duties only
- 93 attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use
- 94 rentiers, pensioners, remittance recipients, etc.
- 95 not able to work owing to disability
- 97 others (including beggars, prostitutes, etc.)
- 98 did not work owing to sickness (for casual workers only)
- 99 children of age 0-4 years

It may be noted that codes 61, 62, 71, 72, 82 and 98 were applicable for current weekly status and current daily status approaches only. Moreover, activity status code 41 in the usual status is used for casual wage labour in all types of *public works*, whereas in the current activity status, code 41 is for casual wage labour in *public works* other than MGNREG public works and code 42 is for casual wage labour in MGNREG public works.

**2.13 Workers (or employed):** Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained themselves from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers. Relevant activity status codes 11 to 72 were assigned for workers. Workers were further categorized as *self-employed* (relevant activity status codes: 11, 12, 21, 61, 62), *regular salaried/wage employee* (relevant activity status codes: 31, 71, 72), and *casual wage labour* (relevant activity status codes: 41, 42 and 51).

**2.14 Seeking or available for work (or unemployed):** Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those 'seeking or available for work' (or unemployed). Activity status codes 81 or 82 were assigned for unemployed.

**2.15 Labour force:** Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons with activity status codes 11 – 82 constituted the labour force.

**2.16 Not in labour force:** Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'not in labour force'. Persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labourers not working due to sickness. Activity

status codes 91-95, 97 and 98 were assigned for persons belonging to category 'not in labour force'. For the purpose of this report, status code 99 was assigned to children of age 0-4 years.

2.17 **Self-employed:** Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were treated as self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (decide how, where and when to produce) and *economic independence* (in respect of choice of market, scale of operation and finance) for carrying out their operation. The remuneration of the self-employed consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise. The combined remuneration is wholly determined by the revenue from sales after netting out value of purchased inputs used in production.

2.17.1 *Categories of self-employed persons:* Self-employed persons were categorised as follows:

- (i) **own-account workers:** those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise;
- (ii) **employers:** those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour; and
- (iii) **helpers in household enterprise:** those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related person living in the same household in running the household enterprise.

2.18 **Regular wage/salaried employee:** These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

2.19 **Casual wage labourer:** A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labourer.

2.20 **Public works:** 'Public works' were those activities which were sponsored by Government or Local Bodies, and which covered local area development works like

construction of roads, dams, bunds, digging of ponds, etc., as relief measures, or as an outcome of employment generation schemes under the poverty alleviation programme such as *Mahatma Gandhi National Rural Employment Guarantee* (MGNREG) public works, *Sampoorna Grameen Rozgar Yojana* (SGRY), *National Food for Work Programme* (NFFWP), etc. The coverage of schemes under 'public works' was restricted to those schemes through which the Government generated wage employment under poverty alleviation programme, or relief measures. The types of works that were generally undertaken through these schemes, were watershed development, drought proofing, land levelling, flood control, laying pipes or cables, sanitation, water harvesting, irrigation canal, development of orchard, road construction, building construction / repair, running crèche, etc. To distinguish between '*public works*' and works not classifiable as '*public works*', some broad characteristics of '*public work*' were identified, viz. the primary objective is generation of wage employment and poverty alleviation, and creation of community asset as an outcome in achieving those main objectives. It is to be noted that the existing activity status code 41 (casual wage labour in public works) was split into two codes for assigning activity status codes as per current daily activity status and current weekly activity status, as follows:

- (i) worked as casual wage labour in public works other than Mahatma Gandhi National Rural Employment Guarantee (MGNREG) public works – 41
- (ii) worked as casual wage labour in Mahatma Gandhi National Rural Employment Guarantee (MGNREG) public works – 42

*However, in the usual activity status, code 41 was used for casual wage labour in public works, which included all types of public works and code 42 was not applicable in the usual activity status.*

**2.21 Different approaches followed to determine activity status:** The persons surveyed were classified into various activity categories on the basis of the activities pursued by them during certain specified reference periods. There were three reference periods for this survey. These are: (i) one year (ii) one week and (iii) each day of the reference week. Based on these three periods, three different measures of activity status are arrived at. These are termed respectively as usual status, current weekly status and current daily status. The procedures adopted to arrive at the usual status, current weekly status and current daily status are elucidated below.

**2.21.1 Usual principal activity status:** The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively long time (i.e. major time criterion) during the 365 days preceding the date of survey is considered as the *usual principal activity status* of the person. To decide the usual principal activity of a person, first a two stage dichotomous-classification was followed for determining the broad usual principal activity status (employed or unemployed or not in labour force) of the person. At the first

stage, persons were first categorised as those in the *labour force* (either employed or unemployed) and those *not in the labour force* depending on the major time spent during the 365 days preceding the date of survey. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work' (*not in the labour force*). At the second stage, for persons belonging to the labour force, the broad activity status of either 'working' (*employed*) or 'not working but seeking and/or available for work' (*unemployed*) was ascertained based on the same criterion viz. relatively long time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively long time spent on such activities. In terms of activity status codes, codes 11-51 were assigned to persons classified as workers and codes 91-97 to those not in the labour force. In the usual status approach, a single code 81 was assigned to persons seeking or available for work (unemployed persons) while two separate codes 81 (sought work) and 82 (did not seek but was available for work) were assigned to unemployed persons according to current weekly status and current daily status approach.

**2.21.2 Usual subsidiary economic activity status:** A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Activity status codes 11 to 51 only were used for the subsidiary economic activity performed by a person. It may be noted that engagement in work in subsidiary capacity may arise out of the two following situations:

- (i) a person may be engaged in a relatively long period during the last 365 days in some economic (non-economic) activity and for a relatively minor period, which is not less than 30 days (not necessarily for a continuous period), in another economic activity (any economic activity). The economic activity, which was pursued for a relatively minor period *but not simultaneously with principal activity*, was considered as his/her subsidiary economic activity.
- (ii) a person may be pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for a relatively short time in a subsidiary capacity. The economic activity, which was pursued for a relatively short time, was considered as his/her subsidiary economic activity.

**2.21.3 Usual activity status considering principal and subsidiary status taken together:** The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or

in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

**2.21.4 Current weekly activity status:** The current weekly activity status of a person is the activity status obtaining for a person during a reference period of 7 days preceding the date of survey. It is decided *on the basis of a certain priority cum major time criterion*.

2.21.4.1 According to the *priority criterion*, the status 'working' gets priority over the status 'not working but seeking or available for work' that, in turn, gets priority over the status 'neither working nor available for work'. A person was considered working (or employed) if he/she, while pursuing any economic activity, had worked for at least one hour on at least one day during the 7 days preceding the date of survey. A person was considered 'seeking or available for work (or unemployed)' if, during the reference week, no economic activity was pursued by the person but he/she made efforts to get work or had been available for work any time during the reference week though not actively seeking work in the belief that no work was available. A person who had neither worked nor was available for work any time during the reference week was considered as engaged in non-economic activities (or not in labour force).

2.21.4.2 After deciding the *broad current weekly activity status* of a person on the *basis of 'priority' criterion*, the *detailed current activity status* was then decided *on the basis of 'major time' criterion if that person pursued multiple economic activities*. The current weekly activity status of a person could be any of the valid codes within 11 to 98. Of these codes, 11 to 72 pertained to workers, 81 to 82 for unemployed and 91 to 98 for persons not in the labour force.

**2.21.5 Current daily activity status:** The activity pattern of the population, particularly in the informal sector, is such that during a week, and sometimes, even during a day, a person could pursue more than one activity. Moreover, many people could even undertake both economic and non-economic activities on the same day of a reference week. The current daily activity status for a person was determined on the basis of his/her activity status on each day of the reference week *using a priority-cum-major time criterion* (day to day labour time disposition). Time disposition was recorded for every member of the sample households. This involved recording of different activities pursued by the members along with the time intensity in quantitative terms for each day of the reference week. The different activities were identified and recorded in terms of 'activity status' and 'industry' codes for persons in urban areas and 'activity status', 'industry' and 'operation' codes for persons in rural areas. The description (and codes used) of current daily activity statuses is the same as those of current weekly activity status. The terms 'industry' and 'operation' are explained later. The following points were considered for assigning the time intensity and determining the current daily status of a person:

- i) Each day of the reference week was looked upon as comprising either two 'half days' or a 'full day' for assigning the activity status. For recording time disposition for activities pursued by a person in a day, an intensity of 1.0 was given against an activity that was done for 'full day' and an intensity of 0.5 against the activity which was done for 'half day'.
- ii) A person was considered 'working' (employed) for the full day if he/she had worked for 4 hours or more during the day.
- iii) If a person was engaged in more than one of the economic activities for 4 hours or more on a day, he/she was assigned two out of the various economic activities on which he/she devoted relatively long time on the reference day. In such cases, an intensity of 0.5 was given for each of these two economic activities.
- iv) If the person had worked for 1 hour or more but less than 4 hours, he/she was considered 'working' (employed) for half-day and 'seeking or available for work' (unemployed) or 'neither seeking nor available for work' (not in labour force) for the other half of the day depending on whether he was seeking/available for work or not.
- v) If a person was not engaged in any 'work' even for 1 hour on a day but was seeking/available for work for 4 hours or more, he was considered 'unemployed' for the entire day. But if he was 'seeking/available for work' for more than 1 hour and less than 4 hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day.
- vi) A person who neither had any 'work' to do nor was available for 'work' even for half a day was considered 'not in labour force' for the entire day and was assigned one or two of the detailed non-economic activity statuses depending upon the activities pursued during the reference day.

2.21.5.1 The current weekly status of a person is derived from the intensities assigned for the daily activities performed by a person during the 7 days of the reference week.

**2.22 Industry and occupation of the work activity:** For the employed persons, to record the industry of work, 5-digit classification of NIC-2004 was used and to record the type of occupation, 3-digit classification of NCO-2004 was used. To identify certain category of workers under Division 95 (Private households with employed persons) of NIC-2004, eight additional codes were used in the survey viz., housemaid /servant (95001), cook (95002), gardener (95003), gatekeeper/chowkidar/watchman (95004), governess/baby-sitter (95005), tutor (95006), driver (95007) and 'others' (95009). Industry Divisions 96 (except the activities covered in other Industry Divisions) and 97 of NIC-2004 were not used for the purpose of collection of information on industry of activity. The entire activities described under Division 97 are not under the production boundary of Indian

System of National Accounts (ISNA) and are not also considered as economic activities in the NSS survey. A part of the activities under Division 96 (viz., hunting and gathering, farming and the production of shelter), which is within the production boundary of ISNA, is also considered as economic activities in NSS surveys and the industry of these undifferentiated activities were judged in the usual manner as done now, by considering the industry in which major time was spent. Thus, this part of activities got classified against the respective industries under divisions 01-14 relating to the primary sector or 45 relating to construction. The rest of Division 96 is outside the production boundary of ISNA and was not considered as economic activity for the NSS survey. Broad structure of NIC-2004 (Sections and Divisions) and description of occupation divisions/sub-divisions of NCO-2004 have been presented at the end of this Chapter in Annexure I and Annexure II, respectively.

**2.23 Operation:** This was the type of work performed by a person during a reference period. It could be manual or non-manual and could pertain to activities in agricultural or non-agricultural sector. Operation was combined with activity status and industry corresponding to the work performed. Information regarding the type of operation was collected *only for rural areas* and related to *current status only*. The different types of operations came under four categories. Ploughing, sowing, transplanting, weeding, harvesting and other cultivation activities fell under the category *manual work in cultivation*. Against the category *manual work in other agricultural activities* were the following types: forestry, plantation, animal husbandry, fisheries and other agricultural activities. *Manual work in non-agricultural activities* constituted the third category. The last category viz. *non-manual work* comprised two broad types – (i) in ‘cultivation’ and (ii) in ‘other than cultivation’. It may be noted that for ‘regular salaried/wage employees’ on leave or on holiday, the ‘operation’ related to their respective function in the work or job from which he/she was temporarily off. Similarly, for persons categorised as ‘self-employed’ but not working on a particular day in spite of having work on that day, the operation related to the work that he/she would have done if he/she had not enjoyed leisure on that day.

**2.24 Cultivation:** All activities relating to production of crops and related ancillary activities were considered as cultivation. Growing of trees, plants or crops as plantation or orchards (such as rubber, cashew, coconut, pepper, coffee, tea etc.) were not considered as cultivation activities for the purpose of this survey. In general, the activities covered under NIC-2004 sub-classes 01111, 01112, 01113, 01115, 01119, 01121, 01122 and 01135 (excepting plantation of pepper and cardamom) were considered as cultivation.

**2.25 Manual work:** A job essentially involving physical labour was considered manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education were not termed as 'manual work'. On the other hand, jobs not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) background

were treated as 'manual work'. Thus, engineers, doctors, dentists, midwives, etc., were not considered manual workers even though their jobs involved some amount of physical labour. But, peons, chowkidars, watchman, etc. were considered manual workers even though their work might not involve much physical labour. A few examples of manual workers are cooks, waiters, building caretakers, sweepers, cleaners and related workers, launderers, dry cleaners and pressers, hair dressers, barbers, beauticians, watchmen, gate keepers, agricultural labourers, plantation labourers and related workers.

**2.26 Rural labour:** Manual labour working in agricultural and /or non-agricultural occupations *in return for wages* paid either in cash or in kind (excluding exchange labour) and *living in rural areas*, was taken as rural labour.

**2.27 Agricultural labour:** A person was considered as engaged as agricultural labour, if he/she followed one or more of the following agricultural occupations in the capacity of a wage paid manual labour, whether paid in cash or kind or both:

- (i) farming,
- (ii) dairy farming,
- (iii) production of any horticultural commodity,
- (iv) raising of livestock, bees or poultry,
- (v) any practice performed on a farm as incidental to or in conjunction with farm operations (including forestry and timbering) and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm produce.

Working in fisheries was *excluded* from agricultural labour. Further, 'carriage for transportation' referred *only to the first stage of the transport* from farm to the first place of disposal.

**2.28 Wage paid-manual labour:** A person who did manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) was considered as a wage paid manual labour. Salaries were also counted as wages. A person who was self-employed in manual work was *not treated* as a wage paid manual labour.

**2.29 Nominal work:** When a person worked for a total duration of 1 to 2 hours in a day, it was considered as a day with nominal work for the person. In the day-to-day labour time disposition of the reference week, such a day's work was considered as 'half-days' work. Therefore, for a person, number of days with nominal work is a sub-set of the number of days worked with 0.5 intensity.

**2.30 Wage and salary earnings:** Information on wage and salary earnings was collected separately for each of the wage/salaried work recorded for a person in a day. Here, earnings refer to the wage/salary income (and not total earnings taking into consideration of all other activities done) received/receivable for the wage/salaried work done during the reference week by a wage/salaried employee and casual labourer. The wage/ salary

received or receivable may be in cash or kind or partly in cash and partly in kind. While recording the earnings following conventions were followed.

- i) The wages in kind were evaluated at the current retail price.
- ii) Bonus and perquisites such as free accommodation, reimbursement of expenditure for medical treatment, free telephones, etc. evaluated at the cost of the employer or at retail prices and duly apportioned for the reference week were also included in earnings.
- iii) Amount receivable as 'over-time' for the additional work done beyond normal working time was excluded.

It may be noted that in the survey, at most two activities could be recorded for a person in a day. Therefore, it is possible that a person might have carried out two or more wage/salaried activities in a day, but only one activity or two activities at the most, depending upon the time spent on those activities, was recorded. In that case, the wage/salary income only from that activity(s) was collected and recorded separately, and not the total income of the person from all the activities done for the entire day.

**2.31 *Earning from self-employment:*** To have some idea about earnings from self-employment, perception of the self-employed persons (self-employed either in the usual principal status or usual subsidiary status) regarding their current earnings from self-employment was recorded. Earning of the self-employed person was judged considering all his/ her farm and non-farm businesses together in which he/ she was engaged in self-employment capacity during the last 365 days either in principal status or subsidiary status or in both the statuses. Information was collected on whether their current earnings from self-employment were regarded as remunerative or not. The current earnings from self-employment was regarded as remunerative if total earnings from self-employment was able to meet the desired level of income of the individual under the existing situation in respect of type of activity, scale of operation of the business(s), market condition, location of the business, etc. If the actual earnings from the self-employment activities fell short of the desired level, the employment was not regarded as remunerative. From all the self-employed members of the household, desired level of earnings in a month from all self-employment activities was also recorded in terms of codes.

**2.32 *Present spell of unemployment:*** The present spell of unemployment meant the continuous period for which a person remained unemployed starting from the day the person became unemployed to the survey date. For the new entrants into the labour force, the present spell meant the entire length of unemployment till the date of survey, starting from the day such person joined in the labour force. For those who had any previous employment, the present spell meant the period starting from the day they were seeking or available for work after losing their last employment to the survey date.

**2.33 Approximate number of months without work:** The months without work were not necessarily continuous. The 'approximate number of months without work' included those months in which a person was either unemployed or was not in the labour force. For deciding the number of months without work, each of the 12 months was considered separately and if, in a month the period without work was reported to be 15 days or more, it was considered as a month without work.

**2.34 Existence of union/association in the activity:** Union/association meant any registered/recognised body whose membership is open to a section of those engaged in a specific activity or trade and whose main objective is to look into the interests of its members. Thus, besides the usual trade unions, union/association covered the association of owners, self-employed persons, etc.

**2.35 Household type:** On the basis of the sources of the household's income during the last 365 days preceding the date of survey, the household types were assigned. For this purpose, only the household's income from economic activities was considered. The income of servants and paying guests was not taken as the income of the household. For the **rural** areas, household types were as follows:

self-employed in non-agriculture;    agricultural labour;    other labour;  
self-employed in agriculture;        others.

For **urban** areas, the household types were as follows:

self-employed; regular wage/salary earning; casual labour ; others.

**2.36 Procedure for determining household industry and occupation:** To determine the household principal industry and occupation, the general procedure followed was to list all the occupations pertaining to economic activities pursued by the members of the household excluding those employed by the household and paying guests (who in view of their staying and taking food in the household were considered as its normal members) during the one year period preceding the date of survey, no matter whether such occupations were pursued by the members in their principal or subsidiary (on the basis of earnings) capacity. Out of the occupations listed that one that fetched the maximum earnings to the household during the last 365 days preceding the date of survey was considered as the principal household occupation. If one or more members of the household pursued the household occupation in different industries, the particular industry out of all the different industries corresponding to the principal occupation, which fetched the maximum earnings, was considered as the principal industry of the household.

**2.37 Procedure for collecting monthly per capita consumer expenditure (MPCE):** For collection of data on total expenditure of the household from employment and unemployment schedule (Schedule 10), a worksheet was used in the Schedule 10 of the 66<sup>th</sup> round. The approximate value of consumer expenditure obtained through the

worksheet has been used for studying employment and unemployment characteristics by different levels of living of the household members. The worksheet contained 36 different components of household consumer expenditure. Depending upon the type of item, either of the two reference periods viz., 30 days and 365 days, was used to record consumption of different groups of items. The items of consumption were classified into four groups and three different approaches viz (a) consumption approach, (b) expenditure approach and (c) first-use approach, were followed for defining consumption of items. The different groups were (i) food (other than 'cooked meals'), pan, tobacco & intoxicants and fuel & light, (ii) cooked meals, miscellaneous goods and services including education, medical, rent, taxes and cess, (iii) clothing and footwear and (iv) durable goods. The procedure followed for defining consumption of the four groups were (i) consumption approach, (ii) expenditure approach, (iii) first-use approach and (iv) expenditure approach, respectively. The definition of household consumer expenditure and the procedure for evaluating that was the same for both Schedule 10 and Schedule 1.0 (Household Consumer Expenditure).

### 2.38 Conceptual Framework of Key Employment and Unemployment Indicators

2.38.1 **Labour force participation rate (LFPR):** LFPR is defined as the number of persons/ person-days in the labour force per 1000 persons /person-days

2.38.2 **Worker Population Ratio (WPR):** WPR defined as the number of persons/person-days employed per 1000 persons/person-days.

2.38.3 **Proportion Unemployed (PU):** It is defined as the number of persons/person-days unemployed per 1000 persons/person-days.

2.38.4 **Unemployment Rate (UR):** UR is defined as the number of persons/person-days unemployed per 1000 persons/person-days in the labour force (which includes both the employed and unemployed).

2.38.5 **Usual status adjusted UR:** Unemployment rates for the reference period of 365 days, i.e., in usual *principal status* (*ps*) approximates an indicator of chronically unemployed. Some of the persons categorised as unemployed according to the *usual principal activity status* might be working in a subsidiary capacity. Therefore, another estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period can be derived. The former is called the usually unemployed according to the *principal status* (*ps*) and the latter, the usually unemployed excluding employed in *subsidiary status* or *usual status adjusted* i.e., *us (adjusted)*, which would conceptually be lower than the former.

2.38.6 The architecture of key employment-unemployment indicators are given below in tabular form:

activity profile*		key indicators
activity status (code)	category of persons	
11, 12, 21, 31, 41, 42, 51, 61, 62, 71, 72	workers	<b>1. Labour Force Participation Rate (LFPR):</b> $\frac{\text{no. of employed persons} + \text{no. of unemployed persons}}{\text{total population}} * 1000$
81, 82	unemployed	
91, 92 93, 94, 95, 97, 98	not in labour force	<b>2. Worker Population Ratio (WPR):</b> $\frac{\text{no. of employed persons}}{\text{total population}} * 1000$ <b>3. Proportion Unemployed (PU):</b> $\frac{\text{no. of unemployed persons}}{\text{total population}} * 1000$ <b>4. Unemployment Rate (UR):</b> $\frac{\text{no. of unemployed persons}}{\text{no. of employed persons} + \text{no. of unemployed persons}} * 1000$
Note: *: 1. Activity status codes, 42, 61, 62, 71, 72, 82, and 98 are used only in <i>the current status</i> (in <i>CWS</i> and <i>CDS</i> ) and the remaining activity status codes are used in both <i>usual</i> and in <i>current status</i>		

## **Annexure I**

### **BROAD STRUCTURE OF NIC 2004** **(SECTIONS & DIVISIONS)**

#### **Section A: Agriculture, hunting and forestry**

Division 01: Agriculture, hunting and related service activities

Division 02: Forestry, logging and related service activities

#### **Section B: Fishing**

Division 05: Fishing, aquaculture and service activities incidental to fishing

#### **Section C: Mining and quarrying**

Division 10: Mining of coal and lignite; extraction of peat

Division 11: Extraction of crude petroleum and natural gas; service activities incidental to oil and gas extraction, excluding surveying

Division 12: Mining of uranium and thorium ores

Division 13: Mining of metal ores

Division 14: Other mining and quarrying

#### **Section D: Manufacturing**

Division 15: Manufacture of food products and beverages

Division 16: Manufacture of tobacco products

Division 17: Manufacture of textiles

Division 18: Manufacture of wearing apparel; dressing and dyeing of fur

Division 19: Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, harness and footwear

Division 20: Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials

Division 21: Manufacture of paper and paper products

Division 22: Publishing, printing and reproduction of recorded media

Division 23: Manufacture of coke, refined petroleum products and nuclear fuel

Division 24: Manufacture of chemicals and chemical products

Division 25: Manufacture of rubber and plastics products

<sup>1</sup> For collection of information on occupation of the workers and the principal household occupation, 3-digit code of NCO-2004 was used in NSS 66<sup>th</sup> round and in the quinquennial rounds, prior to NSS 66<sup>th</sup> round, 3-digit code of NCO-1968 was used. It may be noted that concordance between 3-digit code of NCO-2004 and NCO-1968 is not possible.

## Chapter Three

### Households and Population

#### 3.0. Introduction

3.0.1 As stated earlier in Chapter One, the NSS 66<sup>th</sup> round survey was conducted during July 2009-June 2010. To study the employment-unemployment situation of a country, it is necessary to look into the socio-economic structure of the households and the demographic pattern of the population of the country during that time. As such, certain information on socio-economic condition of sample households and demographic data pertaining to the surveyed individuals were also collected in this survey. In this chapter, the main findings relating to these aspects have been presented. The estimates are given for India and its constituent states and union territories with an effort to present a more detailed picture at the all-India level. Discussions are mainly centered on the all-India estimates. A comparison with earlier survey results is also done in some cases, at the all-India level.

3.0.2 *Use of estimated aggregates:* Compared to the census population or the projections thereof, population estimates from the NSSO surveys are, in general, on the lower side. This difference arises mainly due to the differences in coverage and methods adopted in NSS in comparison with the census operation. However, the ratios obtained from the survey are expected to be robust. This is why the estimates on employment-unemployment are presented as ratios. To estimate an absolute number in any category, users may apply the survey estimates of ratios to the census population or projections thereof, for that category. However the estimates of aggregates given in the detailed tables in the Appendix A may help to combine the ratios. It may also be noted that as the tables are generally presented as per thousand distributions, the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits.

3.0.3 *Reference period of the estimates:* The estimates presented in the report, in general, refer to the midpoint of the survey period (July 2009– June 2010) of NSS 66<sup>th</sup> round i.e. 01.01.10. The estimates for ‘land cultivated’ have the reference period of the agricultural year 2008-09 i.e. July 2008 –June 2009. It may be noted that the estimates of aggregates given in the detailed tables help only to combine ratios. To arrive at the absolute number in any category, the survey estimates of ratios are to be applied to the projected populations as on 01.01.2010, the mid-point of the 66<sup>th</sup> round survey period (July 2009 to June 2010).

3.0.4 *Major states:* The discussions in the summary findings have mostly been restricted to estimates of the major states though the all-India estimates are based on the data of all the states and union territories. In the state/u.t. tables, placed at the end of the chapters, estimates for all the states and union territories have been presented. It may be noted that the estimates given for smaller states and union territories may not be reliable due to small sample size. The major states are those with population one crore<sup>1</sup> or more as per population census 2001 in respect of rural or urban sector separately. As per this criterion, there are 20 major states in the rural areas and 21 major states in the urban areas. The major states are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Kerala, Madhya Pradesh,

---

<sup>1</sup> 10 million = 1 crore

Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh, Uttarakhand, West Bengal and urban Delhi.

### 3.1 Estimates of Household and Population

3.1.1 Statement 3.1 gives the all India household size and sex ratio over the years from 1977-78 up to 2009-10. It is seen from statement 3.1 that, during 2009-10, the sex- ratio in India was 947 in rural areas and was 909 in urban areas. The average household size for the rural was 4.6, which was a little higher than the urban average of 4.1.

Statement 3.1: Average household size (0.0) and sex ratio over the different NSS surveys					
NSS rounds (survey periods)	rural		urban		all-India
	household size	sex- ratio	household size	sex- ratio	
(1)	(2)	(3)	(4)	(5)	
66 <sup>th</sup> (July 2009- June 2010)	4.6	947	4.1	909	
61 <sup>st</sup> (July 2004- June 2005)	4.8	962	4.3	920	
55 <sup>th</sup> (July 1999- June 2000)	5.0	959	4.5	915	
50 <sup>th</sup> (July 1993- June 1994)	4.9	944	4.4	905	
43 <sup>rd</sup> (July 1987- June 1988)	5.1	948	4.7	912	
38 <sup>th</sup> (January – December 1983)	5.1	963	4.7	905	
32 <sup>nd</sup> (July 1977- June 1978)	5.2	959	4.9	904	

3.1.2 *Changes over the years:* It is seen from the statement 3.1 that the sex-ratio decreased in 2009-10 over 2004-05 – more so in the rural areas than in the urban areas. This is in conformity with the trend seen between 1983 and 1993-94 in the rural areas, during which period, the ratio declined gradually. In urban areas there is no uniform pattern in the sex-ratio since 1983. As regards the household size, the estimate was marginally lower than that in 2004-05, both in the rural and urban areas.

### 3.2 Age Distribution of Population

3.2.1 Age and sex are two important demographic characteristics. The distribution of population by age-group and sex as background information could improve the understanding of the results on employment-unemployment. In Statement 3.2, the distribution of the rural and urban population by 5-year age-groups is presented for males and females separately. Comparable results based on the 50<sup>th</sup> round (1993-94), 55<sup>th</sup> round (1999-2000) and 61<sup>st</sup> round (2004-05) surveys are also presented in this statement.

3.2.2 *Age distribution:* During the five years separating the present survey from the last quinquennial one, a shift among the younger groups in the population is visible. A slight decline in the share of the youngest age-group (0-4 years) as well as of the children aged 5-9 years in both rural and urban areas are noticeable for all the categories of persons. The corresponding distributions for different states and union territories are given in Statement 3.2.1 for each sex separately for rural and urban areas.

Statement 3.2: Per 1000 distribution of population by five year age groups during 1993-94, 1999-2000, 2004-05 and 2009-10

age group (years)	all-India							
	male				female			
	1993-94	1999-2000	2004-05	2009-10	1993-94	1999-2000	2004-05	2009-10

all	1000	1000	1000	1000	1000	1000	1000	1000

3.2.3 Information on sex of the head of household was collected in the survey. Number of female-headed households per 1000 households along with the sex-ratio and household size obtained for such female-headed households during 1993-94, 1999-2000, 2004-05 and 2009-10 are shown in Statement 3.3 for all-India. It is observed that during 2009-10, about 12 per cent of households of rural as well as urban India were headed by females. Compared to all households, they had, on an average, a relatively small household size and a much higher sex-ratio. As in the case for all households, for female-headed households too, the household size seems to have slightly decreased in between 2004-05 and 2009-10 in both rural and urban areas.

3.2.4 *State-level results:* The corresponding estimates as obtained for each state and union territory in the present survey are presented in Statement 3.3.1. Among the major states, the proportion of female-headed households was the highest in Kerala in the rural areas (25 per cent) and in urban areas it was the highest in Kerala and Himachal Pradesh (24 per

cent each). The all-India feature of smaller household size (rural: 3.2, urban: 3.1) and higher sex-ratio in female-headed households (rural: 1785, urban: 1808) as compared to all households is noticeable in the major states.

Statement 3.3: Number of female headed households, household size and sex-ratio for the female headed households during 1993-94, 1999-00, 2004-05 and 2009-10

characteristics of the female headed hhs	all-India

sex-ratio	1861	1820	1771	1785	1706	1721	1599	1808

### 3.3 Household Type

3.3.1 The nature and type of work from which a household derives its major income is an important indicator of the activity pattern of its members. In this survey, depending on the economic activity of the members of the household during the 365 days preceding the date of survey the major income of the household was worked out. On the basis of the source of major income, sample households were categorised into different *household types*. The distribution of households and the corresponding population by *household type* for all-India is given in Statement 3.4.

Statement 3.4: Per 1000 distribution of households and population by household type during 1993-94, 1999-00, 2004-05 and 2009-10

household type	all-India							
	households				population			
	1993 - 94	1999- 00	2004- 05	2009- 10	1993 - 94	1999- 00	2004- 05	2009 - 10

others	112	137	116	122	95	114	88	94
all	1000	1000	1000	1000	1000	1000	1000	1000
<b>urban</b>								
self-employed	337	344	375	347	388	393	433	406
regular wage/salaried	434	417	413	397	428	402	396	385
casual labour	132	140	118	134	129	141	118	142
others	97	97	94	121	55	63	52	66
all	1000	1000	1000	1000	1000	1000	1000	1000

3.3.2 Statement 3.4 reveals that during 2009-10, members of about 47 per cent of the rural households had recourse to *self-employment*. They constituted nearly 52 per cent of the rural population. Another 39 per cent of the rural population belonged to *rural labour* households. Such households constituted 40 per cent of all rural households. Among urban households, *regular wage/salaried employment* was the mainstay of 40 per cent of households with a share of 39 per cent of urban population. Nearly 35 per cent of the urban households had income mainly from *self-employment*. While, in rural areas, the proportion of households depending on *self-employment* had increased by 6 percentage points between 1999-2000 and 2004-05, there has been a decrease in the proportion by 5 percentage points between 2004-05 and 2009-10. In the urban areas also an increase of 4 percentage points was noticed between 1999-00 and 2004-05 while the proportion of self employed households decreased by 3 percentage points between 2004-05 and 2009-10. On the other hand, the proportion of households depending mainly on casual employment declined by 2 percentage points between 1999-2000 and 2004-05, while it increased by 1 percentage point between 2004-05 and 2009-10. The proportion of households depending mainly on regular wage/salaried employment decreased by 1 percentage point during the period 2004-05 and 2009-10.

3.3.3 *State-wise distribution*: The distributions of households and persons by household type for different states and union territories are given in Statements 3.4.1 and 3.4.2 respectively, for both the rural and urban areas.

3.3.4 *Rural areas*: In the rural areas, *self-employment* was the major activity of the households in many of the major states. Among the major states, the proportion of *self-employed* households was highest in Assam (66 per cent), followed by Rajasthan (65%) and Uttar Pradesh (61 per cent).

3.3.5 *Urban areas*: *Regular wage/salaried employment* was the main activity of urban households in most of the major states. About 52 per cent of the urban households in Maharashtra were found to depend on *regular wage/salaried employment* followed by Haryana (50 per cent), Jammu & Kashmir (44 per cent), Gujarat (43 per cent), Punjab and Himachal Pradesh (42 per cent each) and Assam (41 per cent). In the urban areas, among the major states, the percentage of *self-employed* households was higher in Bihar (50 per cent), Uttar Pradesh (44 per cent), Rajasthan (41 per cent) than those in other major states. The percentage of *casual labour* households was much higher in Kerala (25 per cent) and Tamil Nadu (23 per cent) than those in other major states.

### 3.4 Households and Particulars of Land

3.4.1 In rural India, a majority of the households depend mainly on agricultural activities and thus land is the main source of employment for their members. Hence, it is important to study certain aspects of land viz. the particulars of its ownership, possession and cultivation by the rural households. These aspects are discussed one by one in the following paragraphs.

3.4.2 *Ownership of land*: So far as the ownership of land is concerned, information on size of land owned as on the date of survey was collected in the survey. In Statement 3.5, per thousand distributions of rural households by household type for each size class of land owned has been presented.

3.4.2.1 It is observed from Statement 3.5 that 3 per cent of the households belonged to the highest land owned class (4.01 hectares or more) and 5 per cent of the households belonged to the lowest land owned class (less than 0.001 hectares including not reported

cases of land owned). The land owned class 0.005 - 0.40 hectares had the highest share of households (nearly 47 per cent). From the distributions of different household types in the land owned classes, it is seen that among the households belonging to higher land owned classes, the share of *self-employed* households were prominent: in the land owned class 0.41 – 1.00 hectares, 67 per cent were *self-employed*; in the class 1.01-2.00 hectares, it was 81 per cent; in the class 2.01-4.00 hectares, nearly 90 per cent and in the highest land owned class (4.01 hectares or more), the share of *self-employed* households was 91 per cent. On the other hand, the shares of *rural labour* households were higher in the lower land owned classes except in the lowest class: in the land owned class 0.005 – 0.40 hectares nearly 54 per cent households were *rural labour* and in the land owned class 0.01 – 0.004 hectares, it was 68 per cent, while in the lowest land owned class, the share of *rural labour* household was 37 per cent.

Statement 3.5: Per thousand distribution of rural households by household type for each size class of land owned

size class of land owned (hectares)	per 1000 distribution of households	household type						rural	
		self employed			rural labour			others	all
		agri-culture	non-agricul-ture	all	agricul-tural labour	other labour	all		
								(3)	(4)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
0.000	53	53	136	189	185	189	373	438	1000
0.001 - 0.004	105	29	163	192	447	231	678	130	1000
0.005 – 0.40	467	124	210	334	332	204	536	130	1000
0.41 – 1.00	174	555	112	666	186	72	258	76	1000
1.01 – 2.00	103	732	78	811	93	37	130	60	1000
2.01 – 4.00	69	849	52	902	31	18	49	49	1000
≥ 4.01	30	843	65	908	24	23	47	44	1000
all	1000	319	155	474	256	148	404	122	1000

Note: 1. The households with size class of land owned '0.000' hectares comprise households owned land less than 0.001 hectares as well as households which reported no information on land owned.

3.4.2.2 *State level distribution*: The distribution of rural households by size classes of land owned for each state and union territory is given in Statement 3.5.1. The statement shows that among the major states, the proportion of rural households owning land from 0.001 hectares to 1.00 hectares was as high as 93 per cent in West Bengal, 89 per cent in Jammu & Kashmir, 88 per cent each in Bihar and Kerala, and 84 per cent in Jharkhand. However, in some major states, proportion of households owning land with size exceeding 1.00 hectare was quite substantial – it was 47 per cent in Rajasthan and 42 per cent in Madhya Pradesh as against about 20 per cent at the all-India level.

3.4.3 *Land possessed*: Statement 3.5.2 gives the average area of land possessed per household and the distribution of the households by size class of land possessed for each State/u.t.. As seen from the statement, in 2009-10, the average area of land possessed as on the date of survey by a rural household was 0.65 hectare. The corresponding average for a female-headed household was 0.31 hectares. In rural West Bengal, only 3 per cent of the households were found to possess 1 hectare or more of land and the average land possessed was as low as 0.18 hectare - the lowest among the major states. Among the major states, the average land possessed that were in lower side are – Kerala (0.20 hectare), Tamil Nadu (0.27 hectare), Uttarakhand (0.25 hectare), Bihar (0.31 hectare).

Average land possessed was the highest in Rajasthan (1.81 hectares) followed by Madhya Pradesh (1.32 hectare), Maharashtra (0.99 hectare) and Gujarat (0.92 hectare).

3.4.4 *Land cultivated*: Information on land cultivated during the agricultural year (AY) 2008-09, i.e., July 2008 to June 2009 was collected in the employment-unemployment survey in NSS 66<sup>th</sup> round (July 2009- June 10). The distributions of rural households by size class of land cultivated according to the latest four quinquennial NSS rounds, viz., 66<sup>th</sup> (2009-10), 61<sup>st</sup> (2004-05), 55<sup>th</sup> (1999-2000) and 50<sup>th</sup> (1993-94) have been presented in Statement 3.6.

3.4.4.1 The statement shows that during the agricultural year 2008-09, about 34 per cent of the rural households cultivated land more than 0.40 hectares. It can be seen that between 1993-94 and 2009-10, the distribution of land cultivated has shifted towards the lower size classes, that is, an increasing proportion of households have shifted to the lower size classes.

Statement 3.6: Per 1000 distribution of rural households by size class of land cultivated during the agricultural years 1992-93, 1998-99, 2003-04 and 2008-09

all-India size class of land cultivated (hectares)	agricultural year				rural
	1992-93	1998-99	2003-04	2008-09	
(1)	(2)	(3)	(4)	(5)	
up to 0.40	575	632	621	665	
0.41 – 1.00	171	168	171	155	
1.01 – 2.00	135	112	113	95	
2.01 – 4.00	76	59	65	61	
4.01 & above	43	30	30	25	
all classes	1000	1000	1000	1000	

*Note: The households with size class of land cultivated up to 0.40 hectares comprise households cultivated land less than 0.40 hectares as well as household reported no information on land cultivated.*

3.4.4.2 *State-level distribution*: Based on the present survey, the distribution of rural households by size class of land cultivated for different states and union territories are presented in Statement 3.6.1. The major states where 30 per cent or more of rural households had cultivated land more than 1.00 hectare were Rajasthan (41 per cent), Madhya Pradesh (38 per cent).

### 3.5 Households with Usually Employed Persons (PS +SS) of Age 15 Years and Above

3.5.1 Among the factors contributing to the economic condition of the households is the number of employed persons in the household. Although income depends also on the type of work carried out by the members, the number of employed persons in a household could be taken as a broad indicator of its economic condition. The results giving the distribution of households having at least one member of age 15 years and above by number of usually employed persons of age 15 years and above are presented in Statement 3.7 for both all households and female headed households in all-India. The corresponding results obtained from the 50<sup>th</sup>, 55<sup>th</sup> and 61<sup>st</sup> round surveys have also been presented to observe the changes, if any, over the period 1993-94 to 2009-10.

3.5.2 It is seen from Statement 3.7 that during 2009-10, among the households having at least one member of age 15 years and above, about 5 per cent of the rural households and

10 per cent of the urban households had no usually employed member of age 15 years and above, while about 62 and 38 per cent of rural and urban households respectively had two or more members employed more or less regularly. On the other hand, in the households where the head was a female, the proportion of households with no usually employed member of age 15 years and above, was considerably higher – nearly 22 per cent in the rural areas and 33 per cent in the urban areas of India. It may be further noted that while among all the households only 3 to 4 per cent had ‘only 1 female worker’, among households headed by females, the proportion with ‘only 1 female worker’ was much higher- 33 per cent in rural areas and 23 per cent in urban areas.

3.5.3 *Change since 1993-94*: Statement 3.7 reveals that, in rural India the proportion of households with no worker of age 15 years and above increased from about 3 per cent in 1993-94 to 5 per cent in 1999-2000 and maintained more or less the same level in 2004-05 and 2009-10. In the urban areas, this proportion was almost stable at the level of 8 per cent during 1993-94 to 2004-05 and increased to 10 per cent in 2009-10. Among the female-headed households, in rural areas, this proportion showed an increasing trend– from 17 per cent in 1993-94 to 24 per cent in 2004-05 but in 2009-10 it decreased to 22 per cent. In the urban, the proportion remained static at 26 per cent during 1999-2000 to 2004-05 after an observed fall of 6 percentage points between 1993-94 to 1999-2000 but in 2009-10, it increased to 33 per cent.

Statement 3.7: Per 1000 distribution of households having at least one member of age 15 years and above by number of usually employed (ps+ss) persons of age 15 years and above in those households during 1993-94, 1999-00, 2004-05 and 2009-10

all	1000	1000	1000	1000	1000	1000	1000	1000

3.5.4 *State-level distribution*: The corresponding distributions for different states and union territories based on data of the present survey are presented in Statement 3.7.1. It can be seen that, the same pattern as that noted for all-India is also observed for the major states.

### 3.6 General Education Level of Population

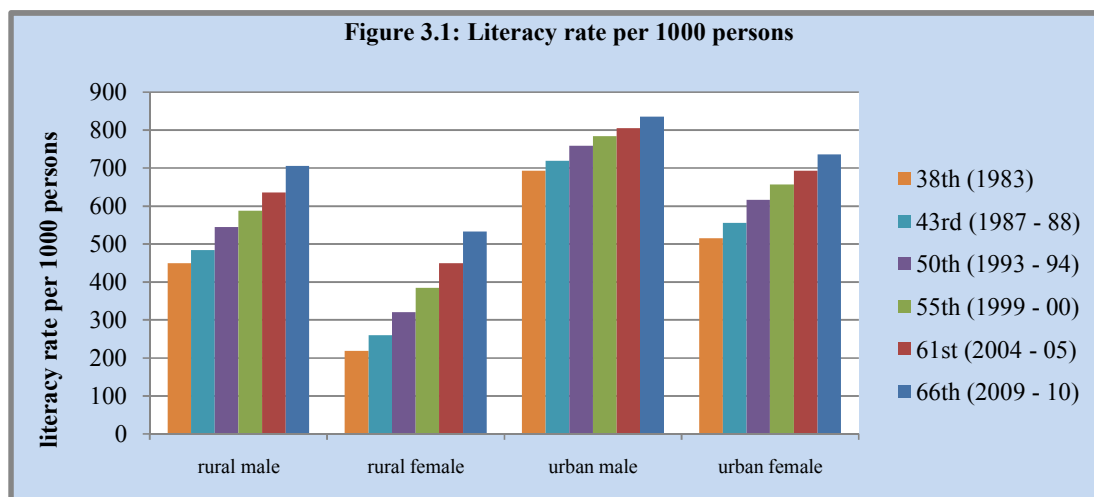

3.6.1 Literacy, together with educational attainment, determines the quality of population and is highly related to one's employment prospects. For the purposes of this survey, a person who could read and write a simple message in any language with understanding was considered a *literate*.

Statement 3.8: Literacy rate (per 1000 persons) by sex and for rural and urban India during 1983 to 2009-10

round (year)	rural		urban		all-India
	male	female	male	female	
(1)	(2)	(3)	(4)	(5)	
66 <sup>th</sup> (2009 - 10)	706	533	836	736	
61 <sup>st</sup> (2004 - 05)	636	450	805	693	
55 <sup>th</sup> (1999 - 00)	588	385	784	657	
50 <sup>th</sup> (1993 - 94)	545	321	759	616	
43 <sup>rd</sup> (1987 - 88)	484	260	719	556	
38 <sup>th</sup> (1983)	449	219	693	515	

*Literates* were further classified according to their levels of educational attainment. Educational attainment determines the quality of a population and one's employment prospect. Thus, it is important to study

the distribution of population by educational attainment (level) before a comprehensive discussion is attempted on employment-unemployment in the subsequent chapters. There is also a need to examine the changes in the literacy rates over time. In Statement 3.8, the literacy rates (number of literates per 1000 persons) by sex as estimated from the 38<sup>th</sup> (1983), 43<sup>rd</sup> (1987 - 88), 50<sup>th</sup> (1993-94), 55<sup>th</sup> (1999-2000), 61<sup>st</sup> (2004-05) and 66<sup>th</sup> (2009-10) round quinquennial surveys on employment and unemployment are presented for rural and urban India. In Figure 3.1, the literacy rates per 1000 persons are presented. It may be mentioned that in the earlier quinquennial surveys, a person who could read and write a simple message in any language was considered as literate. From the 50<sup>th</sup> round onwards, another condition viz. 'with understanding' was added for identifying literates. Over the period 1983 to 2009-10, it is seen that the literacy rate has increased considerably. The increase is more prominent among females than among males – both in rural and urban India. The distribution of persons by broad education level is presented in Statement 3.9 for each sex and rural-urban residency at the all-India level and those for different states and union territories for 2009-10 in Statement 3.9.1. As seen from Statement 3.9.1, there was considerable variation in the proportion of *not-literate* and *educated* (i.e., those with general educational level *secondary and above including diploma/ certificate course*) over the major states.

Statement 3.9: Per 1000 distribution of persons by general educational level during 1993-94, 1999-2000, 2004-05 and 2009-10

year and round	general educational level				all-India

<b>urban female</b>					
2009-10 (66 <sup>th</sup> )	264(236)	270(172)	136(153)	328(439)	
2004-05 (61 <sup>st</sup> )	307 (279)	294 (197)	144 (168)	255 (356)	
1999-00 (55 <sup>th</sup> )	343 (318)	299 (195)	132 (157)	225 (328)	
1993-94 (50 <sup>th</sup> )	384 (363)	310 (216)	118 (143)	187 (277)	

Note: Figures in parentheses are the corresponding proportions for persons of age 15 years and above.

3.6.2 *Change over rounds:* As seen from Statement 3.9, the proportion of *educated* persons (i.e. educational level *secondary and above*) has increased in all the categories during the period of 16 years between 1993-94 and 2009-10. In rural India, the proportions of *educated* persons in 2009-10 are 19 and 10 per cent respectively among males and females. The corresponding proportions in urban India were 41 and 33 per cent.

### 3.7 Rural Household Participation in MGNREG works

3.7.1 In 66<sup>th</sup> round, in the household characteristics block of Employment & Unemployment schedule, a few questions were asked to the rural households for collection of information related to MGNREG works, such as 'whether the household has MGNREG job card', 'whether got work in MGNREG works during last 365 days', 'number of days worked' and 'mode of payment of the wages earned in MGNREG works'. In Statement 3.10, number of households having MGNREG job card per 1000 households, average number of days worked during last 365 days in MGNREG works by households that got MGNREG works, per 1000 distribution of households by status of getting work in MGNREG works and average number of days got work during last 365 days for each decile class on monthly per capita expenditure in rural India has been presented and the corresponding state table has been presented in Statement 3.10.1.

3.7.2 In Statement 3.10, it is observed that 35 per cent of the rural households had MGNREG job card. In this context it can be mentioned that in the present survey, the household having MGNREG job card connoted that at least one member of the household appeared in a job card. It is noticed that 24 per cent of the households got MGNREG works. The survey results show (see Appendix Table 11) that a small proportion of households had worked in MGNREG works without having MGNREG job card: 68 per cent of the households with MGNREG job card had worked in MGNREG works and less than 1 per cent of the households without job card had worked in MGNREG works. It is

further noticed that 19 per cent of the households sought but did not get MGNREG work and 54 per cent of the households did not seek MGNREG work. It can also be seen from the Statement that percentage of job card holder households decreased as we go up in the decile classes. Whereas in the bottom decile class, almost 50 per cent of the households had MGNREG job cards, in the top decile class it was 17 per cent. Similar feature was observed in respect of the households who got work in MGNREG works and the households who sought but did not get work. In bottom decile class, 35 per cent of the households got work in MGNREG works and 26 per cent households sought but did not get work. In the higher decile class, the corresponding figures were 10 per cent and 12 per cent respectively. As it is expected, percentage of households who did not seek MGNREG works was more in higher decile classes than those in lower decile classes. Whereas 75 per cent of the households in the top decile class did not seek MGNREG works, the figure was 36 per cent in the bottom decile class. The Statement also presents the average number of days worked during last 365 days in MGNREG works in different decile classes. It is seen that the households which worked in MGNREG works, worked on an average for 37 days during the last 365 days and the average number of days of work in MGNREG work has generally shown an increasing trend with the increase of level of living of the households. It is seen that in the bottom decile class, the households had worked on an average 32 days during the last 365 days whereas it was 40 days for the households in the top MPCE decile class.

Statement 3.10: Number of households having MGNREG job card per 1000 households, per 1000 distribution of households by status of getting work in MGNREG works and average number of days got work during last 365 days for each decile class on monthly per capita expenditure

decile classes on MPCE	number of households having MGNREG job card per 1000 hhd.	average number of days worked during last 365 days in MGNREG works by hdds. that got MGNREG works	per 1000 distribution of households by status of getting MGNREG work				rural
			got MGNREG works	sought but did not get MGNREG work	did not seek MGNREG work	all (incl. n.r.)	
			(4)	(5)	(6)	(7)

all classes	347	37	242	193	538	1000	

3.7.3 *State-level distribution:* It is observed from the Statement 3.10.1, that the rural households who got work in MGNREG works, worked on an average for 37 days in MGNREG works. Among the major states, Rajasthan got the maximum number of days of MGNREG works (71 days) followed by Himachal Pradesh (47 days), Andhra Pradesh (46 days) and Tamil Nadu (43 days). So far as number of households having MGNREG job card is concerned, among the major states, Rajasthan is in the top position with about 71 per cent of households reported to have job card followed by Madhya Pradesh (69 per cent), West Bengal and Chhattisgarh (59 per cent each), Himachal Pradesh (45 per cent) Andhra Pradesh (43 per cent). Among the major states, 59 per cent of the households in Rajasthan got work in MGNREG works followed by Chhattisgarh (48 per cent), West Bengal (43 per cent), Madhya Pradesh (36 per cent) and Andhra Pradesh (35 per cent).

## Chapter Four

### Labour Force

#### 4.0 General

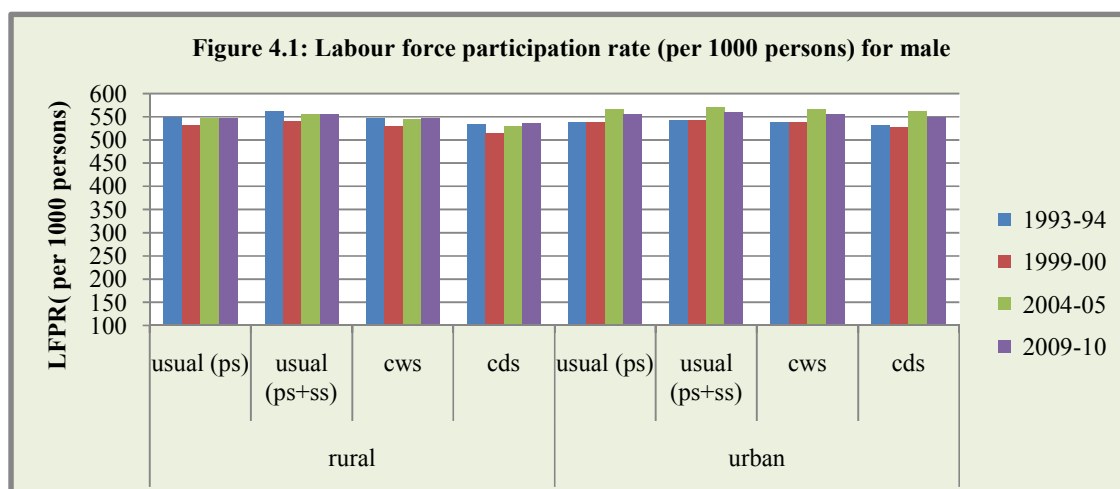

4.0.1 Labour force, or in others words, the ‘economically active’ population, refers to the population which supplies or seeks to supply labour for production and, therefore, includes both ‘employed’ and ‘unemployed’ persons. Four different estimates of the labour force have been obtained based on the three approaches adopted in the survey for classification of the population by activity status viz. *usual status*, *current weekly status* and *current daily status*. These are:

- (i) number of persons in the labour force according to the *usual status* (ps) i.e. by considering usual principal activity only,
- (ii) number of persons in the labour force according to the *usual status* (ps+ss) i.e. by considering usual principal and subsidiary activity together,
- (iii) number of persons in the labour force according to the *current weekly status* approach, and
- (iv) number of person-days in the labour force according to the *current daily status* approach.

Statement 4.1: Labour force participation rate (LFPR) according to usual, current weekly and current daily statuses during 1993-94, 1999-2000, 2004-2005 and 2009-10

4.0.2 The estimate of the labour force according to the *usual principal status* gives the number of persons who either worked or were looking for work for a relatively long part of the 365 days preceding the date of survey. The labour force, considering both the *usual principal status* and the *subsidiary status*, includes (a) the persons who either worked or were looking for work for a relatively long part of the 365 days preceding the date of survey and (b) also those persons from among the remaining population who had worked at least for 30 days during the reference period of 365 days preceding the date of survey. The labour force measured in terms of current weekly status gives the average picture of the labour force participation in a short period of one week during the survey period. The estimate of labour force according to the current weekly status provides the number of persons who worked for at least 1 hour or was seeking/available for work for at least 1 hour on any day during the 7 days preceding the date of survey. The labour force measured in terms of *current daily status* gives the average picture of the number of person-days in the labour force on a day during the survey period. For each person, 7 person days were assigned for the 7 days preceding the date of survey and the estimate of the person-days in the labour force during the reference week was obtained by considering the number of person-days worked or was available for work during the week by adopting current daily status approach. The number of person-days in the labour force on a day during the survey period is obtained by dividing the person-days in the labour force in a week by 7.

## 4.1 Labour Force Participation Rates (LFPR)

4.1.1 The labour force participation rate (LFPR) is defined as the number of persons/person-days in the labour force per 1000 persons/person-days. In Statement 4.1, the LFPRs, as estimated from the NSS 66<sup>th</sup> round (2009-2010) survey, based on the different approaches are presented for all-India. The corresponding rates obtained from the 50<sup>th</sup> (1993-94), 55<sup>th</sup> (1999-2000) and 61<sup>st</sup> (2004-05) round surveys are also given in this statement for comparison. In Figure 4.1, the LFPR based on the different approaches are presented for NSS 50<sup>th</sup>, 55<sup>th</sup>, 61<sup>st</sup> and 66<sup>th</sup> rounds separately for males and females.

4.1.2 *Usual status approach:* In 2009-10, considering 'all' (ps+ss) workers, i.e., workers according to *us* (ps+ss), about 56 per cent of the rural males and 27 per cent of the rural females were 'usually' available for employment. The corresponding figures for urban areas were 56 and 15 per cent, respectively. During the period of five years ending in June 2010, the usual status LFPRs in rural areas remained the same for males but for the females it decreased by 6 percentage points. In the urban areas, during that period, a decrease in LFPR was noticed for both male and female – 1 percentage point for male and 3 percentage points for female. When LFPR was considered in usual status (ps) for both male and female in both the sectors, same trend as that of usual status (ps+ss) was observed during 2004-05 and 2009-10.

4.1.3 *Current status approach:* Compared to LFPRs of the current statuses, the usual status (all) LFPRs were slightly higher in both the sectors for both males and females.

4.1.4 *Gender differentials in the labour force:* Statement 4.1 also presents the sex ratio (i.e. number of females per 1000 males) in the labour force. The statement reveals that whatever be the approach followed, females were far outnumbered by males in the labour force – to a greater extent in urban areas than in rural areas. However, when the usual status 'all workers' approach is followed, sex ratio is found to improve, particularly in the rural areas. This reflects that the feature of females being engaged in subsidiary economic activities was more frequently observed in rural areas than in urban areas.

4.1.5 *State level estimates:* The LFPRs based on the various alternative approaches for different states and union territories as estimated from the present survey are presented in Statements 4.1.1 and 4.1.2. Statement 4.1.1 gives LFPRs for persons of all ages and Statement 4.1.2 gives that for persons of age 15 years and above.

## 4.2 Age Specific Labour Force Participation Rates (ASLFPR)

4.2.1 During 2009-10, the LFPRs according to usual principal status are presented in Statement 4.2 for different age-groups. In Statement 4.3, the LFPRs based on usual status (ps+ss) approach, i.e. taking into account both the principal and subsidiary statuses together, are presented for different age-groups as obtained from the NSS 50<sup>th</sup>, 55<sup>th</sup>, 61<sup>st</sup> and 66<sup>th</sup> round surveys.

Statement 4.2: Age specific labour force participation rates according to usual principal status during 2009-2010

all	542	542	570	559	164	147	178	146

4.2.2 It is seen from Statements 4.2 and 4.3 that the pattern in the LFPRs over the age groups is same for all the categories of persons (rural male, rural female, urban male and urban female) as per usual (ps) and usual (ps+ss) approaches, respectively. Statement 4.2 reveals that LFPR is almost negligible (less than 0.5 per cent) in the age-group 5-9 years. However, in the age-group 10-14 years, it is almost 3 per cent for rural males and urban males each and 2 per cent and 1 per cent for rural females and urban females respectively. Among the persons of ages 25 – 54 years, LFPR is found to be very high: 96 per cent to 99 per cent for rural male, 95 per cent to 99 per cent for urban male, 31 per cent to 41 per cent for rural female and 20 per cent to 24 per cent for urban female.

4.2.3 In Statement 4.3 it is observed that about 65 per cent of the aged males (60 years and above) in rural areas and about 34 per cent of the aged males in the urban areas were found to be in the labour force. The corresponding figures for females was 23 per cent in rural and 7 per cent in urban areas. The comparison of the age specific LFPRs measured according to the usual principal status, and usual principal and subsidiary (ps+ss) statuses taken together reveals that the incidence of participation in the labour force in the subsidiary capacity is higher among the male youths in the age groups 10-14, 15-19 years and 20-24 years in the rural areas than that among the persons in the other age groups whereas for urban males it is high in the age group 20-24 years. Among the females, the participation rate in the labour force in the subsidiary capacity is much higher in all the age groups above 10 years in rural areas years and above 14 years in urban areas. The overall participation rate in the labour force in the subsidiary capacity is found to be less than 1 per cent for the males and 2 to 6 per cent for the females in India.

4.2.4 *Change in LFPR since 1993-94:* It is seen from Statement 4.3 that compared to the rates in 1993-94, among, the LFPR has declined in the younger age groups (age less than 25 years) during 2010 for all the four segments of the population. For males in both rural and urban areas, the LFPR for the persons of age 25 years and above, during this period, has remained almost invariant except for the age group 60 years and above where the LFPR had declined, while for females in both rural and urban areas, there had been a fall in the LFPR between 1993-94 and 2009-10 for persons of age 25 years and above. Similar pattern in 2009-10 has been observed when compared with those of 2004-05. The age specific LFPR for the NSS 66<sup>th</sup> round is presented in Figure 4.2.

## Chapter Five

### Employed (Work Force)

#### 5.0 General

5.0.1 In this chapter, the estimate of the work force (or employed) and its structure are discussed. In order to study the trend, earlier survey estimates are provided. The survey has generated four different estimates of the employed based on the three approaches used in classification of the activity statuses of the person surveyed. These are:

- (i) number of persons employed according to the *usual status* (ps) i.e. by considering usual principal activity only,
- (ii) number of persons employed according to the *usual status* (ps+ss) i.e. by considering usual principal and subsidiary activity together,
- (iii) number of persons employed according to the *current weekly status* approach, and
- (iv) number of person-days employed according to the *current daily status* approach.

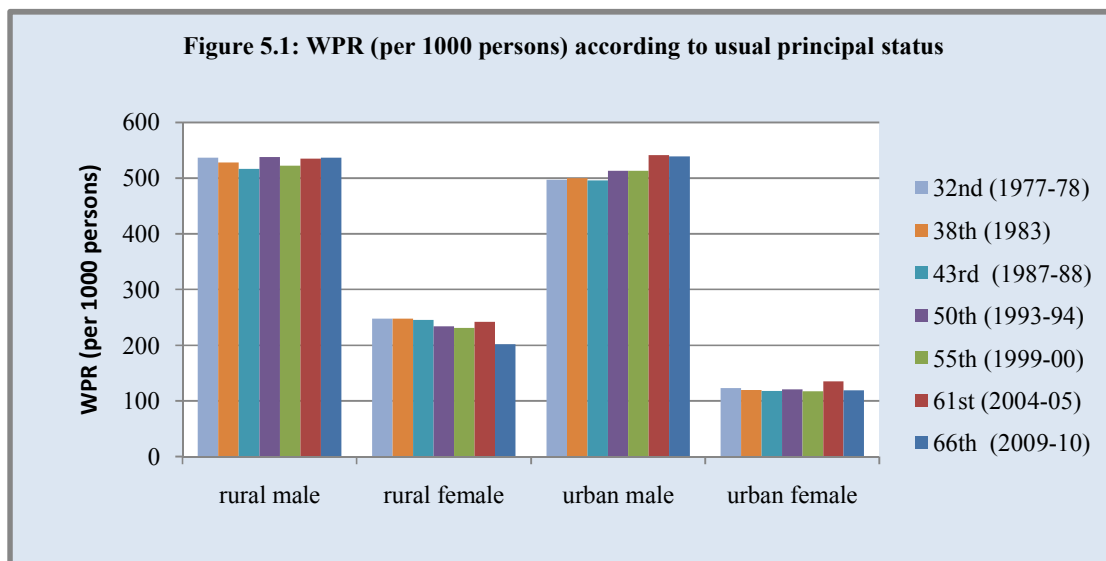

5.0.2 The estimate of employed (or worker) according to the *usual principal status* gives the number of persons who worked for a relatively long part of the 365 days preceding the date of survey. The work force, considering both the *usual principal status* and the *subsidiary status*, includes (a) the persons who either worked for a relatively long part of the 365 days preceding the date of survey and (b) also those persons from among the remaining population who had worked at least for 30 days during the reference period of 365 days preceding the date of survey. The work force measured in terms of current weekly status gives the average picture of the work force in a short period of one week during the survey period. The estimate of work force, according to the current weekly status provides the number of persons worked for at least 1 hour on any day during the 7 days preceding the date of survey. The work force measured in terms of *current daily status* gives the average picture of the person-days worked in a day during the survey period. For each person, 7 person-days were assigned for the 7 days preceding the date of survey and the estimate of the number of person-days worked in the reference week was obtained on the basis of the person-days worked according to the current daily status approach. The number of person-days worked on a day during the survey period is obtained by dividing the person-days worked in a week by 7.

5.0.3 The number of persons/person-days employed per thousand persons/person-days is referred to as work-force participation rates (WFPR) or worker-population ratio (WPR). This ratio is used in the following discussion on the employed.

#### 5.1 Usually Employed

5.1.1 Statement 5.1 presents the worker-population ratios (WPRs) for two categories of usual status workers viz. (a) usual principal status workers i.e. workers according to usual status (ps) and (b) usual subsidiary status workers i.e. persons working only in a subsidiary status (ss workers). In Figure 5.1, the WPRs are presented for the years 1977-78, 1983, 1987-88, 1993-94, 1999-00, 2004-05 and 2009-10 separately for usual status (ps) and usual status (ps+ss). The two categories together constitute the total usually employed (or

‘all’ workers) i.e. workers according to the usual status (ps+ss). The first category pertains to those with more or less stable employment. WPR figures corresponding to ‘all’ workers in Statement 5.1 shows that 55 per cent of the males and 23 per cent of the females were workers. It is also seen from Statement 5.1 that WPR for rural male was only 1 percentage point higher than that for urban male: WPR for rural male being 55 per cent and that for urban male being 54 per cent. But there was wide gap in the WPR for females in rural and urban areas. For rural females this was 26 per cent whereas in urban areas this was 14 per cent.

Statement 5.1: Number of persons employed per 1000 persons (i.e., WFPR or WPR) according to usual status during 1972-73 to 2009-2010

*ps = principal status; ss = subsidiary status; ps+ss: principal and subsidiary status taken together*  
*\*: proportions not derived for NSS 27<sup>th</sup> round*

5.1.2 *Usually employed over the rounds:* Statement 5.1 also gives the WPRs obtained from all the eight quinquennial surveys conducted by NSSO. It may be noted that due to certain procedural differences for the 27<sup>th</sup> round, WPR values pertaining to usual status are comparable only with respect to 'all workers', and hence, are presented for that category only. The statement shows that, in rural areas, WPRs for males in 2009-10 and 2004-05 were same while that for females this was less by about 7 percentage points. In urban areas, in comparison with 2004-05, the corresponding rates in 2009-10 were lesser by 1 percentage point and 3 percentage points respectively.

5.1.3 *WPR for states and union territories during 2009-10:* To study the regional disparities in the usual status WPRs, the estimates based on the 66<sup>th</sup> round results on usual status worker- population ratio in terms of 'principal status' and also 'principal as well as the subsidiary status taken together' are presented for all the states and union territories in

Statement 5.1.1 separately for males, females and persons by their rural-urban residency. The discussion below is restricted mostly to figures based on 'all' workers (i.e workers according to usual status (ps+ss)).

5.1.4 *Rural males*: During 2009-10, among the major states, the percentage of usual status (ps+ss) workers (i.e. 'all' workers) among rural males was highest in Karnataka (62 per cent) followed by West Bengal (61 per cent), Andhra Pradesh (60 per cent), Tamil Nadu (60 per cent), Gujarat (59 per cent). For seven other major states, WPRs were well above the national average of 55 per cent for rural males. The WPR for rural male was the lowest in Uttarakhand (46 per cent) preceded by Bihar (48 per cent), Jharkhand (49 per cent).

5.1.5 *Rural females*: Among the major states, Himachal Pradesh (47 per cent) reported the highest WPR followed by Andhra Pradesh (44 per cent), Tamil Nadu (41 per cent) and Maharashtra (40 per cent). Bihar (7 per cent) reported the lowest WPR for rural females and was preceded by West Bengal (15 per cent), Assam & Jharkhand (16 per cent each) and Uttar Pradesh (17 per cent). The percentage of female subsidiary status workers was relatively very high in Jammu & Kashmir (23 per cent), Punjab (19 per cent), Rajasthan (14 per cent), Uttarakhand (13 per cent) and Haryana (11 per cent).

5.1.6 *Urban males*: In the urban areas, among the major states, the male WPR was higher than 54 per cent (national level WPR) for West Bengal, Karnataka and Maharashtra (58 per cent each), Tamil Nadu, Punjab and Orissa (57 per cent each), Gujarat, Haryana and Himachal Pradesh (56 per cent each) and Kerala (55 per cent).

5.1.7 *Urban females*: For urban areas, among the major states, the female WPR was higher than 14 per cent (national level WPR) in Tamil Nadu and Kerala (19 per cent each), Andhra Pradesh (18 per cent), Karnataka (17 per cent), Himachal Pradesh and Maharashtra (16 per cent each). The proportion of subsidiary status workers among urban females was relatively higher for Rajasthan, Haryana, Kerala and Uttar Pradesh as compared to the other major states.

## 5.2 Age Specific Usual Status Worker-population Ratio (ASWPR)

5.2.1 The number of persons usually employed in a particular age-group per 1000 persons in that age-group is defined as the age specific worker-population ratio (ASWPR). Based on the age recorded, the ASWPRs are estimated from the 66<sup>th</sup> round (2009-10) data for age groups of five year interval up to the age of 60 years and for the age group 60 years and above, for both the principal status (ps) workers and 'all' workers. The relevant results, separately for rural and urban areas, are presented for all-India in Statement 5.2 and for states and union-territories in Statement 5.2.1 (for workers according to the usual status (ps)) and in Statement 5.2.2 (for 'all' workers i.e. workers according to the usual status (ps+ss)). Comparable all-India results based on the 50<sup>th</sup> round (1993-94), 55<sup>th</sup> round (1999-2000) and 61<sup>st</sup> round (2004-05) surveys are also presented in Statement 5.2.

5.2.2 *Change in ASWPR since 1993-94*: It is seen from Statement 5.2 that compared to the rates in 1993-94, among rural males and females, the ASWPR have generally declined in the younger age groups over the period ending with 2010. When compared with 2004-05, the rates have also declined in 2009-10. For the other age-groups for rural males between 1993-94 and 2009-2010, the ASWPR had remained almost the same, while for female there had been a fall in the ASWPR during this period. The ASWPR in 2009-10 for other age groups for rural male has remained almost at the same level of 2004-05, while for rural female the

ASWPR has declined. In urban areas compared to 1993-94, in 2009-10, for the younger age groups, the ASWPR for both males and females have decreased while for other age groups, the rates for males have remained almost same and for female there was a reduction in ASWPR. Compared to 2004-05, in 2009-10, the ASWPR for the younger age groups have reduced for both urban males and females, but for other age groups, the rates for urban males have generally remained at the same level, barring a few age groups where it has marginally increased (1-2 percentage points), while for females a general reduction in the ASWPR has been observed.

### 5.3 Age Composition of the Usually Employed

5.3.1 Statement 5.3 shows the per 1000 distribution of the usually employed persons by age-group for all-India for both the principal status (ps) workers and all workers as obtained from the present survey as also those from the 50<sup>th</sup> (1993-94), 55<sup>th</sup> (1999-2000) and 61<sup>st</sup> (2004-05) round surveys.

5.3.2 It is seen from Statement 5.3 that for 'all' workers during the year 2009-10, more than two-third of the usually employed were in the age-group 15 to 44. The proportion of the usually employed males in this age bracket is 67 per cent in rural and 71 per cent in urban areas. For the females, the corresponding percentages are 68 and 73. Further, during this period, about one-fifth of the usually employed belonged to the age-group 45-59. The oldest group (i.e. age-group 60 and above) accounted for about 4 to 5 per cent of the usually employed in urban areas. However, in rural areas, about 9 per cent of usually employed males and 7 per cent of usually employed females belonged to this group.

5.3.3 *Change in distribution since 1993-94:* During 1993-94, 1999-2000 and 2004-05, the estimated proportions of the usually employed in the age-groups of 45-59 or 60 & above were broadly the same as those for 2009-10 – for males or females, in either rural or urban areas. This observation holds true for the age-group 15 to 44 considered as a whole. However, for the age-group 15-29, in the rural areas, a small decrease of about 1 percentage point for males and 2 percentage points for females is observed in the proportions between 1993-94 and 1999-2000 as well as between 1999-2000 and 2004-05 but between 2004-05 and 2009-10, there was a decrease of about 3 percentage points for both rural males and females in 'all workers' group. In the urban areas, in the age group 15-29 years for males and females, a gradual decrease in the rates has been noticed during 1993-94 to 2009-10. On the other hand, for the age-group 30-44, a gradual increase in the proportions between 1993-94 and 2009-10 is observed in both rural and urban areas.

Statement 5.2: Age specific usual status worker population ratio (ASWPR) during 1993-94, 1999-2000, 2004-2005 and 2009-2010

## 5.4 Usual Status Worker Population Ratio across Decile Classes on MPCE

5.4.1 As stated earlier, 'employment' of the household members is highly related with household income and in turn, with the household monthly per capita expenditure – a close proxy for household income.

Statement 5.4: Number of persons employed per 1000 persons (WPR) according to usual status (ps+ss) and sex ratio (per 1000) among workers by decile classes on monthly per capita consumer expenditure

decile classes on MPCE	wpr		sex ratio of the population	all- India sex ratio among workers

of females (per 1000 males) belonging to the households of lower MPCE decile classes, had to work. The worker population ratio for the states and union territories are given in Statement 5.4.1 separately for each sex and sector. Similar observations, as for all-India, are noted among the major states.

## 5.5 Education Level Specific Usual Status Worker Population Ratio for Persons of Age 15 Years and Above

5.5.1 Among persons of age 15 years and above, the number of persons who are usually employed in a particular education category per 1000 persons in that education category is defined as the education level specific worker population ratio. For working out such education specific worker-population ratios, the persons of age 15 years and above are classified into 7 categories viz., 'not literate', 'literate and up to primary', 'middle', 'secondary', 'higher secondary', 'diploma/ certificate' and 'graduate and above'. In the 61<sup>st</sup> and 66<sup>th</sup> round survey, general educational level was recorded as 'diploma/ certificate' for those who completed diploma or certificate course that was below graduation level.

Diploma/ certificate courses, which were of graduation level or above, were classified under the respective class of general education. In the earlier surveys, such people were classified against the equivalent level of general education. The relevant worker-population ratios for rural and urban India for both the principal status (ps) workers and 'all' workers are shown in Statement 5.5. The corresponding results for 1993-94, 1999-2000 and 2004-05 obtained from NSS 50<sup>th</sup>, 55<sup>th</sup> and 61<sup>st</sup> round surveys, respectively are also presented in this statement. As done earlier, discussions are restricted to 'all' workers i.e. workers according to the usual status (ps+ss).

5.5.2 Statement 5.5 reveals that at all-India level, for rural males with educational qualification *graduate and above* (or rural male graduate, in brief), the worker-population ratio was almost same in between 1993-94 and 1999-2000. Between 1999-2000 and 2004-05, there was an increase of 1 percentage point. But between 2004-05 and 2009-10 there was a decline of 6 percentage points. However, among the rural female graduates, the ratio of 366 in 1993-94 suffered a fall of about 6 percentage points in 1999-2000 and then increased to 345 in 2004-05 but again decreased to 297 in 2009-10. In urban areas, among the male *graduate*, there was a steady fall of 1 percentage point in all these NSS rounds starting from 1993-94 to 2009-10. For females in the urban areas, a fall of about 3 percentage points was noticed between 1993-94 and 1999-2000 followed by a rise of nearly 2 percentage points between 1999-2000 and 2004-05 which again fell by 3 percentage points in 2009-10.

5.5.3 Education level specific usual status worker-population ratios for persons of age 15 years and above for states and union territories based on the data of the present survey are presented in Statements 5.5.1 and 5.5.2 – Statement 5.5.1 for 'ps' workers and Statement 5.5.2 for 'all' workers.

## 5.6 General Educational Level of the Usually Employed (15+)

5.6.1 Per 1000 distribution of the usually employed persons of age 15 years and above (referred to as 'employed' in this chapter hereafter) by education category for all-India for both the principal status (ps) workers and 'all' workers is presented in Statement 5.6. The corresponding distribution for 1993-94, 1999-2000 and 2004-05 obtained from NSS 50<sup>th</sup>, 55<sup>th</sup> and 61<sup>st</sup> round survey results, respectively is also presented in the statement. The discussions are restricted to 'all' workers i.e. workers according to the usual status (ps+ss).

5.6.2 During 2009-10, among the 'employed' rural males, about 28 per cent were *not literate* while 24 per cent were *educated* i.e. with *secondary and above* educational standard, including diploma/ certificate. On the other hand, among the 'employed' rural females, about 58 per cent were *not literate* while only about 9 per cent were *educated*. In urban India, an estimated 11 per cent of the 'employed' males and about 30 per cent of the 'employed' females were *not literate*. The estimate of the proportion of *educated* people was much higher in urban areas – with about 52 per cent of the 'employed' males and about 38 per cent of the 'employed' females reporting themselves as *educated*. In both the rural and urban areas, there was a rise of about 2 percentage points in the proportion of educated people among the usually employed in 2004-05 compared to that in 1999-2000. Between 1993-94 and 1999-2000, the rise in the corresponding proportion was faster – the rise being 3 percentage points for rural males, 1 percentage point for rural females and 5 percentage points for both urban males and females. Compared to 2004-05, the corresponding figures in 2009-10 showed a rise of 6 percentage points, 3 percentage points for rural males and females respectively and 7 and 8 percentage points for urban males and females respectively.

Statement 5.5: Education-level specific usual status worker population ratio for persons of age 15 years and above during 1993-94, 1999-2000, 2004-2005 and 2009-2010

In the 61<sup>st</sup> and 66<sup>th</sup> round survey, persons with general education level 'diploma/ certificate' which were equivalent to below graduate level were identified separately.

## 5.7 Distribution of Usually Employed by Status of Employment

5.7.1 As stated earlier in Chapter Two (Concepts & Definitions), employed persons are categorised into three broad groups according to their status of employment. These broad groups are: (i) *self-employed*, (ii) *regular employees* and (iii) *casual labour*. Statement 5.7 shows the per 1000 distribution of usually employed by these broad groups for all-India for both principal status (ps) workers and 'all' workers. The statement also gives the results on the corresponding distribution obtained from the earlier quinquennial surveys. Trends in the proportion (per 1000 workers according to usual status (ps+ss)) for different NSS rounds are presented in Figure 5.2, separately for the rural and urban areas. The discussion below, as before, pertains to 'all' workers.

Statement 5.7: Per 1000 distribution of usually employed by category of employment during 1983 to 2009-2010  
all-India

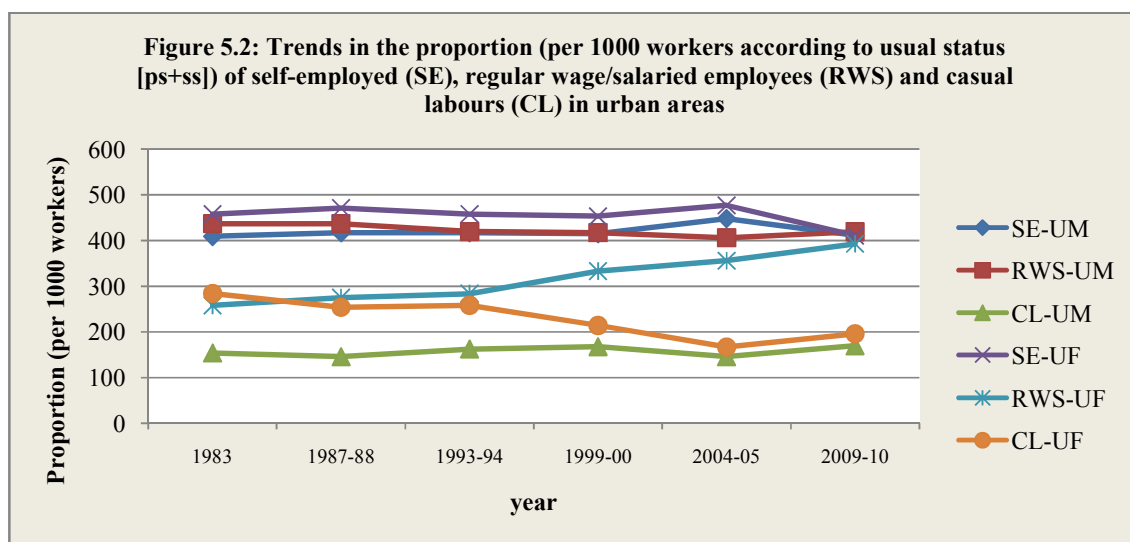

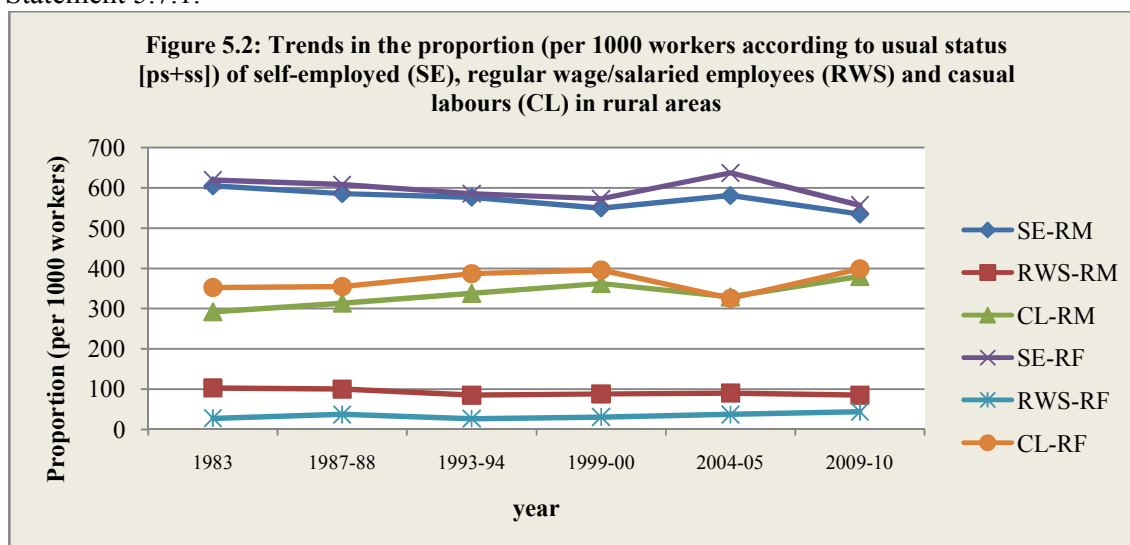

NSS round (survey period)	category of employment					
	usual status (ps)			usual status (ps+ss)		
	self- employed	regular/wage salaried employees	casual labour	self- employed	regular/wage salaried employees	casual labour

38 <sup>th</sup> (1983)	402	445	153	409	437	154
<b>urban females</b>						
66 <sup>th</sup> (2009-10)	354	444	202	411	393	196
61 <sup>st</sup> (2004-05)	404	422	174	477	356	167
55 <sup>th</sup> (1999-00)	384	385	231	453	333	214
50 <sup>th</sup> (1993-94)	372	355	273	458	284	258
43 <sup>rd</sup> (1987-88)	393	342	265	471	275	254
38 <sup>th</sup> (1983)	373	318	309	458	258	284

5.7.2 During 2009-10, in rural India, among the usual status (ps+ss) workers ('all' workers), about 54 per cent of the males and 56 per cent of females were *self-employed*. The corresponding figures for urban India were 41 per cent for both males and females.

Proportion of *regular employees* was relatively lower among females as compared to males in both rural and urban India. On the other hand, proportion of *casual labour* was higher among female workers than that among male workers in both rural and urban areas.

5.7.3 *Change over rounds*: For rural males, the proportion of *self-employed* had fallen from 61 per cent in 1983 to 54 per cent in 2009-10. For rural females, although the proportion of *self-employed* also showed a gradual fall, for a long period, from 62 per cent in 1983 to 57 per cent in 1999-2000, it showed a rise of 7 percentage points over 1999-2000 during 2004-05 and then showed a fall of 8 percentage points during 2004-05 and 2009-10. Interestingly, compared to the *self-employed*, there has been a corresponding rise and fall in the proportion of *casual labour* over this period. During this period (i.e. from 1983 to 2009-10), though the proportion of *regular employed* among urban males had fallen by about 2 percentage points, among urban females, there had been an increase in this proportion – by about 13 percentage points.

5.7.4 *State-level distribution*: The distributions of the usually employed by employment status during 2009-10 (66<sup>th</sup> round) for different states and union territories are presented in Statement 5.7.1.

5.7.5 Decile classes on MPCE and status of employment: Statement 5.8 presents the distribution of usually employed (ps+ss) by status of workers for each MPCE decile class at the all-India level. It is seen that in the rural areas, the proportion of casual labourers is found to be higher in the lower MPCE decile classes and lower in the higher MPCE decile classes. On the other hand, the proportion of both self-employed and regular salaried employees is found to be lower in the lower MPCE decile classes and higher in the higher MPCE decile classes. In the urban areas, the pattern is a little different. While, as in the case of rural, the proportion of casual labourers is found to be higher in the lower MPCE decile classes and lower in the higher MPCE decile classes, the proportion of regular salaried employees increases substantially as we go up in the decile classes on MPCE. But the proportion of self-employed decreases with the increase in MPCE decile classes. These patterns are consistent for both the males and females.

Statement 5.8: Per 1000 distribution of usually employed (ps+ss) by status of employment for each decile classes on monthly per capita consumer expenditure

all-India

## 5.8 Industrial Distribution of the Usually Employed

5.8.1 As in the earlier quinquennial surveys, for the 66<sup>th</sup> round survey also, information relating to the sector (industry) of employment in which a person was working has been collected for the persons categorised as *employed*. In the case of *usually employed*, this information was collected for both the principal status (ps) as well as subsidiary status (ss)

workers. Statement 5.9 shows the distribution of *usually employed* by industry, separately for usual 'principal status' (ps) workers and for 'all' workers. In this present survey NIC 2004 has been used whereas in 61<sup>st</sup> and 55<sup>th</sup> round, NIC 1998 was used for industry classification. Similar results based on the earlier quinquennial surveys are also presented in the statement. It may be mentioned that in NSS 50<sup>th</sup> Round NIC 1987 was used, while in NSS 43<sup>rd</sup> and 38<sup>th</sup> rounds NIC 1970 was used. It may be noted that the changes in the activity classification across rounds at one digit level of industry is nominal and thus, comparison can fairly be made over the rounds at the one digit level. This fact may be taken into account in measuring the changes of workforce at one digit level over rounds.

5.8.2 *Rural areas*: The statement shows that, during 2009-10 in rural India, among 'all' *usually employed*, about 63 per cent of the males and 79 per cent of the females were engaged in the agricultural sector. The proportion of males engaged in the agricultural activities gradually fell from 81 per cent in 1977-78 to 71 per cent in 1999-2000, and then to 67 per cent in 2004-05 and in 2009-10 it further decreased to 63 per cent. On the other hand, in the case of female workers, the proportion engaged in the agricultural activities decreased from 88 per cent in 1977-78 to 85 per cent in 1999-2000, to 83 per cent in 2004-05 and presently to 79 per cent. Over the years, in rural India, there has been an increase in the proportion of males engaged in 'trade, hotel and restaurant', 'transport, storage and communications' and 'construction'.

5.8.3 *Urban areas*: In urban India, the 'trade, hotel and restaurant' sector engaged about 27 per cent of the male workers while 'manufacturing' and 'other services' sectors accounted for nearly 22 per cent each of the *usually employed* males. Next to these three sectors, 'transport, storage and communications', 'construction' and 'agriculture' sectors provided employment to about 10, 11 and 6 per cent respectively of the urban male workers. On the other hand, for urban females, 'other services' sector accounted for the highest proportion (39 per cent) of the total *usually employed*, followed by 'manufacturing' (28 per cent) and 'agriculture' (14 per cent). Since 1977-78, the proportion of urban females employed in agricultural sector fell by about 18 percentage points – and in 'manufacturing' by 2 percentage point. The percentage of urban females employed in 'manufacturing' sector increased from 24 points in 1999-2000 to 28 points in 2009-10. Regarding other sectors, the proportion for urban females showed a rise of about 3 percentage points each in 'trade, hotel and restaurant' and 'construction' and as high as 13 percentage points in 'other services' sectors since 1977-78.

5.8.4. *State-level distribution*: The per 1000 distributions of *usually employed* in the 'principal status' (ps) and in the 'principal as well as subsidiary status' ('all' workers) by industry for each state and union territory are presented in Statements 5.9.1 and 5.9.2 respectively.

Statement 5.9: Per 1000 distribution of usually employed persons by broad industry division during 1983 to 2009-10

## 5.9 Estimates of Employed According to Current Status

5.9.1 The *usual status* approach adopted for classification of the population is unable to capture the changes in the activity pattern caused by seasonal fluctuations. But the estimates obtained by adopting the current weekly status (cws) and current daily status (c ds) approaches are expected to reflect the overall effect caused by the intermittent changes in the activity pattern during the year. The latter reflects also the changes that take place even during a week. The estimates of the *employed* based on *current weekly status* give the general picture of employment in a period of 7 days while those based on *current daily status* give the general picture of employment on a day. The difference between the cws and cds rates indicates the *underemployment* of those who had some employment in the week. Statement 5.10 gives the relevant estimates of the *employed* according to *current weekly status* and *current daily status* for all-India based on the eight quinquennial surveys.

Statement 5.10: Number of persons employed per 1000 persons (WPR) according to current weekly status and current daily status during 1972-73 to 2009-2010

round (year)		all-India							
		cws				c ds			
		rural		urban		rural		urban	
		male	female	male	female	male	female	male	female
(1)		(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
66 <sup>th</sup>	(2009-10)	531	223	536	130	501	182	522	117
61 <sup>st</sup>	(2004-05)	524	275	537	152	488	216	519	133
55 <sup>th</sup>	(1999-00)	510	253	509	128	478	204	490	111
50 <sup>th</sup>	(1993-94)	531	267	511	139	504	219	496	120
43 <sup>rd</sup>	(1987-88)	504	220	492	119	501	207	477	110
38 <sup>th</sup>	(1983)	511	227	492	118	482	198	473	106
32 <sup>nd</sup>	(1977-78)	519	232	490	125	488	194	472	109
27 <sup>th</sup>	(1972-73)	530	277	491	123	503	231	477	108

5.9.2 It is observed that compared to last quinquennial survey (NSS 61<sup>st</sup> round), in rural areas the WPR according to current weekly status increased marginally for males whereas for females it decreased. Same phenomenon was observed in WPR obtained according to current daily status. It may be noted that the difference between the WPRs according to cws and cds is quite substantial in the rural areas, particularly among female workers (4 to 6 percentage points) since 1993-94. This indicates prevalence of *underemployment* in the rural areas and particularly, among female workers who had some employment in the week.

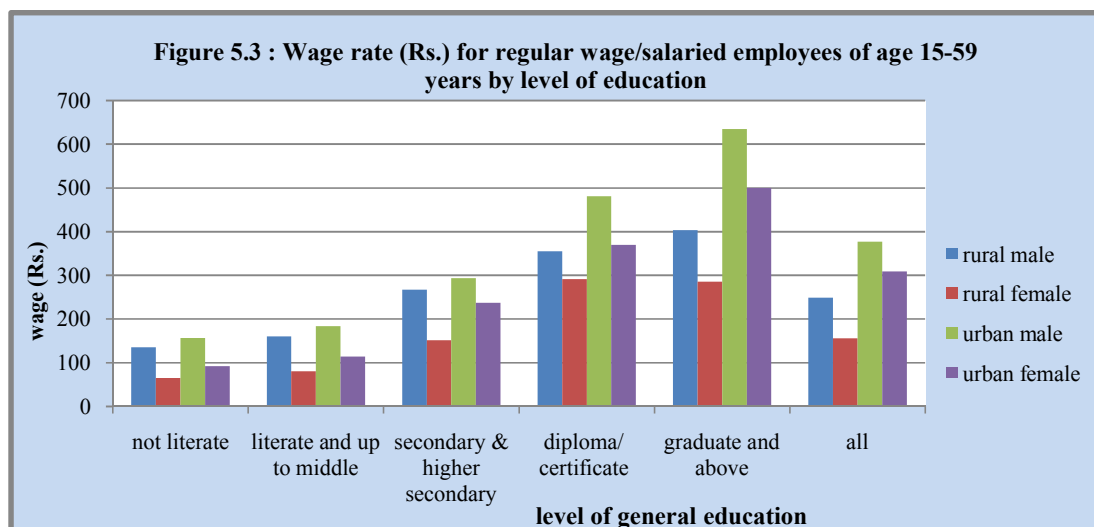

5.9.3 *State-level estimates*: The proportions of persons employed according to *current weekly status* and *current daily status* per 1000 persons by sex and residence for each state and union territory are presented in Statement 5.10.1.

## 5.10 Daily Wage Rates

5.10.1 *Regular wage/salaried persons*: Data on the average wage earnings per day received by regular wage/salaried persons and casual labourers during each of the seven days of the reference week were collected in this survey. Statement 5.11 presents the average daily wage/ salaried earnings of the regular wage /salaried persons of age 15-59 years for each educational category at all-India level during 2009-10 and in Statement 5.12, average daily wage/ salaried earnings of the regular wage /salaried persons of age 15-59 years are presented for 1993-94, 1999-2000, 2004-05 and 2009-10. In Figure 5.3, wage rates for regular wage/ salaried employees of age 15-59 years are presented. It is seen from the statement that at the all-India level, apart from the rural-urban differences, the gender differential is quite pronounced in the daily wage earnings of the regular wage/salaried persons. The difference in the wage rates across educational levels of the regular wage earners is distinctly visible: the wage increases sharply with the increase in the level of education and is found to be highest among the regular wage earners with educational level *graduates and above*. The statement shows that while the daily wage earning of a regular wage/salaried person in the rural areas was, on an average, Rs. 232; it was Rs. 365 in the urban areas – more than one-and-a-half times the wage of his/her counterparts in the rural areas. Secondly, a male regular wage earner earned nearly 1.6 times that of a female regular wage earner in the rural areas, which is about 1.2 times in the urban areas.

Statement 5.11: Average wage/ salary earnings (Rs. 0.00) per day received by regular wage/ salaried employees (activity status codes: 31, 71, 72) of age 15-59 years for different broad general education level

general education level	all-India

all	249.15	155.87	231.59	377.16	308.79	364.95

Statement 5.12: Average wage/ salary earnings (Rs. 0.00) per day received by regular wage/ salaried employees (activity status codes: 31, 71, 72) of age 15-59 years for different NSS rounds along with CPI (AL) and CPI (UNME) for those periods

all-India								
NSS round	rural			CPI (AL) (base year 1986-87)	urban			CPI (UNME) (base year 1984-85)
	male	female	person		male	female	person	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
66 <sup>th</sup> (2009-10)	249.15	155.87	231.59	494	377.16	308.79	364.95	503
61 <sup>st</sup> (2004-05)	144.93	85.53	133.81	319	203.28	153.19	193.73	338
55 <sup>th</sup> (1999-2000)	127.32	114.01	125.31	271	169.71	140.26	165.05	279
50 <sup>th</sup> (1993-94)	58.48	34.89	55.12	176	78.12	62.31	75.78	173

5.10.1.1 *State and union territories*: Statement 5.11.1 presents the average daily wage/ salaried earnings of the regular wage /salaried persons for the states and union territories. All-India features are observed among the states and union territories. There is a significant divergence in the wage rates across the states. Among the major states, in rural areas, Himachal reported the highest wage earnings of Rs. 332 and Madhya Pradesh reported the lowest wage earnings of Rs.152 for their regular wage employees. In the urban areas, among the major states, Himachal Pradesh (Rs. 478) reported the highest wage rate and Gujarat (Rs.292) reported the lowest wage rate.

5.10.2 *Casual Labourers*: Statement 5.13 presents the wage rates for the casual labourers of age 15-59 years engaged in *public works other than MGNREG public works, MGNREG public works* and *casual labours other than public works* during 2009-10. In this Statement, daily wage rate for persons of age 15-59 years engaged as *casual labour in public works* and *casual labour in works other than public works* are also presented for 1993-94, 1999-2000 and 2004-05. Statement 5.13.1 presents the daily wage rates for casual labours of age 15-59 years engaged in public works other than MGNREG public works for rural areas for different states/ union territories and all-India. As seen from the statement, sample size in terms of person-days worked is rather low in many major states. At the all India level, the average daily wage-rate of casual labourers *engaged in public works* other than MGNREG public works was Rs. 98.33 for males and Rs. 86.11 for females. The wage rates for casual labourers of age 15-59 years *engaged in MGNREG public works* in rural areas for different states/ union territories and all-India have been presented in Statement 5.13.2. In this case also the sample size in terms of person-days worked is low in many major states. It can be seen from the statement that at the all India level, the average daily wage-rate of casual labourers *engaged in MGNREG public works* was Rs. 90.93 for males and Rs. 87.20 for females.

5.10.2.1 *Casual labourers in other types of work*: The sample size in terms of person-days worked was, however, much more when casual labourers *engaged in other types of work*, i.e. engaged in works other than public works, were considered. The daily wage-rates for casual labours of age 15-59 years engaged in works other than public works for different states and union territories are shown in Statement 5.13.3.

5.10.2.2 *Rural areas*: In general, the average wage rates for the males are higher than those for the females, and higher in the urban areas than in the rural areas. In rural areas, among the major states, the average daily wage rate for male workers was the highest in Kerala (Rs. 226.60), followed by Jammu & Kashmir (Rs. 157.46), Haryana (Rs. 146.08), Himachal Pradesh (Rs. 141.44) and Punjab (Rs. 133.46); and was lowest in Chhattisgarh

(Rs. 70.83), preceded by Madhya Pradesh (Rs. 74.46), Orissa (Rs. 81.00) and Bihar (Rs. 81.03). For female workers, the rate was the highest in Jammu & Kashmir (Rs. 206.54), followed by Kerala (Rs. 119.31), Himachal Pradesh (Rs. 110.23) and Haryana (Rs. 99.12). The average wage rate for female casual labourers was lowest in Madhya Pradesh (Rs. 58.13) preceded by Maharashtra (Rs. 58.22) and Karnataka (Rs. 62.77).

Statement 5.13: Average wage earnings (Rs. 0.00) per day received by casual wage labour (activity status codes: 41, 42, 51) of age 15-59 years during 2009-10, 2004-05, 1999-2000 and 1993-94

casual labour in other type of works	45.48	29.39	40.23	63.25	38.22	57.98
<b>NSS 50<sup>th</sup> round (1993-94)</b>						
casual labour in public works	24.65	18.52	22.44	-	-	-
casual labour in other type of works	23.18	15.33	20.54	32.38	18.49	28.77

Note: CPI(AL) and CPI(UNME) for the periods 2009-10, 2004-05, 1999-2000 and 1993-94 are given in Statement 3.12

5.10.2.3 *Urban areas*: In urban areas, among the major states, the average daily wage rate for male workers was the highest in Kerala (Rs. 237.42), followed by Andhra Pradesh (Rs. 155.20), Jammu & Kashmir (Rs. 152.23) and Himachal Pradesh (Rs. 149.23) and it was lowest in Madhya Pradesh (Rs. 88.92) preceded by Bihar (Rs. 94.04). For female workers, the rate was the highest in Himachal Pradesh (Rs. 157.57), followed by Jammu & Kashmir (Rs. 136.87), Kerala (Rs. 120.90) and Rajasthan (Rs. 100.04). It may be noted that for female workers, the wage rate is found to be even higher than that for the male workers in urban Himachal Pradesh. For female workers in the urban areas, among the major states, wage rate was lowest in Maharashtra (Rs. 57.64) preceded by Bihar (Rs. 59.63), Gujarat (Rs. 66.32) and Haryana (Rs. 70.58). In Statement 5.13, for urban areas, daily wage rate for persons of age 15-59 years engaged as *casual labour in works other than public works* (code 51) is presented, since the incidence of casual labour in *public works* is small in urban areas. From the table it is observed that in rural areas, disparity in wage rate among male and female is more in casual labours other than public works than that of public works. In urban areas also wide disparity in wage rate of casual labour among male and female is observed.

### 5.11 Self-employed Persons Who Reported Their Earnings as Remunerative

5.11.1 In this survey, information was collected to identify the self-employed persons, according to usual status (ps+ss), whose current earnings from all the self-employment activities during the last 365 days was, according to their perception, remunerative.

Moreover, for the self-employed, the amount of earnings from the self-employment activities that was regarded by them as remunerative has also been collected. Statement 5.14 presents the proportion (per 1000) of the self-employed persons who reported their current earnings from all self-employment activities as remunerative, and their distribution over the amount of earnings regarded as remunerative by them.

5.11.2 It is important to note that earning of the self-employed was judged considering all his/her farm and non-farm business together, in which he/she was engaged in the self-employment capacity during the last 365 days, either in the principal or subsidiary status or in both. The current earnings from self-employment was regarded as remunerative if total earnings from self-employment were able to meet the desired level of income of the individual under the existing situation in respect of type of activity, scale of operation of the business(s), market condition, location of the business, etc. In case, the actual earnings from the self-employment activities were short of the desired level, the employment was not considered as remunerative.

5.11.3 It is seen from the statement that about 49 per cent of the self-employed in the rural areas regarded their current earnings as remunerative, and the proportion was about 9 percentage points higher among the self-employed in the urban areas. Among them in the rural areas, while about 5 per cent regarded an amount of even Rs. 1000 or less per month as remunerative, about 75 per cent regarded Rs. 2000 or more per month as remunerative. The corresponding proportions among the self-employed, who reported their earning from self-employment as remunerative, in the urban areas, were 4 per cent and 87 per cent, respectively. The gender differential in the overall proportion is almost nil in the rural areas, but is of the order of about 12 percentage points in the urban areas. However, a larger proportion of the self-employed females compared to the males, who reported their earning from self-employment as remunerative, regarded earnings even less than Rs. 1000 per month as remunerative.

Statement 5.14: Number of self-employed persons according to usual status (ps+ss) reporting their earning from self-employment as remunerative per 1000 of self-employed persons and their per 1000 distribution by amount (Rs.) regarded as remunerative

category of persons	no. per 1000 of self-employed persons reporting earning as remunerative	per 1000 distribution of self-employed persons reporting earning as remunerative by amount (Rs.) regarded as remunerative							all-india

## Chapter Six

### Unemployed

#### 6.0 General

6.0.1 As in the case of employed, for unemployed also, four kinds of estimates are obtained following the three different approaches. These are:

- (i) number of persons unemployed based on *usual status* (ps),
- (ii) number of persons unemployed based on *usual status* (ps+ss),
- (iii) number of persons unemployed based on the *current weekly status*, and
- (iv) number of person-days unemployed based on the *current daily status*.

6.0.2 Of these estimates, the first estimate indicates the magnitude of the persons unemployed for a relatively long period during a reference period of 365 days and approximates to an indicator of the chronically unemployed. However, some of the unemployed on the basis of this criterion might be working in a subsidiary capacity. Therefore, the estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period can also be arrived at. The former is based on usual status (ps) and is called as the *unemployed according to the usual principal status* and the latter is based on usual status (ps+ss) and is called as *usually unemployed excluding the subsidiary status workers or us (adjusted)*, which would conceptually be lower than the former.

6.0.3 The estimate of unemployed based on the 'weekly status' approach gives an average picture of unemployment in a short period of 7 days during the survey period. According to the current weekly status approach, a person was considered as unemployed in a week if he/she did not work even for 1 hour during the week but sought or was available for work at least for 1 hour during the week. It includes both chronic unemployment and also the intermittent unemployment of those categorised as usually employed caused by seasonal fluctuations in the labour market.

6.0.4 The estimate of unemployed based on the 'daily status' approach gives an average picture of unemployment on a day during the survey year. For measuring unemployment according to the current daily status approach, 7 person-days were assigned for a person for the 7 days preceding the date of survey and activity for each of the person-days was considered. A person, who did not work even for 1 hour in a day, was considered unemployed for the day if he/she sought or was available for work for 4 hours or more, and was considered unemployed for half-day, if he/she sought or was available for work only for 1 to 4 hours. The estimate of person-days unemployed on a day during the survey period is obtained by dividing the person-days unemployed in a week by 7.

The person-days unemployed captures three aspects of *unemployment*, viz.:

- (a) the unemployed days of the chronically unemployed,
- (b) the unemployed days of the usually employed who become intermittently unemployed during the reference week and
- (c) the unemployed days of those classified as employed according to the priority criterion of 'current weekly status'.

Hence, this estimate may be considered as the most inclusive rate of *unemployment*.

## 6.1 Unemployment Rates

6.1.1 *Unemployment rate* (UR) is defined as the number of persons unemployed per 1000 persons in the *labour force* (which includes both the employed and the unemployed). This, in effect, gives the unutilised portion of the labour force. Thus, it is a more refined indicator of the unemployment situation in a population than the *proportion unemployed* (PU), which is merely the number of the unemployed per thousand persons in the population as a whole.

6.1.1.1 It may be noted that the *unemployment rate*, as estimated from the surveys, happens to be very much lower in the population compared to the worker population ratio (WPR). Therefore, the estimates of *unemployment rate* obtained from the surveys are subject to higher margin of sampling fluctuations than those of the WPRs. One may use the estimates of *unemployment rate* cautiously in interpreting them, particularly at the state and union territory level.

Statement 6.1: Unemployment rates (per 1000 persons in the *labour force*) according to usual status, current weekly status (cws) and current daily status (cds) during 2009 - 2010

all-India

status	unemployment rate					
	rural			urban		
	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)
usual status (ps)	19	24	21	30	70	37
	(11)	(5)	(8)	(17)	(9)	(13)
<i>us</i> (adjusted)	16	16	16	28	57	34
	(9)	(4)	(7)	(16)	(8)	(12)
cws	32	37	33	36	72	42
	(17)	(8)	(13)	(20)	(10)	(15)
cds	64	80	68	51	91	58
	(35)	(16)	(25)	(28)	(12)	(20)

*Note: Figures within bracket indicate the proportion of unemployed per 1000 persons.*

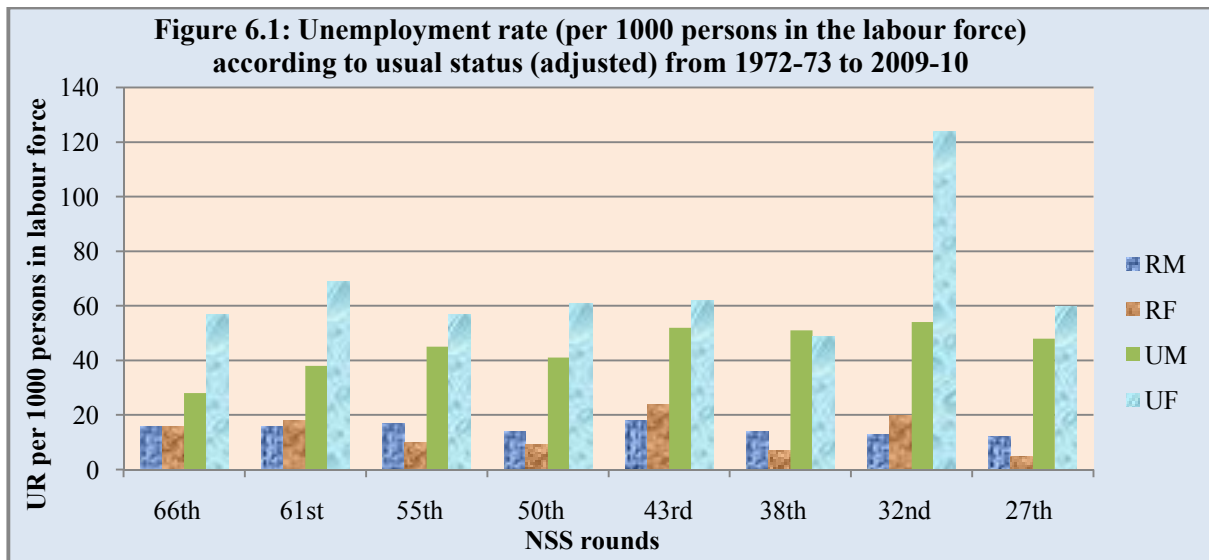

6.1.2 *Unemployment rates during 2009-2010*: Statement 6.1 presents the unemployment rates (UR) as obtained from the present survey according to the three approaches. The corresponding values of proportion unemployed (PU) in the population are given in parentheses. Some of the important points emerging from this statement are:

- (i) the unemployment rates in urban areas are higher than those in rural areas in all the approaches of measurement except for males in urban areas in cds, which is lower than the unemployment rates for males in rural areas measured in cds;
- (ii) the unemployment rates for females are higher than those for males, and highest among urban females;
- (iii) the unemployment rates according to the current daily status (cde) approach are higher than the rates obtained according to 'usual status' approach and 'weekly status' approach, thereby indicating a high degree of intermittent unemployment.
- (iv) the unemployment rate, measured through the usual status (ps) or through the usual status (*adjusted*) is very low in the rural areas.
- (v) In the *us (adjusted)*, unemployment rate for both males and females in rural areas was about 2 per cent, while in urban areas female unemployment rate was 6 per cent compared to 3 per cent for males.
- (vi) The unemployment rates obtained in usual principal status and *us (adjusted)* remained almost at the same level except for urban females for whom unemployment rate in the *us(adjusted)* was nearly 1 percentage point lower compared to that obtained in usual status (ps).
- (vii) In *cws*, unemployment rate in urban areas was 7 per cent for females and 4 per cent for males while in rural areas unemployment rates for females and males were 4 per cent and 3 per cent respectively.
- (viii) In *cde* approach, unemployment rate for urban females was the highest (9 per cent) and for rural female it was 8 per cent. For males in urban areas unemployment rate in *cde* was 5 per cent compared to 6 per cent for rural males.

6.1.3 *Unemployment rates over NSS rounds*: Statement 6.2 gives the unemployment rates as obtained from the eight quinquennial surveys of NSSO. In Figure 6.1, the unemployment rates according to usual status (*adjusted*) for the eight quinquennial rounds have been presented. It may be noted that for the 27<sup>th</sup> round survey only the usual status (*adjusted*) figures were available. The statement shows that compared to 2004-05, in 2009-10, the *unemployment rate* in usual principal status, remained almost the same for rural males (nearly 2 per cent), but decreased by 1 percentage points for rural females (from 3 per cent in 2004-05 to 2 per cent in 2009-10), while in urban areas, the male unemployment rate decreased from 4 per cent to 3 per cent and for females it decreased from 9 per cent to 7 per cent. During this period, the *unemployment rate* in terms of the *us (adjusted)*, remained almost the same for rural males and females (2 per cent) while in urban areas, male unemployment rate decreased from 4 per cent in 2004-05 to 3 per cent in 2009-10 and for females the decrease in unemployment rate was from 7 per cent to 6 per cent. In *cws*, during the period 2004-05 and 2009-10, the unemployment rate for rural males decreased from 4 per cent to 3 per cent while for rural females it was invariant at 4 per cent, and in urban areas, the male unemployment rate decreased from 5 per cent to 4 per cent while for females the decrease was from 9 per cent to 7 per cent. In *cde*, during the period 2004-05 and 2009-10, reduction in unemployment rate was observed for all the four segments of population: for rural male it decreased from 8 per cent to 6 per cent, for rural females it decreased from 9 per cent to 8 per cent, for urban male the decrease was from 8 per cent to 5 per cent and for urban females the decrease was from 12 per cent to 9 per cent.

Statement 6.2: Unemployment rates (per 1000 persons in the *labour force*) according to usual status, current weekly status (cws) and current daily status (cds) from 1972-73 to 2009-10

27 (1972-73)	-	48	60	80	-	60	92	137

6.1.4 *State level variations*: Statements 6.2.1 to 6.2.3, present the *unemployment rates* (UR) during 2009-10 for various states and union territories following the three different approaches stated earlier. While Statement 6.2.1 presents UR based on usual status (ps) and usual status (ps+ss), Statements 6.2.2 and 6.2.3 present estimates obtained following cws and cds approaches, respectively.

6.1.4.1 *URs based on us (adjusted)*: To measure chronic unemployment, the usually unemployed excluding those employed in a subsidiary status (which is not less than 30 days) may be considered. The unemployment rates computed after making such adjustment (i.e., usual status adjusted) would, in general, be expected to be smaller in magnitude than the corresponding rates according to the usual status (principal). One would, therefore, like to examine the *unemployment rates* obtained according to usual status taking into consideration of both principal and subsidiary statuses, that is, rate according to *us (adjusted)*. From the figures presented in Statement 6.2.1 it is seen that there is a large variation in the *unemployment rates* across the states and union territories, across the rural-urban sector and gender.

6.1.4.2 *Rural males*: Statement 6.2.1 shows that there is a large variation in the *unemployment rates* according to *us (adjusted)* for rural males across the states and union territories. It may be noted that the results for the smaller states and union territories are based on a comparatively smaller sample size. Among the major states, Jharkhand reported the highest unemployment rate (4.6 per cent) followed by Assam (3.4 per cent), Kerala (3.2 per cent) and Orissa (3.1 per cent). The rate was the lowest in Karnataka (0.5 per cent), preceded by Rajasthan (0.6 per cent), Maharashtra (0.7 per cent), Gujarat and Madhya Pradesh (0.8 per cent each) and Chhattisgarh (0.9 per cent).

6.1.4.3 *Rural females*: Among the major states, generally, unemployment rate for females were higher than that for males with the exceptions of Assam, Jammu & Kashmir, Kerala and West Bengal, where unemployment rate for females were higher than that for males. Among the major states, Kerala reported the highest unemployment rate (16 per cent) followed by Assam (5.6 per cent) and Jammu & Kashmir (3.8 per cent).

6.1.4.4 *Urban males*: Among the major states, highest unemployment rate was reported by Bihar (6.3 per cent), followed by Jharkhand (5.3 per cent), Jammu & Kashmir (4.7 per cent) and Punjab (4.4 per cent). The unemployment was very low for Gujarat (1.5 per cent) preceded by Rajasthan (1.7 per cent).

6.1.4.5 *Urban females*: Among the major states, the *unemployment rate* for females is found to be more than 10 per cent in the states of Kerala (16.8 per cent), Bihar (16.0 per cent), Assam (12.5 per cent), Jharkhand (12.1 per cent), Jammu & Kashmir (10.9 per cent) and Himachal Pradesh (10.6 per cent).

6.1.4.6 As seen from Statement 6.2.1, the regional pattern of unemployment rates based on usual status (ps) is broadly similar to that of usual status (adjusted). It is seen that, compared to males, for females in both rural and urban areas, unemployment rate obtained in the usual principal status has reduced more when the subsidiary economic activities of the unemployment persons in the usual principal status is considered and the unemployment rate in *us (adjusted)* is obtained.

6.1.4.7 The unemployment rates obtained using the current weekly status (presented in Statement 6.2.2) was, in general, lower than those obtained using the current daily status (see Statement 6.2.3).

6.1.4.8 The daily status concept incorporates the changes in the activity statuses of persons by taking into account the half-days data during the seven days of the reference week. The estimates

based on the daily status, therefore, measure the extent of unemployment in terms of person-days rather than unemployed persons. To an extent the unemployed days of persons who are usually employed are also taken into account in this case. In a situation where large-scale seasonal unemployment exists, the cds measure gives a better picture of the unemployment situation than the one relating to unemployed persons. The daily status estimates obtained from the present survey are presented in Statement 6.2.3. It is seen from the statement that among the major states, for rural males, Kerala reported the highest rate (12.9 per cent), followed by Tamil Nadu (11.6 per cent) and Orissa (8.2 per cent) and Jharkhand (8.1 per cent). For rural females, unemployment rate was the highest in Kerala (27.4 per cent) followed by Tamil Nadu (17.9 per cent) and Assam (11.9 per cent). Among the major states, the *unemployment rate* for urban males according to current daily status approach, was the highest in Kerala (12.1 per cent) followed by Jharkhand (7.9 per cent), and Bihar and Tamil Nadu (7.0 per cent each). For urban females, the unemployment rate was highest in Bihar (29.0 per cent), followed by Kerala (21.3 per cent), Jharkhand and Himachal Pradesh (17 per cent each), Jammu & Kashmir (15 per cent), Tamil Nadu (11.0 per cent), Assam (10.9 per cent), West Bengal (10.8 per cent), Orissa (9.9 per cent), Andhra Pradesh 9.5 per cent) and Punjab (9.2 per cent).

## 6.2 Unemployment Rates among the Educated

6.2.1 As mentioned earlier, the *educated* are those persons who have attained an educational level of *secondary and above including those completed diploma/ certificate courses*. Normally, one can attain this educational level at the age of 15 years or above. Thus, the study among the *educated* is restricted to persons of age 15 years and above. In Statement 6.3, the unemployment rates based on various approaches are given for different educational attainments at the all-India level - for the present and for the last two quinquennial surveys. In Figure 6.2, the unemployment rates according to usual status (adjusted) are presented for different educational attainments for 2009-2010.

6.2.2 The statement reveals the following broad features for the period 2009-10:

- (i) In both rural and urban areas, unemployment rate among the *educated* was higher than that among those whose educational level was lower than *secondary*.
- (ii) In both rural and urban areas, among the *educated*, the rate was much higher for females than for males. This disparity was even more prominent among those whose educational level was *higher secondary or graduate and above*.

Statement 6.3: Unemployment rate (per 1000 persons in the *labour force*) for the persons of age 15 years and above with different educational attainments during 1993-1994, 1999-2000, 2004-2005 and 2009-2010

6.2.3 *Comparison of rates since 1993-94*: It is seen from Statement 6.3 that compared to 1993-94, these rates for 2009-10 among the *educated* have generally declined. The decline was more for the females than for the males. In the us (adjusted), the unemployment rate for *educated* rural male was 7 per cent during 1993-94 which decreased to 6 per cent during 1999-2000 and in 2009-2010, it was nearly 4 per cent. For *educated* rural female, the decrease in the unemployment rate was from 16 per cent in 1993-94 to nearly 12 per cent in 2009-10.

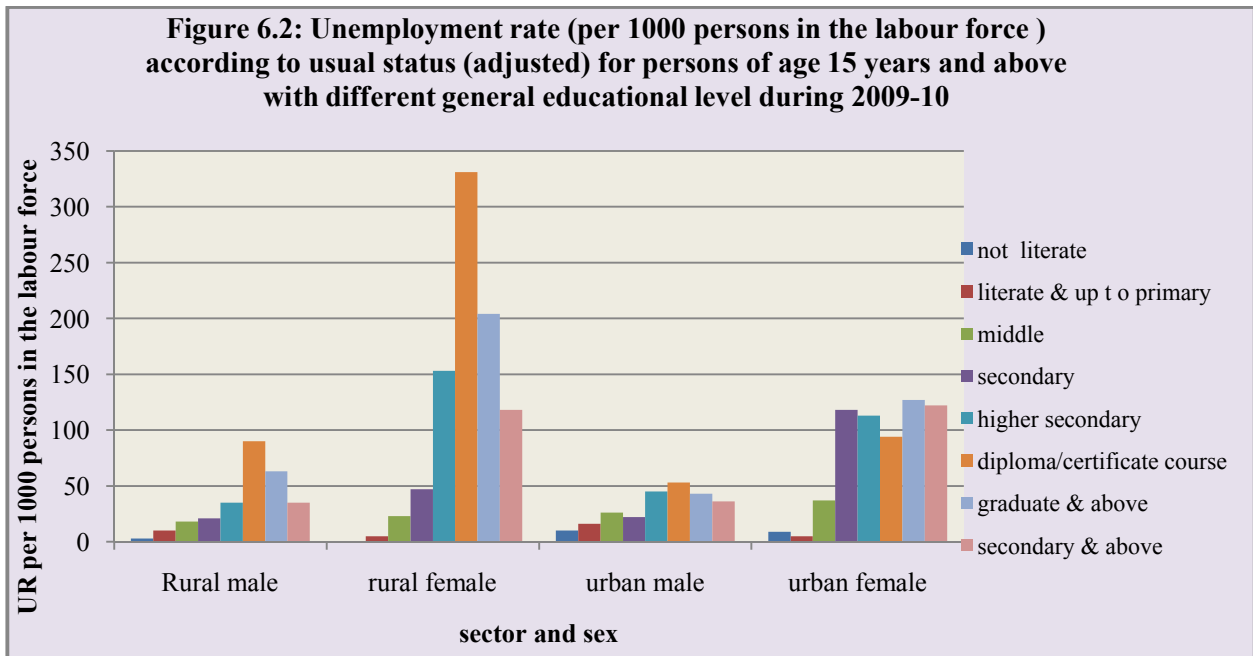

Among urban male *educated*, the unemployment rate decreased from 6 per cent in 1993-94 to 4 per cent in 2009-10. The urban female *educated* unemployment rate decreased from 18 per cent in 1993-94 to 12 per cent in 2009-10.

6.2.4 *State level rates for the educated*: The unemployment rates among the *educated* for different states and union territories are given in Statements 6.3.1 to 6.3.3. Statement 6.3.1 is based on *usual status (ps)*, Statement 6.3.2 on *us (adjusted)* and Statement 6.3.3 on *cws*. It may be noted that the estimates given for the smaller states and union territories may not be reliable enough due to small sample size.

6.2.4.1 *URs based on usual status (ps)*: It is seen from Statement 6.3.1 that in rural areas among the major states, the rate was the highest in Kerala (18.0 per cent) followed by Orissa and Assam (nearly 12 per cent each). In urban areas, the unemployment rate was also highest in Kerala (13.7 per cent) followed by Bihar (12.3 per cent) and Jharkhand (10 per cent). The unemployment rates for educated females were also very high in these states.

6.2.4.2 *URs based on usual status (adjusted)*: It is seen from Statements 6.3.2 that in rural areas the rate was highest in Kerala (15.3 per cent) followed by Assam and Orissa (nearly 11 per cent each). In the urban areas, the highest unemployment rate was found in Kerala and Bihar (nearly 12 per cent each) followed by Jharkhand (9.6 per cent) and Jammu & Kashmir (9.1 per cent).

6.2.4.3 *URs based cws*: According to *cws* (given in Statement 6.3), in rural areas, the unemployment rate was the highest in Kerala (16.9 per cent) followed by Orissa (13.1 per cent) and Assam (12.8 per cent). In urban areas, the unemployment rate was the highest in Bihar (13.3 per cent) followed by Kerala (12.6 per cent), while it was nearly 9.8 per cent each in Jammu & Kashmir and Jharkhand.

### 6.3 Unemployment Rates of the Youth

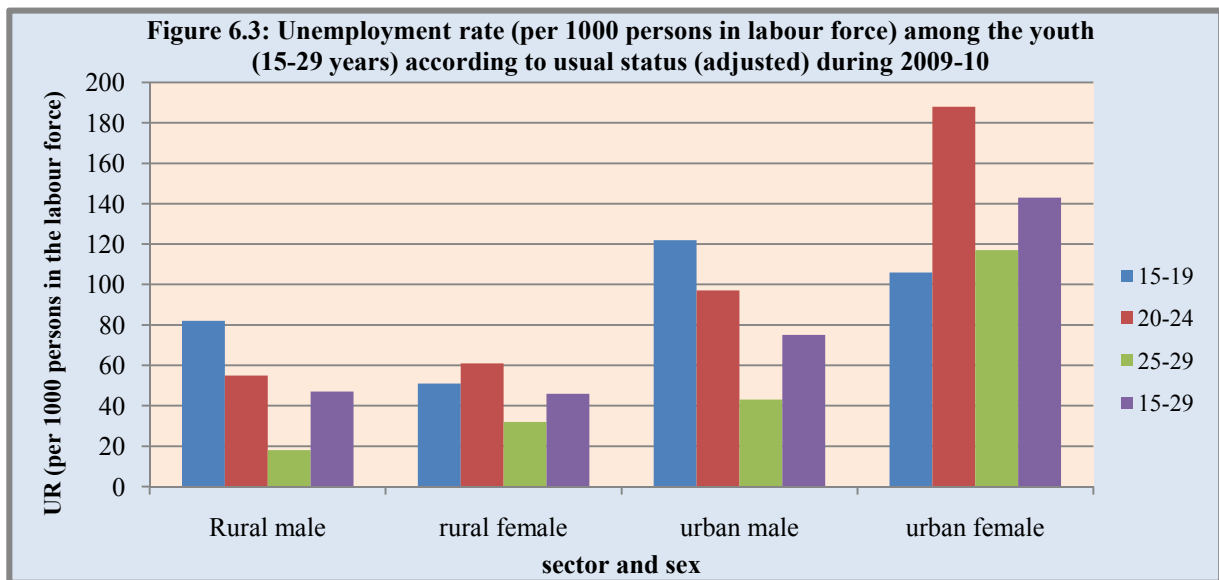

6.3.1 In India, persons aged 15-29 years, who were considered as the *youth*, accounted for 26 to 29 per cent of the total population (refer Statement 3.6 of Chapter Three). A substantial proportion of them attain some level of education and enter into the labour market while they are in the age group of 15-29 years, while some of them may be *chronically unemployed* - remaining unemployed for a longer period of the year. Some others, though usually employed, become intermittently unemployed during some weeks or days of the year due to seasonal fluctuations in the labour market. Statement 6.4 gives the unemployment rates (per 1000) among the *youth* for each sex at the all-India level. In Figure 6.3, the unemployment rates according to usual status (adjusted) among the youth (age 15-29 years) are presented for different age groups during 2009-2010.

6.3.2 It is seen that the unemployment rate was much higher in 2009-10 among the youth as compared to that in the overall population (given in Statement 6.1). Secondly, the rate was higher for the urban youth than that for the rural youth except in cds for the males where the rates were same in both rural and urban areas (nearly 11 per cent). Further, compared to the female youth, the unemployment rate for the male youth was lower in general and was substantially lower in urban India.

Statement 6.4: Unemployment rate (per 1000 persons in the *labour force*) among the youth (15-29 years) according to usual status, current weekly status (cws) and current daily status (cds) during 1993-1994, 1999-2000, 2004-2005 and 2009-2010  
all-India

6.3.3 *Change since 1993-94*: During the period from 1993-94 and 2009-2010, the unemployment rates among the youth have increased for both males and females in rural and decreased in urban areas in all the approaches of measurements. During 2004-2005 and 2009-10, in the *us* (adjusted), the unemployment rates among the youth in rural areas have increased by 1 percentage points for both males and females, for *cws* there has not been any change in the unemployment rate for these segments of the population, while in *cds* the rates have decreased by 1 percentage points. In the urban areas, during 2004-05 and 2009-10 for both males and females, the unemployment rate has decreased by 1 percentage points in *us* (adjusted). The reduction in the urban male unemployment rate during this period was nearly 2 percentage points in *cws* and 3 percentage points in *cds*, while the reduction was nearly 1 percentage points for females in *cws* and 3 percentage points for *cds*.

6.3.4 *Unemployment rates of youth in states*: The corresponding rates for different states and union territories are given in Statements 6.4.1 to 6.4.4. It may be noted that the rates given for smaller states and union territories may not be reliable due to small sample size for the unemployed in those states and union territories. Among rural areas of the major states, the youth unemployment rate in the usual status (adjusted) was highest in Kerala (24.4 per cent), followed by Jharkhand (12.3 per cent) and Assam (11.3 per cent), while in the urban areas, the rate was the highest in Bihar (23 per cent), followed by Assam and Kerala (20 per cent each). In *cws* approach, in rural areas, highest unemployment rate was in Kerala (26.1 per cent), followed by Orissa (14.4 per cent) and Jharkhand (13.4 per cent), while in urban areas, the rate was the highest in Bihar (25.1 per cent), followed by Kerala (21.6 per cent) and it was nearly 19 per cent in each of Jharkhand and Himachal Pradesh. In *cds*, in rural areas, unemployment rate was the highest in Kerala (33.5 per cent), followed by Tamil Nadu (19.9 per cent), Orissa (18.2 per cent) and Jharkhand (17.4 per cent), while in urban areas it was the highest in Kerala (28.4 per cent), followed by Bihar (26.0 per cent) and Jharkhand (23.3 per cent).

6.3.5 *Unemployment Rates of the youth and educational level*: It may be important to see how the unemployment rates among the *youth* are related with their educational level and are

Statement 6.5: Education-level specific usual status (ps+ss) unemployment rate (per 1000 persons in the *labour force*) for persons of age 15-29 years and 15-59 years during 2009-2010  
all-India

different from that of the economically active population. Statement 6.5 presents the unemployment rates according to usual status (adjusted) for the youth (15-29 years) as well as for persons of age 15-59 years (the economically active population). The general feature was that the unemployment rate increases with the level of education. Moreover, for every educational level, the rates are higher among the youths than those among persons of age 15-59 years in the corresponding educational level. Among educated youths, the *unemployment rate* was higher for females than males: unemployment rates were 22.5 per cent and 17.8 per cent for females in urban and rural areas, respectively whereas the rates for males in urban and rural areas were 10.3 per cent and 8.3 per cent, respectively.

## 6.4 Unemployed on All the Seven Days of the Reference Week

6.4.1 This section deals with persons aged 15-59 years who were unemployed on all the 7 days of the reference week. In the following paragraphs, different features of such persons, henceforth referred to as 'unemployed' in brief, are discussed.

### 6.4.2 Unemployed Who Were Ever Employed

6.4.2.1 For the purpose of survey, among those who were unemployed on all the seven days of the reference week but had more or less regular work at least for some time in the past were considered as *ever employed*. Information on whether an unemployed was *ever employed* or not was collected to differentiate the *ever employed* from the first-time work seekers. The proportion of unemployed who were *ever employed* per 1000 unemployed is given for each broad age-group and educational level in Statement 6.6. Obviously, 1000 minus these proportions will be the estimated proportion of new entrants into the labour market among the unemployed.

6.4.2.2 It is seen from Statement 6.6 that the proportion of unemployed who were *ever employed* increases with age but decreases with the level of education. A reverse relationship

Statement 6.6: Number of unemployed (15-59 yrs.) who ever worked per 1000 unemployed (15-59 yrs.) separately by broad age-group and general educational level

age group / general educational level (1)	rural		all-India urban	
	male (2)	female (3)	male (4)	female (5)
<i>age group:</i>				
15-29	340	266	250	197
30-44	876	800	689	457
45-59	898	968	861	772
<i>general educational level:</i>				
not literate	706	960	626	575
literate but below primary	504	807	614	538
primary, middle and secondary	533	360	411	359
higher secondary & above	227	143	250	180
all (15-59 yrs.)	484	449	351	262

Note: unemployed means those persons unemployed on all the 7 days of the week

will therefore hold for the new entrants into the job market. Among the unemployed with educational level higher secondary & above, in rural areas, 77 per cent among males and 86 per cent among females sought employment for the first time. In urban areas, these proportions were 75 per cent among males and 82 per cent among females. The corresponding proportions among the *not literate* unemployed were 29 per cent among males and 4 per cent among females in rural areas and 37 per cent among males and 43 per cent among females in urban areas. Among the different age-groups, the proportion of the new entrants was the highest in the age-group 15-29 years and within this age-group, the proportion was highest among urban females. For persons of age 15-59 years, the proportion of new entrants among the unemployed was higher in urban areas than that in rural areas: among the unemployed proportion of new entrants was 66 per cent for rural males, 73 per cent for rural females, 75 per cent for urban males and 80 per cent for urban females.

6.4.3 *Status of last employment:* The distribution of the unemployed who had worked for some time in the past by the status in their last employment is shown in Statement 6.7.

Statement 6.7: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked by their status in last employment

status of last employment (1)	rural		all-India urban	
	male (2)	female (3)	male (4)	female (5)
self-employed	233	102	172	144
regular wage/salaried	78	101	410	565
casual labour	689	797	418	292
total	1000	1000	1000	1000

Among them, in rural areas, as high as 69 per cent among males and 80 per cent among females were engaged as *casual labour* in the past, while in urban areas, about 42 per cent and 29 per cent of the males and females respectively were *casual labour*. A significant proportion of the urban unemployed – 41 per cent for males and 57 per cent for females – who had worked for some time in the past had been *regular wage/salaried* workers. In rural areas, the corresponding proportions were very low – 8 per cent for males and 10 per cent for females.

6.4.4 *Industry of last employment*: The distribution of unemployed who were *ever employed* by industry of last employment is given in Statement 6.8. In the rural areas, a majority of them worked in the agriculture sector (59 per cent for males and 74 per cent for females) and

Statement 6.8: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked by broad industry division in their last employment

broad industry (division)	all-India

all (incl. n.r.)	1000	1000	1000	1000

**Division 1:** Legislators, senior officials and managers, **Division 2:** Professionals, **Division 3:** Technicians and associate professionals, **Division 4:** Clerks, **Division 5:** Service workers and shop & market sales workers, **Division 6:** Skilled agricultural and fishery workers, **Division 7:** Craft and related trades workers, **Division 8:** Plant and machine operators and assemblers, **Division 9:** Elementary occupations.

as '*elementary occupation*'. For urban unemployed females who were *ever employed*, nearly 22 per cent had '*elementary occupation*' as the last occupation division, while the occupations '*professionals*', '*technicians and associate professionals*' and '*clerks*' were reported, respectively, by nearly 16 per cent, 15 per cent and 17 per cent of them.

6.4.6 *Reason for becoming unemployed for those who had work in the past*: The information on reason for becoming unemployed was collected for those who were employed in the past. The results are given in Statement 6.10. Among them, in rural areas, about 55 per cent among males and 67 per cent among females became unemployed due to *lack of work in the area* and

in the urban areas, they worked mostly in the non-agriculture sector (95 per cent for males and 89 per cent for females).

6.4.5 *Occupation of last employment*:

The distribution of unemployed who were *ever employed* by their occupation division in their last employment is given in Statement 6.9. The

National Classification of Occupation (NCO) 2004 was used in this survey. It is seen from the statement that in rural areas, for both males and females, that majority of the unemployed who were *ever employed* had '*elementary occupations*' as their last occupation (Occupation Division 9) – 60 per cent among males and 74 per cent among females. In urban areas, among the males unemployed who were *ever employed*, nearly 24 per cent reported their last occupation as '*craft and related trades workers*' (Division 7) and 22 per cent

Statement 6.10: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked by reason for break in employment

reason for break in employment (1)	all-India			
	rural		urban	
	male (2)	female (3)	male (4)	female (5)
loss of earlier job	43	27	89	37
quit earlier job	39	41	178	247
lay-off without pay	1	23	17	8
unit closed	27	1	73	33
lack of work in the enterprise	146	57	114	95
lack of work in the area	547	671	249	130
others	191	180	279	448
all (including n.r.)	1000	1000	1000	1000

in urban areas, these proportions were 25 per cent for males and 13 per cent for females. About 18 per cent of the male and 25 per cent of the female unemployed in urban areas had *quit earlier job*. *Lay-off, closure of the unit or loss of earlier job* were reported as the reason for unemployment by about 18 per cent of the urban male unemployed and 8 per cent of urban female unemployed,

while these were reported by nearly 7 per cent of rural male unemployed and 5 per cent rural female unemployed. Among other specified reasons, *lack of work in the enterprise* was reported by a considerable proportion of the unemployed – 15 per cent among males and 6 per cent among females in rural areas, and 11 per cent among males and 10 per cent among females in urban areas.

6.4.7 *Reason for quitting the earlier job*: Information was collected about the reasons for quitting the earlier job from those who had become unemployed as they had to *quit earlier job*. The results are given in Statement 6.11 for all-India. It is observed that of the various specified reasons for quitting the earlier job, work being *not remunerative enough* was reported by a majority of the unemployed– 59 per cent by males and 49 per cent by females in rural areas and 41 per cent by males and 34 per cent by females in urban areas. In the rural areas, *unpleasant environment* was reported by about 13 per cent of the unemployed males

Statement 6.11: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked and quit the job by reason for quitting the last job

reason for quitting last job (1)	all-India			
	rural		urban	
	male (2)	female (3)	male (4)	female (5)
work not remunerative enough	590	488	410	336
unpleasant environment	128	24	34	20
employer harsh	128	0	129	32
health hazard	26	0	62	178
to avail the benefits of voluntary retirement	0	0	11	0
others	128	488	354	437
all (including n.r.)	1000	1000	1000	1000

and 2 per cent of the unemployed females who ever worked but quit the job. The corresponding figures for males and females in the urban areas were 3 per cent and 2 per cent respectively. About 13 per cent each of rural male unemployed and urban male unemployed had to quit the earlier job due to *employer being harsh*. *Health hazard*, as a reason

for quitting job was reported by nearly 18 per cent of the urban female unemployed. It may be seen that for about 13 per cent and 49 per cent of the unemployed males and females in rural areas, the reason for quitting the earlier job was recorded as ‘others’ in the survey, while these proportions were nearly 35 per cent and 44 per cent of the urban males and female unemployed, respectively. This shows that a large majority of female unemployed had to quit the earlier job for reason(s) other than the specified ones.

## Chapter Seven

### Underemployment

#### 7.0 General

7.0.1 Underemployment is commonly defined as the under-utilisation of labour time of the workers. Some of the persons categorised as usually employed, do not have work throughout the year due to seasonality in work or otherwise and their labour time is not fully utilised - they are, therefore, underemployed. Their underemployment is termed *visible underemployment* if they report themselves to be not working with respect to a shorter reference period. The NSS measures the *visible* underemployment by cross classifying persons by (a) their usual and current weekly statuses (b) their usual and current daily statuses and (c) their current weekly and current daily statuses.

7.0.2 Some employed persons, particularly the *self-employed*, may appear to work throughout the year. But the work they pursue may not fully meet their needs in terms of generating sufficient income, giving fulfilment to them, etc. They may, therefore, want additional and/or alternative work. Such underemployment is termed as *invisible underemployment* and therefore, not directly measurable. The NSS calculates the indicators of *invisible underemployment* through a set of probing questions addressed to those categorised as usually employed on their availability for additional/alternative work and reason for seeking such additional/alternative work, status of their present engagement (i.e. whether worked more or less regularly), etc. The proportions of the usually employed who report their availability for additional/alternative work, gives, by and large, an overall share of the employed who did not have enough work, or at least felt the need for additional/alternative work, and, in that sense, were underemployed.

#### 7.1 Underemployment Among the Usually Employed

7.1.1 As mentioned earlier, some persons categorised as usually employed might not have work throughout the year. They might remain without work during some weeks of the year or go without work on some days of the different weeks of the year. The first dimension is brought out by the distribution of the usually employed by their current weekly status. Statement 7.1 gives the relevant all-India results for 'all' usually employed persons (i.e., usually employed according to usual status (ps+ss)) for NSS 66<sup>th</sup> round (2009-10). Corresponding results based on the 50<sup>th</sup> (1993-94), 55<sup>th</sup> (1999-2000) and NSS 61<sup>st</sup> (2004-05) rounds are also presented in the statement.

7.1.2 It is seen from Statement 7.1 that the *underemployment rate* defined as the proportion of usually employed who were found to be *not* employed (i.e. reporting either unemployed or not in labour force) during the week preceding the date of survey, had been stable for males between 1993-94 and 2004-05 at nearly 4 per cent in rural areas and 2 per cent in urban areas, which dropped by 1 percentage point each in both rural and urban areas in 2009-10. The

underemployment rate for rural females was 15 percent in 2009-10, which was nearly 2 percentage points lower than to that of either 1999-2000 or 2004-05 and 4 percentage points lower than that of 1993-94. Among urban females, the underemployment rate, which was found to be 6 per cent in 2009-10, decreased by about 3 percentage points compared to that found in 2004-05. Compared to the period 1993-94, the underemployment rate among urban females decreased by nearly 6 percentage points in 2009-10. It is seen that, the problem of underemployment was more severe among usually employed females than among employed males, and more in rural than in urban areas. During 2009-10, the underemployment among usually employed females was 15 per cent in rural India and nearly 6 per cent in urban India, while the corresponding figures for usually employed males were 3 per cent and 1 per cent in rural and urban areas, respectively. It is, moreover, seen that most of the usually employed females who were currently not working had withdrawn themselves from the labour force and did not report themselves as currently unemployed. The distributions for the different states and union territories obtained from the present survey are given in Statement 7.1.1.

Statement 7.1: Per 1000 distribution of usually employed (principal and subsidiary status taken together) by their broad current weekly status during 1993-94, 1999-2000, 2004-2005 and 2009-10

all-India								
current weekly status	male				female			
	1993-1994	1999-2000	2004-2005	2009-2010	1993-1994	1999-2000	2004-2005	2009-2010
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
<b>rural</b>								
employed	957	956	958	968	807	832	833	847
unemployed	15	22	22	15	14	21	20	15
not in labour force	28	22	21	17	179	148	147	138
all	1000	1000	1000	1000	1000	1000	1000	1000
<b>urban</b>								
employed	976	977	977	987	884	900	914	939
unemployed	11	11	14	8	9	9	15	11
not in labour force	12	12	9	6	107	91	71	50
all	1000	1000	1000	1000	1000	1000	1000	1000

7.1.3 The activity pattern of the usually employed during different days within the reference week is indicated by the distribution of their days by current daily status. The relevant results for rural and urban India are presented in Statement 7.2. It is observed that the proportion of person-days of the usually employed utilised for work was quite low for females compared to males in all the four periods for which results are presented. During 2009-10, this proportion was 69 per cent and 85 per cent for females in rural and urban India, respectively while these were 92 per cent and 96 per cent for males in rural and urban India, respectively. It is observed that when work is not available, a large proportion of females withdrew from the labour force rather than they reported themselves as unemployed. A comparison with the earlier rounds, show that in 2009-10 a higher percentage of the person-days of the usually employed was utilised for work: the person-days of the usually employed persons utilised for

work increased by 3 percentage points each for rural male and females, 1 percentage point for urban male and 5 percentage points for urban females in 2009-10 compared to that of 2004-05. The distributions obtained from the present survey for different states and union territories are presented in Statement 7.2.1.

Statement 7.2: Per 1000 distribution of person-days of usually employed (principal and subsidiary status taken together) by their broad current daily status during 1993-94, 1999-2000, 2004-2005 and 2009-10

## 7.2 Underemployment of Persons Categorised as Working According to Current Weekly Status

7.2.1 Some persons classified as working during a week might not have had work for the entire week. The distribution of persons working according to current weekly status by their current daily status, therefore, would indicate the proportion of person-days on which they had remained without work. These results are presented in Statement 7.3 for 2009-10, 2004-05, 1999-2000 and 1993-94.

7.2.2 In 2009-10, the proportion of person-days on which persons with some work during the reference week (according to weekly status) were without work was about 5 per cent for rural males, 18 per cent for rural females, 3 per cent for urban males and 10 per cent for urban females. During the period from 1993-94 to 2004-05, in rural areas, the proportion of unemployed days increased for both males and females, but decreased during 2009-10: from 5 per cent in 1993 it increased to 7 per cent in 2004-05 but decreased to 5 per cent in 2009-10 for rural male and from 18 per cent in 1993-94 it increased to 21 per cent in 2004-05 thereafter it decreased to 18 per cent in 2009-10 for rural female. For urban males, the proportion of unemployed days was invariant at around 3 per cent during 1993-94 to 2009-10. For urban females, the proportion of unemployed days, however, had been somewhat static at 14 to 13 per cent during this period from 1993-94 to 2004-05 but decreased to 10 per cent in 2009-10. The state-specific data on the distribution of person days of persons with some work during a week by their broad daily activity status are presented in Statement 7.3.1.

Statement 7.3: Per 1000 distribution of person-days of current weekly status employed persons by their broad current daily status during 1993-94, 1999-2000, 2004-2005 and 2009-10

### 7.3 Invisible Underemployment – Some Indicators

7.3.1 In the present survey, the usually employed were asked ‘whether they worked more or less regularly throughout the year’. Among them, those who did not work more or less regularly gave an indication of the extent of underemployment.

Statement 7.4: Number of employed persons according to principal status of age 15 years and above who did not work more or less regularly throughout the year per 1000 employed persons in the usual principal status

broad usual principal status	all-India			
	rural		urban	
(1)	male (2)	female (3)	male (4)	female (5)
<i>self-employed in:</i>				
agriculture	131	139	97	73
non-agriculture	87	85	59	63
<i>regular wage/salaried in:</i>				
agriculture	128	58	57	40
non-agriculture	80	50	44	52
<i>casual labour in:</i>				
agriculture	204	253	174	194
non-agriculture	182	199	173	131
all	145	176	74	77

7.3.2 *Underemployed-did not work more or regularly*: Statement 7.4 presents the number of usually employed of age 15 years and above who did not work more or less regularly throughout the year per 1000 employed by usual principal status at the all-India level. It is observed from the statement that higher proportion of females than males, in both rural and urban areas, did not work more or less regularly. Further, among the various categories of the employed, the proportion was the highest for *casual labourers*. As high as 25 per cent and 19 per cent of female *casual labourers* engaged in the agriculture sector,

in rural and urban India respectively, did not work regularly throughout the year and in the

non-agriculture sector, the corresponding proportions were 20 per cent and 13 per cent respectively. On the other hand, the proportion was the lowest among the *regular wage/salaried employees*, specially for those engaged in non-agriculture sector: among those engaged in non-agricultural sector as regular wage/salaried employees, nearly 8 per cent of the rural male workers, 5 per cent of rural female workers, 4 per cent of urban male workers and 5 per cent of urban female workers did not work regularly throughout the year. The estimates obtained from the present survey for different states and union territories are given in Statement 7.4.1.

7.3.3 In the survey, the usually employed were further asked 'whether they sought or were available for (i) additional work and (ii) alternative work'. The proportions of usually employed who reported themselves as available for additional work or alternative work gave an idea about under-utilisation of available labour time and therefore, could serve as two indicators of underemployment.

7.3.4 *Underemployed - seeking or available for additional work*: Statement 7.5 gives the number of persons who sought or were available for additional work per 1000 usually (ps) employed persons of age 15 years and above and their distribution by reason for seeking or being available for additional work. The statement shows that, during 2009-10, among the usually employed, for both males and females, percentage of workers seeking or available for additional work was higher in the rural areas than in urban areas: about 11 per cent of rural male workers, 8 per cent of rural female workers and 6 per cent each of male and female workers in urban areas had sought or were available for additional work. The main reported reason for seeking or being available for additional work was *to supplement income* : nearly 58 per cent of the male workers in each of rural and urban areas, 59 per cent of rural female workers and 64 per cent of urban female workers reported this reason for seeking or available for additional work. *Lack of enough work* was reported by 20 to 22 per cent of workers. Thus, as per survey results, the two reasons, viz., *to supplement income* or *lack of enough work*, had led to seeking or being available for additional work for nearly 79 to 86 per cent of the workers. The results for each states and union territories is given in Statement 7.5.1.

Statement 7.5: Number of usually working persons of age 15 years & above, who sought or were available for additional work per 1000 usually employed persons in the principal status (15 years & above) and their per 1000 distribution by reason for seeking or availability for additional work

category of persons	no. per 1000 workers who sought or were available for additional work	per 1000 distribution of workers who sought or were available for additional work by reason					total
		to supplement income	not enough work	not enough work and to supplement income	others		
					total	all-India	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	
rural male	114	576	216	167	28	1000	
rural female	83	590	199	167	34	1000	
urban male	59	582	214	157	37	1000	
urban female	62	641	214	114	27	1000	

**7.3.5 Underemployed - seeking or being available for alternative work:** Statement 7.6 shows the usually (ps) employed persons of age 15 years and above reporting themselves as having sought or being available for alternative work. It is seen that a higher proportion of usually employed persons in rural areas had sought or were available for alternative work than their urban counterparts: nearly 10 per cent of rural male compared to 5 per cent of urban male and 7 per cent of rural female compared to 5 per cent of urban females had sought or were available for alternative work. Among the usually employed reporting themselves as having sought or available for alternative work nearly 67 per cent of rural male, 72 per cent of rural female, 64 per cent of urban male and 68 per cent of urban females reported that their *present work was not remunerative enough*. Statement 7.6.1 gives the corresponding results obtained from the present survey for different states and union territories.

Statement 7.6: Number of persons who sought or were available for alternative work per 1000 usually employed persons in the principal status (15 years above) and their per 1000 distribution by reason for seeking or availability for alternative work

category of persons	per 1000 no. of workers who sought or were available for alternative work	per 1000 distribution of workers who sought or were available for alternative work by reason						all-India

## Chapter Eight

### Labour Mobility: Change in Nature of Work

#### 8.0 General

8.0.1 Over a period of time various features related to the employment of a worker, such as his/her occupation, industry or status of work may undergo a change. To study such changes in the nature of work, information was collected in this survey relating to change(s) in occupation, industry and work status or of 'establishment' that took place within a reference period of two years prior to the date of survey for the usually employed persons (according to principal status). In this chapter, the term 'usually employed' refers to those persons who are employed according to the usual status (ps). The term 'establishment' was used in a broad sense and included all producing units covering household enterprises also. Discussion is made in the following sections on labour mobility in terms of change in occupation, industry, work status and of establishment.

#### 8.1 Change in Work Status or of Establishment

8.1.1 At first, we look at the estimates obtained from the present survey classified by change in work status or by change in establishment for each level of education of the person at the all-India level. The number of usually working persons of age 15 years & above, who had changed their status of work or changed establishment during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) at the all-India level is presented in Statement 8.1.

Statement 8.1: Number of usually (ps) working persons who had changed their status of work or changed establishment during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status for each broad level of general education

changed work status / establishment	general educational level				all-India
	not literate	literate and up to primary	primary, middle and secondary	higher secondary and above	all
(1)	(2)	(3)	(4)	(5)	(6)
<b>rural male</b>					
work status	4	2	6	6	5
establishment	52	46	47	24	45
<b>rural female</b>					
work status	4	3	4	2	4
establishment	60	48	54	26	55
<b>urban male</b>					
work status	7	5	7	5	6
establishment	53	46	49	30	43
<b>urban female</b>					
work status	2	4	2	8	4
establishment	62	49	44	32	46

8.1.2 The statement shows that during the two years preceding the interview only a negligible proportion (less than 1 per cent) among the usually employed had changed work status while change of establishment hovered around 4 to 6 per cent among the four segments of the usually employed (i.e., rural male worker, rural female worker, urban male worker and urban female worker). The proportion changing their establishment was higher for females than for males in both rural and urban areas and in case of rural females the proportion was the highest: 5 per cent of rural male had changed establishment compared to 6 per cent of rural females and 4 per cent of urban males had changed establishment compared to 5 per cent of urban females. Proportion changing establishment during the two years preceding the date of survey showed distinct pattern with the level of education of the workers. Among all the four segments of the usually employed, the proportion was the highest among not literate workers and it was the lowest among the workers with education level higher secondary and above: among the not-literate, the proportion of workers who had changed establishment was nearly 5 per cent for rural male, 6 per cent for rural female, 5 per cent for urban male and 6 per cent for urban female, while among those with educational level higher secondary and above these were nearly 2 per cent of rural male, 3 per cent of rural female and 3 per cent each of urban male and female. The number of usually working persons of age 15 years & above, who had changed their status of work or changed establishment during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) for different states and union territories is presented in Statement 8.1.1. It may be noted that the estimates of proportions given in this statement are based on a very small sample reporting the changes.

Statement 8.2: Number of usually working persons who had changed their status of work during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status and the per 1000 distribution by their last work status

all-India										
present work status	male					female				
	no. per 1000 who changed work status	last work status				no. per 1000 who changed work status	last work status			
		self- emp.	reg. wage/ sal.	cas- ual lab.	all (incl. n.r.)		self- emp.	reg. wage/ sal.	cas- ual lab.	all (incl. n.r.)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
<b>rural</b>										
self-employed	4	106	284	446	1000	1	82	112	671	1000
regular wage/ salaried	11	571	-	371	1000	8	395	-	600	1000
casual labour	5	454	189	331	1000	6	370	72	402	1000
all	5	326	193	389	1000	4	316	72	479	1000
<b>urban</b>										
self-employed	7	87	617	264	1000	4	307	522	169	1000
regular wage/ salaried	6	480	-	453	1000	5	334	-	298	1000
casual labour	6	722	180	32	1000	2	976	0	24	1000
all	6	343	301	304	1000	4	391	170	228	1000

8.1.3 The distribution of usual workers of age 15 years & above changing their status of work by their last work status at the all-India level is presented in Statement 8.2. The statement reveals that among those who reported their present work status as *casual labour* were, in their last work status, more frequently *self-employed* than *regular* workers: among *casual labours* for rural male nearly 45 per cent were *self-employed* compared to 19 per cent as *regular worker*, for rural female nearly 37 per cent were *self-employed* compared to 7 per cent as *regular worker*, for urban male nearly 72 per cent were *self-employed* compared to 18 per cent as *regular worker* and for urban female nearly 98 per cent were *self-employed*. However, among workers reporting their present work status as *self-employed*, proportion reporting their last status as *casual labour* was much higher in rural areas than that in urban areas, where the last status was more frequently reported as *regular wage earners*. Among those reported as *self-employed* in the present work status, for males in rural areas nearly 45 per cent were *casual labours*, for females in rural areas nearly 67 per cent were *casual labours*, while among urban males nearly 62 per cent were *regular workers* and among urban females nearly 52 per cent were *regular workers*.

## 8.2 Change in Industry of Work

8.2.1 Statement 8.3 presents the distribution of usual principal workers aged 15 years and above who had changed their industry of work during the two preceding years by their last industry of work at the all-India level. For the purpose of study, the industry divisions of NIC 2004 have been categorised as (i) *primary* sector (divisions 01 – 05), (ii) *secondary* sector (divisions 10 – 45) and (iii) *tertiary* sector (divisions 50 – 99). It is seen from Statement 8.3 that about 1 per cent of male workers in both rural and urban areas had changed industry of work, while among female workers change in industry of work was negligible (less than 1 per cent) in rural areas and nearly 1 per cent in urban areas. The number of usually working persons who had changed their industry of work during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) for different states and union territories is presented in Statement 8.1.1.

8.2.2 Statement 8.3 also shows that among the four segments of the workforce, those reporting their present industry of work in the *primary* sector, more workers reported their last industry of work in the *secondary* sector excepting the urban males, for whom more had the last industry of work in the *tertiary* sector: among those reporting present industry of work in the *primary* sector, nearly 64 per cent of rural male workers, 66 per cent of rural female workers and 75 per cent of urban female workers had reported their last industry in *secondary* sector, while nearly 56 per cent of the urban male workers had reported *tertiary* sector as last industry of work. Further, among both male and female workers in the rural areas, reporting presently employed in *secondary* sector, a larger proportion, had been employed in *primary* sector earlier, whereas in the urban areas, among males a larger proportion were employed in *secondary* or *tertiary* sector but in case of females a large proportion were employed in the *primary* sector: among those reporting present industry of work in the *secondary* sector, nearly 48 per cent of rural male, 91 per cent of rural female and 41 per cent of urban females were engaged in the *primary sector* while among urban males nearly 49 per cent were engaged in *secondary sector* and another 35 per cent in *tertiary sector*. In urban areas, among the male or female workers reporting their present industry of work in the *tertiary* sector,

there were more who had their last industry of work in the *secondary* sector than in the *primary* sector. Compared to this, in rural areas, among all such workers, male or female, who changed their industry of work, the situation was just the reverse, with more workers reporting their last industry of work in the *primary* sector than in the *secondary* sector.

Statement 8.3: Number of usually working persons who had changed their industry of work during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status and the per 1000 distribution by their last broad industry of work

												all-India

### 8.3 Change in Occupation of Work

8.3.1 Statement 8.4 presents the distribution of usual workers aged 15 years and above who had changed their occupation of work during the two preceding years by the occupation in their last work at the all India level. As stated earlier, National Classification of Occupations (NCO), 2004 was used in recording the occupation codes. It is seen from Statement 8.4 that about 1 per cent of male workers in both rural and urban areas had reported change in their occupation during the two years preceding the date of survey. Among female workers, nearly 1 per cent in urban areas and negligible (less than 1 per cent) proportion in rural areas had changed occupation during the two years preceding the date of survey. The number of usually working persons of age 15 years & above, who had changed their occupation of work during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) for different states and union territories is presented in Statement 8.1.1.

Statement 8.4: Number of usually working persons who had changed their occupation of work during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status and the per 1000 distribution by their last broad occupation of work

8.3.2 Descriptions of the Occupation Divisions as per National Classification of Occupation (2004), used in Statement 8.4 are as follows:

occupation division code	description of occupation division
1	Legislators, senior officials and managers
2	Professionals
3	Technicians and associate professionals
4	Clerks
5	Service workers and shop & market sales workers
6	Skilled agricultural and fishery workers
7	Craft and related trades workers
8	Plant and machine operators and assemblers
9	Elementary occupations
x	Workers not classified by occupations

8.3.3 Statement 8.4 also shows that among the four segments of the workforce who reported change in their occupation, except for urban females, for all the other workers, a relatively high proportion had changed from ‘elementary occupations’: nearly 35 per cent of rural male workers, 29 per cent of rural female workers, 20 per cent of urban male workers had changed from the last occupation division “elementary occupations” while for urban female the occupation division ‘clerks’ was the last occupation division for nearly 35 per cent of the workers who had changed occupation during the two years preceding the date of survey.

#### 8.4 Reasons for Change in Industry of Work and /or Occupation

8.4.1 The reason for change of the industry of work and/or occupation was ascertained from the usually employed who changed their industry of work and/or occupation during the two years preceding the date of survey. The relevant results based on this information are given in Statement 8.5 for persons of age 15 years and above. Among the specified reasons, the most significant reason was *for better income/ remuneration* for the workers who had changed their industry of work and /or occupation – it being reported by 40 per cent for rural male workers, 68 per cent for rural female workers, 51 per cent for urban male workers and 39 per cent of urban female workers. *Loss of earlier job* (due to *retrenchment* or *closure of unit*) was the reason for change of the industry of work and/or occupation for the workers who had changed

their industry of work and /or occupation was for nearly 8 per cent each of rural male and urban male workers, 2 per cent of rural female workers and 6 per cent of urban female workers.

Statement 8.5: Per 1000 distribution of usual principal status workers of age 15 years and above who had changed industry and/or occupation during last 2 years by reason for such change of job for each broad level of general education

## **Appendix B**

### **Sample Design and Estimation Procedure**

## Appendix - B

### Sample Design and Estimation Procedure

#### 1. Introduction

1.1 The 66<sup>th</sup> round (July 2009-June 2010) of NSS was earmarked for survey on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. All the sample first stage units of both rural and urban areas of Leh, Kargil and Poonch districts of Jammu & Kashmir became casualty and therefore these districts were outside the survey coverage. In addition to these, all the sample first stage units of the following areas were casualty in different sub-rounds: (i) in sub-rounds 1, 2, and 4, both rural and urban areas of Rajouri district of Jammu & Kashmir, (ii) in sub-round 2, urban areas of Lakhisarai district of Bihar, (iii) in sub-round 3, rural areas of Doda district of Jammu & Kashmir. The estimates of the different sub-rounds, therefore, excluded these areas. The period of survey was of one year duration starting on 1<sup>st</sup> July 2009 and ending on 30<sup>th</sup> June 2010. The survey period of this round was divided into four sub-rounds of three months' duration each, the 1<sup>st</sup> sub-round period ranging from July to September 2009, the 2<sup>nd</sup> sub-round period from October to December 2009 and so on. In each of these four sub-rounds equal number of sample villages/ blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period.

#### 2 Sample Design

2.1 A stratified multi-stage design was adopted for the 66<sup>th</sup> round survey. The first stage units (FSU) were the 2001 census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. Hamlet-groups/sub-blocks constituted the intermediate stage whenever these were formed in the sample FSUs.

2.2 *Selection of the first-stage units:* The various steps involved before making the selection of the FSUs are discussed at length in the following few paragraphs before taking up the issue of selection of USUs within FSUs.

2.2.1 *Sampling Frame for First Stage Units:* For the rural sector, the list of 2001 census villages (Panchayat wards in case of Kerala) constituted the sampling frame. For the urban sector, the list of latest available UFS blocks constituted the sampling frame. For non-UFS towns, frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame).

2.2.2 *Stratification of the first stage units*: Within each district of a State/ UT, two basic strata were formed as follows:

- i) rural stratum comprising of all rural areas of the district and
- (ii) urban stratum comprising of all the urban areas of the district.

However, within the urban areas of a district, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

2.2.3 *Sub-stratification*: There was no sub-stratification in the urban sector. However, to net adequate number of child workers, for all rural strata, each stratum was divided into 2 sub-strata as follows:

sub-stratum 1: all villages with proportion of child workers ( $p$ )  $> 2P$  (where  $P$  is the average proportion of child workers for the state/ UT as per Census 2001)

sub-stratum 2: remaining villages

2.2.4 *Allocation of FSU's among Strata*: At the all-India level, a total number of 12784 FSUs were allocated for survey in the central sample. In addition, 24 State sample FSUs (16 for rural sector and 8 for urban sector) of Leh and Kargil districts of J & K were included in the central sample. The total number of sample FSUs was allocated to the States and UTs in proportion to population as per census 2001 subject to the availability of investigators and ensuring minimum sample allocation to each State/ UT. The State/ UT level sample size was allocated between two sectors in proportion to population as per census 2001 with double weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc. did not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each state/ UT separately for rural and urban areas. Further the State level allocations for both rural and urban areas were adjusted marginally in a few cases to ensure that each stratum/ sub-stratum got a minimum allocation of 4 FSUs. Within each sector of a State/ UT, the respective sample size was allocated to the different strata/ sub-strata in proportion to the population as per census 2001. Allocations at stratum/ sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal number of samples was allocated among the four sub rounds.

2.2.5 *Selection of first-stage units*: For the rural sector, from each stratum/ sub-stratum, required number of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For urban sector, from each stratum FSUs were selected by using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

2.3 *Selection of Ultimate Stage Units (USU) within a FSU*: The remaining paragraphs of this sub-section outlines the various steps leading to the actual selection of USUs within a FSU.

2.3.1 *Selection of hamlet-groups/sub-blocks:* Selected FSUs with approximate population 1200 or more were divided into a suitable number (say, D) of ‘hamlet-groups’ in the rural sector and ‘sub-blocks’ in the urban sector as stated below.

approximate present population of the sample FSU	no. of hgs/sbs to be formed
less than 1200 (no hamlet-groups/sub-blocks)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except four districts Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups were formed as follows:

approximate present population of the sample village	no. of hgs to be formed
less than 600 (no hamlet-groups)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

Hamlet-groups/ sub-blocks were formed in the sample FSU by more or less equalising populations. Two hamlet-groups (hg)/ sub-blocks (sb) were selected from a large FSU, wherever hamlet-groups/ sub-blocks were formed. This was done in the following manner – one hg/ sb with maximum percentage share of population was always selected and termed as hg/ sb 1; one more hg/ sb was selected from the remaining hg’s/ sb’s by simple random sampling (SRS) and termed as hg/ sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/ sub-blocks. The FSUs without hg/ sb formation were treated as sample hg/ sb number 1.

2.3.2 *Sampling frame of households:* All households listed in a village/UFS block where no hamlet-group/sub-block formation was done, or the households listed in the two selected hamlet-groups/sub-blocks of the village/UFS block where hamlet-group/sub-block formation was done, constituted the sampling frame of households.

2.3.3 *Stratification of rural households:* For employment and un-employment survey of NSS 66<sup>th</sup> round, all households listed in the selected FSU/hamlet group/sub-blocks were stratified into three second stage strata (SSS). The three second-stage-strata (SSS) formed in the rural areas were:

**Rural**

SSS	composition of SSS	number of households to be surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
SSS 1:	relatively affluent households	2	1
SSS 2:	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	2	1

Identification of affluent households was done by taking into account factors generally associated with affluent households such as: ownership of motor car/ jeep/ tractor/ combine-harvester/ truck/ bus/ etc.; consumer durables like DVD/ VCP/ refrigerator/ washing machine etc.; ownership of large business/ highly remunerative profession/ high salaried income etc.; ownership of spacious pucca house in good condition; ownership of 7 hectares or more of cultivable land; ownership of 3.5 hectares or more of irrigated land; ownership of a good number of cattle, buffaloes and camels (10 or more in number).

2.3.4 *Stratification of urban households*: Three second stage strata (SSS) were formed in the urban areas as follows:

**Urban**

SSS	composition of SSS	number of households to be surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
SSS 1:	households having MPCE of top 10% of urban population (MPCE > B)	2	1
SSS 2:	households having MPCE of middle 60% of urban population ( $A \leq \text{MPCE} \leq B$ )	4	2
SSS 3:	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1

The cut-off points 'A' and 'B' (in Rs.) were determined from NSS 61<sup>st</sup> round data for each NSS region for urban areas in such a way that top 10% of the population have MPCE more than 'B' and bottom 30% of the population have MPCE less than A.

2.3.5 *Selection of households*: For employment-unemployment survey a total of 8 households were selected from each village/FSU. In both rural and urban areas, in case no hamlet-group/sub-block formation was done in the village/block, a number of 2, 4 and 2 households were selected from the second stage strata SSS1, SSS2 and SSS3, respectively. In case hamlet-groups/sub-blocks were formed in the village/block, a number of 1, 2 and 1 households were selected respectively from the second stage strata SSS1, SSS2 and SSS3 of each of the hamlet-groups/sub-blocks. The sample households from each of the second stage strata were selected by SRSWOR.

2.4 Number of village/blocks allotted for survey in the NSS 66<sup>th</sup> round along with the number of village/blocks actually surveyed and number of persons enumerated in respect of employment and unemployment survey are given for different states and union territories in Table 1 at the end of Appendix-B.

### 3. Estimation Procedure

Procedures for obtaining estimates of aggregates, ratios and their RSEs is briefly indicated below:

#### 3.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum (only for rural sector)

m = subscript for sub-sample (m =1, 2)

i = subscript for i-th FSU [village (panchayat ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb [j = 1, 2 or 3]

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/ sb's formed in the sample FSU

$D^* = 0$  if  $D = 1$

= (D – 1) for FSUs with  $D > 1$

N = total number of FSUs in any urban stratum

Z = total size of a rural stratum/sub-stratum (= sum of sizes for all the FSUs of a stratum/sub-stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including 'zero cases' but excluding casualty for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

$\hat{X}$ ,  $\hat{Y}$  = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

$y_{stmidjk}$  = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

3.2 Estimation of aggregates for a particular sub-sample ( $m$ ) and stratum ( $s$ ):

3.2.1 Sub-sample estimate for a sub-stratum in rural areas:

For  $j$ -th second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.2 Sub-sample estimate for a stratum in rural areas: Sub-sample estimate for a stratum will be obtained by adding sub-sample wise estimates of all the sub-strata ( $\hat{Y}_{st}$ ) of the stratum.

3.2.3 Sub-sample estimate for a stratum in urban areas:

For  $j$ -th second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.3 Overall Estimate for Aggregates: Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

3.4 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

3.5 Estimates of Ratios: Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates  $Y$  and  $X$  for two characteristics  $y$  and  $x$  respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

3.6 *Estimates of Error:* The estimated variances of the above estimates will be as follows:

3.6.1 *For aggregate  $\hat{Y}$ :*

$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$  where  $V\hat{a}r(\hat{Y}_s)$  is given by

$$V\hat{a}r(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2 \text{ for rural stratum, where } \hat{Y}_{st1} \text{ and } \hat{Y}_{st2} \text{ are the}$$

estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

and

$$V\hat{a}r(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2 \text{ for urban stratum, } \hat{Y}_{s1} \text{ and } \hat{Y}_{s2} \text{ being the stratum}$$

estimates for sub-sample 1 and 2 respectively.

3.6.2 *For ratio  $\hat{R}$ :*

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[ (\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for rural and

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[ (\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for urban.

3.7 *Estimates of Relative Standard Error (RSE):*

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

Table B1: Number of FSUs (villages/urban blocks) allotted, number of FSUs surveyed and number of persons enumerated in different states and union territories

6.	whether the schedule contains remarks? (yes -1, no-2)		in block 10/ 11			elsewhere in the schedule				
7.	signature									

## [10] remarks by investigator

--

## [11] comments by supervisory officer (s)

--

[3] household characteristics												
1.	household size			10.		whether the household has NREG job card (yes-1, no-2)						
2.	principal industry (NIC-2004)	description:			11.	for rural areas,	whether got work in NREG works during last 365 days (code)					
		code (5-digit)							12.	if code 1 in item 11,	no. of days worked	
												mode of payment (code)
3.	principal occupation (NCO-2004)	description:			is any member of the household the holder of post office account (yes-1, no-2, don't know-9) and number of such accounts in the household as on the date of survey [in items 14 to 17]							
		code (3-digit)						type of post office account	whether held by any member (yes-1, no-2, don't know -9)	no. of accounts in the hh.		
4.	household type (code)			14.	savings bank							
5.	religion (code)			15.	recurring deposit account							
6.	social group (code)			16.	monthly income accounts scheme							
7.	land owned as on the date of survey (0.000 hectares)			17.	any other account or savings instruments							
8.	land possessed as on the date of survey (0.000 hectares)			has any member used the following services in any Post Office during last 3 months (yes-1, no-2, don't know-9) [items 18 to 20]								
				18.	money order							
9.	land cultivated (including orchard and plantation) during July 2008–June 2009 (0.000 hectares)			19.	instant money order							
				20.	international money transfer service							

Note: 1 acre = 0.4047 hectare, 1 hectare = 10,000 sq. metre

### Codes for Block 3

item 4: household type:

for rural areas: self-employed in non-agriculture -1, agricultural labour -2, other labour -3, self-employed in agriculture -4, others -9.

for urban areas: self-employed -1, regular wage/salary earning -2, casual labour -3, others -9.

item 5: religion: Hinduism -1, Islam -2, Christianity -3, Sikhism -4, Jainism -5, Buddhism -6, Zoroastrianism -7, others -9.

item 6: social group: scheduled tribe -1, scheduled caste -2, other backward class -3, others -9.

item 11: whether got work in NREG works: got work in NREG works -1, sought but did not get work in NREG works -2, did not seek work in NREG works -3.

item 13: mode of payment: paid: directly into post office account-1, directly into bank account-2, in a gram sabha meeting-3, by the field assistant/mate-4, by an SHG member-5, through a smartcard-6, other-9; not yet paid-7.

[3.1] indebtedness of rural labour household as on the date of survey (i.e., for households with code 1 in item 5, block 1 along with code 2 or 3 in item 4, block 3)				
srl. no. of loan	nature of loan (code)	source (code)	purpose (code)	amount outstanding including interest as on the date of survey (Rs)
(1)	(2)	(3)	(4)	(5)
total				

### Codes for Block 3.1

col. (2): nature of loan: hereditary loan -1, loan contracted in cash -2, loan contracted in kind -3, loan contracted partly in cash and partly in kind -4.

col. (3): source: government -1, co-operative society -2, bank -3, employer/ landlord -4, agricultural/ professional money lender -5, shopkeeper/ trader -6, relatives/ friends -7, others -9.

col. (4): purpose: household consumption: medical expenses -1, educational expenses -2, legal expenses -3, marriage and other ceremonial expenses-4, other household consumption expenses -5; purchase of land/ construction of building -6, other productive purpose -7, repayment of debt -8, others -9.

**Codes for Block 4****col. (3): relation to head:**

self -1, spouse of head -2, married child -3, spouse of married child -4, unmarried child -5, grandchild -6, father/ mother/ father-in-law/ mother-in-law -7, brother/ sister/ brother-in-law/ sister-in-law/ other relatives -8, servants/ employees/ other non-relatives -9.

**col. (6): marital status:**

never married -1, currently married -2, widowed -3, divorced/separated -4.

**col. (7): educational level - general:**

not literate -01, literate without formal schooling: EGS/ NFEC/ AEC -02, TLC -03, others -04; literate: below primary -05, primary -06, middle -07, secondary -08, higher secondary -10, diploma/certificate course -11, graduate -12, postgraduate and above -13.

**col. (8): educational level - technical:**

no technical education -01, technical degree in agriculture/ engineering/ technology/ medicine, etc. -02, diploma or certificate (below graduate level) in: agriculture -03, engineering/ technology -04, medicine -05, crafts -06, other subjects -07; diploma or certificate (graduate and above level) in: agriculture -08, engineering/ technology -09, medicine -10, crafts -11, other subjects -12.

**col. (9): status of current attendance:**

currently not attending:  
never attended: school too far -01, to supplement household income -02, education not considered necessary -03, to attend domestic chores -04, others -05;  
ever attended but currently not attending: school too far -11, to supplement household income -12, education not considered necessary -13, to attend domestic chores -14, others -15;  
currently attending in: EGS/ NFEC/ AEC -21, TLC -22, pre-primary (nursery/ Kinder garten, etc.) -23, primary (class I to IV/ V) -24, middle -25, secondary-26, higher secondary-27, graduate in: agriculture -28, engineering/ technology -29, medicine -30, other subjects -31; post graduate and above -32, diploma or certificate (below graduate level) in: agriculture -33, engineering/ technology -34, medicine -35, crafts -36, other subjects -37; diploma or certificate (graduate level) in: agriculture -38, engineering/ technology -39, medicine -40, crafts -41, other subjects -42; diploma or certificate in post graduate and above level- 43.

**col. (10): type of institution:** government -1, local body -2, private and aided -3, private and unaided -4, not known -5.**col. (12): whether receiving/received any vocational training:**

yes: receiving formal vocational training -1; received vocational training: formal -2, non-formal: hereditary-3, self-learning-4, learning on the job-5, others -6; did not receive any vocational training -7.

**col. (13): field of training:**

mechanical engineering trades -01, electrical and electronic engineering trades -02, computer trades -03, civil engineering and building construction related works -04, chemical engineering trades -05, leather related work -06, textile related work -07, catering, nutrition, hotels and restaurant related work -08, artisan/ craftsman/ handicraft and cottage based production work -09, creative arts/ artists -10, agriculture and crop production related skills and food preservation related work -11, non-crop based agricultural and other related activities -12, health and paramedical services related work -13, office and business related work -14, driving and motor mechanic work -15, beautician, hairdressing & related work -16, work related to tour operators/ travel managers -17, photography and related work -18, work related to childcare, nutrition, pre-schools and crèche -19, journalism, mass communication and media related work -20, printing technology related work -21, other -99.

**col. (15): source from where degree/diploma/certificate received/to be received:**

Industrial Training Institutes (ITIs)/Industrial Training centers (ITCs) -01, School offering vocational courses (Secondary, Higher Secondary level) -02, UGC (first degree level) -03, Polytechnics -04, Community Polytechniques/ Jansiksha Sanstha -05, National Open School -06, Hotel Management Institutes -07, Food craft & Catering Institutes -08, Small Industries Service Institutes/District Industries Centres/Tool Room Centres -09, Fashion Technology Institutes -10, Tailoring, Embroidery and Stitch Craft Institutes -11, Nursing Institutes -12, Rehabilitation/ Physiotherapy /Ophthalmic and Dental Institutes -13, Institutes giving Diploma in Pharmacy -14, Hospital and Medical Training Institutes -15, Nursery Teachers' Training Institutes -16, Institutes offering training for Agricultural Extension -17, Training provided by Carpet Weaving Centers -18, Handloom/ Handicraft Design Training Centers/ KVIC -19, Recognised Motor Driving Schools -20, Institute for Secretariat Practices -21, Recognised Beautician Schools -22, Institutes run by Companies/ Corporations -23, Institutes for Journalism and Mass Communication -24, other institutes -99.

**col. (16): whether the vocational training was ever helpful in getting a job:**

yes: was helpful in taking up self-employment activity- 1, was helpful in taking up wage/salaried employment-2; was not helpful-3, not applicable-4.

[4] demographic particulars of household members

srl. no.	name of member	relation to head (code)	sex ( <i>male-1, female - 2</i> )	age (years)	marital status (code)	educational level		for persons of age below 30 years, current attendance in educational institution		for persons of age 15 to 45 years, whether currently registered with employment exchange ( <i>yes-1, no-2</i> )	for persons of age 15 to 59 years
