

Dwellings in india

NSS 50TH ROUND

July 1993 - June 1994

**FIFTH quinquennial survey
ON
CONSUMER EXPENDITURE**

National Sample Survey Organisation

Department of Statistics

Government of India

March 1997

PREFACE

The National Sample Survey Organisation (NSSO) has been carrying out all-India surveys on Consumer Expenditure since its inception in 1950 in almost all the rounds of NSS, barring a few, till 26th round (1971-'72) sometimes independently and sometimes integrating it with enquiries on other subjects in both urban and rural areas. At the instance of the Governing Council of NSSO, the survey on consumer expenditure was being conducted quinquennially since 1972-73 (27th NSS round). In order to have an idea about the short-term changes in consumer expenditure patterns, the NSSO began collecting data in its annual rounds also from the 42nd round (1986-87) onwards.

2. The fifth quinquennial survey on consumer expenditure was undertaken in the 50th round (July 1993-June 1994). A summary report giving household consumer expenditure patterns for all-India & for major states was brought out in March 1996. A second report giving detailed tables for each state & UT of the Indian Union on monthly per capita expenditure class by commodity groups, etc., have been brought out in May 1996. The third report in the series which deals with some aspects of nutritional intake by the Indian population, has been brought out in October 1996.

3. The present report deals with particulars of Dwellings in India. The report contains detailed tables on the different aspects of dwelling such as type of structure, house category, ownership etc. by state/UT. According to NSS practice, all information has been classified by average monthly per capita expenditure (MPCE) classes, a format which has in the past proved extremely helpful to the users and researchers in various areas. Adjustment of MPCE for the urban households taking into account the imputed rent for own-dwellings has also been made and compared with the unadjusted MPCE. Observed trends by some important indicators of the housing situation over the decade (1983 to 1993-94) have also been presented.

4. Chapter one of the report is introductory, while chapter two contains a note on the Sample Design and Estimation Procedure followed in the survey. Chapter three briefly elaborates the important concepts and definitions and the survey findings are examined in Chapter Four. Detailed statistical tables are also appended to the report.

5. The schedule of enquiry for the survey was, more or less, similar to that adopted in previous quinquennial rounds. The field work for the survey was conducted, as usual, by the Field Operations Division (FOD) of the Organisation. The collected data were processed by the Data Processing Division (DPD) of the NSSO and tabulated by the Computer Centre of the Department of Statistics. The report has been prepared by the Survey Design & Research Division (SDRD) of the NSSO. I am grateful to the members of the Governing Council, Heads of various Divisions of the NSSO, the Executive Director, Computer Centre and their colleagues for the efforts taken in preparing the Report.

Comments/suggestions from the readers of the report will be most welcome.

Highlights

The 1993-94 survey shows 93.4% of the rural households and 55.5% of the urban households are in occupancy of owned house at the national level.

There is only a marginal increase by half percent in the category of households living in owned house in rural India as against an increase to the tune of 3% in the urban India since 1987-88.

Percentage of households living in rented houses has increased to 3.9% from 2.9% in rural sector while this percentage in urban sector has decreased marginally by 0.6% to the level of 35.6% since 1987 - '88.

Households living in katcha structures is 33% of total households in rural & 10% of total households in urban and the percentages have been reduced by 16% & 8% respectively since 1987-88.

Households living in pucca & semi-pucca structure are 29% and 38% respectively in rural India and 70% & 20% respectively in urban India, showing a rise in the

proportion of households living in pucca by 12% in urban and by 10% in rural besides a 6% rise in rural occupancy in semi-pucca structures since 1987-88.

In 1993-94 survey the proportion of households occupying independent houses shows an increase of 15% & 6% in rural & urban India respectively since 1987-88, raising the occupancy from 78% to 93% in rural & 60% to 66% in urban sector.

Obviously there is a corresponding decrease in proportion of hhs living in chawl/bustee & flat from 18% to 5% & 4% to 2% respectively in rural India and from 21% to 17% & 19% to 17% respectively in urban India since 1987-88. While comparing, the percentage in occupancy of unspecified category during the two different periods has not been considered.

Average monthly rent paid by an urban household has doubled to Rs.261 since 1987-88.

Chapter One

Introduction

1.0 Background : The 50th round of NSS was the fifth quinquennial survey on consumer expenditure. The previous four quinquennial surveys were the 27th (Oct. 1972 - Sept. 1973), the 32nd (July 1977 - June 1978), the 38th (Jan-Dec. 1983), and the 43rd (July 1987- June 1988) Rounds of NSS. In other rounds, too, consumer expenditure inquiry on a lesser scale is being carried out starting from the 42nd round (1986-87) onwards side by side the main topic of enquiry. From the 45th round onwards the subject coverage of this schedule has been broadened to include some important aspects of questions on employment so that an annual series of consumer expenditure and employment data becomes available. While some of these smaller-scale surveys are conducted over a period of 12 months or six months, the quinquennial (full-scale) surveys have all been of complete year's duration.

1.1 In the quinquennial surveys two separate schedules are canvassed - sch.1.0 for consumer expenditure and sch.10 for employment situation - in each sample household, enabling thereby cross-tabulation of variates on consumer expenditure and employment. The present report, however, is based on schedule 1.0 only, enlightening primarily on different aspects of dwelling units occupied by the Indian households as apparent from the data collected through this schedule.

1.2 The survey period of the 50th round was from July 1993 to June 1994. The geographical coverage of the survey was to

be the whole of the Indian Union except Ladakh and Kargil districts of Jammu & Kashmir, 768 interior villages of Nagaland and 172 villages in Andaman & Nicobar Islands which remain inaccessible throughout the year. However, certain districts of Jammu & Kashmir viz., Doda, Anantnag, Pulwama, Srinagar, Badgam, Baramullah and Kupwara, and Punjab's Amritsar district, had to be excluded from the survey coverage due to unfavourable field conditions.

1.3 In all, 115354 households were interviewed, spread over 6951 sample villages and 4650 sample blocks. Ten households were selected for survey in each selected village / urban block.

1.4 The survey period of one year was divided into four sub- rounds of three months each with allocation of equal numbers of sample villages and blocks to each of the four sub-rounds viz.,

sub-round 1 : July-Sept'93;

sub-round 2 : Oct.-Dec'93;

sub-round 3 : Jan.-Mar'94;

sub-round 4 : Apr.-June'94

1.5 The results thrown up by the survey are presented in the report from which an idea regarding type of structure and occupancy of the dwelling units by the Indian households belonging to different monthly per capita expenditure classes can be made up.

1.6 With a view to study the nature and extent of change in the distribution of households by monthly per capita expenditure class imposing the effect of adjustment of rent imputed for owned houses by urban households distributed over various rent classes, ancillary facts of information was sought in the ROUND besides those usually required for measuring total consumer expenditure inclusive of monthly rent paid by the household.

1.7 Basing on the combined sample (both of sub-sample 1 & 2) data, this report summarises the detailed results of the survey on the aforesaid matter. The Sampling Design and Estimation Procedure followed in this survey round is figuring in the following chapter. Chapter three briefly elaborates on the important concepts and definitions adopted in the survey and used in this report and the survey findings are examined in chapter four. The collection of detailed data tables are appended to the report.

Chapter Two

Sample Design & Estimation procedure

2.0 Sample Design : A stratified two-stage sampling design was adopted, with census villages as first stage units (fsu's) in the rural sector and Urban Frame Survey (UFS) blocks in the urban, except for a few newly declared towns of the 1991 census, for which UFS frames were not available, and census enumeration blocks (EB's) were used as first stage units. Households formed the second stage units in both rural and urban sectors.

2.1 Sampling frame for fsu's : In the rural sector, the sampling frame was provided sometimes by the 1981 census list of villages and sometimes by the 1991 census list of villages, depending on the sub-round (see para 1.4) and the state/union territory being surveyed, as follows.

2.1.1 In the following areas of rural India (hereafter referred to as **Group A areas**), the **1981** census lists of villages served as the sampling frame for **all 4 sub-rounds** :

Jammu & Kashmir - where the 1991 census was not conducted.

Agra district of U.P. and Durg, Sagar and Morena districts of M.P. - for which the available information for 1991 was incomplete.

2.1.2 In the following areas of rural India (hereafter referred to as **Group B areas**),

the **1991** census lists of villages served as the sampling frame for **all 4 sub-rounds** :

Andhra Pradesh, Assam, Kerala, Orissa, West Bengal & Chandigarh.

U.P. and M.P. (excepting Group A areas).

2.1.3 In the remaining states/u.t.'s of rural India (hereafter referred to as **Group C areas**), the **1981** census lists of villages were used as sampling frame for **sub-round 1** and the **1991** census lists used for **sub-rounds 2 to 4** in order to make use of the latest available information in the sample selection process.

2.1.4 For Nagaland, the villages situated within 5 km of a bus route constituted the sampling frame. For the Andaman & Nicobar Islands, the villages which remain inaccessible throughout the year were, as usual, excluded from the sampling frame.

2.1.5 In the urban sector, the lists of NSS Urban Frame Survey (UFS) blocks were the sampling frames used in most cases. However, 1991 census house listing enumeration blocks were considered as the sampling units for some of the newly declared towns of the 1991 population census, for which UFS frames were not available.

2.2 Stratification : As usual, each state/union territory (u.t.) was divided into

one or more agro-economic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts were sub-divided for the purpose of region formation on the basis of location of dry areas and the distribution of tribal population in the state. The total number of regions formed in the whole of India was 78.

2.2.1 In the rural sector, within each region, each district normally formed a separate stratum. However, if the census population of the district according to the sampling frame used exceeded 1.8 million / 2 million (depending on whether 1981 or 1991 census frame was used), the district was split into two or more strata by grouping contiguous tehsils. In Gujarat, however, in the case of districts extending over more than one region, the portion of a district falling in each region constituted a separate stratum even if the rural population of the district as a whole was less than 1.8 million / 2 million.

2.2.2 In the urban sector, strata were formed, again within NSS regions, on the basis of town population. In order to be able to allocate a larger proportion of the sample to the affluent section of society and thus improve the precision of the overall estimate of consumer expenditure, the usual first-stage stratification procedure was modified as follows. Urban blocks in towns with census population 400,000 or more were placed in different strata depending on whether they belonged to the "affluent" area of the town or not - the information on affluent areas being supplied by the regional/sub-regional field offices of NSSO. Full details of urban stratification are given below.

stratum	composition
---------	-------------

- | | |
|---|---|
| 1 | towns with population less than 50,000 |
| 2 | towns with population 50,000 - 199,999 |
| 3 | towns with population 200,000 - 399,999 |
| 4 | towns with population 400,000 - 999,999 : affluent areas |
| 5 | towns with population 400,000 - 999,999 : other areas |
| 6 | a single city (if any) with population 1 million or more : affluent areas |
| 7 | a single city (if any) with population 1 million or more : other areas |
| 8 | another city (if any) with population 1 million or more : affluent areas |
| 9 | another city (if any) with population 1 million or more : other areas |

2.3 **Allocation of sample** : The first-stage sample size for any state/union territory of India was allotted to the rural and urban sectors in consideration of the relative sizes of the rural and urban population with double weightage to the urban sector.

2.3.1 Within the **urban** sector of a state/u.t., allocation of the sample to the different urban strata was done in proportion to stratum population with double weightage

to affluent strata - that is, strata 4,6 & 8 (see para 2.2). Stratum level allocations were adjusted to multiples of 8 as far as possible so as to have equal allocations for each sub-sample-sub-round combination.

2.3.2 Within the **rural** sector of a state/u.t., allocation of the sample to the different rural strata was done as follows.

2.3.3 For Group B areas (see para 2.1), the state/u.t. level rural sample was allocated to the different rural strata in proportion to 1991 census population. For other areas (Group A and Group C), allocation was initially made on the basis of 1981 census population. Stratum level allocations were adjusted to multiples of 8 as far as possible so as to have equal allocations for each sub-sample-sub-round combination.

2.3.4 However, for Group C areas, the original allocations for sub- rounds 2 to 4 were revised as follows. The total state/u.t. level allocation for sub-rounds 2 to 4 combined - 75% of the total as 25% had gone to sub-round 1 - was re-allocated to the rural strata in proportion to stratum population as per **1991** census. Stratum level allocations were adjusted to multiples of 6 as far as possible so as to have equal allocations for the remaining sub-sample-sub-round combinations.

2.4 **Selection of fsu's** : Sample villages - except in Arunachal Pradesh - were selected by PPS circular systematic sampling (with population as the size variable) from the appropriate sampling frame as explained in para 2.1, in the form of two independent sub-samples. Sample blocks were selected by ordinary (equal probability) circular systematic sampling, also in the form of two independent sub-samples.

2.4.1 In Arunachal Pradesh the sample of villages was drawn by a cluster sampling procedure. The field staff were supplied with a list of sample "nucleus" villages and were advised to select clusters of villages - building up each cluster around a nucleus village - according to prescribed guidelines. The nucleus villages were selected circular systematically with equal probability, in the form of two independent sub-samples.

2.5 **Selection of hamlet-groups/ sub-blocks** : To reduce workload the following procedure was adopted in drawing up the second- stage sampling frame. Larger sample villages and blocks were divided - according to usual NSS practice - into a suitable number of "hamlet-groups"/"sub-blocks" of roughly equal population content : the second-stage sampling frame was constituted of the households belonging to only two of these hamlet-groups, selected circular systematically, in case of sample villages, and one randomly selected sub-block in case of sample blocks (instead of the whole village/block). No hamlet- group formation was, however, done in Arunachal Pradesh. In Kerala, practical difficulties arose in hamlet-group formation during sub-round 1. These were resolved by selecting, instead of two hamlet-groups, two EB's from the constituent EB's of large villages.

2.6 **Selection of households** : The affluent classes of society have expenditure levels spread over a very wide section of the consumer expenditure range. As a result, the contribution of these classes to the sampling error of a consumer expenditure survey is large compared to that of an equal-sized chunk of population belonging to the more homogeneous "middle classes" (say). To improve the efficiency of consumer expenditure estimates, it was decided that the second-stage sampling frames ought to be stratified in such a way

as to be able to allocate a larger proportion of the sample to the affluent sections of the population wherever they could be located.

2.6.1 **Rural** : In sample villages, households in the second-stage sampling frame were divided into two strata as follows. Households - if any - exhibiting signs of affluence such as the possession of

$$\bar{y} = \sum_s \frac{1}{n_s} \sum_i \frac{P_{si} D_{si}^*}{P_{si}} \sum_{t=1}^2 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

any of a specified list of assets including land in excess of a certain specified area, or a member holding a good salaried job or belonging to a paying profession such as that of a doctor or advocate, were designated "affluent households" and the top 10 such households (subject to availability) placed in stratum 1. The remaining households formed second-stage stratum 2. **Two** households were selected circular systematically from second-stage stratum 1. From second-stage stratum 2, **eight** households were selected circular systematically after arranging the households in the stratum by "means of livelihood" ; this meant that households "self-employed in agriculture" were placed first, followed by "rural labour" households, and then the "others". Further, the households under "others" were arranged in five different land-possessed classes to ensure spread of the sample over households of different economic statuses.

2.6.2 **Urban** : In sample blocks, households with monthly per capita consumer expenditure (as reported at the time of household listing) Rs. 1200 or more (Rs. 1500 or more in towns with population one million and above) were placed in second-stage stratum 1 and the rest in second-stage stratum 2. In sample blocks belonging to first-stage strata 4,6 & 8

(affluent areas of towns with population 4 lakhs or more), as many as **four** sample households were selected for survey from second-stage stratum 1 and **six** from second-stage stratum 2. In all strata other than those numbered 4,6 & 8, **two** sample households were selected from second-stage stratum 1 and **eight** from second-stage stratum 2. In each case the sample of households, for each second-stage stratum, was drawn circular systematically with a random start. The households in second-stage stratum 2 were, prior to sample selection, placed in eight different groups and the different groups of households placed one after another in a specified order to ensure spread of the sample over the different groups. The grouping was done on considerations of means of livelihood (self-employed / regular wage or salary earning / casual labour / others) and household monthly per capita consumer expenditure.

2.7 **Sample size** : This report covered, in all, 115354 households spread over 11601 sample villages/blocks. The number of sample villages and blocks allotted and surveyed, and the number of sample households and persons surveyed, are given for different state/u.t.'s and all-India in Statement 0, separately for rural and urban sectors.

2.8 Estimation Procedure

2.8.1 **Estimation of aggregates at sub-sample level** : Aggregates are first estimated at sub-sample level according to the following estimation formulae, where \bar{y} denotes the estimate - based on one sub-sample - of the aggregate of a given characteristic Y for a sector of a state/u.t.

For the **rural sector** of a state/u.t. **other than Arunachal Pradesh,**

For the **rural sector** of **Arunachal Pradesh,**

For the **urban sector** of a state/u.t.,

where

- y : observed value of the same characteristic in a sample household
- s : stratum suffix
- i : sample village/block suffix
- t : second-stage stratum suffix
- j : sample household suffix

$$\bar{y} = \sum_s \frac{1}{n_s} \sum_{i=1}^{n_s} N_{si} \sum_{t=1}^2 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

D : number of hamlet-groups/

$$\bar{y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{t=1}^2 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

sub-blocks formed in the surveyed village/block

- H : number of households listed in the second-stage sampling frame
- h : number of sample households surveyed
- p : population of sample village as in the sampling frame
- N : for the urban sector, number of blocks in the sampling frame
- n : number of sample villages/blocks surveyed in this sub-sample
- Psi : population of the s-th stratum as per frame used in the selection of i-th sample village of the stratum
- Nsi : for Arunachal Pradesh, number of sample villages in the sampling frame for s-th stratum which was used in selection of i-th sample village of the stratum
- D* : equals 1, if D = 1
equals D/2 if D > 1

2.8.2 Estimation of aggregates for the combined sample (pooling sub-samples) :

The combined sample estimate of an aggregate is obtained as the simple average of the corresponding sub-sample estimates.

2.8.3 **Estimates of ratios** : The estimate of a ratio of the form $R = Y/X$, where Y and X are the population aggregates of two characters, is obtained as

$$\bar{R} = \frac{\bar{Y}}{\bar{X}}$$

where \bar{Y} and \bar{X} are estimates of Y and X obtained according to the procedure laid down in paras 2.8.1 and 2.8.2. Examples of ratio estimates are rates and percentages.

STATEMENT 0: NUMBER OF VILLAGES/BLOCKS ALLOTTED AND SURVEYED AND NUMBER OF SAMPLE HOUSEHOLDS AND PERSONS SURVEYED

Chapter Three

Concepts and Definitions

3.0 The concepts & definitions as followed in the household consumer expenditure survey during 50th round are broadly in lines of recent past rounds. A few of those relevant to this report are given below :

3.1 **Household** : A group of persons normally living together and taking food from a common kitchen constitutes a household. The qualification "normally" extends to cover only temporary stay aways but not temporary visitors, in the group. Thus a member residing outside, in a hostel, for studies is counted outside the household of the remaining family member(s), but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. Among the twin criterion "Living together" is usually stressed upon rather than "sharing food from a common kitchen" in drawing the boundaries of a household in case both of them cannot be accommodated together due to mutual conflict; however, in the special case of a person taking food from the common family kitchen while regularly spending nights somewhere else (say in a shop or in a different house for sleeping) due to reasons of security of the shop or other insufficiencies in the family household premises, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household

only; similar condition being applicable to residential staff of such establishments.

3.2 **Household size** : The size of a household is a complete count of the household members.

3.3 **Household consumer expenditure** : The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the sum total of the monetary values of consumption of various groups of items namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

3.3.1 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipt in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate. For evaluating the consumption of the items of group (iii) i.e. items categorised as miscellaneous goods

and services and durable articles, a different approach is followed. In this case, total amount of money spent during the reference period for the purchase of goods and services is treated as consumption expenditure.

3.3.2 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the household and also by the occasional guests & visitors whether during celebrations or otherwise. Transfer payments like charity, loan advance, etc. made by the household are not reconsidered to avoid duplicacy while counting them in payer household as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account there. However, the item "cooked meals" is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and for guests and employees will also be recorded in the purchaser household.

3.3.3 The aforementioned procedure by which value of cooked meals served to others is accounted for in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. The variation of the number of donors and recipients of free cooked meals are likely to be in opposite directions over the expenditure classes. As a matter of fact

most of the donors of cooked meals will be in the upper MPCE classes whereas most of the recipients will be in the lower ones. The nutritional intake derived from the consumer expenditure survey data need to be presented taking care of this aspect.

3.4 **Reference period** : Consumption data appearing in this report were all collected with a reference period of "last 30 days", i.e. the 30 days just preceding the date of survey. The reference period used for the survey, in other words, was a "moving" one, varying from one household to another depending upon the day of canvass.

3.5 **Monthly per capita expenditure (MPCE)** : For a household, this is the total household consumer expenditure during a period of 30 days subdivided by household size. A person's MPCE is understood to be, the figure derived on the household to which he/she belongs.

3.6 **MPCE classes** : It is customary in NSS consumer expenditure reports, to present various estimates, including and state and all-India level values of different indicators, socio-economic or else like nutrition related and distributions of households and persons over different socio-economic classes and calorie intake level formed basing on categorisation of the population as per monthly expenditure per capita i.e. MPCE. As regards population during the 50th round, 12 categories were drawn up in each sector - rural and urban - as follows. For the rural (urban) sector, the class limits of MPCE were so chosen that each class, excepting for the two pair of classes one each at the ends, approximately contained an estimated 10% of the rural (urban) population, while the remaining four classes each contained an estimated 5% of the population. Some adjustments were, however, made to keep some class limits common between the rural and urban

sectors. Tabulation of results by MPCE class from the 43rd to the 49th round of NSS, incidentally, was done using MPCE classes derived in a similar way, using 43rd round MPCE data. In other words, the present updation of classification on MPCE is second to the one made during the 43rd round.

3.6.1 The classification evolved now for the two sectors of population is as follows :

MPCE Level	Rural (Rs.)	Urban (Rs.)
1.	below 120	below 160
2.	120 - 140	160 - 190
3.	140 - 165	190 - 230
4.	165 - 190	230 - 265
5.	190 - 210	265 - 310
6.	210 - 235	310 - 355
7.	235 - 265	355 - 410
8.	265 - 300	410 - 490
9.	300 - 355	490 - 605
10.	355 - 455	605 - 825
11.	455 - 560	825 - 1055
12.	560 & above	1055 & above

3.7 **Dwelling Unit** is defined as the accommodation occupied by a household for its **residential purpose**. It may be an entire structure or a part thereof or may consist of more than one structure. On the other hand of more than one household may be found to occupy a single structure such as those living in independent flats or sharing a single housing unit, in which case there will be one or more dwelling units depending upon the number of households in occupancy of the structure.

3.7.1 There may also be cases of one household occupying more than one structure (e.g. detached structures used for different purposes like sitting, sleeping, cooking, bathing etc.) for its housing accommodation. In such a situation, all the structures combined together constitute a single dwelling unit. In general, residential accommodation will cover living room, kitchen, store, bathroom, latrine, garage, open and closed verandah etc. available, if any. A structure or a portion thereof used exclusively for non-residential purposes or let out/spared by the households is

conventionally not covered within the dwelling unit of the household under survey. However, a portion, if any, of a structure common to both residential and non-residential use is treated as a part of the dwelling unit except when nominally used as residential.

3.8 **Occupancy type of the dwelling**

Units : A threefold classification of dwelling units basing on the criterion of occupancy of the households in those units has been adopted in the survey. Criteria as recorded under that classification are (i) owned (ii) quarters (iii) other hired accommodations. Besides these, information on households not satisfying these criteria is clubbed under "others" while those without any proper dwelling unit come within a separate category viz. "No dwelling".

3.8.1 Households are considered to be categorised as possessing "no dwelling" when found to be living more or less regularly under bridges, in pipes, below staircases or with temporarily built flimsy improvisations etc. with a liability to be removed at any moment.

3.8.2 If a household has owner-like possession of the occupied dwelling constructed on a plot of land taken under long-term lease (usually 30 years or more) then the dwelling unit is treated as "**owned**". Likewise, the dwelling unit possessed under a long-term lease by the household has also been treated as under owner-like possession i.e. "**owned**".

3.8.3 If the occupied accommodation is provided or allotted by the employer, Public or Private, to any member of the household on lease or on rent for a short term then the dwelling has been treated as "**quarter**".

3.8.4 If the dwelling is leased or rented in by the household on its own for which payment is made periodically then the occupancy is treated as **hired** and classified under "**other hired accommodation**".

3.8.5 If the occupancy of a dwelling could not be appropriately classified in any one of the above three categories, then the

household occupying such dwelling has been categorised as "**others**".

3.9 **Type of dwelling** : Classification of the dwelling units occupied by the households has been made under four viz. (i) "**independent house**", (ii) "**flat**", (iii) "**chawl/bustee**", and (iv) "**others**" categories of houses. Household in occupancy of a particular dwelling has been enumerated in the category of house under which the particular one is classified.

3.9.1 An "**independent house**" is one which has a separate structure and entrance with self-contained arrangements. In other words, if the dwelling unit and the entire structure of the house are physically one and the same it should be considered an "**independent house**". A combine of two or more structures may constitute a single housing unit in a number of cases. Such housing unit has also been treated as an "**independent house**".

3.9.2 A "**flat**" is a self-contained housing arrangement many of which may be found to be located in one building. It consists of one or more rooms with normal housing facilities like water supply, bath and toilet for exclusive use of a single household. If a household occupying a portion of a building has some housing facilities like water supply, bath and/or toilet meant for its exclusive use in a

detached structure(s), it is also regarded as occupying a **flat**.

3.9.3 A "**chawl/bustee**" may be described as a building with a number of tenements mostly single-roomed having common corridor and common bathing and toilet facilities. In case of three/four storeyed chawl the common facilities of bath and toilet may be available in each floor for the tenements of that floor.

3.9.4 "**Others**" covers all other types of housing arrangements besides those enumerated above. This includes flat like dwelling which are not self-contained in respect of water, bath and toilet facilities, hostel accommodation etc.

3.10 **Type of structure** : The structures have been classified into **three distinct categories**, viz. (i) **pucca**, (ii) **semi-pucca** and (iii) **katcha**, on the basis of the materials used in construction thereof.

3.10.1 A **katcha** structure is one whose walls and roofs are made up with mud, bamboo, grass, leaves, reeds, thatch or unburnt bricks. A **pucca** structure is one whose walls and roof are made of burnt bricks, stone, cement, concrete, jack board (cement - plastered reeds), mosaic, tiles or timber. Tiles, galvanised tin or asbestos cement sheets used in construction of roofs will be regarded as pucca material. A **semi-pucca** structure is one of which either the roof or the walls, but not both, is made like that of a pucca structure.

Chapter Four

Particulars of Dwellings

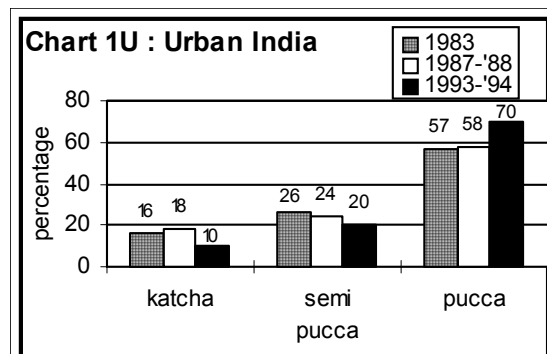

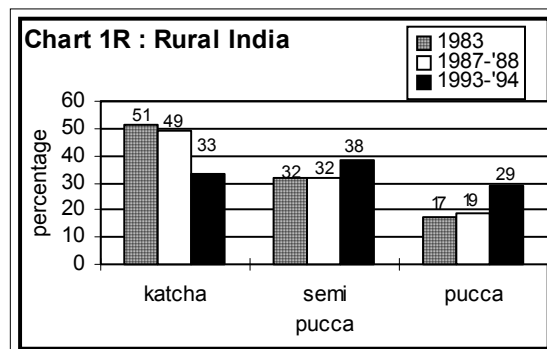

4.0 In this chapter important findings on some aspect of housing situation such as type of structure, house category and ownership of the dwelling units are discussed. These indicators of housing situation are also examined at various MPCE level for both rural and urban sectors of the country as well as state-wise for 15 major states. Adjustment of MPCE for the urban households taking in to account the imputed rent for owned dwellings has also been made and compared with the unadjusted MPCE.

4.0.1. Major trends exhibited by some important indicators of the housing situation in the country as revealed from the **three consecutive quinquennial surveys (38th, 43rd and 50th rounds)** on Household Consumer Expenditure conducted during the decade 1983 to 93-94 is highlighted to start with. **Subsequently, discussion on the detailed results of NSS 50th Round on particulars of Dwelling Unit is carried out.**

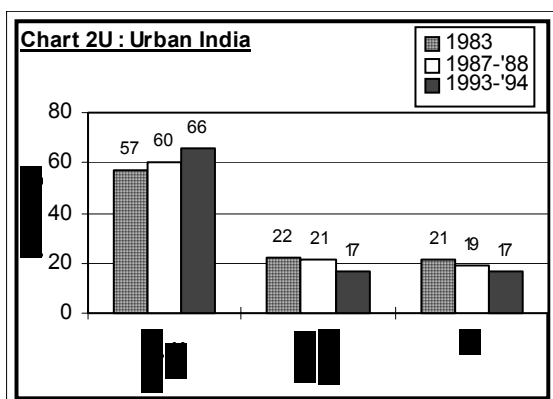

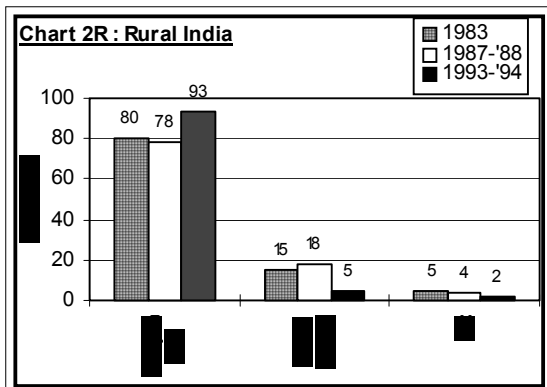

4.1 **Observed trend in (a) Distribution of households living in different (i) type of structure (ii) category of dwellings in both the sectors of rural & urban and (b) Distribution of households living in rented house & average monthly rent paid by the household in the Urban Sector; at the national level during the decade 1983-93 : NSS Round-wise.**

4.1.1 **Chart 1(R/U)** shows the percentage distribution of households living in different type of structures over successive **three quinquennial rounds of NSS (38th., 43rd. & 50th)** for rural/urban India.

4.1.2 An increase in the proportion of households living in pucca structures in both sectors has been observed to be the trend over the rounds due to rise in construction activity in the country. Number of semi pucca structures are clearly on the decline in the urban sector while they are on the rise in the rural sector over the decade (1983 to 1993-94). Number of katcha structure are also showing a decreasing trend in both the sectors possibly due to conversion of this kind of structures to semi pucca & pucca in rural areas over the decade (1983 to 1993-94).

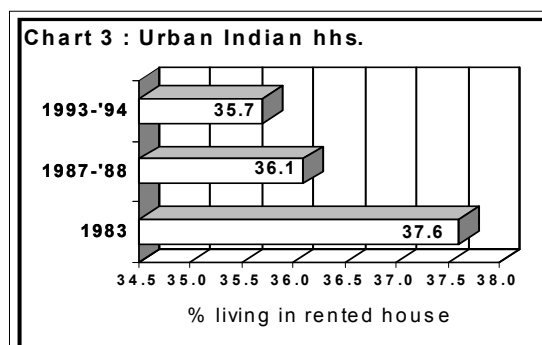

4.1.3 **Chart 2(R/U)** shows the percentage of households **living in different categories of dwelling** (specified type) in both rural and urban sectors of India **by NSS rounds**.

4.1.4 It is noticed that the distribution of households in different types of dwellings has remained more or less identical during the decade except for some changes of marginal nature. The percentage of households living in independent houses has increased while percentage living in chawl/bustee and flat has reduced in the country over the decade.

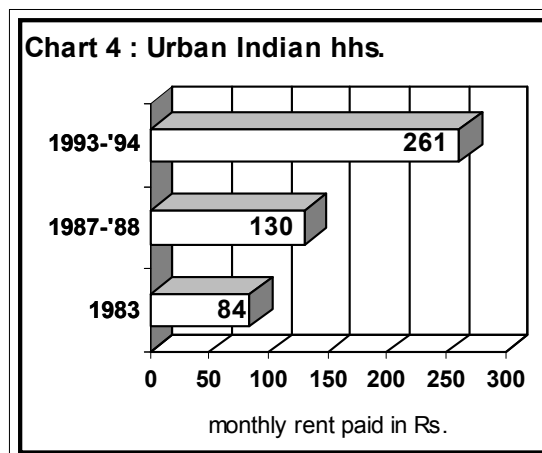

4.1.5 **Chart 3** shows the percentage of households **living in rented houses** in urban sector. It is observed from the diagram that percentage of household living in rented houses is declining steadily over the decade 1983 to 1993-94 although marginally.

4.1.6 This phenomenon is as expected due to acquisition of ownership houses/flats etc. by some urban households during the period as a result of growing construction activity in the urban sector.

4.1.7 **Chart 4** shows the **average monthly rent paid** by an urban household in the country during the period of surveys conducted on three consecutive NSS rounds.

4.1.8 It is clear from the trend exhibited that the amount payable on rent has doubled during the last six years (1987 to 1993-94) and a little more than trebled in the last decade (1983 to 1993-'94) keeping pace with inflation and other market forces.

Detailed results from NSS 50th round data :

4.2 Per 1000 distribution of households with dwelling units by broad house category for each type of occupancy.

4.2.1 **Statement 1** shows per thousand **distribution of households by broad house category** for each **type of occupancy** at the **National level** for **both sectors of rural and urban**.

4.2.2 Considering first the 'owned' type of occupancy it is noticed that out of every thousand, 280 & 333 households in rural India as compared to 672 & 110 households in urban India live in pucca & katcha structures respectively, the remaining households in either sector living in **semi-pucca** structures. Moreover in each of the three kinds of structures, not less than three fourth of the owned houses fall in the first category i.e. independent house, in urban as well as rural households. Again the number of households in occupancy of categories like Flat, chawl/Bustee, etc. taken together is less in rural than in urban in any kind of structure, besides the fact that such households are comparatively smaller in number than those within the category of independent house in both the sectors.

4.2.3 In the second type i.e. 'quarter', of occupancy the size of the group of household having independent houses ranges from 55% (311 out of 570) in pucca to 90% (75 out of 83) in katcha structure in Rural India whereas in Urban India households having 'flat' and 'chawl/bustee' category of house are in a majority amongst the households dwelling in the pucca and semi pucca kind of structures respectively. Also, out of every thousand households with this type of occupancy 570 in Rural sector as compared to 924 in Urban sector dwell in all pucca structures the rest living in other than pucca structures.

4.2.4 Thirdly, in "other hired accommodation", majority of the households in any kind of structure in the rural sector,

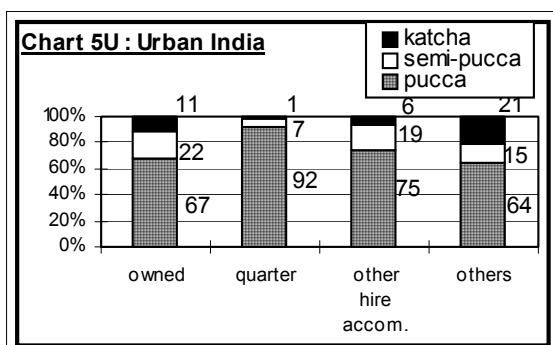

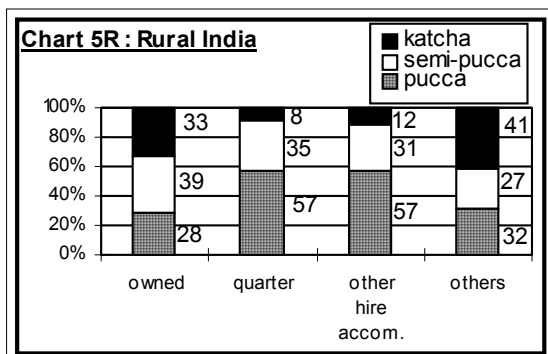

fall under "independent house" category also but the picture is somewhat different in the other sector. In this i.e. urban sector households living in independent house is the largest group but not in majority amongst the households living in "all pucca structure", the other three groups being equal in size. But the number of households living in independent house and chawl/bustee are almost equal in "all semi pucca" as well as "all katcha" structure. In 'others' type of occupancy, majority of the occupant households (638 out of 1000) dwell in "all pucca structure" in urban India, mostly in 'other type' category, whereas in Rural India the largest chunk (408 out of 1000) dwell in "all katcha structures", mostly in "independent house" category.

4.2.5 Finally examining "all" type of occupancy it is seen that 381 in rural as against 195 in urban out of every 1000 households dwell in semi pucca structures, the rest i.e. 619 in rural and 805 in urban living in either "all pucca" or "all katcha" structures respectively. However, the proportion of pucca structure in urban sector (0.707) far outweigh the proportion (0.292) in the same category of structure in rural sector. The proportion of structures in semi pucca category is maximum (0.381) in rural India and the proportion of structures in katcha category is minimum (0.099) in urban India.

4.2.6 Further it is also observed that independent houses are in a predominant majority amongst the different categories of house in either sector.

4.2.7 Besides, in the urban sector number of households dwelling in pucca flat and semi pucca chawl/bustee are emerging to be considerable when viewed in a totality but such special phenomenon could not be marked amongst the dwelling units occupied by the rural households.

4.2.8 **Chart 5(R/U)** shows distribution of households over **type of structure** for each occupancy type of dwelling at the **National level** for rural and urban sectors.

4.2.9 **Statements 2R & 2U** give per 1000 distribution of households with dwelling units by broad house category for each type of occupancy for 15 major states in the rural & urban sectors respectively.

4.2.10 Considering first 'all' type of occupancy in rural sector, it is observed that in the states of Andhra Pradesh (42.0%), Assam (67.4%), Orissa (70.6%), Tamil Nadu (39.2%) and West Bengal (46.4%), percentage of households in katcha structures is larger than the percentage of households in each of the other two kinds of structures. In the states of Gujarat (44.2%), Karnataka (53.9%), Madhya Pradesh (76.5%), Maharashtra (51.0%) and Uttar Pradesh (37.1%), the percentage of households in semi pucca structure is larger than the percentage of households in each of the other two kind of structures. But in the states of Haryana (72.5%), Kerala (51.5%) and Punjab (67.8%), percentage of households in pucca structures is larger than the percentage of households in each of the

other two kind of structures taken together, whereas in the state of Bihar the percentages of households in katcha (41.0%) and semi pucca (41.5%) classes of structure are of almost equal magnitude.

4.2.11 Looking next into "owned" type of occupancy in the rural sector, it is found that, whereas the percentage of households in "pucca structure" is more than 50 in the states of Kerala (51.1%), Haryana (72.0%) & Punjab (67.0%), it is only less than 20 in the states of Madhya Pradesh (12.7%), Orissa (8.1%), West Bengal (14.5%), Assam (4%) & Bihar (17.1%), as against 28% in the national perspective.

4.2.12 The percentage of households in katcha structure (owned) is very large in the states of Orissa (72.8) & Assam (73.1) and is very small in the states of Madhya Pradesh (10.2), Punjab (12.7), Haryana (13.6%) and Maharashtra (14.6%) whereas the National level figure stands at 33.3% in rural sector. More than 50% of the households in the states of Karnataka (54.9), Madhya Pradesh (77.1) and Maharashtra (52.5), have owned semi pucca structure.

4.2.13 Majority of the dwelling units occupied as 'quarters' are pucca structures in rural sector except in the states of Assam and Karnataka where the percentages are 16.5% & 41.5% respectively.

4.2.14 Looking at occupancy in "other hired accommodation" it is noticed that preference pattern of the households is for hiring pucca structure over semi pucca and katcha structure in that order, across the states of Andhra Pradesh, Gujarat, Haryana, Kerala, Maharashtra, Punjab, Tamil Nadu and Uttar Pradesh, whereas just the opposite pattern is marked in Assam in rural sector. But in the state of Bihar, Karnataka, Madhya Pradesh and West Bengal the order of preference is for semi pucca over pucca, katcha being last choice.

4.2.15 In the Urban Sector, 'all' type of occupancy reveals that Gujarat (80.0%),

Haryana (90.0%), Rajasthan (85.7%) and Punjab (89.1%) are the few states, where percentage of pucca structures is very high, i.e. 80 & above whereas in the state of Assam it is only 45.9%, the least in India. In the cross-section of the households with 'owned' type occupancy, 80% or more have pucca structures in the states of Punjab (90.9), Rajasthan (82.3), Gujarat (81.5) and Haryana (88.0) against 67.2 as the average National percentage. The states poorer in percentage of households with 'owned' occupancy in pucca structure are Orissa (44.2), Assam (35.7) and Madhya Pradesh (49.9). In this type of occupancy the group of households with pucca structure dominated the picture with the group of households having semi pucca structure coming next in order of size. More or less identical pattern of occupancies in the remaining types is observed, requiring no further elaboration on this aspect.

4.3 Per thousand of households by type of occupancy

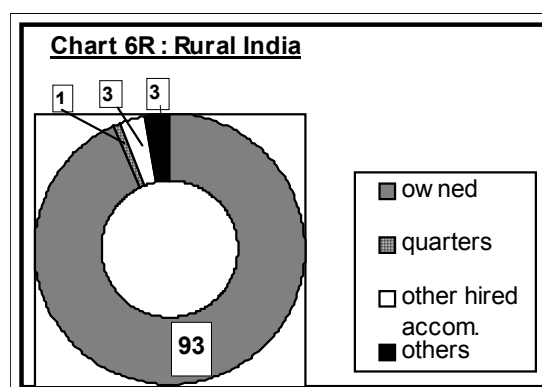

4.3.1 **Statement 3** gives distribution of households by **type of occupancy** for each MPCE class in both the sectors of rural and urban at national level.

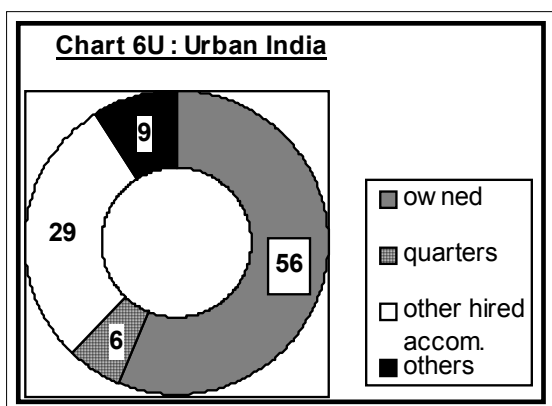

4.3.2 An examination reveals that at the overall level (all MPCE classes), percentage of the households occupying 'owned' accommodation is 93.4 in rural sector as against 55.5 in the urban sector. It is also observed that the percentage of households with 'owned' type of occupancy shows a decreasing trend whereas the percentage of households with "quarters" & "other hired accommodation" shows an increasing trend with increase in urban MPCE level. Similar trend is found to be hidden in rural sector. In the urban sector one out of each 1000 households has "no dwelling", for occupation at all.

4.3.3 6.4% of the households have occupied 'quarters' in the urban sector which is more than six times as many of the households in the same type of occupancy in the rural sector. Hiring of accommodation for occupation is ten times more among the households in the urban sector than in the rural sector.

4.3.4 In both the sectors, the group of households in almost all the MPCE classes occupying "owned" accommodation dominate in size but in the uppermost two MPCE classes of urban sector, size of households is almost of the same order as the size in "other hired accommodation". Percentage of households having "other hired accommodation" is at least 18 in all but the lowest pair of MPCE class of the urban sector whereas the figure of corresponding percentage is not more than 3 in any but the highest pair of MPCE class of rural sector which shows the contrast in hiring situation in both the sectors. "Others" type is occupied by at least 2% of the rural Indian household in comparison to 7% of the urban in each individual MPCE class.

4.3.5 **Chart 6(R/U)** shows distribution of households by **occupancy type of dwelling** at the **National level** for both the sectors of rural and urban.

4.3.6 **Statement 4** gives per thousand distribution of households by **type of occupancy in 15 major states** in both the sectors.

4.3.7 Analysis shows that in terms of percentage of households having their own house, Kerala (81%) in urban sector is ahead of other states with Rajasthan (68%), Uttar Pradesh (67%) and Punjab (66%) following but far behind, whereas in rural sector the figure ranges narrowly between 87% in Tamil Nadu to 98% in Bihar among the states. More percentages of households are found to have occupied other than 'owned' type in urban sector(44%) than in rural sector(7%) as is expected because of availability of greater infrastructural facilities in and flow of the population to the urban areas.

4.3.8 It is also marked that more than 10% of the households have occupied 'quarter' in the state of Assam(17%), Bihar(12%), Haryana(11%), Madhya Pradesh(11%) and Orissa(16%) in the urban sector whereas in the rural sector the number of households in the same type varies between 3 to 19 per thousand except Assam where it is unusually high.

4.3.9 One in every thousand households in urban India has no dwelling unit at all. In the 8 states viz. Gujarat, Kerala, Madhya Pradesh, Maharashtra, Punjab, Andhra

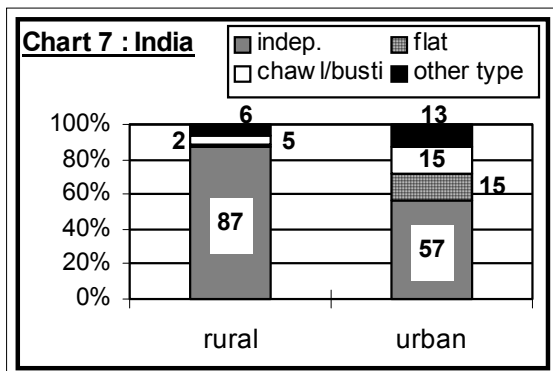

Pradesh, Rajasthan and Uttar Pradesh households with no dwelling have been found in either or both of the sectors.

4.3.10 In urban India, percentage of households with 'other hired' type occupancy (29%) which comes next to the 'owned' type (56%), in size is far above the percentage of households with 'others' type occupancy (9%) whereas in the rural India these two figures of percentages are nearly the same (around 3%). Comparatively more number of households are observed to opt and go for occupying 'other hired accommodation' in the state of Andhra Pradesh(rural 5%, urban 38%), Karnataka(rural 5%, urban 39%), Maharashtra(rural 6%, urban 33%), Tamil Nadu(rural 8%, urban 40%), West Bengal(urban 32%) and Gujarat(rural 5%), than the National average (rural 3%, urban 29%).

4.3.11 Many households in either or both sectors of the states viz. Gujarat(urban 11%), Orissa(urban 13%), Tamil Nadu(urban 14%, rural 5%) and Karnataka(rural 5%) as compared to other states are observed to be in occupancy of 'others' type of accommodation not classified, due to economic and social problems of finding specified categories of dwellings.

4.4 **Per thousand distribution of households with dwelling units by broad house category.**

4.4.1 The distribution of households with dwelling units by broad house category, at the national level for individual MPCE classes is shown in the **statement 5** and such distribution at the state level for 'all MPCE classes' are given in **statement 6(R/U)**, for both the sectors.

4.4.2 As it has already been observed earlier and also evident from **statement 5** that households with pucca dwellings are more in number, in higher MPCE classes, than the number of households with semi pucca and katcha dwellings and with decrease in MPCE, number of households with pucca dwellings also decrease as opposite to the situation found in other two groups of households which increase in size. This is true in both the rural and urban sectors at the national level.

4.4.3 While considering "all MPCE" classes it is seen that the distribution of households in "independent house" in urban sector is : number having pucca (393) is more than thrice the number having semi-pucca (122) and about 6.5 times the number having katcha (59) which is quite different from that of the distribution in rural sector where number having semi-pucca structure(335) is more than the number having either pucca (250) or katcha (282) type structure.

4.4.4 The households with dwelling type viz. "flat" and "chawl/bustee" are prominent in number in the urban sector and it is more particularly prominent in pucca house category of the same sector as it is evident from a comparison of **figures in cols. (3),(4),(8),(9),(13) and (14) of statement 5 and 6(R/U)**.

4.4.5 **Chart 7** shows the distribution of households by **type of dwelling** for both the

sectors of rural and urban at the **National level**.

4.4.6 Concentration of households in pucca chawl/bustee is highest in Maharashtra (urban: 299 out of 1000 and rural: 67 out of 1000) and concentration of next higher order is found in Karnataka (urban: 105 out of 1000 & rural: 31 out of 1000) and Gujarat (urban: 101 out of 1000 & rural: 21 out of 1000) where it is more in comparison to concentration gradient in other states, but far behind than that of Maharashtra **as may be seen from statement 6(R/U)**.

4.4.7 Number of households in **pucca independent house** is very high in the states of Haryana (668 out of 1000 in both rural and urban) and Punjab (rural: 645 and urban: 710 out of 1000) in **both the sectors** and very low in Assam (53 out of 1000) and Orissa (78 out of 1000) for the rural and Maharashtra (200 out of 1000) and Assam (295 out of 1000) for the urban sector. Number of **semi-pucca independent houses** is highest in Madhya Pradesh (rural: 685 and urban: 283 each out of 1000) and lowest in Haryana (rural: 133 and urban: 34 each out of 1000) whereas **katcha independent houses** are higher in Assam as well as in Orissa (668 & 577 for rural and 224 & 188 for urban each out of 1000).

4.5 Number of households living in rented houses per 1000 households in the urban sector

4.5.1 **Statement 7** shows the number of urban households **living in rented houses** per 1000 urban households for each broad house category for 15 major states.

4.5.2 Examining **Statement 7**, which shows number of households living in rented houses per 1000 urban households for each broad house category, it is found that number of households living in rented houses (all categories) per 1000 household ranges from 156 in Kerala to 464 in Karnataka and some of the states where

comparatively more households than the national average (357) live in rented houses are Andhra Pradesh, Assam, Orissa, Tamil Nadu, West Bengal and Maharashtra. In contrast to the national averages the states where comparatively very large number of households live in katcha structures are Assam & Punjab, and the states in which comparative very large number of households live in semi pucca structures are Gujarat, Karnataka, Tamil Nadu and West Bengal whereas very large number of households in the state of Assam, Orissa and Karnataka live in pucca structures.

4.5.3 Examining the situation in individual type of structure it is found that in the states of Bihar, Haryana, Kerala & Uttar Pradesh very few households live in rented katcha structure where as largest number of households are found to be living in flats and chawl/bustee in pucca and semi pucca type of structures in most of the states.

4.6 Per 1000 distribution of households residing in Rented House / Owned House and households with dwelling unit by rent class and average monthly rent (actual / imputed) per household

4.6.1 **Statements 8(R/U) and 9** give per 1000 distribution of households residing in rented house by rent class for each monthly per capita expenditure class at the national level in both the sectors of rural and urban and at the state level for each of the 15 major states in urban sector respectively. (The state level estimates for rural sector has not been presented as the number of households reporting rent is only about 3% at the National level (rural sector)).

4.6.2 It may be seen from col.(14) of statements 8R & 8U that the maximum percentage of households, 23.4% in the rural India and 27.3% in the urban India, fall in the rent class of Rs. 100-200 and Rs.200-400 respectively. The households residing in rented house for whom the rent found "not

recorded" is as high as 24% in the rural India against only 3.1% in the urban India. First four rent classes i.e., less than Rs.50 to Rs.200 to 400 are observed to be accounting for about 71% of rural households and 77% of urban households. Only about 5% in the rural sector as compared to about 20% of households in urban sector paying monthly rent of Rs.400 & above at the National level.

4.6.3 The average monthly rent per household increase with the MPCE level in both the sectors is evident from **statements 8R & 8U**. An average monthly rent per household at the national level is Rs.152 in rural & Rs.261 in urban sector.

4.6.4 Per 1000 distribution of households residing in rented house by rent class for each of the major states is given in **statement 9** for the urban sector.

4.6.5 While comparing the average monthly rent per household highest rent per household i.e., Rs.311 in the urban sector is reported from Karnataka which is followed by Andhra Pradesh and Madhya Pradesh (in both Rs.294) in this category. The states where the average monthly rent per households is low are West Bengal (Rs.154) & Uttar Pradesh (Rs.218) as may be seen from **statement 9**.

4.6.6 The distribution of urban households by rent class at the state level is more or less similar in pattern to that of National level distribution.

4.6.7 Distributions of households residing in owned house by monthly rent class (imputed) for each MPCE class and for each major states in urban sector are shown in **statements 10 & 11** respectively.

4.6.8 Average monthly rent of the houses as per prevailing market rate for households

residing in their own houses has been imputed.

4.6.9 While looking at the figures in col.(14) "all MPCE" classes, it is found that around 25% of the households fall in the monthly rent class of Rs.200-400 and around 71% of the households fall in the first five rent classes i.e., less than Rs.50 to Rs.400-550 taken together and only 24% belong to the rest four rent classes, i.e., Rs.550 & above.

4.6.10 Average imputed rent for urban households residing in their own houses is Rs.472. The average imputed rent increases with MPCE level, which is quite expected.

4.6.11 Among the major states in the urban sector, Punjab reported the highest imputed rent of Rs.643 per month per household followed by rent figures reported from Gujarat (Rs.566) and Maharashtra (Rs.547) while on the other hand in Andhra Pradesh (Rs.289), Tamil Nadu (Rs.299) and Orissa (Rs.326) the reported average monthly imputed rent is on the lower side as may be seen from **statement 11**. 20% or more of the households residing in their own house in all the major states belong to monthly rent class of Rs.200-400 and the states where the highest percentage of households fall in this class are Rajasthan & Maharashtra (30% each) while considering the imputed rent reported from there at.

4.6.12 The **distribution of households with dwelling unit** (rented as well as owned) **by rent class** (actual/imputed) is given in **statements 12 & 13** for the urban sector .

4.6.13 **Statement 12** shows the **distribution by MPCE classes for urban India** whereas the **distribution by rent class (actual/imputed) for each of the 15**

major states in the urban sector is indicated in statement 13.

4.6.14 The average monthly rent (actual & imputed) is more when compiled for all households irrespective of their categorisation into staying in rented houses or owned houses, as compared to any of the individual type of occupancy. The average monthly rent for the urban India is Rs.497 as against Rs.261 for the households with rented dwelling and Rs.472 with owned dwelling as may be seen from **statement 12**.

4.6.15 It is observed from **statement 13** that in urban sector, Punjab (Rs.655) reported highest rent (actual/imputed) followed by rent figure reported from Assam (Rs.590) & Gujarat (Rs.563) whereas rental figures in Andhra Pradesh (Rs.335), Tamil Nadu (Rs.366) and Orissa (Rs.411) are on the lower side, a situation quite similar to that found among the households with "owned house" (ref. **statement 11**).

4.7 Statements 14 to 17 give respectively the distribution of urban households with dwelling units living in non-rented house by imputed rent adjusted MPCE class for each of the (i) unadjusted MPCE class at the National level (ii) 15 major states and distribution of all urban households (both rented & non-rented) with dwelling unit by imputed rent adjusted MPCE class for each of the (i) unadjusted MPCE class at the National level (ii) 15 major states.

4.7.1 Accounting for the imputed rent in the consumption expenditure, improvement in MPCE occurs and some of the households shift to the upper MPCE classes at the National level, as may be seen from **statement 14 and 16.**

4.7.2 **Statement 14** reveals that from a minimum of 45% of the households in 'less than Rs.160' MPCE class to a maximum of 82% of the households in 'Rs.310-355' & 'Rs.355-410' MPCE class move in to the next higher MPCE classes, whereas from **statement 16** it is noticed that from a minimum of 34% is 'Rs.605-825' MPCE class to a maximum of 61% in 'Rs.230-265' MPCE class go up to the next higher MPCE classes after adjustment of MPCE by imputed rent. Per 1000 distribution of households over adjusted average MPCE and unadjusted average MPCE is almost identical except at the end classes as the effect of adjustment almost get canceled in each of the intervening MPCE classes. However, there is a significant increase in adjusted average MPCE compared to unadjusted figure in the upper most class for both the categories i.e., for the households living in non-rented house [statement-14] and all households (living in rented as well as non-rented houses) [statement-16].

4.7.3 From **Statements 15 & 17** it is found that the adjusted average monthly per capita expenditure invariably increases as imputed rent is taken into account in the consumption expenditure of the households, a fact holding good at the state as well as National level.

4.7.4 **Chart 8**, in the next page, shows the **imputed rent adjusted and unadjusted per capita expenditure over MPCE levels** in the urban India taking into account "all households" (both rented & non-rented).

4.7.5 **Chart 9**, in the next page, shows the **imputed rent adjusted and unadjusted per capita expenditure** for each of the major states of the urban sector.

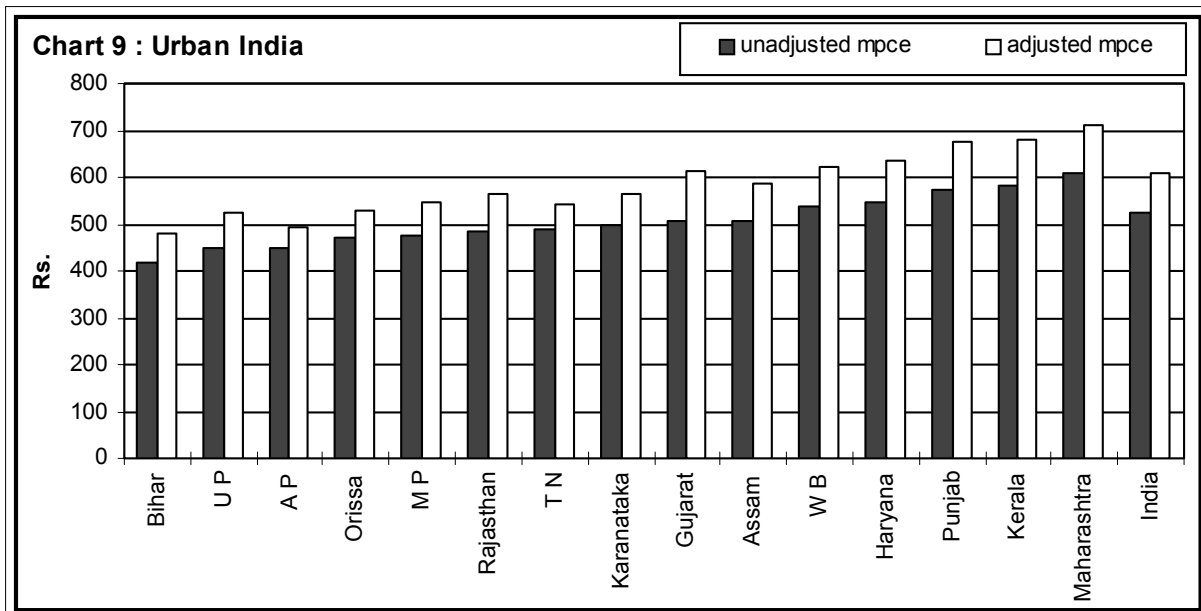

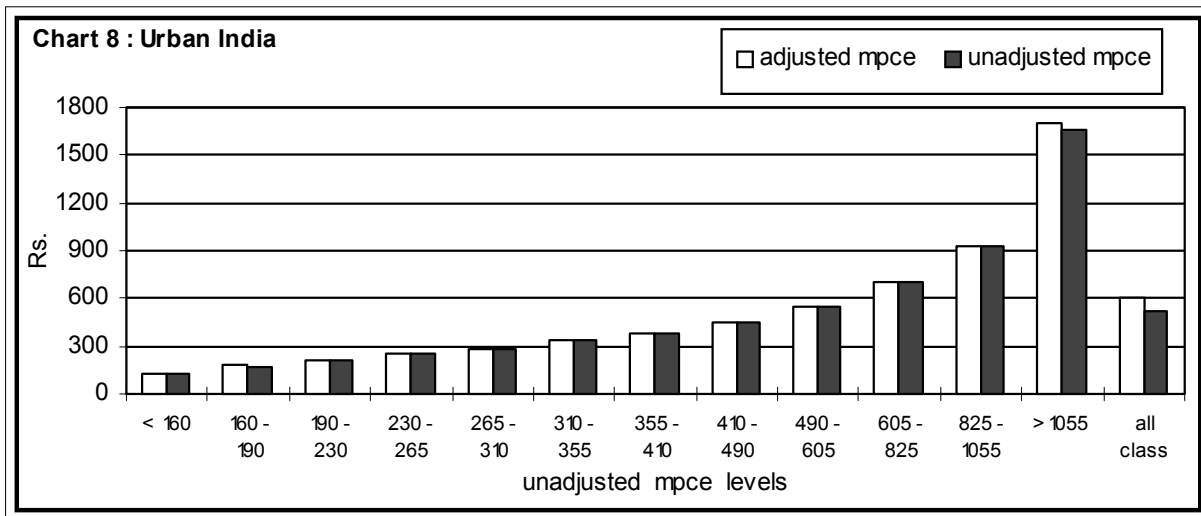

4.8 **Number of households living in Rented Houses reporting Rent (actual) and Average Monthly rent (Actual) by type of structure & MPCE class.**

4.8.1 It is found from **statement 18(R/U)** that, for different kind of structures viz. pucca, semi-pucca & katcha, the average monthly rent per household are Rs. 196, Rs.90, and Rs.58 in rural India as compared to Rs.301, Rs.129 and Rs.99 in urban India whereas the corresponding figures at the National level are Rs.152 and Rs.261 in rural and urban sectors respectively, considering "all category" (ref. col.11).

4.8.2 With increase in MPCE, the households in both the sectors are observed to dwell in houses with higher monthly rent, on the average, which is evident from col.(11) of **statements 18R & 18U**.

4.8.3 In the urban sector, the average monthly rent per household is maximum in pucca and decreases with change in the structural type of the houses from pucca to katcha in respect of households in any individual MPCE class. But the situation is somewhat different in the first few MPCE classes of the rural sector where the trend is found to be quite erratic, possibly due to the problem of categorisation of houses indifferent type of structures occupied by the households in a number of cases.

4.9 **Number of households living in rented house reporting rent(actual) and average monthly rent (actual) by type of structure for each of the major states**

4.9.1 **Statement 19** shows that the average monthly rent per urban household, taking into account "all categories" of structures, is quite high in Karnataka (Rs.311), Andhra Pradesh (Rs.294), Madhya Pradesh (Rs.294) and Orissa (Rs.288). On the other hand the average monthly rent per household is the lowest in West Bengal (Rs.154).

4.9.2 Average monthly rent per household for pucca houses ranges from Rs.192 in West Bengal to around Rs.370 in Karnataka as well as Assam in the urban sector, as is evident from **statement 19**.

4.9.3 Average monthly rent per household for katcha houses is minimum in Kerala (Rs.49).
