List of Detailed Statewise Statistical Tables in the Appendix

<u>Table No.*</u>	<u>Description</u>	<u>Page No.</u>
1.1	Population percentiles of distribution of monthly per capita expenditure (MPCE)	A1 - A6
1.2	Per 1000 distribution of households by percentile group	A7 - A9
1.3	Average household size by percentile group	A10 - A12
2	Per 1000 distribution of persons of age 15 years and above by level of education	A13 - A19
3	Per 1000 distribution of persons of age 5 - 24 years by current attendance and current enrolment status	A20 - A26
4	Per 1000 distribution of persons of age 5 - 24 years pursuing general education by class group	A27 - A33
5	Gross attendance ratio of students pursuing general education at school level	A34 - A40
6	Age-specific attendance ratio of students pursuing general education	A41 - A47
7	Net attendance ratio of students pursuing general education at school level	A48 - A54
8	Per 1000 distribution of persons of age 5 - 24 years pursuing general education by level of education and by nature of institution	A55 - A68
9	Per 1000 distribution of persons of age 5 - 24 years pursuing general education by level of education and by type of institution	A69 - A82
10	Proportion (per 1000) of students of age 5-24 years pursuing general education and (a) getting free education, (b) full exemption from tuition fee and (c) partial exemption from tuition fee	A83 - A96
11	Proportion (per 1000) of students of age 5-24 years pursuing general education and (a) receiving scholarships, free or subsidised books/ stationery and mid-day meals; (b) mode of transport and concession	A97 - A103

<u>Table No.*</u>	<u>Description</u>	<u>Page No.</u>
12	Average annual expenditure per student of age 5 - 24 years pursuing general education by level of education	A104 - A110
13	Average annual expenditure per student of age 5 - 24 years pursuing general education by item of expenditure and (i) by level of education and (ii) by type of institution	A111 - A117
14	Average annual expenditure per reporting student of age 5 - 24 years pursuing general education by item of expenditure and (i) by level of education and (ii) by type of institution	A118 - A124
15	Proportion (per 1000) of dropouts (age 5-24 years) among ever-enrolled and their per 1000 distribution by level at which dropped out	A125 - A131
16	Per 1000 distribution of dropouts (age 5-24 years) by reason for dropping out	A132 - A145
17	Proportion (per 1000) of never-enrolled persons (age 5-24 years) by reason for non-enrolment	A146 - A159

* There are separate tables for rural, urban and combined (rural+urban) sectors. Table No.s have R ,U or C as suffix to denote the sector. For rural and urban sectors, separate tables are given for males, females and persons (males+females). For combined (rural+urban) sector, only tables for persons are given.

HIGHLIGHTS

All India

1. Literacy rate (for persons aged 15 years and above)

Male.....	67.3%
Female.....	40.7%
Person.....	54.3%
Rural	
Male.....	60.6%
Female.....	31.7%
Person.....	46.4%
Urban	
Male.....	85.7%
Female.....	67.3%
Person.....	77.0%

2. Distribution of persons (aged 15 years and above) by level of education attained

Illiterate.....	45.7%
Literate without formal education.....	1.3%
Below primary.....	7.6%
Primary.....	13.4%
Middle.....	14.4%
Secondary.....	8.8%
Higher secondary.....	4.2%
Diploma/ certificate...	0.4%
Graduate.....	3.5%
Post-graduate.....	0.7%

3. Distribution of students of age group 5-24 by level of education

Primary.....	53%
Middle.....	24%
Sec./ Higher sec.....	19%
Higher education.....	4%

4. Attendance ratios

Gross attendance ratio	
Classes I-V.....	85%
Classes VI-VIII.....	65%
Age-specific attendance ratio	
Age 6-10.....	69%
Age 11-13.....	72%
Net attendance ratio	
Classes I-V	66%
Classes VI-VIII	43%

5. Percentage distribution of students by level of education and type of management

Level of education	Type of management				Overall
	Govt.	Local Body	Pvt. aided	Pvt. unaided	
Primary	36.3	4.5	5.3	6.6	52.7
Middle	14.8	2.0	5.0	2.1	23.9
Sec./Hr.sec	10.5	1.1	6.0	1.5	19.1
Higher edn.	2.1	0.2	1.4	0.3	4.0
Overall	63.7	7.8	17.7	10.5	100.0*

*includes n.r. cases

6. Proportion of students getting free education by level of education

Primary.....	77%
Middle.....	73%
Sec./ Higher sec.....	61%
Higher education.....	19%

7. Proportion of students getting incentives

Scholarships.....	6.8%
Free or subsidised books..	25.6%
Free or subsidised stationery	3.9%
Mid-day meals.....	17.9%
Concession in public transport	3.5%

8. Average amount of per capita private expenditure on education (per annum)

Primary.....	Rs. 501
Middle.....	Rs. 915
Sec. /Higher sec.....	Rs. 1,577
Higher education.....	Rs. 2,923

9. Proportions attending, attended and never attended by age group

Age group	Attending	Never attended	Attended
6-10	69%	26%	5%
11-13	72%	19%	9%
14-17	50%	20%	30%
18-24	14%	29%	57%

CHAPTER I

Introduction

1.1 National Sample Survey Organisation (NSSO)

1.1.1 The NSSO was set up in 1950 with a view to having a permanent survey organisation to collect data on various facets of the economy through nationwide sample surveys in order to assist in socio-economic planning and policy making. The NSSO covers different subjects of importance, such as employment and unemployment, consumer expenditure, land holdings, livestock enterprises, debt and investment, social consumption, demography, morbidity, disability, etc., through household surveys. The NSS is a continuous survey in the sense that it is carried out in the form of successive "rounds", each round usually of one-year duration covering several topics of current interest in a specific survey period. The survey programme conforms to a cycle over a period of ten years, some topics being repeated once in ten years and some being repeated once in five years. Subjects of special importance are also accommodated in the intervening years or covered along with regular repeated surveys. At present, an NSS round at the all-India level surveys about 12,000 to 14,000 villages and urban blocks in the Central sample (covered by the Central agency, the NSSO) and an independent sample of about 14,000 to 16,000 villages and urban blocks in the State sample (covered by the Governments of various States and Union Territories).

1.2 Surveys on Social Consumption

1.2.1 The NSSO carried out the first all-India survey on social consumption in its 35th round (July 1980 - June 1981). The

items covered were the public distribution system, health services (including mass immunisation and family welfare programmes) and educational services. The results of the survey could not be brought out due to some unavoidable reasons. The second survey on social consumption was carried out in the 42nd round (July 1986 - June 1987) with some modifications in the coverage of subjects. Topics like problems of aged persons were included in this round. The third survey on social consumption, with which we are concerned here, was carried out in the 52nd round (July 1995 - June 1996). Two topics, viz. utilisation of the public distribution system and utilisation of family planning services, were dropped as these were covered in the NSS 50th round and by a nationwide survey by the Ministry of Health and Family Welfare, respectively.

1.3 The Fifty-second Round

1.3.1 The four main topics covered in the 52nd round are:

- (i) Utilisation of maternity and child health care services
- (ii) Morbidity and utilisation of medical services
- (iii) Problems of aged persons
- (iv) Participation in education

In addition, the topics of household consumer expenditure and employment-unemployment were covered as is usual with every round.

1.3.2 The object of the present survey was essentially to study the benefits derived by various sections of the population from investments made by the Government, to a major extent, as well as

by the private sector in the fields of health and education and also to study the problems of aged persons.

1.3.3 The two main schedules used in the 52nd round, apart from Schedule 1.0 on consumer expenditure, were: Schedule 25.0 on maternity and child health care, morbidity and utilisation of medical services, and problems of the aged persons; and Schedule 25.2 on participation in education.

1.3.4 The entire area of the country, rural and urban, was covered with the exception of some interior areas of Nagaland and Andaman & Nicobar Islands, and the Ladakh, Kargil and Dodha districts of Jammu & Kashmir.

1.4 Participation in Education

1.4.1 The present report is on education based on Schedule 25.2. Details on educational services received by the household were collected from each sample household selected for this enquiry. Some general particulars such as age, sex, educational level attained, current enrolment status, etc., were collected from all the household members. From persons

of age 5-24 years, more detailed information was asked as they formed the main target group of the survey. The questions directed to those who were currently studying included details of the course, level and year of study, type of management of educational institution they were attending, whether the institution was recognised or not, the facilities utilised by them in terms of scholarship, free studentship, etc., and details of private expenditure on education incurred by them. Those currently not attending any educational institution were asked whether they were ever enrolled or not, whether they had completed their education or discontinued midcourse and what were the reasons for dropping out or for non-enrolment.

1.5 Layout of the Report

1.5.1 Some definitions and concepts related to the survey are discussed in Chapter II. The sampling design and the estimation procedure are discussed in Chapter III. Summary results of the survey at the all-India level are presented in Chapter IV. Detailed statewise tables are given in the Appendix.

Chapter II

Concepts and Definitions

2.1 Coverage of the Survey :

The survey, in its initial portion dealing with demographic characteristics, covers the present status of the population including educational level, current attendance and enrolment status. But the main thrust is on persons of age 5-24 years irrespective of whether they are currently attending any educational institution or not. For this purpose, the term 'education' has been used to include:

- a. school education commencing from Class I and going up to Class XI or XII as the case may be.
- b. Higher secondary/ pre-university/ university education leading to certificate/ diploma/ degree, etc., including education imparted by private unrecognised institutions having regular classes and following the syllabus and pattern of education as in schools or colleges and which sponsor students for school/university examinations as private/external candidates.
- c. Professional courses conducted by recognised universities or institutions deemed to be universities.
- d. Correspondence courses conducted by recognised universities for awarding regular degree/diploma or certificate courses.

Specifically excluded are:

- a. Education at nursery/ kindergarten/ preparatory levels (except for their enrolment and attendance status as part of the demographic characteristics).
- b. Type-writing/short-hand classes conducted by institutions which sponsor

students for government recognised examinations.

- c. Technical/ vocational or other general courses conducted by private agencies for diplomas/certificates in various subjects.
- d. The non-formal system of education being implemented through various programmes by government or other agencies.

2.2 Level of Education:

It refers to the different stages of educational attainment. The levels are (i) not literate, (ii) literate without formal schooling, (iii) below primary, (iv) primary, (v) middle, (vi) secondary, (vii) higher secondary, (viii) diploma/certificate, (ix) graduate, and, (x) post-graduate and above. It may be noted that if a person has successfully passed the final year of a given level, then and only then will he/she be considered to have attained that level of education. For example, the level attained by a person studying in Class IX will be middle but the level at which he/she is currently studying is secondary.

2.3 Literate:

A person is considered literate if he/she can read and write a simple sentence in any language with understanding.

2.4 School Education Levels:

A uniform pattern in the number of years of schooling at primary, middle, secondary and higher secondary levels is yet to be achieved. Generally, the primary level refers to Classes I-V, the middle to Classes

VI-VIII, the secondary to Classes IX-X and the higher secondary to Classes XI-XII. While in many states, this system is being followed, there are some states where the primary level comprises Classes I-IV, the middle Classes V to VII or VIII, the secondary Classes VIII-X, etc., and the higher secondary in some states is taught in colleges. The information pertaining to any state is according to the pattern followed in that state.

2.5 Type of Education:

Education is broadly divided into two categories: (i) general education and (ii) technical and vocational education. General education, in this survey, includes general school education from the primary to the higher secondary level, normal university education for a degree *including* professional education like Engineering, Medicine, Agriculture, etc. Other technical and vocational courses like those offered by ITIs, polytechnics, etc., are included under technical and vocational education.

2.6 Nature of Institution:

This refers to whether the institution is recognised or not. A recognised school/institution is one in which the course(s) of study followed is/are prescribed or recognised by the Government or a university or a Board constituted by law or by any other agency authorised in this behalf by the central or state government. It also satisfies one or more of the authorities, e.g. Directorate of education, Municipal Board, Secondary Board, etc., with regard to its standard of efficiency. It runs regular classes and sends candidates for public examination, if any.

2.7 Type of Institution:

This refers to the type of management by which the institution is run. It may be run by Government, a Local Body or a private

body either receiving or not receiving government aid. Thus, the four types are: (a) Government, (b) Local Body, (c) Private aided and (d) Private unaided. All schools / institutions run by central and state governments, public sector undertakings or autonomous organisations completely financed by the government are treated as government institutions. All institutions run by municipal corporations, municipal committees, notified area committees, zilla parishads, panchayat samitis, cantonment boards, etc., are treated as local body institutions. A private aided institution is one which is run by an individual or a private organisation and receives maintenance grant from a government or a local body. A private unaided institution is one which is managed by an individual or a private organisation and is not receiving maintenance grant either from a government or from a local body.

2.8 Free Education:

Education is free of tuition fee in government schools in most of the states and also in private schools in some states up to certain levels of education. There are some schools where students up to a certain level are not required to pay tuition fees. Nevertheless, a fixed sum of money has to be paid such as development fee, library fee, etc. Education in such schools is still considered to be free. This applies to the institution as a whole and not to the specific situation obtaining for the student.

2.9 Exemption from Tuition Fees:

This refers to exemption from payment of tuition fees granted to some students on some special consideration in those institutions where it is reported that the education is not free. The exemption may be full or partial.

2.10 Private Expenditure on Education:

It is the sum total of all the expenditures incurred by the student on education (towards fees, books & stationery, uniform, transport, private coaching, study tours, etc.)

2.11 Attendance and enrolment:

The current attendance status refers to whether a person is currently attending any educational institution or not. While every person who is attending an educational institution is necessarily enrolled in that institution, it may so happen that a person who is enrolled is not currently attending the institution. While most of the official educational statistics are based on enrolment, the NSSO Survey, because of its household approach, bases its analysis on the current attendance status.

2.12 Dropout:

This term 'dropout' has been used in two senses. It may mean either : (i) one who has discontinued education before completing the last level of education for which he or she was enrolled or (ii) one who has discontinued education before attaining a specific level. According to the first definition, for example, if a person has completed the middle level but does not enrol for higher education, he/she is not considered a dropout. It is considered as a case of discontinuation. However, if the person enrolls for the secondary level but does not complete it, then he/she is considered a dropout. According to the second definition, in either case the person would be considered a dropout.

Chapter III

Sample Design and Estimation Procedure

3.1 Sample Design

3.1.0 General:

A stratified two-stage design was adopted in this round. The first-stage units were the census villages for the rural areas (panchayat wards in case of Kerala) and the NSSO Urban Frame Survey(UFS) blocks for the urban areas. The second-stage units were the households in both the cases.

3.1.1 Sampling Frame for First-Stage Units (FSUs):

The list of census villages of the 1991 census (1981 census list for Jammu & Kashmir) constituted the sampling frame for the rural areas. For Kerala, however, the list of panchayat wards was used as the sampling frame for the selection of first-stage units in the rural areas. For Nagaland, the villages located within 5 kms. of a bus route constituted the sampling frame, whereas for Andaman & Nicobar Islands, the list of 'accessible' villages formed the sampling frame. For the urban areas, the list of NSSO Urban Frame Survey(UFS) blocks has been used as the sampling frame.

3.1.2 Stratification:

For the socio-economic surveys of the NSSO, each state or union territory (u.t.) is divided into one or more agro-climatic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts are subdivided for the purpose of region formation on the basis of location of dry areas and the distribution of tribal

population in the state. In all, there are 78 regions covering the entire geographical area of the country.

3.1.2.1 Stratification for Rural areas:

In the rural areas, each district within a region was treated as a separate stratum. However, if the 1991 census population of the district was found to be greater than or equal to 2 million (1.8 million population as per 1981 census for Jammu & Kashmir), the district was split into two or more strata, by grouping contiguous tehsils to form strata. In Gujarat, in the case of districts extending over more than one NSS region, the part of a district falling within each NSS region formed a separate stratum.

3.1.2.2 Stratification for Urban areas :

In the urban areas, strata were formed, within each NSS region, by grouping towns on the basis of the population of towns. The urban strata were formed as shown in Table 1.

Table 1: Composition of urban strata in an NSS region

Stratum No.	Population size class (as per 1991 census) of towns
1	all towns with population less than 50,000
2	all towns with population 50,000 - 1,99,999
3	all towns with population 2,00,000 - 9,99,999
4,5,...	each city with population 10,00,000 or more

3.1.3 Allocation of First Stage Units (FSUs):

A sample of 13,000 FSUs (rural & urban combined) was selected as the 'central sample' at the all-India level. The sample size of FSUs (rural & urban combined) for the central sample for a state/u.t. was allocated to its rural and urban areas considering the relative sizes of the rural and urban population with double weightage to the urban areas. The state-level rural sample size was allocated to the rural strata in proportion to their rural population figures as per the census. Similarly, urban sample size of the state/u.t. was allocated to the urban strata in proportion to urban population figures as per the census. All the stratum-level allocations were adjusted to multiples of 8 as far as possible (otherwise to multiples of 4) in order to allocate them equally in each sub-sample x sub-round combination (2 sub-samples x 4 sub-rounds). Allocation of first-stage units for rural and urban areas of each state is given in columns 2 and 3 of Table 2.

3.1.4 Selection of First-Stage Units:

The sample FSUs in the rural areas were selected circular systematically with *equal* probability. In the Union Territory of Daman & Diu, the district Diu consists of only two villages. These two were selected for the survey in both the central and the state sample. Sample blocks in the urban areas were also selected circular systematically with equal probability. Sample FSUs of both the rural and urban areas were selected in the form of two independent sub-samples. The only

departure from the general procedure of selection of FSUs was made for the rural areas of Arunachal Pradesh for which the procedure of cluster sampling was followed. The nucleus villages were selected circular systematically with equal probability, in the form of two independent sub-samples. A cluster, generally of 4 to 6 villages, was formed around each nucleus village. State/u.t.-wise numbers of FSUs actually surveyed are given in columns 4 and 5 of Table 2.

3.1.5 Selection of Hamlet-Groups/ Sub-Blocks (for 'large' FSUs only):

A large FSU was divided into a suitable number of hamlet-groups/ sub-blocks having equal population content. Two hamlet-groups were selected from each large FSU in the rural areas and only one sub-block was selected from each large FSU of the urban areas.

3.1.6 Selection of Households (Second-Stage Units):

In each of the selected FSUs, three different enquiries, viz. "Survey on Health Care", "Survey on Participation in Education" and "Survey on Consumer Expenditure", were conducted on three independent samples of the households. For the present enquiry, i.e. survey on education, a sample of 6 households was selected for the detailed enquiry. However, before selection, the listed households were first grouped into two second-stage strata. The composition of the second-stage strata and the number of sample households selected from each of them are shown in Table 3.

Table 2: Distribution of sample villages/ blocks (FSUs) allotted and surveyed and distribution of households surveyed for central sample

state/ u.t	number of sample villages/urban blocks				no. of households	
	allotted		surveyed		surveyed

* 24 nucleus villages

Table 3: Second-stage stratum composition and number of households selected

Second-stage stratum		Number of households selected
No.	Composition	
1	households with at least one member of age group 5-24 years and studying in post-primary level	3
2	remaining households	3

State/u.t.wise number of households surveyed is given in columns 6 and 7 of Table 2.

3.2 Estimation Procedure

3.2.0 Notation:

The notation used for describing the procedure of estimation is given below:

- s*: subscript for stratum
- i*: subscript for sample village/block
- j*: subscript for second-stage stratum of households within a sample village/block
- k*: subscript for sample household
- b*: subscript for sub-sample
- N_s = total number of villages/blocks in the frame of the s^{th} stratum
- n_s = number of villages/blocks surveyed (including uninhabited and 'zero cases' but excluding casualty and other 'not received' cases) in the s^{th} stratum, for any particular schedule type
- D = total number of hamlet-groups/sub-blocks formed in the sample village/block ($D=1,4,5,6,.....$ for rural samples and $D=1,2,3,4,.....$ for urban samples)
- The symbol D' used for the rural areas is described as :
 $D' = D$ if $D=1$ and $D' = D/2$ if $D \geq 4$
- H = total number of households listed in the FSU
- h = number of households surveyed and used for tabulation
- x, y = the two characters under study
- \bar{X}, \bar{Y} = estimates of population totals of the characters x, y

3.2.1 Estimates of aggregates:

The formulae for obtaining \bar{Y}_s , the estimate of aggregate of any character y for the s^{th} stratum, are given below :

Rural:
$$\bar{Y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D'_{si} \sum_j \frac{H_{sij}}{h_{sij}} \sum_{k=1}^{h_{sij}} y_{sijk}$$
(1)

Urban:
$$\bar{Y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_j \frac{H_{sij}}{h_{sij}} \sum_{k=1}^{h_{sij}} y_{sijk}$$
(2)

These formulae were used to obtain sub-samplewise estimates first and then pooled estimates were obtained as the simple average of the sub-samplewise estimates.

3.2.2 Sub-sample estimates:

Sub-sample estimates were computed on the basis of villages and blocks surveyed in the sub-sample concerned. Thus n_s in the above formula denotes the number of surveyed villages/blocks in the sub-sample concerned of the s^{th} stratum.

3.2.3 Combined estimate:

The combined estimate based on the whole sample was computed as the simple average of the sub-sample estimates. Thus, if \bar{Y}_{s1} and \bar{Y}_{s2} be the sub-sample estimates of s^{th} stratum total, the combined estimate was obtained as

$$\bar{Y}_s = \frac{1}{2} \sum_{b=1}^2 \bar{Y}_{sb}$$
(3)

3.2.4 Estimate of aggregate at state/u.t./region level:

Let \bar{Y}_b be the estimate of aggregate at state/u.t./region level from b^{th} sub-sample and \bar{Y}_c the combined estimate of aggregate at state/u.t./region level based on the whole sample, then

$$\bar{Y}_b = \sum_s \bar{Y}_{sb}$$
(4)

and
$$\bar{Y}_c = \frac{1}{2} (\sum_s \bar{Y}_{s1} + \sum_s \bar{Y}_{s2})$$
(5)

3.2.5 Estimate of Ratios:

If X be the population total of the variable x for the state/u.t./region, its estimates \bar{X}_b or \bar{X}_c are obtained exactly in the same manner as above after replacing y by x . Then the estimate of ratio $R = \frac{Y}{X}$ is obtained as

$$\bar{R}_b = \frac{\bar{Y}_b}{\bar{X}_b}, \text{ based on sub-sample } b \text{ and}$$

$$\bar{R}_c = \frac{\bar{Y}_c}{\bar{X}_c}, \text{ based on the whole sample.}$$

Chapter IV

Summary Findings

4.0.1 The main objective of the survey is to study the extent to which the educational infrastructure, facilities and incentives provided by government, to a large extent, as well as by private sector, have benefited the people. The survey attempts to assess the benefits in terms of level of education attained, current attendance status of school and college going population in educational institutions and utilisation of various incentives. Related areas of private expenditure on education, phenomena of dropouts and non-enrolment have also been studied. In this chapter, analysis has been done at an all-India level. Detailed state-level statistical tables are given in the Appendix.

4.0.2 Educational attainment levels of the population of age 15 years and above are discussed in section 4.1. The main emphasis of the study is on persons of age group 5-24 who are the main users of the formal education system. Their attendance status by level and class of study is discussed in sections 4.2 to 4.4. In section 4.5, three indicators, viz. gross attendance ratio, age-specific attendance ratio and net attendance ratio have been discussed which provide an idea of the extent of participation at the school level. Distribution of students currently attending by nature of educational institution (recognised or not) and by type of management of the institution are discussed in sections 4.6 and 4.7 respectively.

4.0.3 Education is free in schools run by government up to a certain level, which varies from state to state. Apart from this, higher education is heavily subsidised. Many incentives are provided in the form

of scholarships, free supply of books, mid-day meals, etc. The extent of utilisation of these facilities is discussed in sections 4.8 and 4.9.

4.0.4 Besides the government, individuals incur expenditure on education in the form of payment of fees of different kinds, purchase of books, stationery and uniforms, expenses on conveyance, private coaching, study tours, etc. This is referred to as private expenditure on education. This expenditure by level of education, by type of management and by economic level is discussed in section 4.10. The section also discusses expenditure by individual items of expenditure.

4.0.5 Though education is highly subsidised, our educational system is characterised by high rate of dropouts at different levels. Further, not only are there dropouts among the enrolled but also there is a sizable portion of the population which never enters the educational system at all, and thus having been deprived of education, they are handicapped for life. The phenomenon of dropouts is discussed in section 4.11 and that of non-enrolment in section 4.12. Relative levels of attendance, dropouts and non-enrolment are discussed in section 4.13. Some salient points are presented in section 4.14.

4.0.6 There is a wide variation in the utilisation of educational services by different sections of the population. Here, analysis has been done on rural-urban, male-female and per capita expenditure groups. Economic level of household was estimated on the basis of information collected on a worksheet on monthly expenditure as part of the main schedule on education. The items of expenditure

included were not as detailed as in the regular consumer expenditure schedule : the limited objective was to classify the population into broad groups of economic levels. The monthly per capita expenditure (MPCE) obtained thus was used to divide the population into 12 fractiles (0-5%, 5-10%, 10-20%, 20-30%, 30-40%...80-90%, 90-95%, 95-100%). Tables on fractiles are, however, presented in groups of 20 percentage points, viz. 0-20%, 20-40%, 40-60%, 60-80% and 80-100%.

4.0.7 Population percentiles of MPCE and household size and distribution of households by percentile group are given in Tables 1.1 to 1.3 of the Appendix.

Note 1: Use of estimated aggregates:

Generally, the population and household estimates obtained from the NSS surveys are found to be lower than the actual or projected census figures. These differences, among other things, could be due to differences in the coverage and methods adopted in NSS Surveys and those in Census operations. However, the ratios obtained from NSS surveys are expected to be more robust. Thus, the aggregates of households or population given in the detailed tables of the Appendix, generally as marginal column totals, may be used only for working out ratios.

4.1 Educational Level of Population (age 15 years and above):

4.1.1 Distribution of population by education level is a good measure of the quality of the population. A pie diagram showing the distribution of population of age 15 years and above by level of education is given in Figure 1. Table 1

gives the per 1000 distribution of persons with rural-urban and male-female breakup. It is seen that the overall illiteracy rate is 45.7%. It is 53.6% in rural population as against 23.0% in urban population. There is also wide disparity between males and females. Among males, illiteracy rate is 32.7% and among females it is 59.3%. When the two factors are taken together, the disparity intensifies further. Among urban males, the illiteracy rate is 14.3%, and among rural females it is 68.3%. The rural-urban, male-female disparities accentuate as one moves up the educational ladder. At the post-graduate level, there are 25 persons per 1000 among urban males, 14 among urban females, 4 among rural males and just 1 among rural females.

4.1.2 If we consider the educational levels by fractile group (Table 2), again we see wide variations between the different groups. It is instructive to compare the most disadvantaged, viz. rural females of the 0-20% group, with the most advanced, viz. urban males of the 80-100% group (Table 3). Of the rural females of the lowest fractile group, 85.3% are illiterate and there is hardly anyone with college level qualification. On the contrary, among the urban males in the highest fractile group, 30.9% belong to the graduate or above levels.

4.1.3 Table 4 gives a comparative picture of the estimates of educational levels of the population in the 50th and 52nd rounds. The results appear to be consistent. There is a general reduction in the proportion of illiterates and increase at other levels of education.

Note: Figures in brackets are proportions of persons enrolled but not attending

4.2 Current Attendance and Enrolment Status:

4.2.1 Current attendance status refers to whether a person is currently attending any educational institution or not. Table 5 gives the current attendance and enrolment status of population in the age group 5-24 years. Persons are classified as attending or not attending; if not attending whether enrolled or not and if attending, whether at pre-primary, primary or post-primary levels. Though from the first row of the Table, it appears that 50% are not attending any educational institution, one has to look deeper to get the proper import of the statement. “currently not attending” would consist of both who never attended any educational institution and those who had attended in the past but dropped out subsequently at different levels or have completed their studies. Also, the age group-wise break-up has to be seen. Attendance in the age group 20-24, for example, would naturally be very low as mostly those who are undergoing professional education or post-graduate courses only will be attending educational institutions. Others would have either completed their studies or dropped out. The question of non-enrolment by age group and drop-outs at different levels are discussed in sections 4.11 to 4.12. Similarly, among those attending, analysis by age, class, level, etc. is needed. These

are taken up in sections 4.3 to 4.7.

4.2.2 Those attending post-primary levels constitute 34.4% of the population in urban areas but only 19.2% in rural areas. In the rural sector, the proportions of males and females at the post-primary level are 23.9% and 13.9%, respectively, which give an idea of the vast disparities that exist at higher levels of education.

4.2.3 Those not attending but enrolled are found to be just about 1 in 1000. This is quite surprising. The general perception is that, though children may be on the rolls of educational institutions, not all of them may actually be attending due to a variety of reasons. If the phenomenon of non-attendance is in fact high, it is likely that the schools may consider them as enrolled but the households themselves might be considering the children as not currently enrolled anymore. This may be one of the factors for lower gross attendance ratio obtained in this survey as compared to the gross enrolment ratio of Department of education (discussed later in section 4.7).

Note 2: Attendance at the pre-primary level has been included only as a part of the demographic block in the schedule. For further analysis on current attendance of the 5-24 year age group, attendance at

Table 6: Per 1000 distribution of persons of age 5-24 years who are pursuing general education by current attendance in class groups

*Includes n.r. cases

primary and higher levels only has been considered.

4.3 Attendance by Type of Education:

4.3.1 Education is broadly divided into (i) general education and (ii) technical and vocational education. General education, in this survey, includes primary, middle, secondary and higher secondary education at the school level and normal university education for under-graduate and post-graduate courses *including* professional education like Engineering, Medicine, Agriculture, etc. Those pursuing general education are then classified by course, level and class/ year of study. Other technical and vocational courses, subject of course to 'coverage of education' given at the beginning of Chapter II, are included under technical and vocational education.

Note 3: The number of students pursuing technical and vocational education netted in the survey was only 387 at the all-India level (rural male: 79, rural female: 20, urban male: 210, urban female: 72) giving an estimate of 6.45 lakh students, which is just about 1.7% of the total post-middle level attendance. At the state/u.t. level, the sample size was less than 30 except in the case of three states. Also, there was no provision for recording level/ course/ year of study of students pursuing technical and vocational education. So, further analysis

of the data is based only on general education as defined above.

4.4 Attendance by Class Groups:

4.4.1 General school education is divided into primary, middle, secondary and higher secondary levels and these generally refer to Classes I-V, VI-VIII, IX-X and XI-XII, respectively. In most states this pattern is followed, but in some states there are variations. As the number of years corresponding to primary, middle, secondary and higher secondary levels are not the same in different states, class-wise grouping has been done to study the attendance rates.

4.4.2 Table 6 gives the per 1000 distribution of students of age 5-24 years pursuing general education by the above class groups with rural-urban and male-female break-ups. At the overall level, it is seen that 564 out of 1000 are in Classes I-V, 223 in Classes VI-VIII, etc., and only 41 above school level. In rural areas more than 60% are in Classes I-V and only 2% above school level. The corresponding figures for rural females are 66% and 1.6%. The difference in current attendance between males and females is quite small in urban areas, but in rural areas there is still quite a sizable gap.

4.5 Attendance and Enrolment Ratios:

4.5.1 Traditionally, there are three important indicators which give an idea of the proportion of population that is enrolled in educational institutions at different levels. They are gross enrolment ratio, age-specific enrolment ratio and net enrolment ratio. Since here we consider attendance instead of enrolment, the corresponding attendance indicators have been used. They are defined as follows :

(a) Gross attendance ratio
(say, for Classes I-V)

$$= \frac{\text{Number of persons attending Classes I-V}}{\text{Estimated population of age group 6-10}} \times 100,$$

where 6-10 age group is the official age group for Classes I-V.

Here, while the denominator consists of only the official age group, the numerator may include both over-aged and under-aged children as long as they are studying in Classes I to V resulting in overestimation. In spite of this lacuna, this indicator, in fact its corresponding enrolment indicator, viz. gross enrolment ratio, is widely used because information on age of students is generally not available.

(b) Age specific attendance ratio
(say, for age group 6-10)

$$= \frac{\text{Number of persons of age group 6-10 currently attending educational institution}}{\text{Estimated population of age group 6-10}} \times 100$$

This measure gives an idea of the proportion of persons of a particular age group attending educational institutions irrespective of the class or level in which they are studying. Thus, a seemingly high age-specific attendance ratio for the age group, say, 11-13 (which corresponds to the official age group for Classes VI - VIII) may be due to a large number of children actually studying in Classes I - V but who belong to the age group 11-13.

(c) Net attendance ratio
(say, for Classes I - V)

$$= \frac{\text{Number of persons of age group 6-10 attending Classes I - V}}{\text{Estimated population of age group 6 - 10}} \times 100$$

This indicator overcomes the deficiencies of both gross attendance ratio and age-specific attendance ratio.

4.5.2 As departments of education generally furnish gross enrolment ratios and the NSSO, in various rounds, has been furnishing age-specific attendance ratios while net enrolment ratio takes into account both age and class of the students, all the three ratios are presented in this report.

4.5.3 Table 7 gives the gross attendance ratios for the four class-groups at school level for general education. The overall gross attendance ratio for Classes I-V is 85 and that for Classes VI-VIII is 65. For urban areas, gross attendance ratio for Classes I-V is 100. It is 102 for males in urban areas. As discussed earlier, because over-age and under-age children are included in the numerator while only children of age 6-10 form the denominator, it is possible to get figures above 100.

4.5.4 Department of Education, Ministry of Human Resource Development, in its publication *Selected Educational Statistics* provide estimates of gross enrolment ratios for Classes I-V and Classes VI-VIII on the basis of provisional data on enrolment. Table 8 compares these figures with the

gross attendance ratios obtained from the current survey. It is seen from the table that gross attendance ratio is lower than gross enrolment ratio especially for Classes I-V where the difference is about 20%. It is possible that official enrolment gets overstated compared to actual attendance.

Table 7: Gross attendance ratio

4.5.5 Table 9 gives the age-specific attendance ratio figures. It is seen that for the 6-10 age group, age specific attendance ratio is 69 but for the 11-13 age group, it is 72. The gross attendance ratios and age-specific attendance ratios for primary and middle levels, when seen together, indicate the presence of over-age children in the system. Table 10 gives the net attendance ratios figures. For Classes I-V it is 66 and for Classes VI-VIII it is 43. These ratios indicate that we are still far away from achieving universalisation of elementary education (Classes I - VIII) or even primary education (Classes I - V).

4.6 Attendance by Nature of Institution:

4.6.1 By nature of institution is meant whether an institution is recognised or not as reported by the informant. Table 11 gives the per 1000 distribution of students of age 5-24 years pursuing general education by nature of institution. Overall, both in rural and urban areas, about 4 per cent of the students are attending educational institutions that are not recognised. At primary level, attendance in unrecognised institutions is 6.4% in urban areas and 4.3% in rural areas. At middle and secondary level, the rural-urban difference is not much. In the case of higher education, attendance in unrecognised institutions is 4.7% in rural areas as against 1.5% in urban, situation

being reverse of that occurring at primary level.

4.7 Attendance by Type of Institution:

4.7.1 Type of institution refers to the type of management by which the institution is run. Broadly the types are government, local body, private aided and

private unaided. Table 12 gives the per thousand distribution of students by level of education and type of institution. Government institutions account for 63.7% of the total followed by private aided institutions (17.7%), private unaided institutions (10.5%) and local body institutions (7.8%).

4.7.2 In rural areas, government institutions account for 72.8% of the total attendance. The share of private aided institutions is 12.0% and that of private unaided institutions 7.1%. In the urban sector, the participation of private institutions is much higher. Private aided institutions account for 31.2% and private unaided 18.2%, the share of government institutions coming down to 42.3%. In urban areas, private aided institutions play

an important role at middle, secondary, higher secondary and also at higher education levels, just next to government institutions. Private unaided institutions have a significant presence at the primary level, even slightly higher than private aided schools, accounting for 26.2% of the total attendance at that level. The share of local body institutions is about 8% both in rural and urban areas.

4.8 Free education and exemption from tuition fee:

4.8.1 Table 13 gives the proportions of students (per 1000) pursuing general education getting free education, getting full or partial exemption from tuition fee by level of education and rural-urban and male-female break-up. 77% get free education at the primary level, 73% at the middle level, 61% at the secondary / higher secondary level and 19% at the higher education level. The proportion of students getting free education is higher among rural students as compared to the urban and is higher among girls as compared to boys. The proportion of students getting exemption from tuition fees is negligible at the primary level. At

the middle level 4%, at the secondary/ higher secondary level 6% and at the higher education level 10% get exemption.

4.8.2 Table 14 presents the distribution of students by fractile groups. The proportion of children getting free education is higher in the lower fractiles than in the higher fractiles at school education levels. But at the college level, the proportion of students from the lowest fractile group getting free education is lower than the proportions from the other groups except the 80-100% fractile group. Of course, the small proportion of students from low income group in higher education itself would be a cause for this.

4.8.3 In Table 15, the distribution by type of institution is presented. As is expected, the proportion of students getting free education is high in government and local body schools, followed by private aided schools and then by private unaided schools.

4.9 Other incentives:

4.9.1 Table 16 gives the distribution of students pursuing general education by type of incentive received. Out of every

1000 students, 68 receive scholarships, 256 receive free or subsidised books, 39 receive stationery and 179 receive mid-day meals. Rural students benefit more from these measures and, between males and females, females have the larger proportion of beneficiaries. The average amount of concession received for transport is Rs. 531 per annum. For rural students it is Rs. 563, and for urban it is Rs. 465. The average amount of concession has been worked out on per reporting student basis.

Table 15: Proportions (per 1000) of persons of age 5-24 years pursuing general education and getting free education or exemption from tuition fee by level of education and type of institution

(b)by others	7	8	7	8	8	8	7	8	7
Mid-day meals (total)	195	243	213	92	108	99	166	198	179
Concession in public transport	35	32	34	38	39	39	36	34	35
Average amount of concession in transport (Rs)	595	508	563	475	454	465	560	487	531

Table 17: Per 1000 distribution of persons of age 5-24 years pursuing general education by type of incentive and by fractile group

Type of incentive	Fractile Group					
	0-20	20-40	40-60	60-80	80-100	All
scholarship	70	74	71	71	57	68
free/subsidised books	352	321	286	237	137	256
free/subsidised stationery	67	40	41	38	22	39
Mid-day meals						
(a)by Govt.	235	207	181	158	109	172
(b)by others	8	8	9	6	7	7
Mid-day meals (total)	243	215	190	164	115	179
Concession in public transport	8	15	20	34	83	35
Average amount of concession in transport (Rs)	448	392	503	474	585	531

4.9.2 When classified by fractile groups (Table 17), it is seen that the proportion of students receiving scholarships is almost the same for the 0-20, 20-40, 40-60 and 60-80 fractile groups and only slightly less for the 80-100 fractile group. In the case of free or subsidised books, stationery, mid-day meals, etc., students from lower economic strata have higher shares. But concession in public transport is being availed of more by the higher fractile groups. However, the average amount of concession does not vary much among the fractile groups, the range being Rs. 392 to Rs. 585 per annum.

4.9.3 In Table 18, we have classification by type of institution. It is seen that the proportion of students receiving scholarships, free or subsidised books, stationery and mid-day meals are highest in government institutions followed by local body, private aided and private unaided institutions in that order. But concession in public transport is being availed of in higher proportion by students from private institutions. The average amount of concession in public transport received does not show any pattern, ranging from Rs. 473 to 557 and averaging Rs. 531 per annum.

Table 18: Proportion (per 1000) of persons of age 5-24 years pursuing general education by type of incentive and by type of institution

Type of incentive	Type of Institution				
	Govt.	Local body	Private aided	Private unaided	All
Scholarship	82	62	55	14	68
Free/subsidised books	336	297	99	16	256
Free/subsidised stationery	50	45	19	8	39
Mid-day meals					
(a)by Govt.	225	216	63	7	172
(b)by others	5	13	12	11	7
Mid-day meals (total)	230	229	75	18	179
Concession in public transport	23	25	83	42	35
Average amount of concession(Rs)	516	473	557	519	531

Table 19: Proportion (per 1000) of persons of age 5-24 years pursuing general education by type of incentive and by level of education

Type of incentive	Level of education				
	primary	middle	sec./higher sec.	higher edn.	All
Scholarship	39	106	94	99	68
Free/subsidised books	354	213	88	24	256
Free/subsidised stationery	50	36	22	8	39
Mid-day meals					
(a)by Govt.	259	121	29	3	172
(b)by others	8	7	8	6	7
Mid-day meals (total)	267	128	36	9	179
Concession in public transport	23	25	83	42	35
Average amount of concession(Rs)	516	473	557	519	531

4.9.4 When classified by level of education (Table 19), it is seen that the proportion of students receiving scholarship at primary level is less than 4% while at all other levels it is about 10%. In respect of free or subsidised books and stationery and mid-day meals, the proportion of recipients decreases with increase in the level of education.

4.10 Private expenditure on education:

4.10.1 In the last two sections, we have discussed a variety of incentives given by the government. Further, education is highly subsidised. However it is still a costly proposition even if we do not take into consideration the opportunity cost.

Table 20: Average annual expenditure (Rs.) per student of age 5-24 years pursuing general education by level of education

Higher education	2559	2415	3143	5296	2923
All	580	628	1615	1904	904

Payment of fees of different kinds, expenditure on books and stationery, uniforms, conveyance, private coaching, study tours, etc., for which an individual has to incur expenditure, is called private expenditure on education.

4.10.2 Table 20 gives the average amount of annual private expenditure by level of education. It works out to Rs. 904 (rural

Rs. 570 and urban Rs. 1,686). The average expenditure at the primary level is Rs. 501; at the middle level Rs. 915; at the secondary/ higher secondary level Rs. 1,577 and at the higher education level Rs. 2,923.

4.10.3 In Table 21, private expenditure by fractile group is presented. Private expenditure for the lowest fractile (0-20) is

Rs. 300, while for the highest fractile (80-100) it is Rs. 1836. Table 22 gives private expenditure by type of management. As is expected, the private expenditure is highest in private unaided institutions (Rs. 1904) followed by private aided (Rs. 1615), local body (Rs. 628) and government institutions (Rs. 580). Though higher proportions of students studying in government and local body schools receive various incentives, such students still have to incur private expenditure.

4.10.4 Till now, total private expenditure incurred by a student was discussed. In the rest of the section, discussion is on different components of private

expenditure. Tables 23 to 25 give the average amount of expenditure by sector, level of education and type of institution respectively. Here, the average is worked out over all the students attending educational institutions in that sector, level or type of institution as the case may be. However, not all of them incur expenditure on all items. For example, tuition fees are not paid by all the students, nor do all students incur expenditure on transport. Table 26 gives the proportion of students incurring expenditure on different items are given. In tables 27 to 29 averages based on number of students reporting for that item have been worked out.

Table 23: Average annual expenditure (Rs.) per student of age 5-24 years pursuing general education by item of expenditure

Item of expenditure	Rural			Urban			Rural+Urban		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Tuition fee	50	41	47	410	367	390	149	150	149

Other expenses	37	30	34	73	68	71	47	43	45
Total	605	516	570	1750	1609	1686	919	882	904

4.10.5 In Table 23, private expenditure by different items of expenditure, viz. tuition fees, examination fees, others fees and payments, books, stationery, uniform, conveyance and private coaching, is presented. Also, a pie chart showing the shares of different items of private expenditure is given in Figure 2. On the average, the expenditure is highest on uniform (Rs. 164), followed by expenditure on tuition fees (Rs. 149), that on books (Rs. 145), that on private coaching (Rs. 130) and that on stationery (Rs. 112).

4.10.6 The patterns of expenditure in rural and urban areas are different. In rural areas, the expenditure is highest on uniform (Rs. 125), followed by that on books (Rs. 111), that on stationery (Rs. 91) and that on private coaching (Rs. 64). Tuition fee amounts to only Rs. 47. But in the case of urban areas, the highest expenditure is on tuition fees (Rs. 390), followed by expenditure on private coaching (Rs. 284). Expenditure on uniform comes only third (Rs. 255), followed by that on books (Rs. 222) and that on stationery (Rs. 161).

Figure 2: Private expenditure on education by item of expenditure

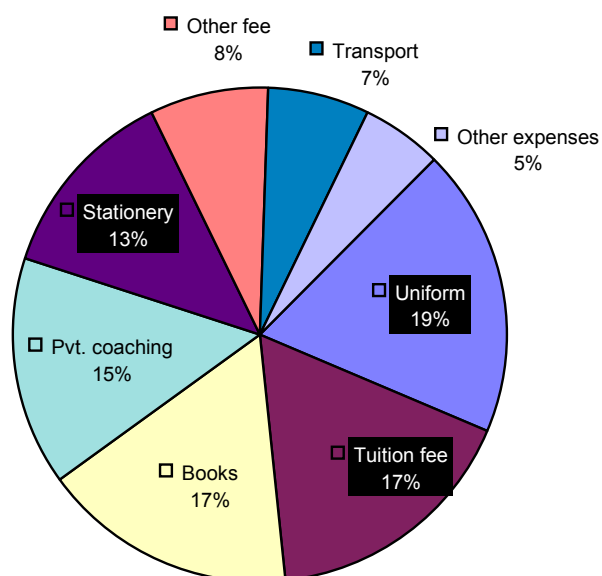

Table 24: Average annual expenditure (Rs.) per student of age 5-24 years pursuing general education by item of expenditure and by level of education

Item of expenditure	Level of education			
	Primary	Middle	Sec./Higher Sec.	Above Higher Sec.
Tuition fee	100	124	197	721
Exam. fee	11	24	66	174

Books	67	153	272	506
Stationery	63	126	190	290
Uniform	118	212	248	84
Transport	31	42	98	351
Private coaching	48	125	326	307
Other expenses	25	45	74	187
Total	501	915	1577	2923

4.10.7 Table 24 presents the items of private expenditure by level of education. Uniform (Rs. 118) is the highest item of expenditure at the primary level followed by tuition fee (Rs. 100). At the middle level, the highest item of expenditure is uniform (Rs. 212) but followed by books (Rs. 153). At the secondary /higher

secondary level, the highest expenditure is on private coaching (Rs. 326) followed by that on books (Rs. 272) and that on uniform (Rs. 248). At the higher levels of education, tuition fee (Rs. 721) is the highest item of expenditure, followed by books (Rs. 506).

Table 25: Average annual expenditure (Rs.) per student of age 5-24 years pursuing general education by item of expenditure and by type of institution

Item of expenditure	Type of Institution			
	Govt. & local body	Private aided	Private unaided	All

Total	585	1615	1904	904

Table 26: Proportion of students incurring expenditure on different items (As percentage of corresponding estimated no. of students of sector-sex)

Item of expenditure	Rural			Urban			Rural+Urban		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Tuition fee	16.7	12.5	15.0	48.8	43.5	46.3	25.5	22.8	24.4
Exam. fee	64.5	59.9	62.7	64.9	63.3	64.2	64.6	61.1	63.2
Other fee and payments	60.1	57.1	58.9	61.0	59.9	60.5	60.4	58.0	59.4
Books	80.6	79.1	80.0	90.0	88.7	89.4	83.2	82.3	82.8
Stationery	97.5	97.1	97.3	97.8	97.8	97.8	97.6	97.3	97.5
Uniform	47.2	49.4	48.1	70.1	72.1	71.0	53.5	57.0	54.9
Transport	8.8	6.1	7.8	17.0	17.3	17.2	11.1	9.9	10.6
Private coaching	14.1	12.6	13.5	29.6	25.2	27.6	18.4	16.8	17.7
Other expenses	51.0	48.4	50.0	48.0	47.7	47.9	50.2	48.2	49.3

4.10.8 When the items of private expenditure are analysed by type of institution (Table 25), it is seen that the patterns differ. For students in government & local body institutions, uniform (Rs. 130), books (Rs. 114), and private coaching (Rs. 84) form the three highest items of expenditure. In the case of private aided schools, tuition fees (Rs. 303), private coaching (Rs. 284) and uniform (Rs. 238) form the three highest items of expenditure. In the case of private unaided institutions, the three highest items are: tuition fees (Rs. 678), uniform (Rs. 274) and books (Rs. 216). Private coaching is only fourth (Rs. 186).

It is even lower than that of private aided institutions which is Rs. 284. Of course, one has to take into consideration the fact that there is a high proportion of primary schools among private unaided schools.

4.10.9 Table 26 gives the proportion of students incurring expenditure by item of expenditure. It is seen that the highest proportions reported are for stationery (97.5%), followed by books (82.8%), exam. fee (63.2%) and other fees (59.4%). The lowest proportions are for transport (10.6%) and private coaching (17.7%). Expenditure on tuition fee is reported by 24.4%. But, there is a wide variation

between rural and urban sectors; in rural sector, only 15% have reported expenditure on tuition fee as against

46.3% in urban sector. Other items where rural-urban differences are large are: transport, private coaching and uniform.

Table 27: Average annual expenditure (Rs.) per reporting student* of age 5-24 years pursuing general education by item of expenditure

Item of expenditure	Rural			Urban			Rural+Urban		
	Male	Female	Total	Male	Female	Total	Male	Female	Total

Total**	611	521	576	1766	1622	1700	928	890	912

*average for each item is based on the number of students reporting for that particular item

**the components do not add up to the total average expenditure as each item is averaged over different number of students

4.10.10 As mentioned earlier in para 4.10.4 above, Tables 27 to 29 are similar to Tables 23 to 25 respectively except that they are based on reporting students for different items of expenditure. As compared to Table 23, we find in Table 27 that the average expenditure in certain items have increased manifold: transport from Rs. 59 to Rs. 561, private coaching from Rs. 130 to Rs. 732, tuition fee from Rs. 149 to Rs. 613 while expenditure on books and stationery have shown only marginal increase. This shows that large proportion of students do not incur any

expenditure at all on transport, private coaching etc. but for those who incur expenditure on these items, they form a considerable part of their private expenditure.

4.10.11 Table 28 gives the average expenditure per reporting student by level of education and Table 29 by type of institution. Average expenditure on tuition fee, private coaching and transport again shows manifold increase as compared to Tables 24 and 25 respectively.

Table 28: Average annual expenditure (Rs.) per reporting student* of age 5-24 years pursuing general education by item of expenditure and by level of education

Item of expenditure	Level of education

**the components do not add up to the total average expenditure as each item is averaged over different number of students

4.11 Dropouts:

4.11.1: Dropout is a serious phenomenon in our educational system. The term 'dropout' has a number of connotations. To get an idea of the extent of dropouts, each of those who are currently not attending but were ever enrolled was asked what was his/her last level of enrolment and whether he/she completed it successfully. If the answer was in the negative to the second question, he/she was counted as a 'dropout' at that level. Used in this sense, it is seen that 562 out of 1000 persons who were ever enrolled are dropouts; i.e., only 44% had completed the level for which they were last enrolled.

Table 30 furnishes the proportion (per 1000) of such dropouts among the ever enrolled by level at which they dropped out. 30% dropped out at the primary level, 26% at the middle level and 29% at the secondary level. However, this is a limited view of the concept of dropout. According to this criterion, for example, a person who completed the primary but did not enroll for the middle would not be considered a dropout. This is a case of discontinuation. On the contrary, a person who successfully completed the graduate level and enrolled for a post-graduate course but could not complete it would be considered a dropout.

Table 30: Per 1000 distribution of 'dropouts' among ever enrolled but currently not attending (age 5-24 years) by level at which dropped out

Level of education	Rural			Urban			Rural+Urban		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Primary	304	369	332	224	219	222	283	331	304

Total*	1000	1000	1000	1000	1000	1000	1000	1000	1000

*This includes n.r. cases

Table 31: Percentage distribution of persons of age 5-24 years who were ever enrolled but are currently not attending by (completed) level of education

Completed level of education	Percentage	Cumulative percentage
Below primary	20.5	20.5
Primary	28.5	49.0
Middle	28.1	77.1
Secondary	13.8	90.9
Higher secondary	6.0	96.9
Diploma, graduate and post-graduate	3.1	100.0

Table 32: Proportion (per 1000) of ever enrolled persons of age 5-24 years who are currently not attending any educational institution by main reasons for dropping out

Reason for dropping out	Rural			Urban			Rural+Urban		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Child not interested in studies	285	210	253	239	194	220	273	206	244
Unable to cope	241	180	215	267	240	256	248	195	225
Financial constraints	136	102	121	149	111	133	139	104	124
Parents not interested in studies	56	163	102	42	106	69	52	149	94
Has to participate in other economic activities	114	39	82	96	24	65	109	35	78
Has to work for wage/salary	61	14	41	99	28	69	71	18	48
Has to attend to domestic duties	12	92	46	8	91	43	11	92	46

4.11.2 A broader view of dropout would be to regard any one who has discontinued education before reaching a specific level of educational attainment as a dropout irrespective of whether the person has completed the last level of education for which he/she was enrolled or not. Thus, all persons who have not completed the secondary stage (whether they were enrolled for secondary education and did not complete or did not enrol themselves at all for secondary education after completing the middle level successfully) would be considered dropouts at the secondary level. This could be obtained from looking at the distribution of population by the level of education attained. This exercise was done for persons of age 5-24 years who were ever enrolled but currently not attending. i.e. those who dropped out at their last level of enrolment as well as others who completed a certain level but did not pursue education further. In other words, those not currently studying but were ever enrolled were classified by their highest level of education they had completed (Table 31). From this table, it is seen that 21% had dropped out before completing the primary level, another 28% completed the primary but did not attain the middle level, etc.

From column 3 of the table, it is seen that about half of those discontinued had either completed only upto primary level or failed to complete even that, about three-fourths have a maximum qualification of middle level and that 9 out of 10 have not completed the school system. This table gives a better picture of the phenomenon of dropout among those who have discontinued education than Table 30 does.

4.11.3 It maybe mentioned that tables 30 and 31 give only the distribution of drop-outs by level of education as proportion of drop-outs from all levels of education. They do not give the drop-out rate which measures the rate at which children of a cohort drop out at different levels for which information on the cohort over a complete cycle of the concerned level of education would be required.

4.11.4 The reasons for dropping out are presented in Table 32. The reasons given are: child not interested in studies (24.4%), unable to cope with or failure in studies (22.5%), financial constraints (12.4%), parents not interested in education of their wards (9.4%) and participation in other economic activities (7.8%). The situation

is similar in both rural and urban areas except that in the urban areas the first two ranks are interchanged. These two most frequently stated reasons refer to lack of proper atmosphere in schools.

4.11.5 Financial constraints and participation in other activities impose economic compulsions that result in the child dropping out of the educational system and joining the labour force prematurely. Adequate scholarships and other incentives like midday meals, etc., and their proper implementation should go a long way in reducing the financial burden of the weaker sections of society. When comparing males and females for reasons for dropping out, it is seen that the most pressing reasons are: child not

interested in studies, unable to cope with or failure in studies, and financial constraints. After these, in case of males, the reasons given are: participation in other economic activities (10.9%) and work for wage/salary (7.1%). In the case of females, the reasons are: to attend to domestic duties(9.2%) and 'others' (8.9%); 'others' possibly include marriage or social taboos against female education.

4.12 Non-enrolment:

4.12.1 This section deals with persons who have not participated in the educational system at all. Table 33 gives the proportion (per 1000) of never enrolled persons of age (5-24) years by age group, sector and sex. It is seen that 268 out of

Table 33: Per 1000 distribution of never enrolled persons of age 5-24 years by age group

	5-24	205	151	173	210	157	179	205	152	173
Financial constraints	6-10	157	166	162	219	215	217	164	170	168
	11-13	187	191	189	305	228	258	197	194	195
	14-17	236	153	186	301	247	271	244	163	195
	18-24	186	95	124	279	143	191	198	101	132
	5-24	163	136	146	229	175	197	170	140	152

every 1000 persons of age 5-24 years have never been enrolled in any educational institution. In rural areas, the number is 315 and in urban it is 120. Among males it is 201 and among females it is 342. Among rural females it is as high as 406. When we compare across the age-groups, we see that as we move from 18-24 years to 14-17 and further to 11-14 there is decline in the proportion of never enrolled which is an encouraging sign. The trend, however, changes when we move to the 6-10 year age-group. This is because of the late entry of children in the educational system. Quite a good proportion of children of ages 6,7 etc. who are currently not enrolled do join schools later.

4.12.2 Table 34 gives the distribution of non-enrolled by fractile group. It is seen that lower the fractile group, more is the proportion of never enrolled, as one would expect. It is as high as 610 in the case of 0-20 fractile for rural females.

4.12.3 The three major reasons for non-enrolment (Table 35) given are: parents not interested in education of their wards (31.8%), child not interested in studies (17.3%) and financial constraints (15.2%). While in rural areas the same ranking holds good, the situation is different in urban areas. In the case of urban males, financial constraints (27.9%), followed by 'child not interested in studies' (21%) and 'parents not interested in education of their wards' (19.2%) are the main contributing factors in that order. But in the case of urban females, parents not interested in education of their wards (30.4%), followed by financial constraints (17.5%), and 'child not interested in studies' (15.7%) are the three factors. This shows that in the case of males, financial constraints are the main reason for non-enrolment but in the case of females it is the attitude of parents towards female education which acts as a major constraint, though financial constraint is also an important contributing

factor.

Table 36: Percentage distribution of persons of age 5-24 years by status of attendance and enrolment

Enrolment - attendance status	% of total	% of sub-total
A. Never enrolled	26.7	100
B. Ever enrolled but currently not attending (by completed level of edn.)		
Below primary	4.8	20.5
Primary	6.7	28.5
Middle	6.6	28.1
Secondary	3.2	13.8
Higher secondary	1.4	6.0
Higher levels	0.7	3.1
Sub-total (currently not attending)	23.4	100
C. Currently attending		
Pre- Primary	1.3	2.6
Primary	25.6	51.4
Middle	11.6	23.2
Sec/ Hr. Sec	9.4	18.8
Higher levels	2.0	4.0
Sub-total (currently attending)	49.9	100
Total	100	

4.13 Attending, attended and never attended:

4.13.1 In earlier sections, persons of age 5-24 years were analysed by their status with regard to participation in education, viz. (a) those who are currently attending, (b) those who were ever enrolled but are currently out of the system, and (c) those who were never enrolled. These results are combined and presented in Table 36.

4.13.2 It is seen from Table 36 that 50% of the population of the age group 5-24 years are attending educational

institutions. Of them, 51.4% are studying in primary classes, 23.2% at the middle level and 18.8% at the secondary/ higher secondary levels. Among those who are not currently studying but were ever enrolled, about 50% dropped out either after completing the primary level but not completing the middle level or even before completing the primary level, about 75% dropped out before completing the secondary level, etc.

4.14 Summary:

- 27% of the population of age 5-24 years has never attended educational institutions at all.
- Another 23% of persons in the age group 5-24 years are currently not attending educational institutions though they were enrolled in the past.
- Of them, more than 90% had dropped out before completing schooling, 21% dropping out without completing even the primary level and another 29% dropping out before completing the middle level, etc.
- Half of the population of the age group 5-24 is currently participating in the formal education system.
- Of this, 51% comprise children studying at the primary level and 23% students at the middle level.
- More than 75% of students get free education (of course, they may still have to pay development fee, library fee, etc.), 25% get free or subsidised books, 18% get mid-day meals and 7% get scholarships.
- The average private expenditure per student per annum works out to Rs.501 at primary level, Rs. 915 at middle level, Rs. 1,577 at secondary/ higher secondary level and Rs. 2,923 at college level.
