

Report No. 474(55/1.0/12)

# Sources of Household Consumption in India 1999-2000

NSS 55<sup>th</sup> Round  
July 1999- June 2000

**National Sample Survey Organisation**  
**Ministry of Statistics & Programme Implementation**  
**Government of India**

September 2001

## **PREFACE**

The National Sample Survey Organisation (NSSO) has been carrying out all-India household surveys on Consumer Expenditure and Employment & Unemployment with a large sample usually once in every five years. The sixth such survey was conducted in the 55<sup>th</sup> round (July 1999-June 2000) - which covered Non-agricultural Enterprises in the Informal Sector in addition. The schedule of enquiry on Consumer Expenditure for the survey was, more or less, similar to that adopted in previous quinquennial rounds.

The present report is the last (twelfth) in the series of reports through which the results on consumer expenditure survey are being released. This report presents distribution of households by source of consumption, average production in kitchen garden, backyard, etc. and monthly consumption from the production from kitchen garden, backyard, etc. It also gives average monthly household consumption out of home-produced stock for some selected non-food items and for some selected commodities supplied through PDS.

This report has four sections and one appendix. Section 1 of the report is introductory while Section 2 presents Sample Design and Estimation Procedure. Section 3 gives Concepts and Definitions. Section 4 discusses Summary of Findings. The detailed tables are provided in the Appendix.

The Field Operations Division (FOD) of the Organisation conducted the fieldwork for the survey. The collected data were processed and tabulated by the Data Processing Division (DPD) of the NSSO. The Survey Design & Research Division (SDRD) of the NSSO developed the survey design and prepared the report.

I am grateful to the Chairman and members of the Governing Council, Heads of various Divisions of the NSSO and their colleagues for the contribution made in preparing the report.

Comments/suggestions from the readers will be most welcome.

New Delhi  
September 2001

N. S. Sastry  
Director General & Chief Executive Officer  
National Sample Survey Organisation

# Highlights

- ◆ Information about different types of sources of consumption, namely, purchase only, home-grown only, both purchase and home-grown, free collection and others were collected for 174 items of food, pan, tobacco & intoxicants and fuel and light. Out of these items, 15% or more households reported consumption for 65 items in rural India and for 79 items in urban India.
- ◆ The items which were consumed only from home-grown stock by a considerable proportion of households were rice, wheat/atta, milk (liquid), firewood and chips and dung cake in rural areas and coconut, pickles and firewood and chips in urban areas.
- ◆ Consumption from both purchase and home-grown stock was relatively rare for any item.
- ◆ Consumption from free collection was high for only firewood and chips in urban India, and for fish, prawn, palak/ other leafy vegetables, other vegetables, honey, and especially for firewood and chips and dung cake in rural India.
- ◆ The total value of production per household in the kitchen garden, backyard etc, during the agricultural year 1998-99 was Rs 122 in rural India and Rs 49 in urban India. The main items produced in the kitchen garden were fresh fruits (in both rural and urban areas) and vegetables (in rural areas).
- ◆ Average value of household monthly consumption out of home-produced stock was Rs 45.79 in rural India, including Rs 23.73 for firewood and chips and Rs 19.12 for dung cake. The corresponding figures for urban India were very small.
- ◆ Among the four items viz., rice, wheat/atta, sugar and kerosene, the item mainly purchased from P.D.S. was kerosene in both rural and urban areas. The difference in prices between P.D.S. and other sources was the highest for kerosene. Price for kerosene was about 40% in the P.D.S. compared to price from other sources.
- ◆ In both rural and urban areas, around one-third of total purchase was made from P.D.S. The share of P.D.S. purchase was much smaller for rice and wheat/atta.

# Section 1

## Introduction

1.1 The fifty-fifth round of NSS was conducted during July 1999 to June 2000 for collecting information on household consumer expenditure, employment-unemployment and informal non-agricultural enterprises (other than those engaged in industrial categories of 'mining & quarrying', electricity, gas and water supply) from nationwide samples of households or enterprises. The survey was spread over the whole of the Indian Union except Ladakh and Kargil districts of Jammu & Kashmir, 768 interior villages of Nagaland and 172 villages in Andaman & Nicobar Islands that remained inaccessible throughout the year. However, certain districts of Jammu & Kashmir viz., Doda, Anantnag, Pulwama, Srinagar, Badgam, Baramullah and Kupwara had to be excluded from the survey coverage due to unfavourable field conditions.

1.2 It was the sixth quinquennial survey on Consumer Expenditure and Employment-Unemployment. In this round 10384 first stage units (village/block) in the Central sample (covered by NSSO) and an independent sample of 11240 first stage units in the State sample (covered by the Governments of various States and Union Territories) were allocated for survey. In the Central sample, the household consumer expenditure schedule was canvassed in 120309 households located in 6046 villages

and 4116 urban blocks. This report is the twelfth of the series of reports through which the findings of the 55<sup>th</sup> round consumer expenditure survey are being released.

1.3 Through the household consumer expenditure schedule, data were mainly collected on quantity and value of household consumption of different goods and services. During this quinquennial survey information on some aspects of procurement of different items of food, pan, tobacco and intoxicants, fuel and light was collected. Information on production during the agricultural year 1998-99 in the kitchen garden, backyard, etc. and consumption made out of such production was also collected. Further, information on purchase of rice, wheat, sugar and kerosene from P.D.S. and open market was collected. All these may be termed as some aspects of sources of household consumption. The present report brings out the results on these aspects of procurement of consumption items.

1.4 This report is the first of its kind. This report is based on four tables presented separately by State/UT. These tables give (i) the distribution of households by source of consumption, (ii) average production in kitchen garden, backyard, etc. and monthly consumption from the production from kitchen garden, backyard, etc, (iii) average

monthly consumption out of home-produced stock for some selected non-food items and (iv) average monthly household consumption of selected commodities supplied through P.D.S.

1.5 The Sample Design and Estimation Procedure followed in the NSS 55<sup>th</sup> round survey is given in Section 2. Section 3 presents some concepts and definitions adopted in the survey and used in this report. The summary of survey findings has been presented in Section 4. The detailed tables at State/UT level are provided in Appendix.

## Section 2

### Sample Design and Estimation Procedure

#### 2.1 Sample Design

2.1.1 **General:** A stratified sampling design was adopted for selection of the sample first-stage units (FSUs). The FSUs were villages (panchayat wards for Kerala) for rural areas and Urban Frame Survey (UFS) blocks for urban areas. The Ultimate stage units (USUs) were households for the consumer expenditure schedule. The households were selected by the method of circular systematic sampling with equal probability from the corresponding frame in the FSU. For the purpose of systematic sampling, households in the frame of second stage stratum 2 are arranged by means of livelihood and land possessed classes for rural samples and by means of livelihood and MPCE classes for urban samples. Large FSUs were subdivided into hamlet-groups (rural)/ sub-blocks (urban) that were grouped into two segments, and USUs were selected independently from each of these segments.

2.1.2 **Sampling frame for first stage units:** List of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks were respectively used for selection of rural and urban sample FSUs. For selection of sample villages from the State of Jammu & Kashmir, list of villages as per 1981 Census was used as the sampling frame. All the uninhabited villages of the country as per 1991 Census, interior villages of Nagaland situated beyond 5 kms of a bus route and inaccessible villages of Andaman & Nicobar Islands were left out of the survey coverage of the NSS 55th round.

#### 2.1.3 Stratification

2.1.3.1 **Rural:** Two special strata were formed at the State/ UT level, viz.,

Stratum#1: all FSUs with population between 1 to 100, and

Stratum#2: FSUs with population more than 15,000.

[Note: The above two strata were spread across a given State and were not confined to any particular administrative division within the State.]

The above noted strata of either type were formed if at least 50 such FSU's were there in the respective frames. Otherwise, they were merged with the general strata.

While forming general strata (consisting of FSUs other than those covered under strata 1 & 2), efforts were made to treat each district as a separate stratum. If limitation of sample size did not allow the formation of so many strata, smaller districts within a particular NSS region were merged to form a stratum. Each district with rural population of 2 million or more as per 1991 Census (1.8 million or more as per 1981 Census in case of Jammu & Kashmir) was split into a number of strata.

2.1.3.2 **Urban** : Strata were formed within NSS Regions as follows:

| Stratum number | Composition of strata by considering population of various towns as per the 1991 Census  |
|----------------|--|
| 1, 3, 5 *      | 'hospital area' (HA) / 'industrial area' (IA) / 'bazaar area' (BA) blocks taken together, of each single city with a population of 10 lakhs or more (there could be a maximum of 3 such cities within an NSS Region) |
| 2, 4, 6 *      | Other blocks of each single city with a population of 10 lakhs or more   |
| 7              | HA or IA or BA blocks of all towns with population between 50,000 and less than 10 lakhs   |
| 8              | Other blocks of all towns with population between 50,000 and less than 10 lakhs  |
| 9              | HA or IA or BA blocks of all towns with population less than 50,000  |
| 10             | Other blocks of all towns with population less than 50,000   |

\* Stratum numbers 3, 4, 5 and 6 remain void if there is only one city in an NSS region with a population of 10 lakhs or more.

If sample size was not adequate for forming so many strata, all blocks of stratum 7 were merged with those of stratum 8 and all blocks of stratum 9 were merged with those of stratum 10.

**2.1.4 Sample size** : A total number of 10,384 FSUs was selected for survey in the *Central sample* at all-India level (rural & urban combined) in the 55th round. For *State sample*, there was normally an equal matching. Exceptions were only for Nagaland (urban), Delhi, Goa and Maharashtra (urban) where the State sample size was higher than Central sample. Sample for the whole round for each State/UT and sector (i.e, rural/urban) was allocated equally among the four sub-rounds. Sample FSUs for each sub-round were selected afresh in the form of two independent sub-samples. The details of

allocation and survey of FSUs, households and persons are given in Statement 0.

**2.1.5 Allocation of first-stage units (FSU's)**: State/ UT level rural sample size was allocated among the rural strata in proportion to population. State/ UT level urban sample was first allocated among the three classes of towns (i.e, 10 lakh +, 50000 to less than 10 lakhs and less than 50,000) in proportion to population. Then sample allocation for each of the three classes of towns, within an NSS region, was further allocated between two stratum types consisting of - (i) HA/ IA/ BA blocks, and (ii) the rest in proportion to total number of FSUs in the respective frames with double weightage given to the first category of blocks. Stratum level allocations for both rural and urban areas of a sub-round were made in even numbers in order to facilitate selection of FSUs in the form of two independent sub-samples. Sub-sample numbers were 1 & 2 for sub-round 1; 3 & 4 for sub-round 2; 5 & 6 for sub-round 3 and 7 & 8 for sub-round 4.

**2.1.6 Selection of first-stage units**: For each sub-round, sample FSUs from each stratum were selected in the form of 2 independent sub-samples by following circular systematic sampling with (a) probability proportional to population for all rural strata other than stratum 1, and (b) equal probability for rural stratum 1 as well as all urban strata. Thus, stratum level allocation of FSUs was a multiple of 8.

**2.1.7 Formation of hamlet-groups in large villages and number of hamlet-groups selected for survey**: Depending upon the values of approximate present population (P) and approximate total number of non-agricultural enterprises (E), decision was taken to divide the FSU into a fixed number of hamlet-groups (hg's - the term applicable for rural samples) / sub-blocks (sb's - the

term applicable for urban samples) as per the rules given below:

| value of P     | no. of hg's/ sb's formed in the FSU as per population criterion | value of E    | no. of hg's/ sb's formed in the FSU as per enterprise criterion |
|----------------|---|---------------|---|
| (1)            | (2)   | (3)           | (4)   |
| less than 1200 | 1 @   | less than 100 | 1 @   |
| 1200 – 1999    | 5   | 100 – 249     | 5   |
| 2000 – 2399    | 6   | 250 – 299     | 6   |
| 2400 – 2799    | 7   | 300 – 349     | 7   |
| 2800 – 3199    | 8   | 350 – 399     | 8   |
| (and so on)    |   | (and so on)   |   |

@ no. of hb's/ sb's = 1 means the whole FSU was considered for listing.

[For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, number of hg's formed in the village as per population criterion was : 1 for P < 600, 5 for P = 600 to 999, 6 for P = 1000 to 1199, 7 for P = 1200 to 1399, 8 for P = 1400 to 1599, and so on.]

The number (D) of hamlet-groups (hg)/ sub-blocks (sb) formed in the FSU was the higher of the two values as per the population and enterprise criteria. If the value of P was less than 1200 (600 for certain hilly areas specified above) as well as the value of E was less than 100 for an FSU, hg/ sb formation was not resorted to and the whole FSU was considered for listing. In case hg's/ sb's were formed in the sample FSU, the same was done by more or less equalizing population.

### 2.1.8 Formation of segments within FSU:

The hg/ sb having maximum concentration of non-agricultural enterprises was selected with certainty for listing of households/ enterprises. This hg/ sb was referred to as segment 1. From the remaining (D-1) hg's/ sb's of the FSU, 2 more hg's/ sb's were selected circular systematically and these 2

selected hg's/ sb's together was referred to as segment 2 for doing a combined listing of households/ enterprises. Thus, the listing of households/ enterprises was done only in segments 1 and 2 of the FSU. The FSU not requiring hg/ sb formation was to be treated as segment 1.

**2.1.9 Stratification of households :** All the households listed in a segment (both rural & urban) were stratified into two second stage strata, viz., 'affluent households' (forming second stage stratum 1) and the rest (forming second stage stratum 2). In the rural sector, a maximum of ten households which were relatively affluent compared to others and possessed at least certain item(s) like motor car/ jeep, colour TV, telephone, etc. or owned land / livestock in excess of certain limits were included in second stage stratum 1. In urban sector, the households having MPCE (monthly per capita consumer expenditure) greater than a certain limit for a given town/city were treated as 'affluent' households for the present survey and were included in the frame of second stage stratum 1 and the rest of the urban households were included in the frame of second stage stratum 2.

**2.1.10 Number of households/ enterprises selected for survey:** The number of households/ enterprises selected for survey from each FSU in general is given below:

| segment                             | number of households allotted for consumer expenditure schedule in second stage stratum (SSS) |     |       |
|-------------------------------------|---|-----|-------|
|                                     | 1   | 2   | total |
| (1)                                 | (2)   | (3) | (4)   |
| <b>FSU with hg/ sb formation</b>    |   |     |       |
| 1                                   | 1   | 3   | 4     |
| 2                                   | 1   | 7   | 8     |
| <b>FSU with no hg/ sb formation</b> |   |     |       |
| 1                                   | 2   | 10  | 12    |

## 2.2 Estimation Procedure:

**2.2.1 Approach:** The estimate for a sub-round was obtained by combining the estimates of the corresponding sub-sample replicates. Similarly, an estimate for the Round was obtained by combining the four sub-round-wise estimates.

**2.2.2** The following notations are being used in this section:

- a = subscript for the a-th stratum  
r = subscript for the r-th sub-sample replicate ( r = 1,2,...,8)  
q = subscript for the q-th sub-round (q = 1,2,3 , 4)  
f = subscript for the f-th sampled village/ block as First Stage Unit ( FSU )  
s = subscript for the s-th segment of sampled village/ block ( s = 1 , 2)  
c = subscript for the c-th 2nd stage stratum of households in the sampled village/ block (c = 1,2)  
j = subscript for the j-th sampled household  
p = subscript for pooled estimate  
z = size used for selection of an FSU from the sampling frame  
Z = total of sizes in the sampling frame for the stratum  
[Note: For urban sector, z=1 and Z=N which is the total number of UFS blocks (FSU's) in the frame.]  
n = number of sampled FSU surveyed within a stratum and a sub-sample replicate (including zero cases but excluding casualty and not reported cases) and used for tabulation  
L = number of sub-sample replicates surveyed and used for tabulation

- D = number of hamlet-groups/ sub-blocks formed in rural/ urban sampled FSU  
H = total number of households listed in the appropriate frame  
h = number of sampled households surveyed and used for tabulation from the frame  
E = total number of enterprises listed in the appropriate frame  
e = number of sampled enterprises surveyed and used for tabulation from the frame  
y, x = value of characteristic y, x obtained in the sample  
 $\bar{y}, \bar{x}$  = estimated value of aggregate of characteristic y, x obtained from the sample.

**2.2.3 ESTIMATES OF AGGREGATE:** In the formulae given in this section,  $\bar{y}$  is the estimate of aggregate of any characteristic y for a given stratum (a), and for a particular sub-round (q) and sub-sample replicate (r). These formulae are provided for the general case of FSU's having two segments 1 and 2. For the FSU's requiring no hg/ sb formation, the formula is identical to that given for segment 1 while the contribution from segment 2 is taken as zero for estimating a characteristic of household from a given 2nd stage stratum (c) in the selection frame

$$\text{Rural : } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \frac{1}{z_f} \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad (1)$$

Here  $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$ , for segment 1 (s=1) and

$$B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 2 (s =2).}$$

$$\text{Urban: } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad \dots(2)$$

Here  $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$ , for segment 1 (s=1) and

$$B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 2 (s =2).}$$

Note: For tabulating any characteristic from this detailed schedule  $\hat{Y} = \sum_c \hat{Y}_c$  is to be used.

**2.2.3.1 COMBINED ESTIMATE FROM SUB-SAMPLES:** In the previous section, the estimate of a characteristic  $\hat{Y}$  as obtained for a stratum (a), for a particular sub-round (q) and a sub-sample replicate (r), actually represent  $\hat{Y}_{aqr}$ . The combined /pooled estimate for a particular stratum and a particular sub-round is computed as the average of sub-sample replicate estimates and is given below:

$$\hat{Y}_{aq} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{aqr} \quad \dots(3)$$

**2.2.3.2 ESTIMATE OF AGGREGATES FOR A SUB-ROUND AT STATE/ UT/ REGION LEVEL:** If  $\hat{Y}_{qr}$  be the State/ UT/ Region level aggregate from the r-th sub-sample replicate and q-th sub-round, and  $\hat{Y}_{qp}$ , the combined/ pooled estimate of the aggregate based on the whole sample, for a given sub-round q, then

$$\hat{Y}_{qr} = \sum_a \hat{Y}_{aqr} \quad \dots(4)$$

based on sub-sample replicate group r, and

$$\hat{Y}_{qp} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{qr} \quad \dots(5)$$

based on all sub-sample replicates.

**2.2.3.3 ESTIMATES OF AGGREGATE FOR THE ROUND (i.e. taking all the 4 sub-rounds together) AT STATE/ UT/ REGION LEVEL:** The estimates of aggregates for the whole round are computed as the simple average of the sub-round estimates derived in section 2.2.2, and are given below:

$$\hat{Y}_r = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qr} \quad \dots(6)$$

based on sub-sample replicate1 and 2\*and

$$\hat{Y}_p = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qp} \quad \dots(7)$$

based on whole sample.

**\*Note:** In the Round, sub-samples 1, 3, 5 & 7 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate1 (annual) while sub-samples 2, 4, 6 & 8 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate 2 (annual). This was followed in the remaining sections also. Stratum level estimate for the Round is obtained similarly.

**2.2.4 ESTIMATES OF RATIO:** If  $\hat{X}$  and  $\hat{Y}$  be the State/ UT/ Region level aggregate estimate corresponding to variables x and y, then the estimate of ratio is given below:

$$\hat{R}_r = \frac{\hat{Y}_r}{\hat{X}_r} \quad \dots(8)$$

based on sub-sample group r, and

$$\hat{R}_p = \frac{\hat{Y}_p}{\hat{X}_p} \quad \dots(9)$$

based on the whole sample.

The formulae for  $\hat{X}$  are obtained similarly by replacing  $\hat{Y}$  by  $\hat{X}$  and y by x in the above formulae stated in previous sections.

**Note:** Estimates for the sub-round  $\hat{R}_{qr}$  and  $\hat{R}_{qp}$  have been obtained by replacing  $\hat{Y}_r$  and  $\hat{Y}_p$  by  $\hat{Y}_{qr}$  and  $\hat{Y}_{qp}$ , respectively and  $\hat{X}_r$  and  $\hat{X}_p$  by  $\hat{X}_{qr}$  and  $\hat{X}_{qp}$ , respectively.

**Statement 0: Number of villages/ blocks allotted and surveyed and number of households and persons surveyed**

| State/UT          | no. of villages |             | no. of blocks |             | no. of households surveyed |              | no. of persons surveyed |               |
|-------------------|-----------------|-------------|---------------|-------------|----------------------------|--------------|-------------------------|---------------|
|                   | allotted        | surveyed    | allotted      | surveyed    | rural                      | urban        | rural                   | urban         |
| (1)               | (2)             | (3)         | (4)           | (5)         | (6)                        | (7)          | (8)                     | (9)           |
| Andhra Pradesh    | 432             | 432         | 320           | 320         | 5181                       | 3806         | 22600                   | 16524         |
| Arunachal Pradesh | 80              | 74          | 24            | 21          | 827                        | 233          | 4314                    | 953           |

## Section 3

### Concepts and Definitions

3.0 The concepts and definitions followed in the sixth quinquennial survey on household consumer expenditure are more or less the same as in the earlier rounds. The concepts and definitions of the terms used or relevant in this report have been expanded below.

3.1 **Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word 'normally' means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. 'Living together' is usually given more importance than 'sharing food from a common kitchen' in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered a single-member household except that a family living in a hotel (say) is considered to be one household only; the same applies to residential staff of such establishments.

3.2 **Household size:** The size of a household is the total number of persons in the household.

3.3 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely, (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

3.4 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear is considered to be consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipts in exchange of goods and services; (d) any other receipt through gift, charity, borrowing; and (e) free collection. Home produce is evaluated at the ex farm or ex factory prices. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable goods, a different approach is followed. In this case, the expenditure made during the reference

period for the purchase of goods and services is considered to be consumption.

3.5 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the household and also by the guests, whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan, advance, etc., made by the household are not considered consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item 'cooked meals' is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty in estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and of guests and employees are recorded in the purchaser household.

3.6 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the nutritional intake derived from the

consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept in mind while using the NSS consumer expenditure data for any studies relating to the nutritional status of households. Such estimates were presented in NSS Report No. 471: Nutritional Intake in India, 1999-2000.

3.7 **Reference period:** Reference period means the period of time for which data on consumption was collected. The reference period used for the survey was a "moving" one, varying from household to household, although it was a fixed length of period. During the 55<sup>th</sup> round of NSS, information on consumption of food, pan, tobacco & intoxicants was collected independently for two different reference periods of last 30 days and last 7 days from the same households. For items of clothing, footwear, durable goods, education and medical (institutional) expenses, data were collected for the reference period of "last 365 days" preceding the date of survey. For the remaining items, a reference period of "last 30 days" preceding the date of survey was used. However, the monthly per capita consumption expenditure (MPCE) classes in this report are based on data collected for "last 365 days" for clothing, footwear, durable goods, education and medical (institutional) expenses and for "last 30 days" for the rest of the items.

3.8 **Sector :** The word "sector" is used for the rural-urban demarcation: rural and urban are the only two sectors as far as this report is concerned.

**3.9 Major states :** This refers to the following states of India: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

**3.10 Public Distribution System (P.D.S.):** P.D.S. means the distribution of some essential commodities by the government at subsidised rates through ration shops, fair price shops and control shops. For kerosene, P.D.S. also included kerosene depots selling kerosene at controlled prices. "Super bazaars" and co-operative stores were not included under P.D.S. except when they sold rationed commodities at controlled prices against ration cards. Any purchase made by paying some extra amount in addition to the normal P.D.S. rates was considered as 'purchase from other sources' and not as purchase from P.D.S. Purchases made from P.D.S. by the household for sale in the open market was not treated as purchase from P.D.S.

**3.11 Source of consumption:** Consumption may be made out of one or more sources. The different sources of consumption were categorised as only purchase, only home-grown stock, both purchase and home-grown stock, only free collection and others. Information on sources of consumption for each item of food, pan, tobacco & intoxicants, fuel and light which has been consumed during the last 30 days was collected during the survey.

**3.12 Kitchen garden, backyard etc.:** Any homestead land in which vegetables, crops, fruits etc. were grown during the agricultural year 1998-99 was considered to possess a kitchen garden.

**Homestead** of household was defined as the dwelling house of the household together with any courtyard, compound, garden, out-house, place of working, family courtyard, guest-house, shop, workshop/offices for running household enterprises, tanks, wells, latrines, drains and boundary walls which are annexed to the dwelling house. All land coming under homestead was defined as **homestead land**.

A deviation from the 50<sup>th</sup> round was made in this definition – gardens, orchards or plantation annexed to the dwelling house was also covered under **homestead land**.

If the sample household **possessed** any homestead land and also grew any vegetable, crop, fruit etc. in that land during the agricultural year 1998-99, then the household was considered to possess a kitchen garden.

Data were collected on quantity and value of each item produced in the kitchen garden, backyard etc. during the agricultural July 1998 - June 1999. Further, information on item wise consumption made out of the produce from kitchen garden, backyard etc. during last 30 days preceding the date of survey was collected irrespective of whether the item was produced during the agricultural year July 1998 - June 1999.

**3.13 Clothing:** This category includes bedsheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and matting, cotton yarn, wool and knitting wool. It, however, excludes tailoring charges, which come under 'miscellaneous goods and services'.

## Section 4

### Summary of Findings

4.0 The present report focuses on the frequencies of consumption from different sources (purchase, home grown stock, free collection etc.) by Indian households. Note that the figures presented are not estimates of consumption in quantity and value terms from different sources, but frequencies of consumption from different sources. The appendix tables provide the said distribution for each item of food, pan, tobacco and intoxicants, fuel and light, separately for rural and urban areas and by States/UTs. For any sector, the items that were reported by at least 20 households at State, UT or all-India level have been presented in the Appendix. However, the number per 1000 of households reporting consumption of the items during the period of last 30 days was restricted to 150 households or more per 1000 households at all-India level while discussing the summary results. At State or UT level, the distribution was restricted to the items which were consumed by at least 50% of households at all-India level.

4.1 The second topic covered in this section pertains to production in the kitchen garden during agricultural year July 1998 – June 1999. The data relating to agricultural production in the kitchen garden - kitchen garden includes backyard, etc. - are not available so far. The objective of collecting such data was to meet the data gap. Along with production data, item-wise consumption made out of the produce from kitchen garden during the last 30 days was also collected. This section concentrates on

all-India estimates or production and monthly consumption out of it by Sector. However, a point needs to be mentioned that consumption here was not restricted to production during agricultural year 1998-99. It meant consumption from the production of kitchen garden only.

4.2 The third topic covered in this report is average household consumption made during the last 30 days out of home-produced stock for 10 selected items of non-food. These items of non-food were: (i) firewood and chips, (ii) dunk cake, (iii) candle, (iv) clothing, (v) footwear, (vi) mats and matting (vii) earthenware, (viii) basket, (ix) coir, rope, etc and (x) carpet, daree and other floor matting.

4.3 The fourth and the last topic covered in this report is the purchase of four specified items, viz., rice, wheat/atta, sugar and kerosene made through P.D.S. and from other sources during the period of last 30 days. Here, purchase from other sources means all purchases other than P.D.S. purchases.

#### 4.4 Sources of consumption:

4.4.1 **Variation over items at national level:** Statements 1R and 1U show the distribution of households by source of consumption of some important items along with the number per 1000 of households reporting consumption at all-India level during the period of last 30 days for rural and urban areas separately.

These statements cover only those items of food, pan, tobacco & intoxicants, fuel and light which were consumed by at least 15% of households. In rural India there were 65 such items while in urban India there were 79 such items. Among these items, the proportion of households consuming only from home-grown stock was relatively high for the following items, namely - rice: other sources (24% of households), wheat/atta (30%), milk liquid (36%), firewood and chips (22%) and dung cake (58%). In urban India, this proportion was relatively high for coconut (6%), pickles (11%) and firewood and chips (7%).

However, the proportion of households reporting consumption from both purchase and home-grown stock was 3% or less for any of these items in both rural and urban areas. The percentage of such households was relatively high for firewood and chips (3%), rice, wheat/atta, eggs, palak/other leafy vegetables, and other vegetables (2%) in rural India and for only firewood and chips (2%) and coconut (1%) in urban India.

Consumption out of free collection was high for only firewood and chips (17% of households) in urban India while for all other items the percentage of households consuming only from free collection was typically less than 1%. In rural India, the percentage of such households was high for fish, prawn (12%), palak/other leafy vegetables (9%), other vegetables (5%), honey (11%), firewood and chips (48%) and dung cake (24%).

**4.4.2 Variation in consumption from purchase over States:** Statement 2 gives the proportions of households consuming some important selected items procuring them only by purchase during the period of last 30 days in rural and urban areas separately for States, UTs and all-India. It shows all the items which were

reported to be consumed by at least 50% of households at all-India level. (Statements 3, 4 and 5 discussed below are also prepared using the same criterion.) 72% rural households at all-India level consumed rice by purchase from other sources only. In urban India, the corresponding figure was 96%. Percentage of households that consumed rice by only purchase is expected to be higher as the figure presented here does not include rice purchased from P.D.S. In rural areas of major States, the percentage of such households was very high, say 85% or more, in Gujarat (90%), Kerala (93%), Rajasthan (96%) and Tamil Nadu (86%) and the percentage was relatively low – ranging from 56% to 70% - in Assam, Bihar, Haryana, Madhya Pradesh, Uttar Pradesh and West Bengal. In urban areas, the percentage of households consuming rice by only purchase from other sources was more uniform across the States than in rural areas. This was true for almost all the items probably because the urban households procure items mainly by purchase.

The percentage of rural households consuming wheat/atta during the period of last 30 days only out of purchase was relatively low – ranging from 47% to 53% - in major States like Haryana, Madhya Pradesh, Rajasthan and Uttar Pradesh. As expected, households living in rural areas of the States in the rice-belt normally purchased wheat/atta from other sources for their consumption.

Arhar *dal* was consumed mainly out of purchase even in rural areas. It meant that the proportion of households growing *arhar dal* was not high in percentage terms.

It is well known that milk consumption in Punjab and Haryana has been relatively high. People there do not generally consume milk from only

purchase. The major States for which the percentage of households consuming milk by only purchase is relatively low are Assam, Haryana and Rajasthan in the rural sector.

For items like potato, onion, sugar, turmeric, dry chillies, tea: leaf, the percentage of households reporting consumption by purchase alone was very high in both rural and urban areas. Among the selected items, the percentage of households consuming firewood and chips by purchase was very low in rural areas; it was also relatively low in urban areas.

**4.4.3 Variation in consumption from home-grown stock over States:** Statement 3 gives the proportions of households consuming some important selected items only from home-grown stock during the period of last 30 days in rural and urban areas separately for States, UTs and all-India. It appears that in rural India, consumption out of home grown stock was normally prevalent in good proportions of households for items like rice (other sources), wheat/atta (other sources), milk: liquid and firewood and chips. As regards *arhar dal*, the proportion of households consuming only from home-grown stock out of the households reporting consumption of *arhar dal* was relatively high in rural areas of Bihar (22%), Karnataka (12%), Madhya Pradesh (25%), Maharashtra (17%), Rajasthan (17%), and Uttar Pradesh (17%), among the major States. For milk: liquid, the proportion of households which consumed it from home-produced stock was high – in the range of 47 to 62% of households – in rural areas of the major States, namely, Assam, Haryana, Madhya Pradesh, Punjab, Rajasthan and Uttar Pradesh. Such households were proportionately less – less than 20% - in rural areas of Andhra Pradesh, Kerala and Tamil Nadu. Consumption of potato

only from home-grown stock was not much prevalent. In the rural areas of the major States, 10% of households reporting such consumption can be regarded as high. Such States were only two - Bihar and Uttar Pradesh. The percentage of households in Gujarat and Kerala were estimated as zero. It implies that potato was hardly cultivated in these two States. In rural areas of all major States, the percentage of households consuming onion only out of home-grown stock among all households reporting consumption of onion was not more than 6%. Clearly, onion growers formed a small percentage of households in rural areas. For many items, e.g., brinjal, tomato, chillies (green), etc., the proportions of households consuming solely from home-grown stock were very high for rural Assam. In rural areas, of many major States 10% or more of the households consumed palak/other leafy vegetables from home-grown stock only. In urban areas, the proportion of households reporting consumption from home-grown stock alone was very low in general. Exceptions were for firewood and chips in Kerala (33%) and Rajasthan (20%).

**4.4.4 Variation in consumption from both purchase and home-grown stock over States:** Statement 4 gives the proportions of households which consumed some important selected items from both purchase and home-grown stock during the period of last 30 days in rural and urban areas separately for States, UTs and all-India. It can be seen that households reporting consumption from both purchase and home-grown stock were rare, especially for major States even in the rural areas for all the selected items. However, three items, namely, rice (other sources), palak/ other leafy vegetables and firewood and chips, could be mentioned because for these items percentages of households reporting consumption from both

purchase and home-grown stock are not very small. For urban areas, only firewood and chips seems to merit attention.

**4.4.5 Variation in consumption from free collection over States:** Statement 5 gives the proportions of households which consumed some important selected items from free collection only among these households which consumed the items during the period of last 30 days in rural and urban areas separately for States, UTs and all-India. It can be seen that in rural areas consumption from only free collection was reported by considerable number of households for palak/other leafy vegetables and particularly for firewood and chips. For urban areas, the proportions are much lower, and only these two items, especially firewood and chips were reported in sizable proportions of cases.

**4.5 Production in kitchen garden and monthly household consumption from the produce from kitchen garden:** Statements 6R and 6U show the average value of agricultural produce grown in the kitchen garden per household during agricultural year 1998-99 separately for rural and urban areas of major States and all-India. Statements 7R and 7U show monthly value of consumption per household during the period of last 30 days from the produce in the kitchen garden separately for rural and urban areas of major States and all-India.

In rural India, the total production in the kitchen garden was Rs 122 per household during the agricultural year 1998-99. Fresh fruits accounted for around half of the total value of production and vegetables accounted for a little more than one-fourth. Other important items produced in the kitchen garden were cereals, spices and pan.

The pattern of production in the kitchen garden was somewhat different in urban areas. The average value of production per household during the agricultural year 1998-99 was much smaller, only Rs. 49.21. Out of this fresh fruits alone accounted for Rs. 37.48.

There was considerable variation in the per household production of the kitchen garden over major States. Kerala rural (Rs. 1752.03) and Assam rural (Rs. 713.35) show high averages, far above the averages for rural areas of other states, and the same can be said for Kerala urban (Rs. 1138.50). However, the relative pattern in both rural and urban areas was broadly similar for different major States. In other words, if the value of production of an item was higher in rural areas of a State compared to other States, then the corresponding figure was also higher in urban areas of that State.

High yield may not necessarily mean high consumption. (Note that while Statements 6R and 6U present figures on an annual basis, Statements 7R and 7U show figures for monthly consumption.) Value of production was the highest for fruits in rural India but consumption was the highest for vegetables. However, for urban India, fresh fruits occupied the highest position both in terms of production and consumption.

Statements 6R and 7R present anomalous figures for Assam and Bihar: whereas Assam (rural) shows a much larger value of production than Bihar (rural), the picture is reversed for the values of consumption.

In rural India, there were three item-groups, viz., cereals, vegetables and fruits (fresh) for which average value of monthly consumption per household was more than a rupee. In urban India, there was only one such item and it was fruits

(fresh). The exceptionally large figures for a few States in Statements 6R, 6U, 7R and 7U appear to be doubtful. This was probably due to the definition of kitchen garden adopted in the 55<sup>th</sup> round, deviating to some extent from the 50<sup>th</sup> round. Figures for Kerala may, however, be consistent.

Table 2 in the Appendix provides the above-mentioned estimates for the items reported by at least 20 sample households in rural and urban areas of each State, UT and all-India.

**4.6 Consumption out of home-produced stock for selected non-food items:** Statement 8 shows the quantity and value of consumption along with the number per 1000 of households reporting consumption of the selected non-food items during the period of last 30 days separately for rural and urban areas at all-India level. In total, ten items were selected for collection of information on consumption out of home-produced stock. In urban India, average monthly household consumption on these items was negligible. Total monthly household consumption expenditure on these items was Rs 4.64 in urban India, while it was Rs 45.79 in rural India. In urban India, out of Rs 4.64, consumption of firewood and chips was Rs 2.53 and of dung cake Rs 1.72. The remaining 37 paise was spent on clothing and footwear. In rural India, out of Rs 45.79, Rs 42.85 was on firewood and chips and dung cake. The remaining Rs 2.95 was spent over seven items. Estimate of monthly household consumption expenditure on earthenware was zero paise. Interestingly, for footwear, the average monthly household consumption expenditure out of home-produced stock was the same (34 paise) for both rural and urban India.

**4.7 Purchase from P.D.S. and other sources:** Statement 9 gives the quantity and value of purchase separately from

P.D.S. and other sources along with the number per 1000 of households reporting purchase for four items, namely, rice, wheat/atta, sugar and kerosene during the period of last 30 days separately for rural and urban areas at all-India level. Accordingly, monthly purchase of rice per household was 4.11 kg amounting to Rs 25.48 in rural India and 2.89 kg amounting to Rs 18.62 in urban India. Per household monthly purchase of rice from sources other than P.D.S. was 21.36 kg amounting to Rs 217.44 in rural India and 18.92 kg amounting to Rs 232.67 in urban India. Among the listed four items, it was only kerosene for which purchase from P.D.S. was higher, in fact much higher, than the purchase from other sources. The proportions of purchase from P.D.S. in percentage terms are given below.

|                 | % share of quantity purchased from P.D.S. |       |
|-----------------|---|-------|
|                 | rural                                     | urban |
| rice (kg)       | 16.13                                     | 13.25 |
| wheat/atta (kg) | 7.96                                      | 6.77  |
| sugar (kg)      | 34.84                                     | 36.64 |
| kerosene (ltr)  | 70.99                                     | 53.36 |

Out of the above four items, kerosene was mainly purchased from P.D.S. by households especially in rural India. In rural India, the share of P.D.S. was more than two-thirds of total purchase while in urban India, it was more than half of the total purchase. For sugar, around one-third of total purchase was made from P.D.S. in both rural and urban India. The share of P.D.S. purchase was much less for the other two items – rice and wheat/atta. The differences in price for P.D.S. purchase and purchase from other sources are as under.

---

price per unit (Rs)

---

|                 | P.D.S.<br>(x) | others<br>(y) | diff<br>(y-x) | % diff<br>taking<br>'others'<br>as 100<br>(100*(y-<br>x)/y) |
|-----------------|---------------|---------------|---------------|---|
| <b>rural</b>    |               |               |               |   |
| rice (kg)       | 5.38          | 10.18         | 4.80          | 47.15   |
| wheat/atta (kg) | 4.98          | 7.47          | 2.49          | 33.33   |
| sugar (kg)      | 11.44         | 15.44         | 4.00          | 25.91   |
| kerosene (ltr)  | 3.82          | 9.11          | 5.29          | 58.07   |
| <b>urban</b>    |               |               |               |   |
| rice (kg)       | 6.44          | 12.30         | 5.86          | 47.64   |
| wheat/atta (kg) | 6.83          | 8.33          | 1.50          | 18.01   |
| sugar (kg)      | 11.18         | 15.58         | 4.40          | 28.24   |
| kerosene (ltr)  | 3.68          | 9.71          | 6.03          | 62.10   |

The price differential in absolute terms was the lowest for wheat and the highest for kerosene in both rural and urban areas. However, in percentage terms, the difference in price of P.D.S. from 'others', taking price of the 'others' as 100, was the highest for kerosene in both rural and urban areas and the lowest for sugar in rural areas and for wheat/atta in urban areas. It can also be seen that the cost of kerosene per litre in P.D.S. was about 40% of the cost in the open market.

4.8 Inter-State variation in P.D.S. price of the selected items is given in Statement 10. It shows that P.D.S. price for the selected items was not uniform over the States and UTs.

**Statement 1R: Per 1000 distribution of households reporting consumption during the last 30 days by source of consumption for items of food, pan, tobacco and intoxicants, and fuel and light**

## Detailed tables

Tables 1R & 1U: Information has been presented for all those items, which were consumed by at least 20 households.

Tables 2R & 2U: Information has been presented for all those items, which were produced in the kitchen garden, backward etc. during the agricultural year 1998-99 by at least 20 households.

Tables 3R & 3U: Information has been presented for all those non-food items, which were consumed out of home produced stock by at least 20 households during the period of last 30 days.

**Table 1R: Per 1000 distribution of households by source of consumption for items of food, pan, tobacco and intoxicants, and fuel and light by State/UT**

| code                  | item  | source of consumption |                 |                              |                      |        |      | Rural                            |               |
