प्राक्कथन

राष्ट्रीय प्रतिदर्श सर्वेक्षण कार्यालय (एनएसएसओ) के परिवार उपभोक्ता व्यय संबंधी सर्वेक्षण राष्ट्रीय तथा राज्य स्तर पर आबादी के अलग-अलग वर्गों के जीवन-स्तर के विभिन्न संकेतकों के बारे में आंकड़ों के बुनियादी स्रोत हैं। नियोजन, नीति निर्माण एवं निर्णय में लेने में सहयोग के रूप में इन आंकड़ों का उपयोग किया जाता है तथा विभिन्न सरकारी संगठन, शिक्षाविद, शोधकर्ता और विद्वान सांख्यिकी प्रक्रियाओं में इनपुट के रूप में इनका उपयोग करते हैं। परिवारों के बड़े प्रतिदर्श आकार के साथ परिवार उपभोक्ता व्यय संबंधी एनएसएस सर्वेक्षण, 27वें दौर (अक्टूबर 1972-सितम्बर 1973) से पंचवार्षिक आधार पर आयोजित किए जा रहे हैं। जुलाई 2011-जून 2012 के दौरान किया गया एनएसएस का 68वें दौर का सर्वेक्षण, इस श्रृंखला का नौवां पंचवार्षिक सर्वेक्षण था। इसमें (i) परिवार उपभोक्ता व्यय तथा (ii) रोजगार एवं बेरोजगारी विषयों को सम्मिलित किया गया था।

एनएसएसओ ने केन्द्रीय प्रतिदर्श आंकड़ों के आधार पर उपभोक्ता व्यय संबंधी पंचवार्षिक सर्वेक्षणों के निष्कर्ष अनेक प्रतिवेदनों में प्रकाशित किए हैं। एनएसएसओ ने भारत में परिवार उपभोक्ता व्यय के मुख्य संकेतक, 2011-2012 नामक प्रतिवेदन जुलाई 2013 में जारी किया था। उपभोक्ता व्यय का स्तर और पैटर्न नामक यह प्रतिवेदन छह प्रतिवेदनों की श्रृंखला में पहला प्रतिवेदन है। इसमें राष्ट्रीय तथा राज्य स्तर पर परिवार उपभोक्ता व्यय के विभिन्न पहलुओं से संबंधित अनुमान प्रस्तुत किये गये हैं। इस रिपोर्ट में तीन अध्याय हैं, तथा प्रमुख तालिकाएं और सर्वेक्षण डिजाइन के विवरण परिशिष्टों के तौर पर संलग्न किये गये हैं। इस रिपोर्ट के विषय से संबंधित सर्वेक्षण के प्रमुख निष्कर्ष अध्याय तीन में हैं। अध्याय तीन में मुख्य निष्कर्ष प्रस्तुत किये गये हैं। तालिकाएं विस्तार से दी गयी हैं और इनकी संख्या बहुत ज्यादा है, इसलिये इन्हें रिपोर्ट के साथ परिशिष्ट 'क' के रूप में एक सीडी में उपलब्ध कराया गया है।

इस प्रतिवेदन में न केवल राज्य/संघ राज्यक्षेत्र स्तर पर मासिक प्रति व्यक्ति व्यय (एमपीसीई) के ग्रामीण तथा शहरी औसत दिये गये हैं, बल्कि परिवारों और व्यक्तियों के अनुसार एमपीसीई के वितरण से जो तथ्य सामने आए हैं उनके आधार पर प्रत्येक राज्य/संघ राज्यक्षेत्र तथा अखिल भारत स्तर पर ग्रामीण एवं शहरी आबादी में एमपीसीई में अंतर की गहन जानकारी भी दी गई है। इसके अलावा, प्रत्येक राज्य/संघ राज्यक्षेत्र तथा अखिल भारत स्तर पर एमपीसीई के अलग-अलग विभाजित वर्गों में शामिल परिवारों के मामले में, उपभोज्य वस्तुओं के अनुसार एमपीसीई का निर्यक्ष एवं प्रतिशत वितरण अलग से दिया गया है। इसी तर्ज पर विभिन्न प्रकार के अनाजों और दालों की प्रति व्यक्ति खपत की मात्रा तथा मूल्य का विवरण भी दिया गया है।

एनएसएसओ ने क्षेत्र-कार्य सम्पन्न होने के एक वर्ष के अंदर ही सर्वेक्षण के मुख्य संकेतक जारी कर दिये थे ताकि अर्थशास्त्री, शिक्षाविद, शोधकर्ता और इस विषय में अभिरुचि रखने वाले अन्य लोग इन पर और आगे विश्लेषण तथा शोध कर सकें। एनएसएसओ के विभिन्न प्रभागों के अधिकारियों द्वारा सावधानी पूर्वक बनाई गई योजना और विभिन्न कार्यों के निष्पादन से यह कार्य सम्भव हो सका है।

मैं एनएसएस के 68वें दौर के लिये गठित कार्यदल के सदस्यों और राष्ट्रीय सांख्यिकीय अयोग को सर्वेक्षण के विभिन्न चरणों में उनके बहुमूल्य मार्गदर्शक लिये हार्दिक धन्यवाद देता हूँ। मैं प्रतिवेदन तैयार करने में एनएसएसओ के विभिन्न प्रभागों के अधिकारियों के प्रयासों की भी सराहना करता हूँ। आशा है कि यह प्रतिवेदन योजनाकारों, नीति निर्माताओं तथा शोधकर्ताओं के लिए उपयोगी सिद्ध होगा। प्रतिवेदन में सुधार हेतु सुझावों का स्वागत है।

(ए.के. मेहरा)

महानिदेशक तथा मुख्य कार्यकारी अधिकारी

फरवरी, 2014

Preface

The Household Consumer Expenditure Surveys of the National Sample Survey Office (NSSO) are the primary source of data on various indicators of level of living of different segments of the population at National and State levels. They are used for planning, policy formulation, support in decision making and as input for further statistical exercises by various Government organizations, academicians, researchers and scholars. NSS surveys on Household Consumer Expenditure with a large sample of households have been conducted quinquennially from the 27th round (October 1972 - September 1973) of NSS onwards. The NSS 68th round survey, carried out during July 2011 - June 2012, was the ninth quinquennial survey in the series, covering (i) Household Consumer Expenditure and (ii) Employment and Unemployment.

Based on the Central sample data, the results of the quinquennial surveys of Consumer Expenditure are being brought out by NSSO in a number of reports. *Key Indicators of Household Consumer Expenditure in India, 2011-12*, was released in July 2013. The present report *Level and Pattern of Consumer Expenditure* is the first in the series of six reports. It presents the estimates pertaining to various facets of household consumer expenditure at National and State levels. This report contains three Chapters, with the main tables and the details of survey design attached as Appendices. The main findings are presented in Chapter Three. The detailed Tables, being voluminous, are given in a CD along with the report, as Appendix A.

The report not only gives rural and urban averages of Monthly Per Capita Expenditure (MPCE) at State/UT and National level but also provides insights into the differences in MPCE within the rural and urban population of each State/UT and all-India, as revealed by the distribution of MPCE over households and persons. The absolute and percentage break-up of MPCE over categories of consumption items is, further, given separately for households in different fractile classes of MPCE, for each State/UT and all-India. The same is done for quantity and value of per capita consumption of different cereals and pulses.

The NSSO brought out the key indicators of the survey within a year of completion of the field work and released the unit level data for further analysis and research work by economists, academicians, scholars and all others who are interested in this subject. This was enabled by the meticulous planning and execution of various activities by the officials of different Divisions of NSSO.

I am deeply thankful to the members of Working Group for NSS 68th round and the National Statistical Commission for their valuable guidance provided at various stages of the survey. I also place on record my appreciation of efforts made by officers of different divisions of NSSO involved in the preparation of this document. I hope that this report will be found useful by planners, policy makers and researchers. Suggestions for improvement of the report will be highly appreciated.

NSSO

मुख्य बार्ते

यह प्रतिवेदन पूरे देश में फैले हुए 7,469 ग्रामों एवं 5,268 नगरीय खंडों से जुलाई 2011-जून 2012 के दौरान एकत्र किए गये सूचनाओं पर आधारित है। उपभोक्ता व्यय पर सूचना एकत्र करने के लिए दो भिन्न अनुसूचियों को प्रयोग में लाया गया, पहले में 101662 परिवारों से और दूसरे में 101651 परिवारों से सूचना एकत्र किया गया।

उपभोग का स्तर

- एमएमआरपी (आशोधित मिश्रित सन्दर्भ अवधि) पद्धति से मापा हुआ एमपीसीई (प्रति व्यक्ति मासिक उपभोक्ता व्यय) के अनुसार औसत एमपीसीई 2011-12 में ग्रामीण भारत में 1430 रु. एवं नगरीय भारत में 2630 रु. (करीब 84% अधिक) अनुमानित हुआ।
- 5% निर्धनतम ग्रामीण जनता का औसत एमपीसीई 521 रु. था। 5% निर्धनतम नगरीय जनता का औसत एमपीसीई 700 रु. था।
- एमपीसीई द्वारा बनाए गए स्तरों में ग्रामीण जनता के उच्चतम 5% का औसत एमपीसीई 4481 रु. था, जो कि निर्धनतम के 5% का करीब 8.6 गुणा था। नगरीय जनता का उच्च 5% का औसत एमपीसीई 10,282 रु. था जो कि निर्धनतम 5% का करीब 14.7 गुणा था।
- प्रमुख राज्यों में केरल (रु. 2669) का सर्वाधिक ग्रामीण एमपीसीई था। इसके बाद पंजाब (रु. 2345) एवं हरियाणा (रु. 2176) थे। अन्य सभी प्रमुख राज्यों का औसत एमपीसीई रु. 1000 एवं रु. 1760 के बीच था।
- सबसे कम औसत ग्रामीण एमपीसीई था उड़ीसा एवं झारखंड में (करीब रु. 1000) और छत्तीसगढ़ में भी यह बहुत कम (करीब रु. 1030) था। बिहार, मध्य प्रदेश, एवं उत्तर प्रदेश के ग्रामीण क्षेत्रों में औसत एमपीसीई रु. 1120 और रु. 1160 के बीच था।
- नगरीय क्षेत्र में सर्वोच्च एमपीसीई (रु. 3817) वाला प्रमुख राज्य हरियाणा था, इसके बाद केरल (रु. 3408) एवं महाराष्ट्र (रु. 3189) था। बिहार को छोड़कर (नगरीय एमपीसीई रु. 1507) किसी भी प्रमुख राज्य का नगरीय एमपीसीई रु. 1860 से कम नहीं था।
- मध्यम स्तर का एमपीसीई^{एमएमआरपी} (मिडियन मात्रा) ग्रामीण भारत में करीब रु. 1200 और नगरीय भारत में करीब रु. 2020 था।
- पंजाब के औसत ग्रामीण एमपीसीई से नगरीय औसत एमपीसीई मात्र 19% अधिक था, केरल में केवल 28% अधिक एवं बिहार में केवल 34% अधिक था। दूसरी तरफ, पश्चिम बंगाल, झारखंड एवं महाराष्ट्र में नगरीय औसत, ग्रामीण औसत से करीब दोगुना था।
- समान सन्दर्भ अवधि द्वारा मापा गया वास्तविक एमपीसीई 1993-94 से 2011-12 तक 18 वर्षों की अवधि में ग्रामीण भारत में करीब 38%, किन्तु नगरीय भारत में 51% बढ़ा। मिश्रित सन्दर्भ अवधि द्वारा मापा गया वास्तविक एमपीसीई इसी अवधि में नगरीय भारत में 54% एवं ग्रामीण भारत में 36.5% बढ़ा।

- गुजरात, राजस्थान एवं तमिलनाडू में औसत एमपीसीई नगरीय क्षेत्र में अखिल भारतीय औसत से कम था, किन्तु ग्रामीण क्षेत्र में नहीं। इन तीन राज्यों को छोड़कर औसत से अधिक ग्रामीण एमपीसीई वाले प्रमुख राज्यों में नगरीय एमपीसीई भी औसत से अधिक था।

उपभोग का स्वरूप

एमपीसीई मापने की एमएमआरपी (आशोधित मिश्रित सन्दर्भ अवधि) पद्धति के अनुसार भारत के ग्रामीण परिवारों का 2011-12 के दौरान कुल में खाद्य का अनुमानित औसत उपभोग का मूल्य करीब 53% था। इसमें 10.8% अनाज एवं उसके प्रतिस्थापक का, 8% दूध एवं दूध से बनी वस्तुओं का, एवं 6.6% सब्जियों के लिए शामिल था। अखाद्य मद वर्गों में खाना बनाने के इंधन और रोशनी का भाग 8%, वस्त्र एवं जूतों का 7%, चिकित्सा खर्चों का 6.7%, यात्रा एवं अन्य उपभोक्ता सेवाओं प्रत्येक का 4%, और टिकाऊ उपभोक्ता वस्तुओं का भाग 4.5% था।

- औसत नगरीय भारतीय के लिए पारिवारिक उपभोग के मूल्य का 42.6% खाद्य पर, 6.7% अनाज पर, एवं 7% दूध एवं दूध से बने पदार्थ पर था।
- कुल उपभोक्ता व्यय में अधिकतर खाद्य मद समूहों का भाग नगरीय भारत की तुलना में ग्रामीण भारत में अधिक था, फल और प्रसंस्कृत आहार इसके अपवाद रहे। अखाद्य मद समूहों के भाग नगरीय भारत में सामान्यतः अधिक थे। नगरीय एवं ग्रामीण क्षेत्रों में सबसे अधिक सुस्पष्ट अन्तर, अनाज के मामले में (नगरीय भाग: 6.7%, ग्रामीण भाग: 10.8%), किराया (नगरीय: 6.2%, ग्रामीण: 0.5%) एवं शिक्षा के मामले में (नगरीय: 6.9%, ग्रामीण: 3.5%) था। पान, तम्बाकू, एवं नशीले पदार्थों का भाग ग्रामीण क्षेत्रों के लिए यद्यपि केवल करीब 3% था, फिर भी यह नगरीय क्षेत्र के भाग से दुगुना था।
- प्रमुख राज्यों में ग्रामीण उपभोग व्यय में खाद्य का अंश केरल के लिए 43% एवं पंजाब के लिए 44% से बिहार में 59% एवं आसाम में 61% तक रहा। नगरीय क्षेत्र में उपभोग व्यय में खाद्य का अंश केरल में 37% एवं हरियाणा में 39% से बिहार में 51% तक रहा।
- ग्रामीण भारत में कुल व्यय में अनाज का अंश प्रमुख राज्यों में 5% (केरल और पंजाब में) से 17% (झारखंड और उड़ीसा) तक रहा। नगरीय भारत में इस अंश का विभिन्नता इससे कम था: हरियाणा में 4% से बिहार में 12% तक।
- ग्रामीण भारत में निम्नतम एमपीसीई डेसाइल वर्ग के लिए अनाज का बजट शेयर करीब 19% था, लेकिन एमपीसीई में बढ़त के साथ गिरने लगा और सर्वोच्च डेसाइल वर्ग में 5-6% तक पहुँचा। नगरीय भारत में अनाज का शेयर निम्नतम डेसाइल वर्ग में 15% से सर्वोच्च डेसाइल वर्ग में 3% तक गिरा।
- दूध एवं दूध के उत्पादों का बजट शेयर एमपीसीई स्तर के साथ निम्नतम डेसाइल वर्ग में करीब 4% से नौवें डेसाइल वर्ग में 9.5% तक बढ़ता हुआ पाया गया। तो भी, नगरीय भारत में इस मद समूह का शेयर जनता के मध्य तृतीयांश के लिए, सर्वोच्च डेसाइल वर्गों से अधिक (करीब 8-8.5%) था।

- शिक्षा का शेयर एमपीसीई स्तर के साथ ग्रामीण भारत के निम्नतम स्तर में 1.6% से सर्वोच्च डेसाइल वर्ग में 5.7% तक और नगरीय भारत में 2.6% से 9% तक लगातार बढ़ा ।

अनाज खपत की मात्रा

- प्रति व्यक्ति औसत अनाज की खपत प्रतिमाह (सभी उम्र के व्यक्तियों पर विचार करते हुए) ग्रामीण भारत में 11.2 किलो, एवं नगरीय भारत में 9.2 किलो था ।
- ग्रामीण भारत में 10% निर्धनतम जनता के लिए प्रति व्यक्ति औसत मासिक अनाज की खपत 10.0 किलो के आसपास थी । एमपीसीई में बढ़त के साथ ही, यह बढ़ते हुए देखी गयी, तेजी से यह बढ़त 10-20 वर्ग में 11.00 किलो तक पहुँची, और फिर धीरे-धीरे बढ़कर 80-90 वर्ग में 11.5 किलो तक पहुँची । नगरीय भारत में एमपीसीई में बढ़त के साथ प्रति व्यक्ति अनाज की खपत में परिवर्तन का कोई स्पष्ट तरीका (पैटर्न) नहीं था । केवल शिखर के 5% जनता को छोड़कर विभिन्न वर्गों के प्रति व्यक्ति मासिक खपत 9.1 किलो से 9.5 किलो के बीच थी ।
- 1993-94 से 2011-12 तक 18 वर्षों के दौरान महीने में प्रति व्यक्ति अनुमानित अनाज की खपत (जिसमें खरीदे गए प्रसंस्कृत आहार में अनाज का हिसाब शामिल नहीं है) ग्रामीण भारत में 13.4 किलोग्राम से 11.2 किलोग्राम और नगरीय भारत में 10.6 किलोग्राम से 9.3 किलोग्राम तक गिरी ।

उपभोग स्तर में असमानता

- 61वें दौर के सर्वेक्षण (2004-2005) से यूआरपी (समान सन्दर्भ अवधि) लोरेन्ज अनुपात के साथ वर्तमान सर्वेक्षण से प्रतिव्यक्ति उपभोक्ता व्यय वितरण का यूआरपी लोरेन्ज अनुपात की तुलना देश के ग्रामीण क्षेत्र के लिए 0.297 से 0.307 की वृद्धि और नगरीय क्षेत्र के लिए 0.373 से 0.385 की वृद्धि दिखाती है ।
- राज्य-क्षेत्र-स्तरीय एमपीसीई^{एमएमआरपी} वितरण के लिए लॉरेन्ज अनुपात ग्रामीण क्षेत्र में 0.19 से 0.36 की सीमा में और नगरीय क्षेत्र में 0.21 से 0.41 तक था ।

Highlights

The report is based on information collected during July 2011-June 2012 from 7,469 villages and 5,268 urban blocks spread over the entire country. Two different schedules were used to collect information on consumer expenditure, the first being canvassed in 101662 households and the second in 101651 households.

LEVEL OF CONSUMPTION

- Using the MMRP (Modified Mixed Reference Period) method of measurement of MPCE (Monthly Per Capita Consumer Expenditure), average MPCE in 2011-12 was estimated as Rs.1430 in rural India and Rs.2630 (about 84% higher) in urban India.
- The poorest 5% of India's rural population had an average MPCE of Rs.521. The poorest 5% of the urban population had an average MPCE of Rs.700.
- The top 5% of the rural population, ranked by MPCE, had an average MPCE of Rs.4481 – about 8.6 times that of the bottom 5%. The top 5% of the urban population had an average MPCE of Rs. 10,282 – about 14.7 times that of the bottom 5%.
- Among the major States, Kerala (Rs.2669) had the highest rural MPCE. It was followed by Punjab (Rs.2345) and Haryana (Rs.2176). In all other major States, average rural MPCE was between Rs.1000 and Rs.1760.
- Average rural MPCE was lowest in Odisha and Jharkhand (around Rs.1000), and also very low in Chhattisgarh (around Rs.1030). In the rural sector of Bihar, Madhya Pradesh and Uttar Pradesh, average MPCE was between Rs.1120 and Rs.1160.
- Haryana was the major State with the highest MPCE (Rs.3817) in the urban sector, followed by Kerala (Rs.3408) and Maharashtra (Rs.3189). Apart from Bihar (urban MPCE Rs.1507), no other major State had urban MPCE below Rs.1860.
- The median level of MPCE_{MMRP} was about Rs.1200 in rural India and about Rs.2020 in urban India.
- Average urban MPCE was only 19% higher than average rural MPCE in Punjab, only 28% higher in Kerala, and only 34% higher in Bihar. In West Bengal, Jharkhand and Maharashtra, on the other hand, the urban average was around double the rural.
- In the 18 year-period from 1993-94 to 2011-12, real MPCE – measured by the Uniform Reference Period method – was estimated to have grown by only about 38% in rural India, but by 51% in urban India. Measured by the Mixed Reference Period method, real MPCE grew by 36.5% in rural India and by 54% in urban India over the same period.

● Except for Gujarat, Rajasthan and Tamil Nadu, where average MPCE was below the all-India average in the urban sector but not in the rural sector, major States with above-average rural MPCE also had above-average urban MPCE.

PATTERN OF CONSUMPTION

● Using the MMRP (Modified Mixed Reference Period) method of MPCE measurement, food was estimated to account for about 53% of the value of the average *rural* Indian's household consumption during 2011-12. This included 10.8% for cereals and cereal substitutes, 8% for milk and milk products, and 6.6% for vegetables. Among non-food item categories, fuel for cooking and lighting accounted for 8%, clothing and footwear for 7%, medical expenses for 6.7%, conveyance and other consumer services for 4% each, and consumer durables for 4.5%.

● For the average urban Indian, 42.6% of the value of household consumption was accounted for by food, including 6.7% by cereals and 7% by milk and its products.

● The share of most of the food item groups in total consumption expenditure was higher in rural India than in urban India, fruits and processed food being exceptions. For non-food item groups, the share was usually higher in urban India. The most noticeable rural-urban differences were in case of cereals (urban share: 6.7%, rural share: 10.8%), rent (urban: 6.2%, rural: 0.5%) and education (urban: 6.9%, rural: 3.5%). The share of pan, tobacco and intoxicants for the rural sector, though only about 3%, was double the share for the urban sector.

● In the major States, the share of food in rural consumption expenditure varied from 43% for Kerala and 44% for Punjab to 59% in Bihar and 61% in Assam. In the urban sector the share of food in consumption expenditure varied from 37% in Kerala and 39% in Haryana to 51% in Bihar.

● The share of cereals in total expenditure in rural India varied across the major States from 5% in Kerala and Punjab to 17% in Jharkhand and Odisha. In urban India, the share varied less, from 4% in Haryana to 12% in Bihar.

● The budget share of cereals was about 19% for the bottom MPCE decile class of rural India but fell with rise in MPCE to about 5-6% for the top decile class. In urban India the share of cereals fell from 15% for the bottom decile class to under 3% for the top decile class.

● The budget share of milk and milk products was seen to rise with MPCE level from about 4% in the bottom decile class to 9.5% in the ninth decile class. For urban India, however, the share of this item group was higher (at around 8-8.5%) for the middle third of the population than for the highest decile classes.

● The share of education rose steadily with MPCE level from 1.6% in the lowest to 5.7% in the highest decile class in rural India and from 2.6% to 9% in urban India.

QUANTITY OF CEREAL CONSUMPTION

● Average cereal consumption per person per month (considering persons of all ages) was 11.2 kg in rural India and 9.3 kg in urban India.

● In rural India, average monthly per capita cereal consumption was around 10.0 kg for the poorest 10% of the population. With rise in MPCE it was seen to increase, quickly at first, to reach 11.0 kg in the 10-20 class, and then more slowly, to reach 11.5 kg in the 80-90 class. In urban India, there was no clear pattern of variation of per capita cereal consumption with rise in MPCE. Except for the top 5% of the population, monthly per capita consumption of the different fractile classes was between 9.1 kg and 9.5 kg.

● During the 18-year period from 1993-94 to 2011-12, estimated monthly per capita cereal consumption (which does not include the cereal content of processed food) fell from 13.4 kg to 11.2 kg in rural India and from 10.6 kg to 9.3 kg in urban India.

INEQUALITY IN CONSUMPTION LEVELS

● Comparison of the URP (Uniform Reference Period) Lorenz ratios of distribution of per capita consumer expenditure from the present survey with URP Lorenz ratios from the 61st round survey (2004-05) shows an increase from 0.297 to 0.307 for the *rural* sector and from 0.373 to 0.385 for the *urban* sector of the country.

● The Lorenz Ratios for the State-sector-level $MPCE_{MMRP}$ distributions ranged from 0.19 to 0.36 in the rural sector and from 0.21 to 0.41 in the urban sector.

Contents

Chapter One

1.	Introduction	1
1.1	Background	1
1.2	Objective of the survey	1
1.3	Reports of the 68 th round CES	2
1.4	Contents of this report	2
1.5	Features of the survey: schedules of enquiry	3
1.6	Features of the survey: scope and coverage	4

Chapter Two

2.	Concepts and Definitions	7
2.1	Conceptual framework	7
2.2	Monthly per capita expenditure (MPCE)	8
2.3	The three estimates of average and distribution of MPCE obtained from the 68 th round survey	9
2.4	Other concepts and definitions	10

Chapter Three

3.	Summary of Findings	15
3.1	A note on interpretation of the survey results	15
3.2	Average MPCE _{MMRP} : States and all-India	17
3.3	Median and fractiles of the MPCE _{MMRP} distribution	19
3.4	MPCE and household size	21
3.5	Trends in level of consumption in monetary and real terms	22
3.6	Shares of various food and non-food groups in total expenditure	23
3.7	Proportions of households reporting specific items	26
3.8	Inter-State variation in food, cereal and non-cereal food expenditure	28
3.9	Trends in pattern of consumption: all-India	29
3.10	Change in consumption pattern with increase in consumption level: all-India	30
3.11	Quantity of cereals consumed per person, 2011-12: all-India and States	35
3.12	Trends in quantity of cereals consumed per person: all-India and States	37
3.13	Trends in quantity of cereals consumed per person across MPCE fractile classes	38
3.14	Inequality in distribution of MPCE: all-India and States	40

Summary Statements (State/UTs and all-India)

1	Lorenz ratio of rural and urban distributions of population by MPCE	43
2R/U	Fractiles (5 th percentile, 95 th percentile and deciles) of the distribution of rural/urban population by MPCE _{MMRP}	44-45
3R/U	Average MPCE _{MMRP} in different fractile classes of MPCE _{MMRP} in rural/urban sector	46-47
4R/U	Break-up of monthly per capita consumer expenditure (MMRP) over broad categories of consumption items	48-59
5R/U	Percentage break-up of monthly per capita consumer expenditure (MMRP) over broad categories of consumption items	60-71
6R/U	Per 1000 distribution of households by size	72-73
7R/U	Average MPCE _{MMRP} of households by size	74-75
8R/U	Monthly average quantity of consumption of different cereals per person	76-77
9R/U	Monthly average value of consumption of different cereals per person	78-79

Chapter One

Introduction

1.1 Background

1.1.1 The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure surveys at regular intervals as part of its “rounds”, each round normally of a year’s duration. These surveys are conducted through interviews of a representative sample of households selected randomly through a scientific design and cover almost the entire geographical area of the country.

1.1.2 The household consumer expenditure survey (CES) is generally conducted along with the employment-unemployment survey of the NSS at quinquennial intervals. This provides a series of CES’s. Thus, "quinquennial" surveys on consumer expenditure and employment-unemployment were conducted in the 27th, 32nd, 38th, 43rd, 50th, 55th, 61st and 66th rounds of NSS, at roughly 5-year intervals.

1.1.3 In its 32nd Meeting held on 23-24 April 2010, the National Statistical Commission (NSC) considered the use of the 2009-10 NSSO quinquennial survey as the base year for both the price indices as well as revision of the national income estimates. The NSC felt that 2009-10, being a non-normal year, may pose problems; hence, it was desirable to repeat the survey once again in respect of consumer expenditure as well as employment-unemployment issues. In its 33rd Meeting held on 19-21 May 2010, the NSC decided that the 68th Round of NSS would be devoted to repeating the quinquennial survey on consumer expenditure and employment-unemployment.

1.1.4 Accordingly, the 66th round survey on consumer expenditure and employment-unemployment was repeated in the 68th Round conducted in 2011-12. For the reason mentioned in the last paragraph, readers of this and forthcoming reports are cautioned against making direct comparisons of the estimates of the 68th round (including averages, distributions and Lorenz curves of consumption expenditure) with those of the 66th. Key indicators on household consumption in India during 2011-12 based on this survey have already been released¹.

1.2 Objective of the survey

1.2.1 The NSS consumer expenditure survey aims at generating estimates of average household monthly per capita consumer expenditure (MPCE), the distribution of households and persons over the MPCE range, and the break-up of average MPCE by commodity group, separately for the rural and urban sectors of the country, for States and Union Territories, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the relevant domains of the population. The distribution of

¹ NSS KI (68/1.0): Key Indicators of Household Consumer Expenditure in India, 2011-2012, June 2013

MPCE highlights the differences in level of living of the different segments of the population and is an effective tool to study the prevalence of poverty and inequality. These estimates thus enable the apex planning and decision-making process to allocate the nation's resources among sectors, regions, and socio-economic groups, and assess the "inclusiveness" of economic growth.

1.2.2 Besides measurement of the level and the pattern of household consumption, another important use of the CES is to provide the budget shares of different commodity groups for the rural and urban population, which are used to prepare the weighing diagram for official consumer price indices (CPIs).

1.2.3 Apart from these major uses of the CES, the food (quantity) consumption data are used to study the level of intake of different nutrients for populations of different regions and disparities therein. Further, the estimated budget shares of a commodity at different MPCE levels facilitates the study of consumption elasticity or responsiveness of demand for the commodity to change in purchasing power.

1.3 Reports of the 68th round CES

1.3.1 The results of the NSS 68th round survey on household consumer expenditure are planned for release in six reports. The tentative titles of these reports are:

1. Level and Pattern of Consumer Expenditure, 2011-12
2. Household Consumption of Various Goods and Services in India, 2011-12
3. Public Distribution System and Other Sources of Household Consumption, 2011-12
4. Energy Sources of Indian Households for Cooking and Lighting, 2011-12
5. Nutritional Intake in India, 2011-12
6. Household Consumer Expenditure across Socio-Economic Groups, 2011-12

1.4 Contents of this report

1.4.1 The present report is concerned with the level of consumer expenditure – as measured by MPCE – and consumption pattern – as revealed in the break-up of MPCE over different heads of expenditure. Results are provided separately for three different measures of MPCE (explained in Chapter Two). Following the present introductory chapter (Chapter One), Chapter Two explains the concepts and definitions followed in the survey and in this report. The salient findings on level and pattern of consumer expenditure are presented in Chapter Three, mainly based on the MMRP measure of MPCE (see Section 2.3, Chapter Two). Trends in consumption and consumer expenditure though, for trends, the URP and MRP measures are also referred to. This is followed by some statements generated from the detailed tables for purposes of ready reference. Appendix A (CD enclosed) gives the detailed tables generated from the survey data. Appendix B explains in detail the sample design and estimation procedure followed. Appendix C consists of the schedules of enquiry (Schedule 1.0, Type 1 and Type 2) that were canvassed in the surveyed households. Appendix D gives estimated relative standard errors of State-sectorwise estimates of MPCE.

1.4.2 The detailed State-sectorwise and all-India-sectorwise tables presented in Appendix A of this report relate to 2011-12. They give

- A. Separately for $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$ ²,
- Fractiles (limits of fractile classes) of the distribution of population by MPCE
 - Average number of male and female adults and children per 1000 households, and sex ratio of population, in each MPCE fractile class
 - Distribution of households by household size, separately for each MPCE fractile class
 - Per capita quantity and value of consumption of different cereals and pulses, separately for each MPCE fractile class
 - Average MPCE and its break-up by broad item group (14 groups of food items and 18 groups of non-food items), separately for each MPCE fractile class
 - Distribution of households by $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$ over 12 fixed classes of MPCE

1.4.3 All estimates presented in this report are provided for all-India and for the States and UTs. While using the estimates for very small States and UTs, and estimates of averages for different MPCE-fractile classes, it may be kept in mind that the number of sample households may not be large enough for getting sufficiently accurate estimates.

1.5 Features of the survey: schedules of enquiry

1.5.1 The household consumer expenditure schedule (“Schedule 1.0”) used for the survey collected information on quantity³ and value of household consumption. To minimise recall errors, a very detailed item classification was, as usual, adopted to collect information, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods, and 89 other items. The schedule also collected some other particulars of each household member, such as age, sex and educational level.

1.5.2 The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used ‘last 365 days’ (only) for the infrequently purchased categories, ‘last 7 days’ for some categories of food items, as well as pan, tobacco and intoxicants, and ‘last 30 days’ for other food items, fuel, and the rest. This was in line with the recommendations of an Expert Group that had been

² These are the three different estimates of MPCE generated by the 66th round consumer expenditure survey. They are explained in detail in Chapter Two, Section 2.3.

³ For education, medical care, and goods and services listed in the schedule as “miscellaneous goods and services”, no data on quantity of consumption are collected in the NSS CES’s.

formed for the purpose of suggesting the most suitable reference period for each item of food consumption⁴. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table T1.

Table T1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2

Category	Item groups	Reference period for	
		Schedule Type 1	Schedule Type 2
I	Clothing, bedding, footwear, education, medical (institutional), durable goods	'Last 30 days' and 'Last 365 days'	Last 365 days
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days

1.5.3 Schedule Type 1 and Schedule Type 2 were canvassed in two independent samples of matching size drawn from each stratum/sub-stratum.

1.6 Features of the survey: scope and coverage

1.6.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of a bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

1.6.2 *Population coverage:* The following principles were adhered to:

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Chapter Two, paragraph 2.4.1, for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

⁴ See NSS Report no. 475, entitled "Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption".

1.6.3 *Sample size*

1.6.3.1 *First-stage units*: As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a “State sample” was surveyed by State Government officials in addition to the “Central sample” surveyed by NSSO. For rural India, the number of villages surveyed in the Central sample was 7,469 and the number of urban blocks surveyed was 5,268. This document is based on the estimates obtained from the Central sample only.

1.6.3.2 *Second-stage units*: For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2. The total number of households in which Schedule 1.0 was canvassed was 1,19,378 in rural India and 83,935 in urban India.

1.6.3.3 Table T2 shows the numbers of villages and urban blocks surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed, for each State and Union Territory.

Table T2: Number of villages/blocks surveyed and number of households surveyed for Schedule 1.0 Type 1 and Type 2: NSS 68th round, Central sample

State/UT	no. of fsu's (villages/blocks) surveyed		no. of sample households

Chapter Two

Concepts and Definitions

2.1 Conceptual framework

2.1.1 **Reference period:** The consumption of any good or service by a household or person occurs in the form of a flow over time. The survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period.

2.1.2 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

2.1.2.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

2.1.2.2 For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption. However, for a few items of expenditure such as rent, telephone charges, consumer taxes and railway season tickets, expenditure during the month is recorded as the amount that was last paid divided by the number of months to which the payment related.

2.1.2.3 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests

during ceremonies or otherwise. Normally, transfers of food, fuel, clothing and footwear made by a household as charity, loan advance, etc. are not considered as consumption of that household, since consumption out of all transfer receipts of these items have to be included. However, meals prepared in a household and served to non-household members are an exception to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure.

2.1.2.4 All goods and services received as payment in kind or perquisites are included in the consumption of the recipient household as goods and services received in exchange of services, except for meals received from other households' kitchens.

2.1.2.5 To simplify data collection, consumption of food processed *in the home* from one "item" into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

2.1.3 **Value of consumption:** For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.2 Monthly per capita expenditure (MPCE)

2.2.1 Normally, the concept of per capita income – or per capita (overall) expenditure, if income data are not available – is used for comparison of average living standards between countries, between regions, and between social or occupational groups. For studies of poverty and inequality *within* populations, however, average income or average expenditure is not enough. One needs to assign a value that indicates level of living to *each individual*, or at least to each household, in a population in order to know the level of inequality in living standards of the population, or the proportion living in poverty.

2.2.2 The NSS concept of MPCE, therefore, is defined first at the household level (household monthly consumer expenditure \div household size). This measure serves as the indicator of the household's level of living.

2.2.3 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level.

2.3 The three estimates of average and distribution of MPCE obtained from the 68th round survey

2.3.1 From each sample household where Schedule Type 1 was canvassed, two measures of MPCE emerged. This was because for each such household, there were two sets of data for Category I items (see Table T1) – “last 30 days” data and “last 365 days” data – unlike items of Categories II and III, for which only “last 30 days” was available. Thus there were two ways of measuring household MPCE: one using “last 30 days” for all items, and the other using “last 365 days” data for Category I items and “last 30 days” for the rest. The first measure of MPCE is called $MPCE_{URP}$ (Uniform Reference Period MPCE) and the second, $MPCE_{MRP}$ (Mixed Reference Period MPCE). From data on $MPCE_{URP}$ and $MPCE_{MRP}$ (collected from households where Schedule Type 1 was canvassed), two alternative estimates of the distribution of MPCE and average MPCE can be built up.

2.3.2 From each sample household where Schedule Type 2 was canvassed, a single measure of MPCE emerged, as, for each item of consumption, data for only one reference period had been collected. Since the reference period system used for Schedule Type 2 was only a slight modification of the Mixed Reference Period (differing only in the reference period used for Category II items), this measure of MPCE was called the $MPCE_{MMRP}$ (Modified Mixed Reference Period MPCE). The estimates of the distribution of MPCE and average MPCE that can be built up from Schedule Type 2 data are therefore called the estimates of $MPCE_{MMRP}$.

2.3.3 In brief, the three MPCE measures may be defined as follows.

2.3.4 **Uniform Reference Period MPCE (or $MPCE_{URP}$):** This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of “last 30 days” (preceding the date of survey).

2.3.5 **Mixed Reference Period MPCE (or $MPCE_{MRP}$)** This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of “last 365 days”, and expenditure on all other items is recorded with a reference period of “last 30 days”.

2.3.6 **Modified Mixed Reference Period MPCE (or $MPCE_{MMRP}$)** This is the measure of MPCE obtained by the CES when household consumer expenditure on edible oil, egg, fish

and meat, vegetables, fruits, spices, beverages, refreshments, processed food, pan, tobacco and intoxicants is recorded for a reference period of “last 7 days”, and for all other items, the reference periods used are the same as in case of Mixed Reference Period MPCE ($MPCE_{MRP}$).

2.4 Other concepts and definitions

2.4.1 Household: A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

2.4.2 Household size: The size of a household is the total number of persons in the household.

2.4.3 Fractiles and fractile classes of MPCE: For any fraction f ($0 < f < 1$), the corresponding fractile of the distribution of MPCE is the level of MPCE Y_f such that the proportion of population whose household MPCE lies below Y_f is f . A fractile class of MPCE is a segment of the population lying within two fractiles f_1 and f_2 , which means that if Y be the household MPCE of any person falling within that fractile class, the proportion of population with household MPCE below Y will be between f_1 and f_2 . Thus MPCE fractile classes of population may be referred to simply as “0-5%”, “5-10%”, “10-20%”, etc. Estimates of population characteristics are often generated separately for population in different fractile classes in order to portray the variation of such characteristics with variation in MPCE. MPCE fractile classes may be formed separately for different States/UTs, or at all-India level. In NSS tabulation, fractile classes are usually formed separately for the rural and the urban sector of India.

2.4.4 Deciles and decile classes of MPCE: Deciles are special cases of fractiles. The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population lie, the second decile, the level below which 20% of the population lie, and so on. Thus the population can be divided into 10 “decile classes of MPCE” as follows: those with MPCE below the 1st decile of the MPCE distribution (the

bottom 10% of the population ranked by MPCE), from the 1st decile to the 2nd decile (the next 10%), from the 2nd decile to the 3rd decile (the next 10%), and so on.

2.4.5 Major States: This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

2.4.6 Categories of consumption items (in alphabetical order)

Beverages, etc.: This stands for “beverages, refreshments and processed food”. It includes tea, coffee, mineral water, soft drinks, fruit juice (not prepared at home), soda water, other beverages such as cocoa, biscuits, cakes, pastries, pickles, sauce, jam, jelly, and other salted refreshments and sweets not prepared at home. Refreshments prepared at home are not included here. Instead, the ingredients of the refreshments (such as flour, sugar, milk, etc.) are accounted under “cereals”, “sugar”, etc. Food purchased in the form of cooked meals is also included in “processed food”.

Cereals: Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether.

Cereal substitutes: Cereals are usually a person's staple food in India. But sometimes, by choice or due to scarcity, a person may consume little or no cereal. The food requirement is partially or wholly met in such cases by consumption of food items which could be treated as substitutes for cereals. Tapioca, for example, is consumed in some parts of the country as a substitute for cereals. Similarly, jackfruit seed, *mahua*, etc. are also consumed as substitute for cereals. Potato or sweet potato consumed as substitutes for cereals are not, however, shown here. These are included in “vegetables”.

Clothing and bedding: This category includes bedding (pillows, quilts, mattresses, mosquito nets, etc.), as well as rugs, blankets, curtains, towels, mats, cloth for upholstery, etc. It excludes footwear and raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are accounted in “consumer services”. Consumption of an article of clothing is considered to take place when it is brought into first use. However, clothing purchased second-hand is considered as consumed as soon as it is purchased. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

Conveyance: This includes expenditure incurred on account of journeys undertaken and/or transportation of goods made by any means of conveyance. The expenditure is the actual fare paid except in case of railway season tickets, for which expenditure is calculated as the cost of the ticket divided by the number of months for which it is valid. Expenditure on journeys undertaken by household members as part of official tours is not considered as consumer expenditure of the household. But journeys to commute to and from place of work are

included here. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

Durable goods: Items included here all have a lifetime of one year or more. However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that glassware, earthenware and plastic goods such as buckets are excluded from durable goods and included in “other household consumables”. Consumption expenditure on durable goods includes both expenditure on purchase (both first-hand and second-hand) and expenditure on repair and construction of household durables. For land and residential building, only expenditure on repair and construction is included. Durable goods include furniture and fixtures, “entertainment” durables such as radios, TV, VCR/VCP/DVD players, tape recorders and CD players, cameras, musical instruments, jewellery and ornaments, crockery and utensils, cooking and other household appliances such as fans, air conditioners, air coolers, sewing machines used for household work, washing machines, stoves, pressure cookers, fridges, water purifiers, electric irons, heaters, toasters and ovens, household transport equipment including two-wheelers, four-wheelers and their parts, therapeutic appliances, clocks, watches, computers for household use, mobile phone handsets, and bathroom and sanitary equipment.

Edible oil: Edible oils used for toilet purpose by the household are not included here.

Education: This includes expenditure on goods purchased for the purpose of education, viz., books and journals (first-hand or second-hand), newspapers, stationery, educational CD, etc, and also magazines, novels and other fiction. It also includes fees paid to educational institutions (e.g., schools, colleges, universities, etc.) on account of tuition and other fees like game fees, library fees, etc., and payment to private tutors. Fees for shorthand and typing courses, fees for music, dancing and swimming lessons, and fees for training in nursing, physiotherapy, etc., are included. Occasional payments to the school fund made on account of charities, and “donations” generally, are not included here, unless they are charged by the educational institution as compulsory payments.

Entertainment: This includes expenditure on cinemas, theatres, *melas*, fairs and picnics, expenditure incurred on processing, developing, etc., of photographic film, charges paid for hiring of VCD/DVD players and CDs, and charges for viewing a video show. Expenses incurred on subscription to dish antenna, cable TV facilities, etc. are also included. Club fees are included here.

Footwear: This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

Gram: This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, not included here, but in “other pulse products”.

Medical expenses: This includes expenditure on medicine of different types and on medical goods; also, payments made to doctor, nurse, etc., as professional fees and those made to hospital, nursing home, etc. for medical treatment, and expenditure incurred for clinical tests, including X-rays, ECG, pathological tests, etc. Medical expenditure reimbursed by employer or by insurance companies is included. Expenditure on all family planning devices is included, and also expenditure on medical termination of pregnancy. Medical insurance payments are excluded.

Medical: institutional and non-institutional expenditure: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (non-institutional). Medical institution here covers private as well as Government institutions such as hospitals and nursing homes.

Milk and milk products: Milk products include ghee, butter, curd, etc. Milk used in home preparation of sweetmeats, etc., is also accounted here. This category also includes those baby foods of which the principal constituent is milk. Further, milk (liquid) includes ice-cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included in this category.

Minor durable-type goods: These include spectacles, torches, locks, umbrellas, raincoats, gas lighters, etc. These are not included in “durable goods” but in “miscellaneous goods and services”.

Miscellaneous goods and services: This is a residual category covering all items *other than* food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, and durable goods. It includes, among other things, expenditure on education, medical care, entertainment, conveyance, rent, and consumer taxes and cesses. (Note, however, that in Schedule 1.0, collection, education and institutional medical care are separated out from the “miscellaneous goods and services” block to form a separate block.)

Other consumer services: This includes expenditure on domestic servants, cooks, attendants, sweepers, barbers and beauticians, laundry, ironing, tailors, priests, legal services, telephone charges, postal charges, grinding charges, and repair charges for non-durable goods. Apart from conveyance, it excludes the consumer services coming under “entertainment”. In this round, internet expenses are included in “other consumer services” instead of in “education”.

Other household consumables: These include electric bulbs, tubelights, batteries, earthenware, glassware, plastic goods such as buckets, water bottles and feeding bottles, coir

and rope, washing soap, washing soda, other washing requisites, incense, room fresheners, flowers, acid and insecticides.

Pan: This includes, *pan* (betel leaves), *supari*, lime, *katha*, other ingredients of “finished” *pan*, and *pan* purchased in finished form.

Rent: Rent includes house and garage rent, hotel room rent, residential land rent and other consumer rent.

Chapter Three

Summary of Findings

3.1 A note on interpretation of the survey results

1. As has been made clear in Chapter Two, three different methods of measurement of Monthly Per Capita Expenditure (MPCE) at the household level were employed in the 68th round survey, just as in the 66th round survey – the URP, MRP and MMRP methods. These have given rise to three different estimates of average MPCE and distribution of MPCE at State/UT and all-India level. A few words on the differences among these estimates are added here for their better understanding and interpretation.

2. Compared to the URP method, the MRP method of measurement of a household's MPCE averages out month-to-month fluctuations in spending on clothing, education, durables, etc. The distribution of $MPCE_{MRP}$ therefore has fewer extreme values than the distribution of $MPCE_{URP}$. *One important consequence of this is that the estimated proportion of population with MPCE below any chosen cut-off point at the lower end of the MPCE range will be higher if the $MPCE_{URP}$ distribution is used than if the $MPCE_{MRP}$ distribution is used. However, there is no theoretical reason to expect average MPCE computed by the MRP method to be higher or lower than average MPCE computed by the URP method.*

3. *For all item groups other than clothing and bedding, footwear, education, institutional medical care, and durables, the URP and MRP estimates of per capita consumption for any State/UT or all-India are identical, because they are based on the same data (collected from the same households). However, estimates of share of food (or any other item group) in total consumption differ, because of the difference in the estimate of overall (all-item) MPCE.*

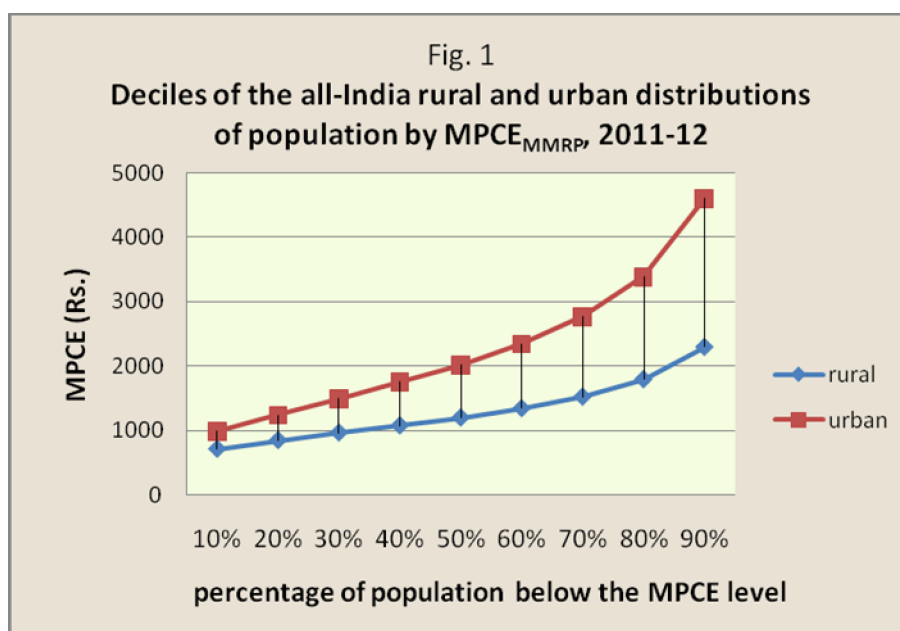

4. When estimates are given separately for each fractile class of MPCE, differences between URP and MRP estimates are expected. Consider an item group such as cereals. For any State/UT or all-India, the URP and MRP estimates of per capita cereal consumption of the entire population are identical, because they are based on the same data. But consider the estimates for, say, the bottom fractile class. The set of sample households forming the bottom fractile class when MPCE is computed by the URP method is different from the set of sample households forming the bottom fractile class when MPCE is computed by the MRP method. *Thus, for any region, the fractile-classwise estimates for any item group by the URP method will in general differ from the corresponding estimates by the MRP method, because the set of households in the corresponding fractile classes will not, in general, be identical.*

5. In 2002 an Expert Group that had been formed for the purpose of suggesting a suitable reference period for each item of consumption recommended, on the basis of a specially designed pilot survey, that for all food items other than cereals, milk and milk products, sugar and salt, and for pan, tobacco and intoxicants, a reference period of “last 7 days” be used, as it produced better reporting of consumption than “last 30 days”. This led to the development of the reference period structure used in Schedule Type 2. It is expected to be less prone to

(downward) reporting biases due to recall error that are suspected to be present in recording of a household's consumption of these items by the usual (30-day recall period) method. *It gives somewhat higher estimates of per capita consumption for the item groups for which the 7-day reference period is used, and hence for the food group as a whole as well as of household MPCE (all items) itself. The MMRP estimates are expected to be closer to the true value of MPCE for the population of the State/UT than the estimates by the MRP method.*⁵

6. *For non-food items, and for cereals, milk, sugar and salt, the differences in MRP and MMRP estimates of per capita consumption for any State/UT or all-India are differences due to sampling fluctuations, because the method of data collection is in both cases the same. Estimates of share of non-food (or any other item group) in total consumption differ for this reason and also because of the difference in the estimate of overall (all-item) MPCE.*

7. The discussion in Chapter Three is focussed primarily on the MMRP estimates as it uses the reference periods recommended by the Expert Group on Non-Sampling Errors after suitable experimentation. *However, it is important to note that because of the different reference period system followed by the MMRP method, the magnitudes of the MMRP estimates are not comparable with the estimates from earlier rounds of NSS, with the exception of the MMRP estimates of the 66th round. To study changes in the level and pattern of consumption over time, therefore, it is the URP and MRP estimates that have to be used, because MMRP estimates are available only from the 66th round (2009-10) onwards.*

3.1.8 Besides the average MPCE, the survey results also provide estimates of various parameters separately for households in different fractile classes of MPCE. Important among

⁵ See NSS Report No. 475: *Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption.*

these are the absolute and percentage break-up of MPCE over categories of consumption items, and quantity and value of per capita consumption of different cereals. These fractile classes for rural and urban domains are separately arrived at for $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$. Similar State-specific fractile classes are also derived and Statewise results are given for these classes in the detailed tables of Appendix A. The rural and urban MPCE distributions can themselves be depicted through the 9 deciles representing the 10%, 20%, ..., 90% points of the distribution; this is done for all-India in Fig.1.

3.1.9 The discussion in this chapter covers:

- (a) average $MPCE_{MMRP}$: States and all-India
- (b) median and fractiles of the distribution of population by $MPCE_{MMRP}$
- (c) relationship between MPCE and household size
- (d) trends in $MPCE_{URP}$ and $MPCE_{MRP}$
- (e) shares of various food and non-food groups in total expenditure (MMRP)
- (f) trends in proportions of households consuming items of different categories
- (g) inter-State variation in cereal and non-cereal food consumption expenditure
- (h) change in consumption pattern with increase in consumption level
- (i) quantity of cereals consumed per person: variation across MPCE levels and States
- (j) trends in quantity of cereals consumed per person
- (k) inequality in distribution of MPCE: all-India and States

3.2 Average $MPCE_{MMRP}$: States and all-India

3.2.1 Average MPCE in 2011-12 was estimated as approximately Rs.1430 in rural India and Rs.2630 in urban India (Table T3). Thus the per capita expenditure level of the urban population – in nominal terms, and ignoring rural-urban differences in price levels, if any – was on the average about 84% higher than that of the rural population.

Table T3: Average $MPCE_{MMRP}$ across fractile classes of $MPCE_{MMRP}$, all-India

fractile class of $MPCE_{MMRP}$	rural India		urban India	
	upper limit (Rs.)	average $MPCE_{MMRP}$ (Rs.)	upper limit (Rs.)	average $MPCE_{MMRP}$ (Rs.)
(1)	(2)	(3)	(5)	(6)
0-5%	616	521.44	827	700.50
5-10%	710	665.84	983	908.92
10-20%	845	783.24	1239	1118.09
20-30%	963	904.57	1490	1362.69
30-40%	1075	1017.8	1757	1624.86
40-50%	1198	1135.97	2019	1887.65
50-60%	1341	1266.08	2349	2180.52
60-70%	1522	1426.76	2771	2547.94
70-80%	1793	1645.36	3390	3062.85
80-90%	2296	2007.46	4610	3892.60
90-95%	2886	2556.33	6383	5350.06
95-100%	-	4481.18	-	10281.84
all classes	-	1429.96	-	2629.65

3.2.2 The poorest 5% of India's rural population had an average MPCE of Rs.521. The poorest 5% of the urban population had an average MPCE of Rs.700.

3.2.3 The top 5% of the rural population, ranked by MPCE, had an average MPCE of Rs.4481 – about 8.6 times that of the bottom 5%. The top 5% of the urban population had an average MPCE of Rs. 10,282 – about 14.7 times that of the bottom 5%.

3.2.4 Table T4 shows average $MPCE_{MMRP}$ in rural and urban sectors of the major States of India. Among the major States, Kerala (Rs.2669) had the highest rural MPCE. It was followed by Punjab (Rs.2345) and Haryana (Rs.2176). In all other major States, average rural MPCE was between Rs.1000 and Rs.1760.

3.2.5 Average rural MPCE was lowest in Odisha and Jharkhand (around Rs.1000), and also very low in Chhattisgarh (around Rs.1030). In the rural sector of Bihar, Madhya Pradesh and Uttar Pradesh, average MPCE was between Rs.1120 and Rs.1160.

3.2.6 Haryana was the major State with the highest MPCE (Rs.3817) in the urban sector, followed by Kerala (Rs.3408) and Maharashtra (Rs.3189). The other major States with average urban MPCE higher than the all-India average were Karnataka (Rs.3026), Punjab (Rs.2794) and Andhra Pradesh (Rs.2685).

Table T4: Average rural and urban MPCE and average household size in 2011-12: major States

State	average MPCE (Rs.)		average household size	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	1754	2685	3.6	3.5
Assam	1219	2189	4.8	4.2
Bihar	1127	1507	5.1	5.0
Chhattisgarh	1027	1868	4.7	4.6
Gujarat	1536	2581	4.8	3.8
Haryana	2176	3817	4.9	4.1
Jharkhand	1006	2018	4.9	4.4
Karnataka	1561	3026	4.5	3.7
Kerala	2669	3408	4.1	3.8
Madhya Pradesh	1152	2058	4.6	4.5
Maharashtra	1619	3189	4.3	4.0
Odissa	1003	1941	4.3	3.8
Punjab	2345	2794	4.7	4.1
Rajasthan	1598	2442	5.0	4.5
Tamil Nadu	1693	2622	3.6	3.4
Uttar Pradesh	1156	2051	5.5	5.0
West Bengal	1291	2591	4.1	3.8
All-India	1430	2630	4.6	4.0

3.2.7 Urban MPCE was lowest in Bihar (Rs.1507). No other major State had urban MPCE below Rs.1860. Two other major States had average MPCE below Rs.2000 – Chhattisgarh (Rs.1868) and Odisha (Rs.1941). In Jharkhand, Uttar Pradesh and Madhya Pradesh, average MPCE was between Rs.2010 and Rs.2060.

3.2.8 While average urban MPCE was higher than average rural MPCE across the major States, the urban-rural difference varied widely across States. Average urban MPCE was only 19% higher than average rural MPCE in Punjab, only 28% higher than average rural MPCE in Kerala, and only 34% higher in Bihar. In West Bengal and Jharkhand, on the other hand, average urban MPCE was around double the average of rural MPCE. In Maharashtra, per capita expenditure in the urban sector was 97% higher than in the rural, and in Karnataka and Odisha, it was 94% higher.

3.2.9 States with higher rural MPCE than the all-India average tended to have urban MPCE above the all-India average as well. Exceptions were Gujarat, Rajasthan and Tamil Nadu, where MPCE was above the all-India average in the rural sector but below the all-India average in the urban sector.

3.3 Median and fractiles of the $MPCE_{MMRP}$ distribution

3.3.1 Table T5 shows fractiles (the nine deciles, denoted P_{10} , P_{20} , ..., P_{90} , and the 5th and 95th percentiles P_5 and P_{95}) of the rural and urban $MPCE_{MMRP}$ distributions in India and its major States. Estimated fractiles of $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$ for all States and UTs are given in Table 2 of Appendix A.

3.3.2 The median level of rural $MPCE_{MMRP}$ was about Rs.1200 – half the rural population belonged to households with MPCE below this level. In urban India the median level of $MPCE_{MMRP}$ was about Rs.2020 – half the urban population had MPCE below this level.

3.3.3 Roughly 64.9% of the rural population of India had MPCE below the rural average of Rs.1430 and 66.7% of the urban population had MPCE below the urban average of Rs.2630 (derived from Table T5).

3.3.4 Over 20% of the rural population of India had MPCE below Rs.850 and nearly 30% had MPCE below Rs.960. Less than 20% had MPCE above Rs.1800 and about 10% had MPCE above Rs.2300.

3.3.5 More than 10% of the urban population of India had MPCE below Rs.1000. More than 30% had MPCE below Rs.1500. Less than 20% had MPCE above Rs.3400, and about 10% had MPCE above Rs.4600.

3.3.6 More than 50% of the rural population of Odisha had MPCE below Rs.900 and more than 40% had MPCE below Rs.820. In Jharkhand and Chhattisgarh 40% of the rural population had MPCE below Rs.840 and 50% had MPCE below Rs.940.

3.3.7 In Kerala and Punjab more than 50% of the rural population had MPCE above Rs.1950 and more than 30% had MPCE above Rs.2500.

3.3.8 More than 40% of the urban population of Bihar and Chhattisgarh had MPCE below Rs.1200, compared to less than 10% in Haryana, Maharashtra, Punjab and Kerala.

Table T5: Fractiles (5th percentile, 95th percentile and deciles) of the distribution of persons by MPCE (MMRP) for each sector, major States

*P_k (for k = 5, 10, 20, 30, ..., 80, 90, 95) is the kth percentile of the distribution of persons by MPCE, that is, the MPCE level below which k% of the population lie.

Based on Schedule Type 2.

3.4 MPCE and household size

3.4.1 Table 1 of Appendix A gives estimates of adult and child (under 15) population in rural and urban India by sex and fractile class of MPCE. In Figures 2R and 2U, the distance between the upper and the lower lines shows the average number of adults per household (= average household size *minus* average number of children) across MPCE decile classes.

3.4.2 In both rural and urban areas, the average number of children declines steadily as MPCE level rises. Richer households, on the average, have fewer under-15 members. On the other hand, the average number of adults per household does not vary substantially with MPCE in either sector. As a result the graph of average household size with MPCE runs more or less parallel to that of the average number of children, and thus falls as MPCE level rises.

children: persons aged 14 or less

3.4.3 The difference in household size between poor and rich households has one important consequence. For any characteristic which is associated with affluence⁶ (for example, possession of motor car), the percentage of *persons* belonging to households possessing the characteristic is lower than the percentage of *households* possessing the characteristic, because such households are, on the average, smaller. Conversely, for any characteristic associated with poverty (for example, use of kerosene for lighting purposes), the percentage of *population* in households with the characteristic would be higher than the percentage of such *households*, because poorer households are, on the average, larger.

3.4.4 State-level averages of household size are shown in Table T4.

3.4.5 Statements 6 (R&U) and Statements 7 (R&U) on pages 72-75 give the proportion and average MPCE_{MMRP} of rural and urban households by size in each State/UT. Separate distributions of household size for each fractile class of population are given in Table 3 of Appendix A for MPCE_{URP}, MPCE_{MRP} and MPCE_{MMRP}.

3.5 Trends in level of consumption in monetary and real terms

3.5.1 Trends from MPCE_{URP} estimates

3.5.1.1 Table T6 below shows estimates of all-India average MPCE_{URP} from four quinquennial surveys of consumer expenditure including the 68th round survey. (URP estimates cannot be obtained from the 55th round quinquennial survey.) For rural India, real MPCE (measured using a price deflator with 1987-88 as base) is seen to have grown from Rs.159.89 in 1993-94 to Rs.220.51 in 2011-12 – an increase of about 38% over 18 years. In urban India there has been a substantially higher growth in real MPCE (obtained using a similar deflator with base 1987-88) – from Rs.264.76 in 1993-94 to Rs.400.54 in 2011-12 – an increase of 51% in the 18 year-period since 1993-94. Over the 7-year period since 2004-05, the growth in real rural MPCE has been about 26% and the growth in real urban MPCE about 29%.

Table T6: Growth in MPCE_{URP} at current and constant prices since 1993-94, all-India

characteristic	Year			
	1993-94	2004-05	2009-10	2011-12
MPCE: rural (Rs.): current prices	281.40	558.78	927.70	1278.94
Price deflator for rural sector*	176	319	494	580
MPCE: rural (Rs.) at 1987-88 prices	159.89	175.17	187.79	220.51
MPCE: urban (Rs.): current prices	458.04	1052.36	1785.81	2399.24
Price deflator for urban sector*	173	338	503	599
MPCE: urban (Rs.) at 1987-88 prices	264.76	311.35	355.03	400.54

* Price deflators for the years up to 2009-10 are taken from NSS Report No.538: Level and Pattern of Consumer Expenditure; they represent price indices for rural and urban India with base 1987-88=100. For 2011-12 indices have been computed as a continuation of this series, with the help of CPI-AL for the rural sector and CPI-IW for the urban sector.

⁶ or, correlated positively with MPCE

3.5.2 Trends from MPCE_{MRP} estimates

3.5.2.1 While Table T6 above gives estimates obtained by the URP method, a corresponding table of estimates of MPCE obtained by the MRP method at current and constant prices is shown below (Table T7). In terms of the MRP estimates, MPCE in rural India has grown from Rs.162.56 in 1993-94 to Rs.221.93 in 2011-12 – that is, by about 36.5% in 18 years. Urban MPCE has grown from Rs.268.38 in 1993-94 to Rs.413.53 in 2011-12 – a growth of 54% over the 18-year period since 1993-94. Over the 7-year period since 2004-05, the growth in real rural MPCE has been about 22% and the growth in real urban MPCE about 27%.

Table T7: Growth in MPCE_{MRP} at current and constant prices since 1993-94, all-India

characteristic	Year				
	1993-94	1999-2000	2004-05	2009-10	2011-12
MPCE: rural (Rs.): current prices	286.10	486.16	579.17	953.05	1287.17
Price deflator for rural sector*	176	271	319	494	580
MPCE: rural (Rs.) at 1987-88 prices	162.56	179.39	181.56	192.93	221.93
MPCE: urban (Rs.): current prices	464.30	854.92	1104.60	1856.01	2477.02
Price deflator for urban sector*	173	279	338	503	599
MPCE: urban (Rs.) at 1987-88 prices	268.38	306.42	326.80	368.99	413.53

*Price deflators for the years up to 2009-10 are taken from NSS Report No.538: Level and Pattern of Consumer Expenditure; they represent price indices for rural and urban India with base 1987-88=100. For 2011-12 indices have been computed as a continuation of this series, with the help of CPI-AL for the rural sector and CPI-IW for the urban sector.

3.6 Shares of various food and non-food groups in total expenditure

3.6.1 Table T8 gives the absolute and percentage break-up of all-India rural and urban MPCE in 2011-12 into 9 broad groups of food items and 11 broad groups of non-food items. A somewhat more detailed break-up, though not in percentage terms, using 14 food groups and 16 non-food groups, is available for all States and UTs in Statements 4 and 5 on pages 48-71. Separate break-ups for households in different fractile classes of MPCE_{URP}, MPCE_{MRP} and MPCE_{MMRP} are available in Tables 6A, 6B and 6C of Appendix A.

3.6.2 Table T8 shows that food accounted for about 53% of the value of the average *rural* Indian's household consumption during 2011-12. This included 10.8% for cereals and cereal substitutes, 8% for milk and milk products, and 6.6% on vegetables. Among non-food item categories, fuel for cooking and lighting accounted for 8%, clothing and footwear for 7%, medical expenses for 6.7%, conveyance and other consumer services for 4% each, and consumer durables for 4.5%.

3.6.3 For the average urban Indian, 42.6% of the value of household consumption was accounted for by food, including 6.7% by cereals and 7% by milk and its products.

3.6.4 While the share of most of the food item groups in total consumption expenditure was higher in rural India than in urban India, fruits and processed food were exceptions. For non-food item groups, the share was usually higher in urban India. The most noticeable rural-

urban differences were in case of cereals (urban share: 6.7%, rural share: 10.8%), rent (urban: 6.2%, rural share: 0.5%) and education (urban: 6.9%, rural: 3.5%). The share of pan, tobacco and intoxicants for the rural sector, though only about 3%, was double the share for the urban sector.

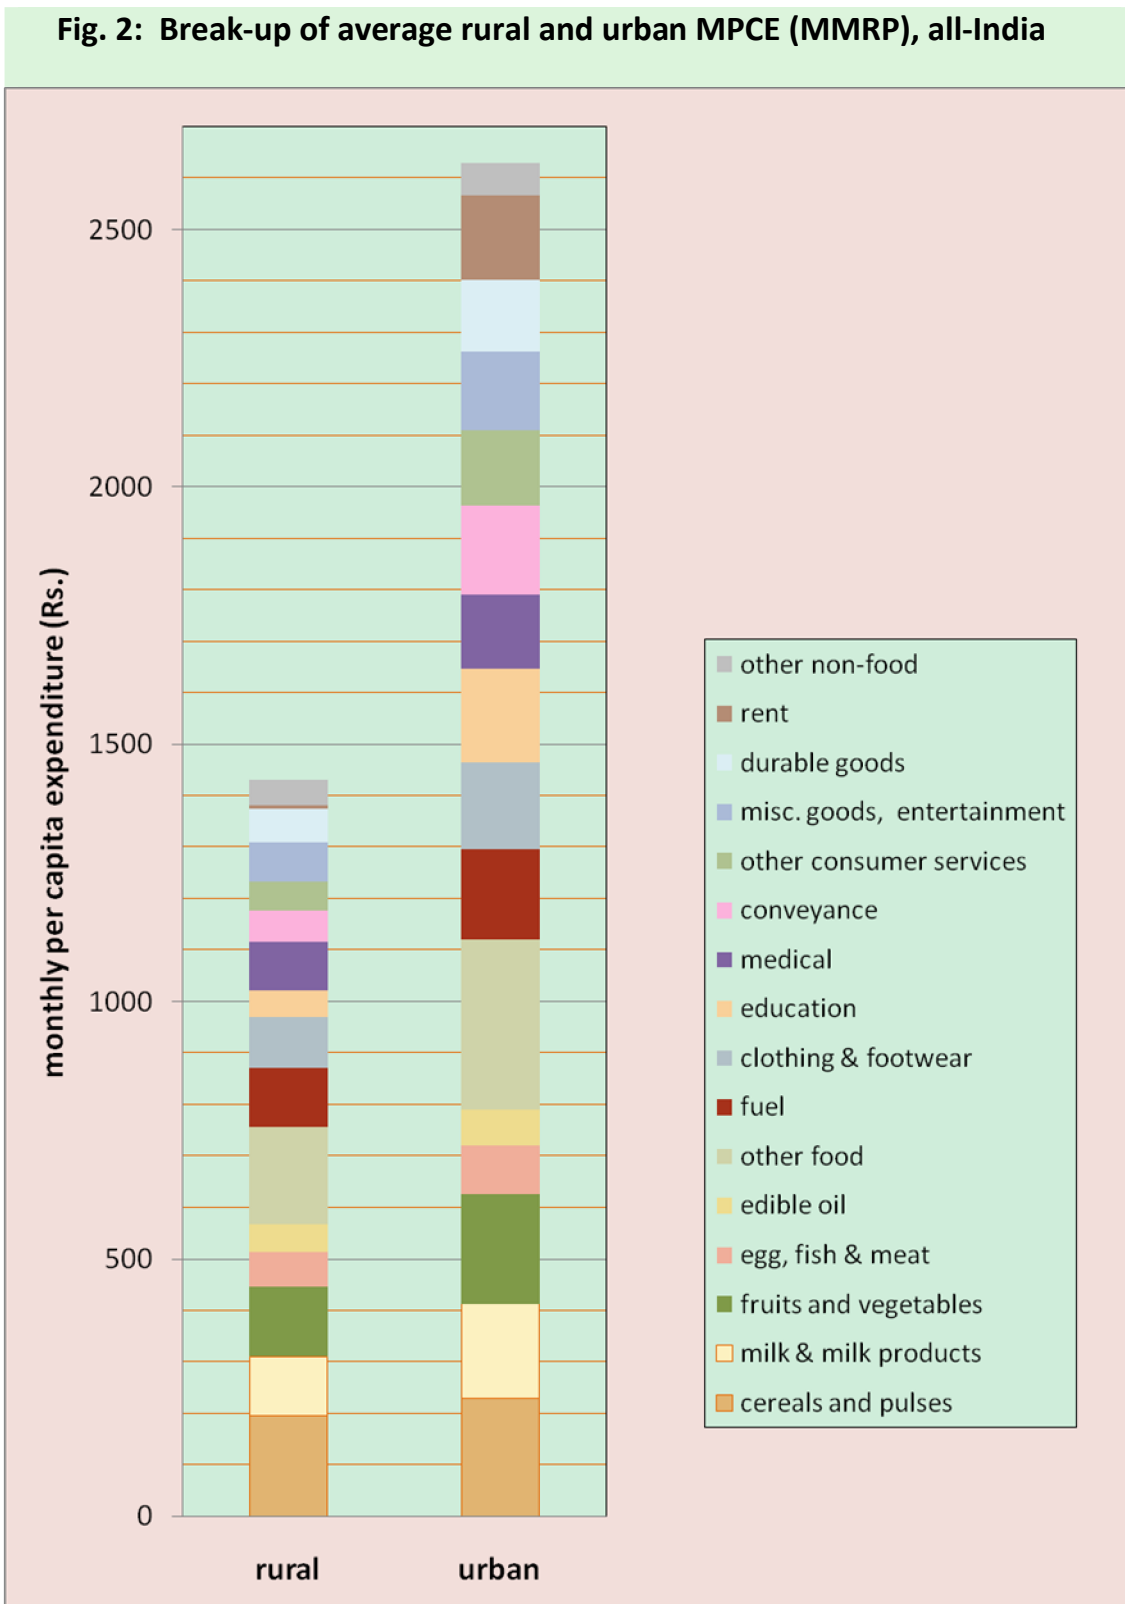

Table T8: Absolute and percentage break-up of MPCE_{MMRP} by item group in 2011-12: all-India, rural and urban

item group	monthly per capita exp. (Rs.)		percentage to total MPCE	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
cereals & cereal substitutes	154	175	10.8	6.7
pulses & their products*	42	54	2.9	2.0
milk & milk products	115	184	8.0	7.0
edible oil	53	70	3.7	2.7
egg, fish & meat	68	96	4.8	3.7
vegetables	95	122	6.6	4.6
fruits	41	90	2.8	3.4
sugar, salt and spices	76	94	5.3	3.6
beverages, refreshments, processed food [#]	113	236	7.9	9.0
food total	756	1121	52.9	42.6
pan, tobacco & intoxicants	46	42	3.2	1.6
fuel and light	114	176	8.0	6.7
clothing & footwear [§]	100	167	7.0	6.4
education	50	182	3.5	6.9
medical	95	146	6.7	5.5
conveyance	60	171	4.2	6.5
consumer services excl. conveyance	57	147	4.0	5.6
misc. goods, entertainment	76	152	5.3	5.8

taxes and cesses	4	22	0.2	0.8
durable goods	65	139	4.5	5.3
non-food total	673	1509	47.1	57.4
all items	1430	2630	100.0	100.0

*includes gram [#]includes purchased cooked meals [§]excludes tailoring charges

3.6.5 While drawing these conclusions from Table T8, the following aspects would need to be taken note of:

3.6.5.1 All averages are computed taking the *entire* estimated population in the denominator. This fact may be borne in mind, specially, for those items showing very low average expenditure, like 'rent' and 'taxes and cesses' in rural India. The actual number of consuming persons in the population is not considered here for any of the item groups. For some item groups such as cereals, consuming persons would mean nearly the entire population; for other items, such as tobacco, it would obviously be much smaller.

3.6.5.2 “Expenditure” on food includes the value of self-consumed home produce, calculated at ex farm prices. It also includes the value of food collected free, for example, from forests, imputed at prevailing local retail prices. “Expenditure” on fuel, likewise, includes the value of home-grown firewood, calculated at ex farm prices, and the value of firewood and other fuel collected free, imputed at local retail prices.

3.6.5.3 “Processed food” refers to purchased food items such as jam, pickles, etc., the quantities and values of the individual ingredients of which are not known well enough to be reported against the detailed items listed in the consumer expenditure schedule. All food processed at home is accounted against the ingredients. For example, a sweet prepared at home and consumed is accounted in the household’s (and the concerned State/UT’s) consumption of cereals, sugar, milk, etc., but not in its consumption of processed food.

3.6.5.4 Spending on tailor-made clothing does not include tailoring charges, which are included in “consumer services”.

3.6.5.5 “Education” includes expenditure on newspapers and periodicals, and on books of all kinds including fiction.

3.7 Proportions of households reporting specific items

3.7.1 For every group of consumption items, there are some households which report zero consumption during the reference period. Based on the numbers of such households, the proportion of households with non-zero consumption of the item group during the reference period may be estimated. Table 6A, 6B and 6C (R and U) in Appendix A give, inter alia, for each item group, the number of reporting households in the sample and the estimated proportion of households in the population with non-zero consumption of the item group during the reference period. For a few selected item groups, these estimates (from Table 6A, Appendix A) are shown in Table T9,⁷ along with the corresponding estimates for 2004-05 and 2009-10.

3.7.2 As mentioned in paragraph 3.6.5.1, estimates of per capita consumption are computed taking the entire population in the denominator. In case of items or item groups such as “egg, fish & meat”, “rent”, or “tobacco”, on which a large section of households incur no expenditure, it is also of interest to work out the average expenditure of households which are known to have incurred some expenditure on the item group.

⁷ Note that consumption of durable goods is taken to mean any payment made for durable goods during the reference period, and the same applies to consumption of education and medical care. Also, consumption of clothing and footwear is understood to mean the use of an article of clothing and footwear for the first time.

Table T9: Estimated percentages of households consuming selected items during last 30 days: all-India, rural and urban, 2004-05 to 2011-12

item group	percentage of households with non-zero consumption during last 30 days					
	rural			urban		
	2004-05	2009-10	2011-12	2004-05	2009-10	2011-12
(1)	(2)	(3)	(4)	(5)	(6)	(7)
cereals	98.6	98.5	98.8	95.1	93.4	93.2
milk & milk products	74.9	79.7	82.5	88.2	88.0	89.0

conveyance	74.3	80.4	86.4	82.9	87.3	90.7
rent	5.0	7.1	6.7	35.7	37.5	36.9
education	40.2	44.8	47.7	57.3	58.3	60.7
medical (non-inst.)	61.4	67.8	78.8	62.9	65.2	75.9
medical (institutional)	1.4	1.8	2.2	1.5	2.6	1.9
durable goods	24.8	35.1	43.9	25.6	30.8	36.6

3.7.3 In Table T10, which looks at only a few selected item groups, columns (2) and (3) give estimates of average consumption per household, which are computed according to the usual procedure. Thus households reporting zero consumption of an item group are included in the calculation of the average. In columns (4) and (5) of Table T10, estimates of *consumption per consuming household* are presented; that is, only households reporting positive consumption are included in computing the average. In each row of Table T10, the figures of consumption per household and *consumption per consuming household* differ by a factor which is equal to the relevant *percentage of consuming households in Table T9*.

Table T10: Consumption per household and per consuming household for selected item groups, all-India

item group	average value of consumption (Rs.) during 30 days			
	per household*		per household reporting consumption in last 30 days	
	R	U	R	U
(1)	(2)	(3)	(4)	(5)
egg, fish and meat	210	271	331	454
pan	20	19	73	101
tobacco	70	63	118	176
intoxicants	48	54	262	419
rent	29	676	433	1832

*average over all households in the population including those reporting zero consumption

3.8 Inter-State variation in food, cereal and non-cereal food expenditure

3.8.1 Details of inter-State differences in consumption pattern are available for all States and UTs in Statements 4 and 5 (pages 48-71) and, within each State/UT, *separately for each MPCE fractile class*, in Tables 6A, 6B and 6C (R & U) of Appendix A. Table T11 shows percentage share of cereals and of food as a whole in total expenditure for the major States.

3.8.2 Generally, States with a higher-than-average share of cereals in total expenditure were also States with a higher-than-average food share.

3.8.3 The share of food in total consumption expenditure of rural households varied from 43% for Kerala and 44% for Punjab to 59% in Bihar and 61% in Assam.

3.8.4 The share of food in consumption expenditure of urban sector households varied from 37% in Kerala and 39% in Haryana to 51% in Bihar.

3.8.5 At State level, the share of cereals in total expenditure in rural India varied from 5% in Kerala and Punjab to 17% in Jharkhand and Odisha. In urban India, the share varied less, from 4% in Haryana to 12% in Bihar.

Table T11: Percentage shares of cereals and all food in total consumer expenditure (MMRP) in 2011-12: major States, rural and urban

State	rural		urban	
	% share of cereals in total exp.	% share of food in total exp.	% share of cereals in total exp.	% share of food in total exp.
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	10	51	8	42
Assam	16	61	10	48
Bihar	15	59	12	51
Chhattisgarh	13	53	9	42
Gujarat	8	55	6	45
Haryana	6	52	4	39

India	115	184	68	96	95	122	41	90

3.9 Trends in pattern of consumption: all-India

3.9.1 Although the present report is focused on MMRP-based results, temporal trends in consumption pattern are examined in this section on the basis of URP-based estimates as MMRP estimates are not available for the quinquennial surveys prior to the 66th round survey.

3.9.2 Table T13 shows changes in percentage composition of MPCE_{URP} (or in aggregate consumer expenditure) as shown by the 5 quinquennial surveys beginning with 1993-94. The share of food is seen to have shrunk over the 18-year period since 1993-94 from 63.2% to 48.6% (a decline of about 23%) in the rural sector and from 54.7% to 38.5% (a decline of nearly 30%) in the urban sector. Over the 7-year period since 2004-05, the share of food has fallen by about 12% in rural India and about 9% in urban India.

3.9.3 Most food groups have suffered a decline in share over the 18-year period. The important exception to this is “beverages, etc.” for the rural sector. The decline is steepest for cereals, the share of which has halved for rural India and shrunk by 48% in urban India. Over the 7-year period since 2004-05, the share of cereals has fallen by about 33% in rural India and about 28% in urban India. More will be said about the decline in the share of cereals in Section 3.13. The share of sugar has halved for urban India and shrunk by 42% in rural India since 1993-94.

Table T13: Trends in percentage composition of consumer expenditure since 1993-94

item group	rural					urban				
	percentage share in total consumer expenditure in									
	1993-94	1999-2000	2004-05	2009-10	2011-12	1993-94	1999-2000	2004-05	2009-10	2011-12

non-food total	36.8	40.6	45.0	46.4	51.4	45.3	51.9	57.5	59.3	61.5
total expenditure	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

URP estimates shown except for 1999-2000, for which only MRP estimates are available.

3.9.4 The non-food groups have generally shown a rise in share over the 18-year period. The exception is “pan, tobacco and intoxicants,” which exhibits a distinct downward trend. The share of durable goods has more than doubled in rural India and grown by 90% in urban India. The share of the much larger category called “miscellaneous goods and services” (including rent, education and medical care) has risen, though not very steeply in recent years, to 26% in rural India and to nearly 40% in urban India.

3.9.5 The details of consumption by item group of food and non-food are given in Tables 6A, 6B and 6C of Appendix A for URP, MRP and MMRP respectively. Note that in these tables, estimates are given separately for each MPCE fractile class of households formed in each sector of each State/UT. Apart from this, Statement 4 (R&U) on pages 48-59 gives the absolute break-up of MPCE_{MMRP} for each State/UT (but not by fractile class) and Statement 5 (R&U) on pages 60-71 gives the percentage break-up.

3.10 Change in consumption pattern with increase in consumption level: all-India

3.10.1 So far the discussion on consumption pattern (shares of different commodity groups in total consumption) has been restricted to that of the entire population of the rural or urban sector of the country or a State. Variation in consumption pattern across households at different MPCE levels, nevertheless, is much more striking than inter-State variation in consumption pattern. A household in the top MPCE decile class in *any* State of India has a consumption pattern very different from that of a low-MPCE household in any State.

3.10.2 To simplify the study of inter-State variation in consumption pattern, one averages over households at different MPCE levels and loses sight of the variation due to MPCE level itself. In this section, it is the variation due to MPCE level that is highlighted. To make the depiction easier, inter-State variation is ignored here and only the all-India estimates are discussed.

3.10.3 For each of 13 item groups, the change in share of the item group in total consumption across 10 population classes – the lowest MPCE decile class to the highest – is shown graphically in Figures 3.1 to 3.13, separately for rural and urban India. The shares have been worked out from Table 6C (rural and urban) for all-India in Appendix A.

Cereals (including cereal substitutes): Figure 3.1 shows the budget share of cereals to decline steadily as MPCE level increases, from about 19% for the bottom decile class of rural India to about 5-6% for the top decile class, and from 15% for the bottom decile class of urban India to under 3% for the top decile class.

Pulses and pulse products: The share of pulses in total consumer expenditure in the bottom decile class is about 4% for both rural and urban India. The share then falls (Figure 3.2) as one moves to the higher classes, the fall being a little steeper for urban India.

Milk and milk products: That milk and its products are a luxury for the greater part of the rural population is shown by the steady rise (Fig. 3.3) in the share of rural consumer expenditure going to this item group with MPCE level from about 4% in the bottom decile class to 9.5% in the ninth decile class. For urban India, however, the share of milk and milk products flattens out at around 8-8.5% for the middle third of the population and then falls as MPCE increases further, the fall gaining momentum as the top decile class is reached.

Edible oil: The share of this group (Fig. 3.4) behaves in much the same way as the pulses group. The rural and urban graphs start at about 5% and then begin to fall, and the fall is a little steeper for the urban sector.

Vegetables: The share of this group (Fig. 3.5) behaves similarly to the cereals group, declining steadily for both sectors so that the rural and urban graphs run more or less parallel, and the rural graph stays above the urban throughout.

Beverages, refreshments and processed food: For the rural sector (Fig. 3.6) the share of this group rises, but by only about 1 percentage point (from about 7.5% to about 8.5%) from the lowest decile class to the highest. In the urban sector this rise is achieved at the eighth or ninth decile class, but a rise of another 2 percentage points takes place in the top decile class.⁸

⁸ This item group includes the cooked meals purchased by a household for its own consumption or that of guests. Households which served purchased meals to a large number of guests (say, at a ceremony or a party) during the last 7 days (and were placed in the top decile class as a consequence) would have a very large share of their MPCE going to this item group, in contrast to the general tendency for the share in MPCE of nearly every food group to fall as MPCE increases.

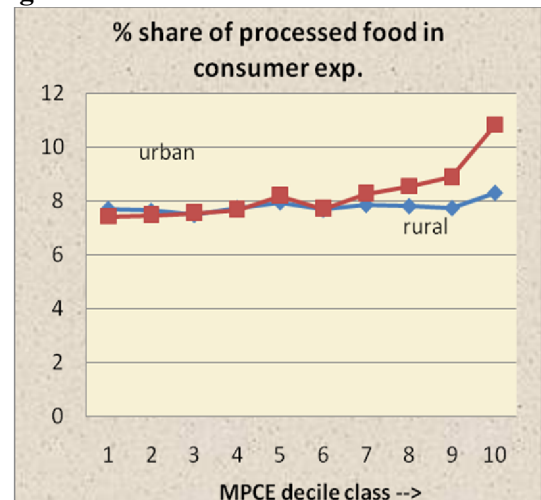

Fig. 3.7

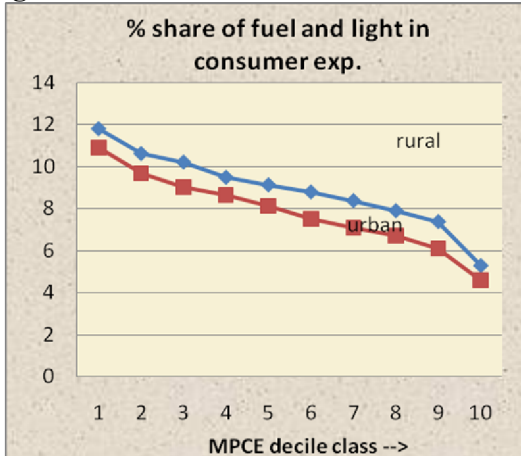

Fig. 3.8

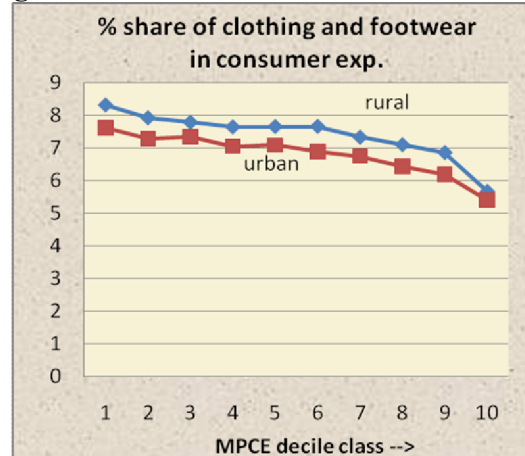

Fig. 3.9

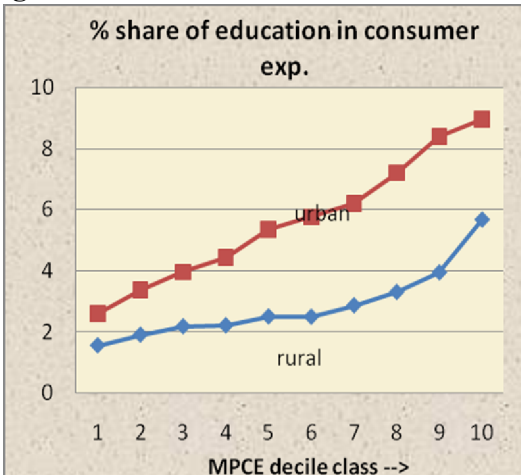

Fig. 3.10

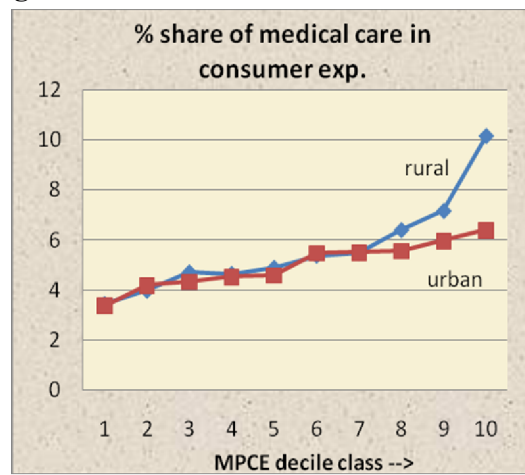

Fig. 3.11

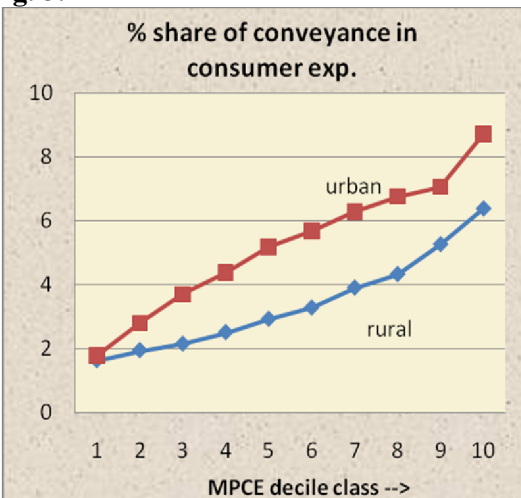

Fig. 3.12

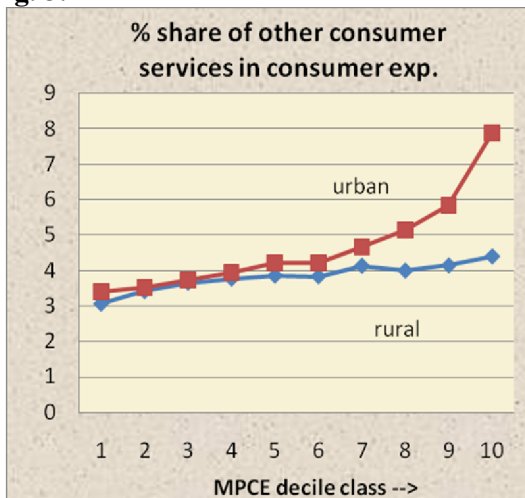

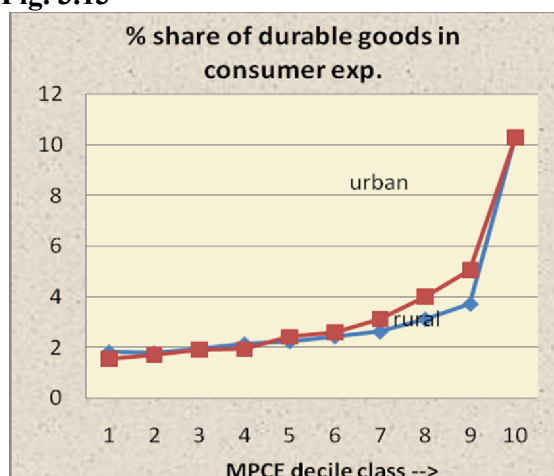

Fig. 3.13

Fuel and light: From about 12% in rural India and 11% in urban India, the share of this category falls (Fig. 3.7) at a steady rate with progress to higher MPCE classes, and at a steeper rate as the top decile class is reached, the rural share remaining a little above the urban share throughout.

Clothing and footwear: From over 8% for the bottom decile class in the rural sector and about 7½% in the urban sector, the share of this group (Fig. 3.8) falls very gradually as MPCE rises, the rural share remaining a little higher.

Education: The share of education (Fig. 3.9) rises steadily with MPCE class from 1.6% to 5.7% in rural India and from 2.6% to 9% in urban India. In rural India the rise is especially steep from the ninth to the top decile class.

Medical care: The rural and urban shares (Fig. 3.10) are very close up to the 7th decile class, after which the rural share rises at an appreciably faster rate to reach 10.2% in the top decile class compared to 6.4% for the urban sector. Medical expenditure, being contingency-based, does not increase very smoothly with MPCE, as the fluctuations in the graphs show.

Conveyance: The urban share (Fig. 3.11) increases at a decreasing rate till the 9th MPCE class. The rural-urban gap narrows at first, but then increases steeply from the 9th to the top decile class.

Other consumer services: The rural and urban graphs start at the same level but the urban graph breaks away as its rise becomes steeper, while the rise of the rural share remains very slow throughout.

Durable goods: The rural and urban graphs stay close together till the 6th decile class.⁹ In the next three classes the urban share is higher. But the rural share, which is only 3.7% in the 9th decile class, draws level with the urban share in the top decile class at 10.3%.

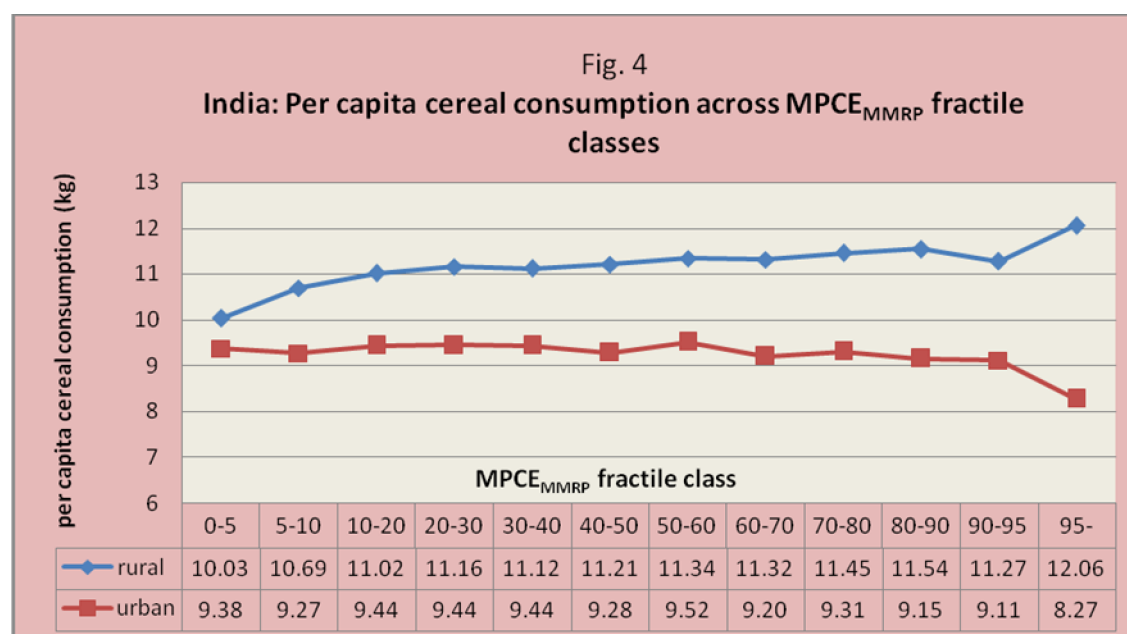

⁹ Rural households tend to spend a greater portion of their budget on repairs of dwelling unit, which is included in expenditure on durable goods.

3.11 Quantity of cereals consumed per person, 2011-12: all-India and States

3.11.1 For each State/UT and all-India, the variation of per capita consumption (in both quantity and value terms) with MPCE class of not only the cereal group as a whole but also for the separate categories “rice” (including rice products), “wheat” (including wheat products), etc., is shown in Table 4 (R&U) and Table 5 (R&U) of Appendix A.

3.11.2 The behaviour of cereal consumption as $MPCE_{MMRP}$ increases is shown for all-India in Fig 4. Numbers 1 to 12 are used to denote the $MPCE_{MMRP}$ fractile classes.

3.11.3 In rural India, average monthly per capita cereal consumption was around 10.0 kg for the poorest 10% of the population. It is seen to increase with MPCE, quickly at first, to reach 11.0 kg in the 10-20 class, and then more slowly, to reach 11.5 kg in the 80-90 class.¹⁰

3.11.4 In urban India, there is no clear pattern of variation of per capita cereal consumption with rise in MPCE. The second-from-bottom (5-10) class shows a lower per capita consumption than the poorest (0-5) class. Per capita consumption stays between 9.1 kg and 9.5 kg except in the top class (95-100) where it plummets to 8.27 kg.

3.11.5 Table T14 gives monthly per capita consumption of cereals in kilograms in the major States and the country as a whole, and the percentage shares of rice, wheat and the remaining cereals in total cereal consumption. (See Statements 8 (R&U) and 9 (R&U) on pages 72-75.)

¹⁰ Rural households which cooked and served meals to a large number of guests during ceremonies in the last 30 days are placed in the top fractile class because of their unusually high expenditure; as a result the cereal consumption of this class is noticeably high. When catering agencies are engaged (as in typical urban ceremonies) to serve meals, the consumption is accounted against “cooked meals” and not against “cereals”. So urban cereal consumption does not exhibit the same behaviour.

Further details of Statewise break-up of average cereal consumption per person, *separately for each MPCE fractile class*, are available in Tables 4 (R&U) and 5 (R&U) of Appendix A.

3.11.6 Average cereal consumption per person per month (taking persons of all ages including infants in the calculation) was 11.2 kg in rural India and 9.3 kg in urban India. From this it would appear that the average urban Indian's monthly cereal intake was about 1.9 kg less than that of the average rural Indian. But, as will be discussed later (paragraph 3.13.5), the cereal content of purchased processed food gets left out of the estimate of cereal consumption. Since the urban population consumes processed food to a greater extent than the rural, the difference in cereal consumption between the two may be less than it appears.

Table T14: Quantity of cereals consumed per person per month and percentage shares of rice and wheat in cereal consumption in 2011-12, major States

State	rural				urban			
	monthly per capita qty. of cereals consumed (kg)	% in total quantity of cereal consumed of			monthly per capita qty. of cereals consumed (kg)	% in total quantity of cereal consumed of		
		rice	wheat	other cereals		rice	wheat	other cereals
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)

Tamil Nadu	9.5	91	8	2	8.5	87	12	1
Uttar Pradesh	11.5	36	64	1	9.8	29	70	0
West Bengal	12.0	88	12	0	9.4	72	28	0
All-India	11.2	55	39	6	9.3	50	47	3

3.11.7 Rice and wheat together accounted for as much as 97% of all cereal consumption in urban areas, and for 94% in rural areas. In rural India, the share of cereals other than rice and wheat was 3% or less in all major States except Gujarat (32%), Karnataka (27%), Maharashtra (20%), Rajasthan (19%), and Madhya Pradesh (6%). In urban India cereals other than rice and wheat accounted for 3% or less of total cereal consumption in all but 3 major States – Karnataka (18%), Gujarat (9%) and Maharashtra (8%).

3.12 Trends in quantity of cereals consumed per person: all-India and States

3.12.1 It was noted in Section 3.9 that the share of cereals in total consumer expenditure has undergone a severe fall over the 18-year period since 1993-94. In the 7-year period since 2004-05, the share of cereals has fallen from 18% to 12% for rural India (a decline of 33%) and from 10.1% to 7.3% for urban India (a decline of 28%).

Table T15: Trend in share of cereals in value of consumption since 1993-94

sector	% share of cereals in total consumer expenditure in				
	1993-94	1999-2000	2004-05	2009-10	2011-12
rural	24.2	22.2	18.0	15.6	12.0
urban	14.0	12.4	10.1	9.1	7.3

Sch. Type 2 estimates for 2009-10 and 2011-12

3.12.2 The average amount of cereals consumed per person is known, from NSS estimates, to have been declining steadily over the past two or three decades. The question that naturally arises at this point, therefore, is: How much (if any) of the decline in share of cereals in value of total consumption is due to a fall in physical quantity of consumption per person?

Table T16: Trend in per capita consumption of cereals since 1993-94

sector	monthly per capita cereal consumption (kg) in				
	1993-94	1999-2000	2004-05	2009-10	2011-12
rural	13.4	12.72	12.12	11.35	11.23
urban	10.6	10.42	9.94	9.39	9.32

Sch. Type 2 estimates for 2009-10 and 2011-12

3.12.3 Table T16 shows the per capita physical consumption of cereals from 1993-94 onwards. It is seen that the decline in per capita quantity of cereals consumed since 2004-05 is of the order of 7% for the rural sector and 6% for the urban sector.

3.12.4 It follows that the fall in share of cereals in value of total consumption – or, to put it differently, the reason for the value of cereal consumption not increasing commensurately with the value of non-cereal consumption – is not to be found in the fall in quantity of cereal consumed per person. To investigate whether non-cereal consumption in real terms is rising faster than physical cereal consumption is, however, not within the scope of this report.

3.12.5 The decline in per capita cereal consumption of the Indian population in rural and urban areas of the major States over the 18 years prior to 2011-12 is shown in Table T17.

3.13 Trends in quantity of cereals consumed per person across MPCE fractile classes

3.13.1 Was the fall in consumption of cereals confined to the richer strata of the population? Table T18 shows that nearly every decile class of population in both rural and urban sectors experienced a steady decline in cereal consumption between 1993-94 and 2011-12¹¹.

¹¹ That is, leaving out of account the apparent rise in the consumption of cereals of some decile classes of the rural population since 2009-10.

Table T18: Changes in per capita cereal consumption in quantity terms since 1993-94 in different MPCE fractile classes: all-India

year	RURAL				
	monthly per capita cereal consumption (kg) in population percentile class				
	0-10	10-20	20-30	30-40	40-50

2009-10	9.52	9.45	9.35	9.23	8.57
2011-12	9.39	9.37	9.30	9.24	8.83

3.13.2 The overall fall in cereal consumption appears to be a phenomenon similar to the slowing down of increase in cereal consumption as MPCE increases, with improvement in economic condition failing to increase cereal consumption beyond a certain point. Among the partial explanations that may be put forward for the decline in cereal consumption are:

- Eating out has increased. (Cereal content of meals taken outside at own cost or at public cost is hardly known.)
- Calorie needs may be declining because labour-saving devices are becoming increasingly available in the household, in the workplace, and in transportation.

3.13.3 It is important to remember in this context that cooked meals purchased from the market, and preparations containing both cereal and non-cereal items similarly purchased, are, by convention, all accounted in the “beverages, refreshments and processed food” group.

The cereal content of such consumption, unfortunately, cannot be separated out and added to the estimate of cereal consumption to ascertain whether per capita consumption of cereals is in fact falling or not, nor the true extent of the fall measured with accuracy.

3.14 Inequality in distribution of MPCE: all-India and States

3.14.1 *Trends in inequality:* Comparison of the URP Lorenz ratios from the present survey with URP Lorenz ratios from the 61st round survey (2004-05)¹² shows an increase from 0.297 to 0.307 for the *rural* sector and from 0.373 to 0.385 for the *urban* sector of the country.

3.14.2 Table T19 gives the share of each all-India rural and urban fractile class in total consumer expenditure, as measured by the three methods URP, MRP and MMRP. Lorenz curves for the distribution based on MRP data are shown on page 41.

Table T19: Percentage share of consumption in different fractile classes of MPCE

fractile class of MPCE	% share of consumption					
	Rural			Urban		
	URP	MRP	MMRP	URP	MRP	MMRP
(1)	(2)	(3)	(4)	(5)	(6)	(7)
0-5	1.7	1.9	1.8	1.3	1.3	1.3
5-10	2.2	2.3	2.3	1.7	1.7	1.7
10-20	5.2	5.4	5.5	4.1	4.2	4.3
20-30	6.1	6.3	6.3	5.0	5.1	5.2
30-40	6.8	7.1	7.1	5.8	6.0	6.2
40-50	7.6	7.9	7.9	6.8	7.0	7.2
50-60	8.6	8.9	8.9	8.0	8.1	8.3
60-70	9.8	10.0	10.0	9.4	9.6	9.7
70-80	11.4	11.6	11.5	11.4	11.6	11.6
80-90	14.0	14.2	14.0	14.8	15.1	14.8
90-95	9.0	9.1	8.9	10.4	10.6	10.2
95-100	17.7	15.4	15.7	21.4	19.6	19.5

3.14.3 *Choice of MPCE measure and value of Lorenz Ratio:* For both rural and urban India, the estimated URP distribution of MPCE has the highest Lorenz ratio, followed by the MRP distribution, and then by the MMRP distribution. (See also Statement 1, page 43.)

Table T20: Lorenz ratios of URP, MRP and MMRP distributions of MPCE, all-India

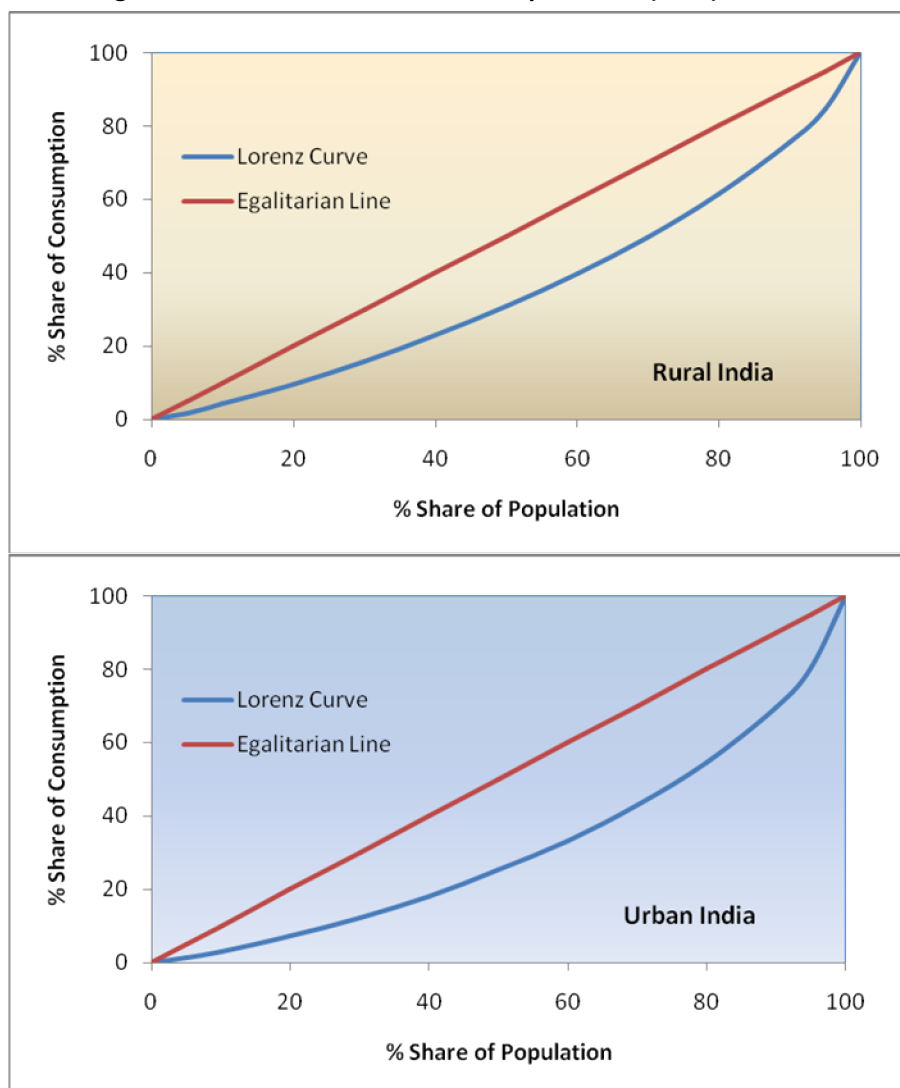

sector	Lorenz ratio of distribution of MPCE		
	URP	MRP	MMRP
	(2)	(3)	(4)
rural	0.307	0.284	0.283
urban	0.385	0.372	0.363

3.14.4 *Within-State inequality:* Lorenz ratios of the distributions of $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$ have been computed for the rural and urban sectors of each State/UT and appear in Statement 1 on page 43. Table T21 on page 42 shows Lorenz ratios (LRs) of the rural and urban $MPCE_{MMRP}$ distributions for selected States. For purposes of comparison of inequality

¹² See NSS Report No.508: *Level and Pattern of Consumer Expenditure, 2004-05, p.45.*

with level of living, the rank of the State (among the 27 States listed) by sectoral average $MPCE_{MMRP}$ is shown alongside.

Fig. 7: Lorenz Curves for Consumer Expenditure (MRP), 2011-12

3.14.5 The State-sector-level LRs range from 0.19 to 0.36 in the rural sector and from 0.21 to 0.41 in the urban sector.

3.14.6 For rural India, the Lorenz ratios for Meghalaya, Nagaland, Sikkim, Manipur and Tripura are among the seven lowest Lorenz ratios. For urban India, the Lorenz ratios for four North-Eastern States – Manipur, Meghalaya, Nagaland and Mizoram – are the four lowest Lorenz ratios.

3.14.7 The 7 States for which inequality in the rural sector is highest include 5 of the top 6 States ranked by MPCE. In the urban sector the two States for which inequality is highest are also the top 2 States ranked by MPCE.

Table T21: Lorenz ratio of State-level MPCE_{MMRP} distribution and rank of State by average MPCE_{MMRP}*

Rural sector			Urban sector		
State	Lorenz ratio of MPCE _{MMRP} distn.	Rank by average MPCE _{MMRP} (highest=1)	State	Lorenz ratio of MPCE _{MMRP} distn.	Rank by average MPCE _{MMRP} (highest=1)

Appendix A (all-India only)*

Detailed Tables

*State/UT and all-India tables in enclosed CD

Notes on Tables

- Measurement of household MPCE is done by three different methods: URP, MRP and MMRP. The methods differ in reference periods used for collection of consumption data for different categories of consumption items. The MPCE estimates based on the 3 different methods are not comparable. Since the tables have all been generated by fractile group of MPCE, separate tables have been generated for $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$.
- Estimates in Tables 3A and 3B for “all classes” of MPCE are based on the same data and are identical. But the estimates in any particular fractile class of MPCE in these two tables are based on sets of households that may not be identical. Hence the estimates for individual fractile classes of MPCE are expected to be different in Tables 3A and 3B. The same holds for Tables 4A and 4B, and 5A and 5B.
- In Tables 6A, 6B and 6C, the last two columns (cols. 15 & 16) give estimated proportion (no. per 1000) of households reporting consumption, and number of sample households reporting consumption of each item, *during the reference period used for data collection*. The length of the reference period used for data collection, however, was not the same for all items. The different reference periods used are given below and should be referred to while using the estimates given in columns 15 & 16.

Item category	Length of reference period for		
	Table 6A	Table 6B	Table 6C
Clothing, bedding, footwear, education, medical (institutional), durable goods	30 days	365 days	365 days
Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	30 days	30 days	7 days
All other food; fuel and light; rents and taxes; all other non-food including non-institutional medical	30 days	30 days	30 days

Table 1A: Estimated number of households and persons by sex, and average MPCE for each fractile class of MPCE_{URP}

fractile class of MPCE (URP)	estimated no. (00)						sex ratio	average MPCE _{URP} (Rs)	sample house-holds	sample persons
	house-holds	adults		children		persons				
		male	female	male	female

Appendix B

Sample Design and Estimation Procedure

Sample Design and Estimation Procedure

1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its 68th round during the period July 2011 - June 2012. The subjects covered were 'Household Consumer Expenditure' and 'Employment and Unemployment'. The last survey on these subjects was conducted in the 66th round of NSS (2009-10) which was the eighth survey in the quinquennial series of surveys on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The 68th round survey was similar to the quinquennial series as far as subjects of enquiry, design, questionnaires and sample sizes were concerned.

2. Outline of survey programme

2.1 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five km of any bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

2.2 **Period of survey and work programme:** The period of survey was of one year duration starting on 1st July 2011 and ending on 30th June 2012. The survey period was divided into four sub-rounds of three months' duration each as follows:

sub-round 1	:	July - Sept 2011
sub-round 2	:	Oct - Dec 2011
sub-round 3	:	Jan - March 2012
sub-round 4	:	April - June 2012

To ensure uniform spread of sample FSUs over the entire survey period, equal numbers of sample villages/ blocks (FSUs) were allotted for survey in each of these four sub-rounds, and attempts were made to survey each FSU during the sub-round to which it was allotted. However, because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

2.3 **Schedules of enquiry:** The following schedules of enquiry were canvassed:

Schedule 0.0	:	List of households
Schedule 1.0	:	Consumer expenditure
Schedule 10	:	Employment and unemployment

Two versions of Schedule 1.0, using different reference period systems, and called Schedule Type 1 and Schedule Type 2, were canvassed in this round in roughly equal numbers of sample households.

2.4 Participation of States: In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli, and Lakshadweep participated. The ratio of the size of the State sample (the sample in the survey conducted by the State/UT) to the Central sample size varied across States/UTs as follows:

Nagaland (U)	: triple
Andhra Pradesh, J & K , Manipur , Delhi	: double
Maharashtra (U) & Kerala	: one and a half
Gujarat	: half
Remaining States/ UTs	: equal

3. Sample Design

3.1 Outline of sample design: A stratified multi-stage design was adopted for the 68th round survey. The first stage units (FSU) were the 2001 Population Census villages (*panchayat* wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In both sectors the ultimate stage units were households. When a large FSU was selected, there was an intermediate stage of sampling: the FSU was partitioned into a suitable number of hamlet-groups/ sub-blocks and two of these were selected to provide the households which would form the sampling frame for ultimate-stage sample selection.

3.2 Sampling frame for first-stage units: For the rural sector, the list of 2001 Census villages (henceforth the term ‘village’ will mean *panchayat* wards in case of Kerala) constituted the sampling frame. For the urban sector, the list of UFS blocks (UFS 2007-12) was the sampling frame.

3.3 Stratification: Within each district of a State/UT, generally speaking, two basic strata were formed: i) a rural stratum comprising all rural areas of the district and (ii) an urban stratum comprising all urban areas of the district. If, however, within the urban areas of a district, there were million-plus cities (towns with population 10 lakhs or more as per Population Census 2001), each such city formed a separate basic urban stratum and the remaining urban area of the district, another basic urban stratum.

3.4 Sub-stratification:

Rural sector r: If ‘r’ was the sample size allocated for a rural stratum, the number of sub-strata formed was ‘r/4’. The villages within a district as per frame were first arranged in ascending order of population. Then cut-off points were marked off in this list demarcating sub-strata 1 to ‘r/4’ in such a way that each sub-stratum comprised a group of villages of the arranged frame and had more or less the same population.

Urban sector: If 'u' was the sample size for an urban stratum, the number of sub-strata formed was 'u/4'. If u/4 was more than 1, formation of 2 or more sub-strata was required. This was done by first arranging the towns in ascending order of number of households in the town as per UFS phase 2007-12 and then arranging the IV units of each town and the blocks within each IV unit in ascending order of their numbers. From this arranged frame of UFS blocks of all the towns/million-plus cities of a stratum, 'u/4' sub-strata were formed in such a way that each sub-stratum had more or less the same number of households as per UFS 2007-12.

3.5 Total sample size (FSUs): 12784 FSUs were allocated for the Central sample at all-India level and 14772 FSUs for the State sample.

3.6 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 as far as possible given the resource availability in terms of number of field investigators, subject to a minimum sample allocation to each State/UT.

3.7 Allocation of State/UT level sample to rural and urban sectors: State/UT-level sample size was allocated between rural and urban sectors in proportion to population as per Census 2001 with double weightage to the urban sector. However, if such weighted allocation resulted in too large a sample size for the urban sector, the allocation for bigger states like Maharashtra, Tamil Nadu, etc. was restricted to that of the rural sector. A minimum of 16 FSUs (minimum 8 each for rural and urban sector separately) was allocated to each State/UT.

3.8 Allocation to strata and sub-strata: Within each sector of a State/UT, the sample size was allocated to the different strata/sub-strata in proportion to the population as per Census 2001. Allocations at stratum level were adjusted to multiples of 4 with a minimum sample size of 4. Allocation for each sub-stratum was 4. Equal numbers of sample FSUs were allotted to the four sub-rounds.

3.9 Selection of FSUs

3.9.1 For the rural sector, from each sub-stratum, sample villages were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population of the village as per Census 2001.

3.9.2 For the urban sector, UFS 2007-12 phase was used for all towns and cities and FSUs were selected from each sub-stratum by Simple Random Sampling Without Replacement (SRSWOR).

3.9.3 Both rural and urban samples were drawn in the form of two independent sub-samples and equal sample sizes were allocated to the four sub-rounds.

3.10 Selection of hamlet-groups/sub-blocks

3.10.1 **Number of hamlet-groups/ sub-blocks formed:** After identification of the boundaries of the FSU, it was first determined whether listing was to be done in the whole sample FSU or not. In case the population of the selected FSU was found to be 1200 or more, it was divided into a suitable number (say, D) of parts of more or less equal population – the parts being called ‘hamlet-groups’ in the rural sector and ‘sub-blocks’ in the urban sector. D was determined as the table below shows.

approx. present population of the sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 1200	1*
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
...and so on	

*no hamlet-groups/sub-blocks formed

3.10.2 For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for 4 districts: Dehradun (P), Nainital (P), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approx. present population of the sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 600	1*
600 to 899	3
900 to 1199	4
1200 to 1499	5
...and so on	

*no hamlet-groups/sub-blocks formed

3.10.3 Selection of hamlet-groups/ sub-blocks to form the frame for sampling of households:

Once a large FSU had been divided into the required number of sub-FSUs (hamlet-groups or sub-blocks), two of these sub-FSUs were selected in the following manner – the one with the largest population was purposively selected, and another was randomly selected from the remaining sub-FSUs by Simple Random Sampling (SRS). Listing and selection of the households was done independently in the two selected sub-FSUs.

3.11 Formation of second-stage strata and allocation of households

3.11.1 In each selected village, some households were identified as affluent on the basis of a number of criteria such as possession of certain durables or assets. If there were more than 10 such

households, the 10 most affluent of these were identified as the ‘relatively affluent households’ of the village.

3.11.2 For urban areas, two cut-off points ‘A’ and ‘B’ (in Rs.) were determined for each NSS state-region in such a way that the top 10% of the population had MPCE more than ‘B’ and bottom 30% of the population had MPCE less than ‘A’ in 2009-10, as estimated by the NSS 66th round survey.

3.11.3 Households listed in the selected FSU/sub-FSU were stratified into three second-stage strata (SSS). Composition of the SSS and number of households planned to be surveyed from different SSS were as follows:

SSS	composition of SSS	number of households surveyed for Sch.1.0, Type 1/ Type 2	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
Rural			
SSS 1:	relatively affluent households	2	1
SSS 2:	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	2	1
Urban			
SSS 1:	households having MPCE of top 10% of urban population (MPCE > B)	2	1
SSS 2:	households having MPCE of middle 60% of urban population ($A \leq MPCE \leq B$)	4	2
SSS 3:	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1

3.12 **Selection of households:** From each SSS, the sample households were selected by Simple Random Sampling Without Replacement.

4. Estimation Procedure

4.1 Notations

s = subscript for stratum

t = subscript for sub-stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU [village (*panchayat* ward)/ block]

d = subscript for hamlet-group/ sub-block (d = 1, 2)

j = subscript for second-stage stratum in an FSU/ sub-FSU [j = 1, 2 or 3]

k = subscript for sample household in a particular second-stage stratum within an FSU/ sub-FSU

D = total number of sub-FSUs (hg's/ sb's) formed in the sample FSU

$D^* = 0$ if $D = 1$

= (D – 1) for FSUs with $D > 1$

N = total number of FSUs in an urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes of all the FSUs of the sub-stratum)

z = size of sample village used for selection

n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and sub-stratum

H = total number of households listed in a second-stage stratum of an FSU/ sub-FSU

h = number of households surveyed in a second-stage stratum of an FSU/ sub-FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in the following paragraphs when they are obvious.

4.2 Formulae for estimation of aggregates for a particular sub-sample and stratum × sub-stratum

4.2.1 Rural

(i) For j-th second stage stratum of a stratum × sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) is obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

4.2.2 Urban

(i) For j-th second stage stratum of a stratum \times sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) is obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

4.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

4.4 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

4.5 Estimates of Ratios

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

4.6 Estimates of Error

The estimated variances of the above estimates are as follows:

4.6.1 For aggregate \hat{Y} :

$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$ where $V\hat{a}r(\hat{Y}_s)$ is given by

$V\hat{a}r(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$, where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

4.6.2 For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R} (\hat{Y}_{st1} - \hat{Y}_{st2}) (\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

4.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

5. Multipliers

The formulae for multipliers at stratum/ sub-stratum/ second-stage stratum level for a sub-sample and schedule type are given below:

sector	multiplier	
	hg/sb 1	hg/sb 2
Urban	$\frac{N_s}{n_{sm}}$	$\frac{N_s}{n_{sm}} D_{smi}^*$
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$

(j = 1, 2, 3)

Note:

- (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.
- (ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic, $D_{stmi}^* = 0$ in the relevant multipliers and there is only one multiplier for the village.

Appendix C

Schedule 1.0 (Type 1 and Type 2)
