

*Report No. 508(61/1.0/1)*

# **Level and Pattern of Consumer Expenditure, 2004-05**

**NSS 61<sup>st</sup> Round  
(July 2004 - June 2005)**

**National Sample Survey Organisation  
Ministry of Statistics and Programme Implementation  
Government of India**

**December 2006**

## Preface

Data on household consumer expenditure are being collected every year by the National Sample Survey Organisation (NSSO) as part of its regular rounds, each round normally of a year's duration and including two or three subjects of survey such as household consumer expenditure, land and livestock holdings, etc. Data are collected by the household interview method from a randomly selected sample of households spread over all States and Union Territories of India.

While every round of NSS nowadays includes a consumer expenditure survey, the 61<sup>st</sup> round survey (July 2004 - June 2005), on which this report is based, belongs to the quinquennial series of consumer expenditure surveys, started in the 27<sup>th</sup> round of NSS (1972-73), and covering a larger-than-usual sample of households. The 61<sup>st</sup> round survey of consumer expenditure is the seventh survey of the quinquennial series.

This report is based on the Central sample, from which data were collected by NSSO officials, as opposed to the State sample, where officials of the State Government carried out the survey. For the Central sample, data were collected from 124,644 households spread over 7999 villages and 4602 urban blocks.

This report is the first of a series of seven reports to be brought out from the data collected through the survey. It presents data on both level of consumption – measured by the sum of monetary values of goods and services consumed by households during a reference period of 30 days – and pattern of consumption, reflected in the composition of total consumption by commodity group. As is the practice in NSS surveys, not only average levels of consumption but also the distribution of households and persons over different ranges of consumption level are presented, separately for rural and urban areas of each State and Union Territory of the country. Such distributions allow studies of inequality and poverty in different regions of the country, and are used in estimating the number of persons below the poverty line.

Chapter One of the report serves as the introduction. Chapter Two explains the concepts and definitions used in the survey. Chapter Three gives the main findings of the survey. Chapter Four discusses the effect on the estimates of using different reference periods – “last 30 days” and “last 365 days” – to collect data on groups of less frequently purchased items such as clothing and durables, with reference to the 61<sup>st</sup> round survey of consumer expenditure as well as the 50<sup>th</sup> round survey, conducted in 1993-94. Detailed tables at the State/UT and all-India level are given in Appendix A, while the sample design and the estimation procedure are explained in Appendix B. A facsimile of the schedule used for data collection is given as Appendix C.

Development of sampling design and survey instruments, and preparation of the report, was undertaken by the Survey Design and Research Division of the NSSO. The field work was handled by the Field Operations Division and the data processing and table generation by the Data Processing Division. The Coordination and Publication Division was responsible for overall coordination. The Chairman and Members of the Governing Council of NSSO, along with the Chairman and Members of the Working Group set up for this round, provided the technical directions and guidance at every stage of the survey. I am grateful to all of them.

The report, I hope, will be useful to planners, policy makers and researchers. Comments and suggestions are most welcome.

New Delhi  
December 2006

Vishnu Kumar  
Director General & Chief Executive Officer  
National Sample Survey Organisation

# Highlights

---

*A sample of 79298 rural households and 45346 urban households spread over the entire country was surveyed in the Consumer Expenditure Survey of the 61<sup>st</sup> round of NSS (the seventh of the quinquennial series), carried out in 2004-05.*

## LEVEL OF CONSUMPTION IN 2004-05

- The survey estimated that in 2004-05, 5% of the Indian **rural** population belonged to households with monthly per capita consumer expenditure (MPCE) in the range “Rs.0-235”, that is, spending less than Rs.8 per person per day on consumption.
- Another 5% of the Indian **rural** population belonged to households with monthly per capita expenditure in the range “Rs.235-270”, that is, spending about Rs.8-9 per person per day on consumption.
- The poorest 5% of the **urban** population of India (ranked by per capita spending levels) in 2004-05 belonged to households with monthly consumer expenditure per person in the range “Rs.0-335”, that is, spending less than Rs.11 per person per day on consumption.
- Another 5% of the Indian **urban** population belonged to households with monthly per capita expenditure in the range “Rs.335-395”, that is, spending about Rs.11-13 per person per day on consumption.
- Average monthly per capita consumer expenditure (average MPCE) in 2004-05 was Rs.559 in rural India and Rs.1052 in urban India at 2004-05 prices.
- About 5% of the **rural** population of India in 2004-05 had MPCE of Rs.1155 or more. Another 5% had MPCE between Rs.890 and Rs.1155.
- About 5% of the **urban** population of India in 2004-05 had MPCE of Rs.2540 or more. Another 5% had MPCE between Rs.1880 and Rs.2540.
- The Lorenz ratio for total consumer expenditure, indicating concentration in total consumption expenditure among the population, was 0.30 for rural India and 0.35 for urban India in 2004-05. In case of expenditure on cereals, for which the range of variation among the population is narrower, the specific concentration ratio was 0.08 for both rural and urban India.

## BROAD PATTERN OF CONSUMPTION IN 2004-05

- Out of every rupee spent in 2004-05 by the average **rural** Indian on consumption, 55 paise was spent on food. Of this, 18 paise was spent on cereals and cereal substitutes, 8 paise on milk and milk products, 6 paise on vegetables, 5 paise on edible oil, 5 paise on sugar, salt and spices, and 5 paise on beverages, refreshments and processed food.
- Out of every rupee spent in 2004-05 by the average **urban** Indian on consumption, 43 paise was spent on food. Of this, 10 paise was spent on cereals and cereal substitutes, 8 paise on milk and milk products, 6 paise on beverages, refreshments and processed food, and 4 paise on vegetables.

- In both rural and urban India, fuel and light took up 10% of total consumer expenditure while clothing, bedding and footwear took up 5%.
- Medical expenses formed 7% of total consumer expenditure in rural India and 5% in urban India.
- Educational expenses formed 3% of total consumer expenditure in rural India and 5% in urban India.
- Conveyance expenses formed 4% of total consumer expenditure in rural India and 7% in urban India.

#### CEREAL CONSUMPTION IN 2004-05

- Average quantity of cereals consumed per person per month in 2004-05 was 12.1 kg in rural areas and 9.9 kg in urban areas.
- Average value of cereals consumed per person per month was Rs.101 in rural India and Rs.106 in urban India.
- In **rural** areas of Haryana and Punjab, expenditure on cereals in 2004-05 formed only 9% of total consumer expenditure. But in **rural** areas of West Bengal and Assam cereals contributed 23% or more to total consumer expenditure, and in **rural** areas of Orissa, Chhattisgarh, Jharkhand and Bihar, they formed 27-28% of consumer expenditure.
- In **urban** areas of Punjab and Haryana cereals took up 6-7% of the household (consumption) budget in 2004-05; in **urban** areas of Bihar and Orissa they took up 17%.

#### TRENDS IN CONSUMPTION

- Between 1972-73 and 2004-05, the share of food in total consumer expenditure has fallen from 73% to 55% in rural areas and from 64% to 42% in urban areas.
- The share of cereals has fallen from 41% of consumer expenditure to 18% in rural India and from 23% to 10% in urban India over the same period.
- The share of fuel and light in total consumer expenditure has risen from under 6% to 10% in both rural and urban areas between 1972-73 and 2004-05.
- The share of clothing in total consumer expenditure over the last three decades has fallen from 7-8% to 4.5% in rural India and from 5-7% to 4% in urban India.
- Quantity of cereals consumed per person per month has declined between 1993-94 and 2004-05, that is, in the decade preceding the survey, from 13.4 kg to 12.1 kg in rural India and from 10.6 kg to 9.9 kg in urban India.

## Appendix A: Detailed Tables

*Note: All tables are given separately for each State/UT except Table 6.*

*Table 1R and 1U*

Per 1000 break-up of households and persons by MPCE class and number per 1000 households of adults and children by sex in different MPCE classes A-1 – A-24

*Table 2R and 2U*

State/UT-wise per 1000 break-up of households by size for each MPCE class A-25 – A-60

*Table 3R and 3U*

Average quantity (kg) of consumption of cereals and pulses per person for a period of 30 days for each MPCE class, by State/UT A-61 – A-132

*Table 4R and 4U*

Average value (Rs) of consumption of cereals and pulses per person for a period of 30 days for each MPCE class, by State/UT A-133 – A-204

*Table 5R and 5U*

Value of consumption (Rs) of broad groups of food and non-food items per person for a period of 30 days for each MPCE class (a) using a reference period of 30 days for all items (b) using a reference period of 365 days for clothing & bedding, footwear, education, medical (institutional) and durable goods only A-205 – A-276

*Table 6R and 6U*

Per 1000 break-up of households by adjusted MPCE class (based on 365 days' data for clothing, footwear, education, medical (institutional) and durable goods) for each MPCE class (based on 30 days' data for all items) A-277 – A-278

# Chapter One

## Introduction

1.0.1 This is a report on household consumer expenditure in India based on a nationwide sample survey of the National Sample Survey Organisation.

1.0.2 The NSSO conducts regular consumer expenditure surveys as part of its “rounds”, each round normally of a year’s duration and covering more than one subject of study. The surveys are conducted through household interviews, using a random sample of households covering practically the entire geographical area of the country. The present report is based on data collected through the 61<sup>st</sup> round of NSS (July 2004-June 2005). This is the first report of the consumer expenditure survey of that round.

1.0.3 The last NSS report<sup>1</sup> on consumer expenditure related to Jan-June 2004 and was based on the 60<sup>th</sup> round survey, conducted during that period.

1.0.4 Compared to that report, the present report

- (a) relates to a later period;
- (b) is based on a full year’s survey and not a 6-month survey;
- (c) is part of the “quinquennial series” of larger-than-usual-scale surveys on consumer expenditure conducted every 5 years or so, the preceding one having been conducted in 1999-2000 (note that nowadays every round of NSS includes a survey on consumer expenditure);
- (d) does not cover all the data on living conditions collected in the consumer expenditure survey, as some are to be brought out in subsequent reports (in all seven reports are to be based on the 61<sup>st</sup> round consumer expenditure survey, compared to only one report for the 60<sup>th</sup> round survey); and
- (e) gives much more detailed results at State/UT level in the sense that separate estimates of consumption are given for households belonging to 12 different expenditure classes – in the last report this was done only for the all-India results.

1.0.5 The basic data released through the present report are:

- (i) State/UT and all-India level size distributions of households and persons grouped over different ranges of **Monthly Per Capita household consumer Expenditure** (or different “**MPCE**” classes), separately for rural and urban areas;
- (ii) Average monthly per capita consumer expenditure (average MPCE) for each State/UT and all-India;
- (iii) Break-up of average MPCE over a number of commodity groups (14 food groups and 18 non-food groups) for each State/UT and all-India;
- (iv) Quantity and value of per capita consumption of different cereals and pulses for each State/UT and all-India;

---

<sup>1</sup> NSS Report No.505: *Household Consumer Expenditure in India*

- (v) Alternative estimates of per capita consumption expenditure on certain groups of relatively infrequently purchased commodities based on different reference periods for data collection.

1.0.6 All the data are provided separately for rural and urban sectors. In case estimates of per capita consumption are required for rural and urban combined (for a State/UT or all-India), the two estimates for rural and urban sectors will have to be aggregated using the estimates of rural population and urban population as weights.

1.0.7 The contents numbered (i) to (iv) above make this a basic report on consumer expenditure, and possibly the most important one, of the 61<sup>st</sup> round survey. It needs also to be mentioned that the estimates of categories (ii), (iii) and (iv) are provided separately for the populations in 12 different MPCE classes, in other words, for 12 groups of the population from poorest to richest, in terms of per capita expenditure level.

1.0.8 Chapter Two explains the concepts and definitions followed in the survey and in the preparation of this report. Basic results on per capita consumer expenditure (viz., those numbered (i)-(iv) in paragraph 1.0.5 above) are discussed in Chapter Three. The alternative estimates for selected item groups based on a “last year” reference period are presented in Chapter Four.

1.0.9 The detailed tables at all-India and State/UT level are given in Appendix A. Unlike the reports based on the last 5 rounds of NSS, estimates for all States and Union Territories are provided in all the tables of Appendix A in this report<sup>2</sup> (except Table 6, which relates to methodological issues).

1.0.10 Appendix B gives details of the sample design and estimation procedure followed and Appendix C is a facsimile of the consumer expenditure schedule (“Schedule 1.0”) that was canvassed in the surveyed households.

1.0.11 Some readers may recall that in the 27<sup>th</sup>, 32<sup>nd</sup>, 38<sup>th</sup>, 43<sup>rd</sup> and 50<sup>th</sup> rounds of NSS, a schedule on employment-unemployment and a schedule on consumer expenditure were canvassed in the same sample of households, that is, sample households interviewed for one subject were also interviewed during the same visit for the other subject of enquiry. This was done to enable employment-unemployment data to be cross-classified by information on consumption level. From the 55<sup>th</sup> round (1999-2000) onwards, the practice of linking the two bodies of data in this way has been discontinued to minimise respondent fatigue from very long interviews.<sup>3</sup>

## 1.1 Some details of the survey

1.1.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of a bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

---

<sup>2</sup> This is the usual practice followed in the rounds of the quinquennial series (see paragraph 1.0.4). This survey is the seventh of the series.

<sup>3</sup> To collect some information on consumption level, the employment-unemployment schedule of the 60<sup>th</sup> round used a short-cut worksheet. This has permitted some tabulation of employment data by consumption level in the employment-unemployment reports of the 61<sup>st</sup> round.

1.1.2 *Sample size – first-stage units:* As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a “State sample” was surveyed by State Government officials in addition to the “Central sample” surveyed by NSSO. For rural India, 8128 villages formed the Central sample for this round. Of these, 7999 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 4660 blocks, of which 4602 were surveyed. This report is based on the estimates obtained from the Central sample alone.

1.1.3 Table P1 shows the numbers of villages and urban blocks allotted for survey and actually surveyed, the numbers of rural and urban sample households in which the consumer expenditure schedule, “Schedule 1.0”, was canvassed, and the corresponding numbers of sample persons covered.

**Table P1: Number of villages/blocks allotted and surveyed for Schedule 1.0 and number of households and persons surveyed: Central sample**

State/UT	no. of villages		no. of urban blocks		no. of sample households		no. of sample persons	
	allotted	surveyed	allotted	surveyed	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)

<b>All India</b>	<b>8128</b>	<b>7999</b>	<b>4660</b>	<b>4602</b>	<b>79298</b>	<b>45346</b>	<b>403207</b>	<b>206529</b>

\*Note that as many as 98 out of 129 allotted villages that could not be surveyed belonged to the disturbed areas of Jammu and Kashmir.

# Chapter Two

## Concepts and Definitions

2.1 **Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

2.2 **Adult:** A person who has completed 15 years of age.

2.3 **Household size:** The size of a household is the total number of persons in the household.

2.4 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

2.5 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the expenditure made during the reference period for the purchase or acquisition of goods and services is considered as consumption.

2.6 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan advance, etc. made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account.

However, the item "cooked meals" is an exception to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests and employees will also be recorded in the purchaser household.

2.7 This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, donors of free cooked meals are likely to be concentrated at the upper end of the per capita expenditure range and the corresponding recipients at the lower end of the same scale. Consequently, the derived nutrition intakes may get inflated for the rich (net donors) and understated for the poor (net recipients). This point has to be kept in mind while interpreting the NSS consumer expenditure data for studies relating to the nutritional status of households.

2.8 **Value of consumption:** Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.9 **Monthly per capita consumer expenditure (MPCE):** For a household, this is the total consumer expenditure over all items divided by its size and expressed on a per month (30 days) basis. A person's MPCE is understood as that of the household to which he or she belongs.

2.10 **Reference periods:** The reference periods used for collection of consumption data for different groups of items are given below:

item of consumption	reference period
clothing, footwear, education, medical care (institutional) and durable goods	"last 30 days" and "last 365 days"
all other items (viz all food, pan, tobacco & intoxicants, fuel and light, miscellaneous goods and services including non-institutional medical care, rents and taxes)	last 30 days

The 5 "Infrequent-expenditure" categories - clothing, footwear, education, medical care (institutional) and durable goods - will be referred to as **I-type categories** in this report.

2.11 **MPCE (U30) and MPCE (M):** Apart from a reference period of "last 30 days" which was used to collect data on all items of consumption, an additional reference period of "last 365 days" was used for 5 item groups: clothing (and bedding), footwear, education, medical care (institutional) and durable goods. Discussion of the basic results of the survey uses data collected with "last 30 days" as reference period for all items of consumption as has been the usual practice in the quinquennial rounds. But, for each sample household, the overall level

of living indicator or MPCE has also been worked out using the estimates based on the reference period of the "last 365 days" for those categories for which such data had been collected. This gives an alternative figure for MPCE of each household. This alternative MPCE is referred to in this report as "MPCE (M)". The MPCE based on the uniform reference period of "last 30 days" for all items is referred to as "MPCE (U30)", or simply "MPCE".

2.12 **Adjusted MPCE:** Occasionally, MPCE (M) (see paragraph 2.11 above) has been referred to as "MPCE after adjustment" or "adjusted MPCE", while MPCE (U30) has been referred to as "unadjusted MPCE".

2.13 **Major States:** This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Together, these States accounted for nearly 94.7% of India's population in 2001.

2.14 The coverage of various categories of consumption items used in presenting the results of the survey in this report is explained in alphabetical order of items below.

## CATEGORIES OF CONSUMPTION ITEMS

**Barley products:** This includes *sattu* prepared by frying and powdering of barley.

**Beverages, etc.:** This stands for "beverages, refreshments and processed food". It includes tea, coffee, mineral water, soft drinks, fruit juice (not prepared at home), green coconut water, soda water, other beverages such as cocoa, biscuits, cakes, pastries, pickles, sauce, jam, jelly, and other salted refreshments and sweets not prepared at home. Refreshments prepared at home are not included here. Instead, the ingredients of the refreshments (such as flour, sugar, milk, etc.) are accounted under "cereals" (e.g. against "wheat"), "sugar", etc. Food purchased in the form of cooked meals is also included in "processed food".

**Cereals:** Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether.

**Cereal substitutes:** Cereals are usually a person's staple food in India. But sometimes, by choice or due to scarcity, a person may consume little or no cereal. The food requirement is partially or wholly met in such cases by consumption of food items which could be treated as substitutes for cereals. Tapioca, for example, is consumed in some parts of the country as a substitute for cereals. Similarly, jackfruit seed, *mahua*, etc. are also consumed as substitute for cereals. Potato or sweet potato consumed as substitutes for cereals are not, however, shown here. These are included in "vegetables".

**Clothing:** The term "clothing" is used in this report as a short form of "clothing and bedding". Besides clothing proper, it includes bedding (pillows, quilts, mattresses, mosquito nets, etc.), as well as rugs, blankets, curtains, towels, mats, cloth for upholstery, etc. It excludes footwear and raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are accounted in "consumer services". Consumption of an article of clothing is considered to take place when it is brought into first use. However, clothing purchased

second-hand is considered as consumed as soon as it is purchased. Imported ready-made garments, even if purchased second-hand, are shown as first-hand purchase. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

**Conveyance:** This includes expenditure incurred on account of journeys undertaken and/or transportation of goods made by any means of conveyance. The expenditure is the actual fare paid except in case of railway season tickets, for which expenditure is calculated as the cost of the ticket divided by the number of months for which it is valid. Expenditure on journeys undertaken by household members as part of official tours is not considered as consumer expenditure of the household. But journeys to commute to and from place of work are included here. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

**Durable goods:** Items included here all have a lifetime of one year or more. However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that glassware, earthenware and plastic goods such as buckets are excluded from durable goods and included in "other household consumables". Consumption expenditure on durable goods includes both expenditure on purchase and expenditure on repair and construction of household durables. For land and residential building, only expenditure on repair and construction is included. Durable goods include furniture and fixtures, "entertainment" durables such as radios, TV, VCR/VCP/DVD players, tape recorders and CD players, cameras, musical instruments, jewellery and ornaments, crockery and utensils, cooking and other household appliances such as fans, air conditioners, air coolers, sewing machines used for household work, washing machines, stoves, pressure cookers, fridges, water purifiers, electric irons, heaters, toasters and ovens, household transport equipment including two-wheelers, four-wheelers and their parts, therapeutic appliances, clocks, watches, computers for household use, mobile phone handsets, and bathroom and sanitary equipment.

**Edible oil:** Edible oils used for toilet purpose by the household are not included here. Oilseeds are sometimes purchased or grown by a household for extracting edible oil (by crushing) for consumption. The value of oilseeds so used is included in "edible oil".

**Education:** This includes expenditure on goods purchased for the purpose of education, viz., books and journals, newspapers, paper, pen, pencil, etc., and also magazines, novels and other fiction. It also includes fees paid to educational institutions (e.g., schools, colleges, universities, etc.) on account of tuition and other fees like game fees, library fees, etc., and payment to private tutors. Expenditure on Internet other than telephone charges is included here. Occasional payments to the school fund made on account of charities, and "donations" generally, are not included here, as they are regarded as transfer payments.

**Entertainment:** This includes expenditure on cinemas, theatres, *melas*, fairs and picnics, expenditure incurred on processing, developing, etc., of photographic film, charges paid for hiring of video cassette/VCR/VCP, and charges for viewing a video show. Expenses incurred on subscription to dish antenna, cable TV facilities, etc. are also included. Club fees are included here.

**Footwear:** This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

**Gram:** This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, not included here, but in “other pulse products”.

**Maize products:** This includes cornflakes, popcorn, etc., made of maize.

**Medical expenses:** This includes expenditure on medicine of different types and on medical goods; also, payments made to doctor, nurse, etc., as professional fees and those made to hospital, nursing home, etc. for medical treatment, and expenditure incurred for clinical tests, including X-rays, ECG, pathological tests, etc. Expenditure on all family planning appliances is included.

**Medical: institutional and non-institutional expenditure:** The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (non-institutional). Medical institution here covers private as well as Government institutions such as hospitals and nursing homes.

**Milk and milk products:** Milk products include ghee, butter, curd, etc. Milk used in home preparation of sweetmeats, etc., is also accounted here. This category also includes those baby foods of which the principal constituent is milk. Further, milk (liquid) includes ice-cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included in this category.

**Minor personal effects:** These include spectacles, torches, locks, umbrellas, raincoats, gas lighters, etc. In the consumer expenditure schedule, this group was called “goods for personal care and effects”. These are not included in “durable goods” but in “miscellaneous goods and services”.

**Miscellaneous goods and services:** This is a residual category covering all items *other than* food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, and durable goods. It includes, among other things, expenditure on education, medical care, entertainment, conveyance, rent, and consumer taxes and cesses. (Note, however, that in Schedule 1.0, the schedule of enquiry of data collection, education and institutional medical care are separated out from the “miscellaneous goods and services” block to form a separate block.)

**Other consumer services:** This includes expenditure on domestic servants, cooks, attendants, sweepers, barbers and beauticians, laundry, ironing, tailors, priests, legal services, telephone charges, postal charges, grinding charges, and repair charges for non-durable goods. Apart from conveyance, it excludes the consumer services coming under “entertainment”.

**Other household consumables:** These include electric bulbs, tubelights, batteries, earthenware, glassware, plastic goods such as buckets, water bottles and feeding bottles, coir and rope, washing soap, washing soda, other washing requisites, incense, room fresheners, flowers, acid and insecticides. In the consumer expenditure schedule, this group was called “sundry articles”.

**Pan:** This includes, *pan* (betel leaves), *supari*, lime, *katha*, other ingredients of “finished” *pan*, and *pan* purchased in finished form.

**Rent:** Rent includes house and garage rent, residential land rent and other consumer rent.

**Rice products:** Rice products are foods like *chira*, *khoi*, *lawa*, *muri*, rice powder, etc. which are obtained by splitting, frying, powdering, or parching of the grain.

**Spices:** Consumption of garlic and ginger, which in the schedule appear under “vegetables”, is accounted in spices and not in “vegetables”. Green chillies are, however, included in “vegetables”.

**Vegetables:** This excludes ginger and garlic, which have been included in the estimates of consumption of “spices”, though data for ginger and garlic were collected in the schedule under “vegetables”.

**Wheat products:** Bread is included here, but not wheat preparations like biscuits, cakes, etc., which are accounted in “beverages, refreshments and processed food”.

## Chapter Three

### Basic Results on Per Capita Consumption Expenditure

#### LEVEL OF CONSUMPTION

3.0.1 The main indicator of standard of living generated by the NSS consumer expenditure survey is Monthly Per Capita Consumer Expenditure (MPCE). This is easy to understand at the national or State (or region) level – the aggregate consumer expenditure of the relevant population divided by the population size. Nations may be ranked by per capita consumer expenditure, just as they may be ranked by per capita gross domestic product. In the NSS consumer expenditure survey, MPCE is defined first at the household level, that is, household MPCE = aggregate monthly consumer expenditure of the household ÷ household size. It is possible to derive the proportions of either households or persons located in these households in different class-intervals of MPCE, and averages of MPCE of these groups of households. The NSS thus helps provide, not just the average MPCE at any level of geographical disaggregation, but the distribution of households, or persons, by size of MPCE around the average level. Such distributions (and the ranking of households in ascending order of MPCE) are used to derive the standard indicators of poverty such as proportion of population below poverty line or indices of inequality such as Lorenz ratio. These distributional indicators derived from the NSS data constitute important measures of welfare.

3.0.2 *Reference period:* It was mentioned earlier (Chapter 2, paragraph 2.11) that, for five categories of non-food expenditure (relatively infrequent purchase categories or the “I-type” for short), the schedule of enquiry used two reference periods of data collection – “last 30 days” and “last 365 days”. The purpose was partly to investigate the differences in data produced by these two different reference periods. A more important purpose was to keep the methodology of the 61<sup>st</sup> round survey the same as that of the 50<sup>th</sup> round (1993-94) consumer expenditure survey, with which its results could be compared. This double reference period resulted in two different and alternative values of monthly consumption expenditure being available for these items. Most importantly, household MPCE, or monthly per capita expenditure on all items of consumption put together, also had two alternative values depending on which reference period was used for the five “I-type” categories.

3.0.3 In the past, whenever the NSS collected consumption data on any item group with two reference periods from *each* surveyed household, “last 30 days” was always one of the reference periods used, and the major findings were released using a reference period of 30 days for such item groups. Moreover, the results of the 50<sup>th</sup> round survey of 1993-94, which belongs to the quinquennial series<sup>4</sup> of full-scale consumer expenditure surveys, and which uses exactly the same reference period structure as the 61<sup>st</sup> round, were released using a reference period of 30 days for all items. Comparability of the survey results with past data thus dictates that the basic results of this survey be based on the “last 30 days” reference period for all items. *This chapter will generally use, for the 61<sup>st</sup> round, the data collected with “30 days” reference period for all items of consumption unless otherwise stated.* A problem remains with the last round of the quinquennial series, the 55<sup>th</sup>, in which only data with “365 days”

---

<sup>4</sup> The smaller-scale surveys, which are not part of this series, are said to form the “annual” series.

reference period was collected for the I-type categories. For precise comparison of MPCE with the 55<sup>th</sup> round, therefore, it has been necessary, at times, to use the “MPCE (M)” of the 61<sup>st</sup> round instead of the usual MPCE or “MPCE (U30)” (see paragraph 2.11).

### 3.1 MPCE and household size

3.1.1 The consumer expenditure schedule recorded age and sex particulars of each member of the sample household. From these, it is possible to generate estimates of population by age and sex, sex ratio, average number of adults and children per household, etc. For this report, the most important demographic parameter is average household size. Table P2 shows that this decreases steadily as one moves up the MPCE scale. The variation in average household size over different MPCE classes is mainly accounted by variation in the average number of children (persons under 15 years of age) in the classes, with the number of adults per household varying much less.

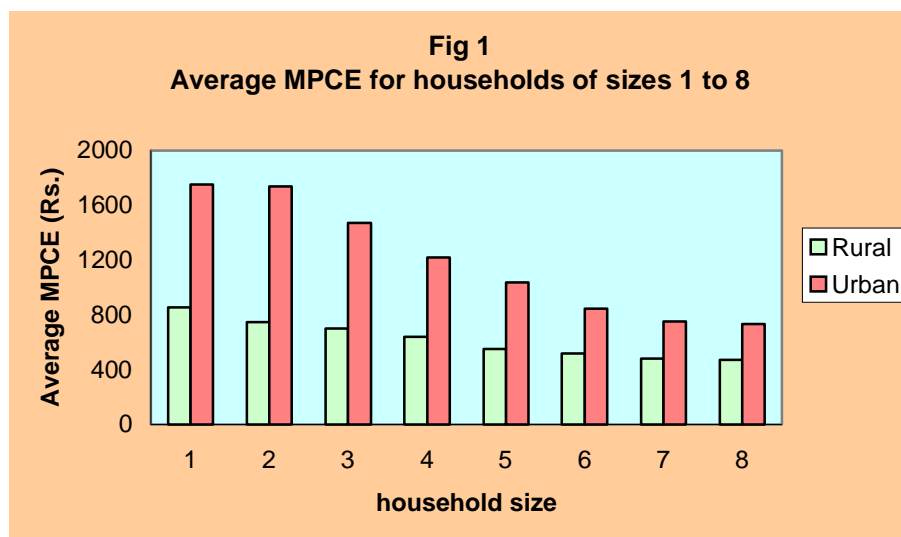

**Table P2: Average number of adults and children per household in different MPCE classes**  
**all-India**

MPCE class (Rs.)	rural			MPCE class (Rs.)	urban		
	av. no. adults	av. no. children*	av. no. persons		av. no. adults	av. no. children*	av. no. persons
0 – 235	2.88	2.73	5.61	0 – 335	3.19	2.73	5.93
235 – 270	3.13	2.80	5.93	335 – 395	3.47	2.32	5.79
270 – 320	3.18	2.48	5.66	395 – 485	3.47	2.06	5.53
320 – 365	3.18	2.24	5.42	485 – 580	3.45	1.72	5.17
365 – 410	3.20	2.05	5.26	580 – 675	3.39	1.57	4.96
410 – 455	3.22	1.85	5.07	675 – 790	3.29	1.41	4.70
455 – 510	3.24	1.73	4.97	790 – 930	3.27	1.20	4.47
510 – 580	3.20	1.54	4.75	930 – 1100	3.13	1.03	4.16
580 – 690	3.18	1.32	4.50	1100 – 1380	3.00	0.85	3.86
690 – 890	3.13	1.17	4.30	1380 – 1880	2.83	0.69	3.52
890 – 1155	3.08	0.99	4.06	1880 – 2540	2.68	0.58	3.26
1155 & more	2.84	0.80	3.64	2540 & more	2.47	0.43	2.90
<b>all classes</b>	<b>3.15</b>	<b>1.74</b>	<b>4.88</b>	<b>all classes</b>	<b>3.12</b>	<b>1.24</b>	<b>4.36</b>

\*persons under 15

3.1.2 As a matter of fact, one may say that it is the larger proportion of dependants, on the average, in the households with more children that, by lowering the proportion of earning members, makes the MPCE of these households lower. Larger households are, on the average, poorer; it follows that poorer households are, on the average, larger.

3.1.3 Figure 1 shows, among other things, that among households of different sizes, it is the single-member households that are, on the average, the richest. Again, this is not surprising when one considers that, except for a small proportion of remittance-receiving households, these households have one earner and no dependants; larger households are much less likely to have no dependants. Growth in the number of 2-member urban households with both members having significant earnings is probably the reason for the average MPCE of 2-member households being very close to that of single-member households in urban India.

3.1.4 A consequence of the difference in household size between poor and rich households is that for any characteristic which is associated, positively or negatively, with level of living, the percentages of *households* possessing the characteristic, and the percentage of *persons* possessing the characteristic, tend to differ appreciably. For example, the percentage of *population* in households using solid fuel for cooking would be higher than the percentage of such *households*, because the use of solid fuel is relatively rare among richer households but very common among the poorer households, which are, on the average, larger.

3.1.5 Details of the estimated distribution of households by household size, for each MPCE class in each State/UT, separately for rural and urban India, are given in Table 2 of Appendix A. Statement 3 (pages 48-49) gives results at State/UT level in summary form, that is, not giving separate estimates for households in different MPCE classes.

## 3.2 Distribution of population by MPCE

3.2.1 For each State and Union Territory, as well as for India as a whole, Statement 2R (page 46) gives the distribution of rural population over 12 MPCE classes. Statement 2U (page 47) does the same for the urban population. These MPCE class-intervals are used in all the tables in this report as also in other reports on employment and unemployment based on Schedule 10<sup>5</sup>. Note that the MPCE class limits for the rural and urban tables have been chosen differently. This is because of the wider range of variation in MPCE in urban area compared to rural areas.

3.2.2 The MPCE classes for the rural sector were, in fact, so formed that the first two and the last two classes each contained about 5% of the rural population according to the present (61<sup>st</sup> round) survey, and the remaining classes each contained about 10%. The classes for the urban sector were formed similarly.<sup>6</sup>

<sup>5</sup> Schedule 10 is the NSS schedule on employment and unemployment.

<sup>6</sup> This is not the practice followed in every NSS consumer expenditure survey, but only for the larger-scale surveys of the quinquennial series (see also paragraph 1.0.4), of which the 61<sup>st</sup> round survey is one. In the next few rounds, the classes formed in the 61<sup>st</sup> round will be used for classification. New classes will again be formed in the next round of the quinquennial series, to be retained till the next such round, and so on.

3.2.3 Figures 2R and 2U show the all-India percentages of rural and urban population below different levels of MPCE. The levels of MPCE chosen are the class limits of the 12 MPCE classes. The graphs may be used to find the approximate percentage of population below any specific level of MPCE, including the “poverty line”. They may also be used to find such population parameters as the median MPCE and other percentiles of the size distribution of MPCE.

### 3.2.1 Glimpses of poverty and economic well-being

3.2.1.1 Some glimpses of economic deprivation, as available from the MPCE distributions for the 17 major States, are presented in Table P3 below.

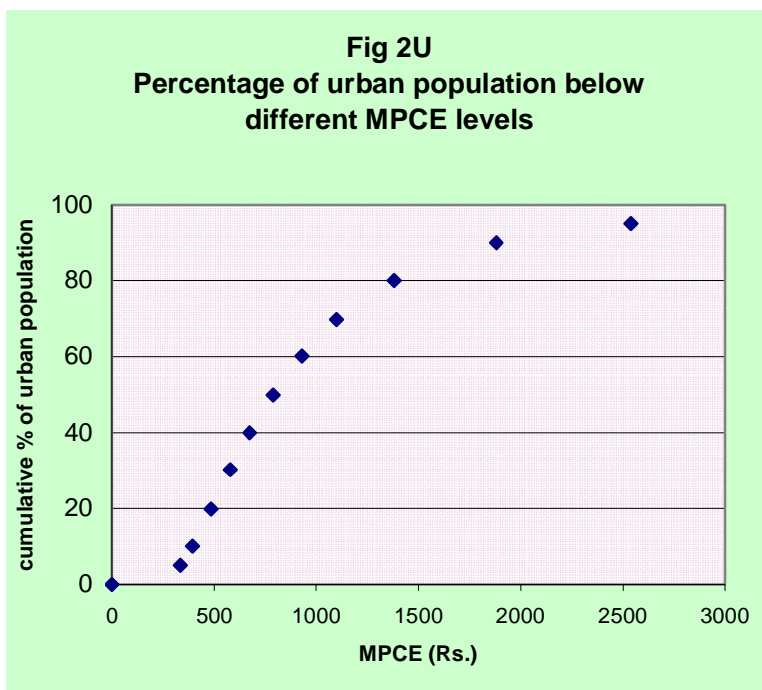

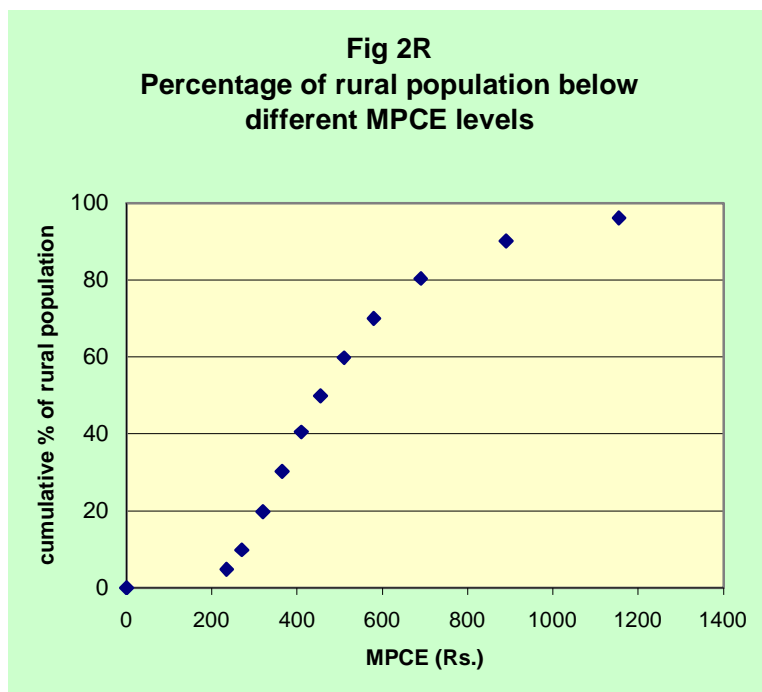

**Table P3: Statewise percentages of rural and urban population below specified levels of MPCE**

State	percentage of rural population with MPCE		State	percentage of urban population with MPCE	
	below Rs.365 (≈ Rs.12 per day)	below Rs.270 (≈ Rs.9 per day)		below Rs.580 (≈ Rs.19 per day)	below Rs.395 (≈ Rs.13 per day)
Orissa	57	31	Bihar	55	28
Chhattisgarh	55	24	Orissa	50	25
Madhya Pradesh	47	21	Uttar Pradesh	44	17
Bihar	46	15	Chhattisgarh	44	20
Jharkhand	46	15	Madhya Pradesh	43	18
Uttar Pradesh	33	10	Rajasthan	36	10
Karnataka	32	7	Jharkhand	33	14
Maharashtra	30	11	Andhra Pradesh	33	8
Tamil Nadu	26	6	Karnataka	31	12
Andhra Pradesh	25	8	West Bengal	29	8
West Bengal	24	5	Tamil Nadu	26	7
Gujarat	21	5	Maharashtra	25	8
Assam	17	3	Assam	23	4
Rajasthan	17	3	Kerala	22	7
Haryana	7	1	Haryana	22	7
Kerala	7	2	Punjab	18	1
Punjab	4	1	Gujarat	16	3
All-India	30	10	All-India	30	10

3.2.1.2 *Rural*: The MPCE level of Rs.365 was roughly the 30<sup>th</sup> percentile of the all-India distribution of MPCE for the rural population in 2004-05, and Rs.270 was the 10<sup>th</sup> percentile. Compared with 30 per cent at the all-India level, in Orissa and Chhattisgarh as many as 55-57% of villagers were, in 2004-05, living below the MPCE level of Rs.365, which is about Rs.12 per day. In MP, Bihar and Jharkhand, 46-47% were living below this level. Even lower levels of living of Rs.270 per person per month (Rs.9 per day) and below were observed in 31% of the rural population in Orissa and over 20% in Chhattisgarh and MP (compared to 10% at the all-India level).

3.2.1.4 *Urban*: For urban India, Rs.580 was roughly the 30<sup>th</sup> percentile of the distribution of MPCE and Rs.395 was the 10<sup>th</sup> percentile. Table P3 shows that 55% of Bihar's and 50% of Orissa's urban population lived below the MPCE level of Rs.580 (Rs.19 per day). Even lower levels of living of Rs.13 per day or less (MPCE<Rs.395) were visible among 28% of Bihar's and 25% of Orissa's urban population.

3.2.1.4 The upper ranges of the MPCE distributions, likewise, give a view of the proportion of people living in relative affluence, as the figures below show. In Table P4, Rs.690 and Rs.890 are, respectively, approximate values of the 80<sup>th</sup> and 90<sup>th</sup> percentiles of the all-India distribution of MPCE of the rural population, that is, the MPCE levels above which the top 20% and top 10% of the rural population of India lived in 2004-05. Rs.1380 and Rs.1880 are the approximate values of the corresponding percentiles for the population of urban India.

**Table P4: Statewise percentages of rural and urban population above specified levels of MPCE**

State	percentage of rural population with MPCE		State	percentage of urban population with MPCE	
	at least Rs.690	at least Rs.890		at least Rs.1380	at least Rs.1880
Kerala	57	38	Kerala	28	15
Punjab	51	32	Punjab	27	14
Haryana	47	28	West Bengal	24	13
Gujarat	26	13	Gujarat	23	10
Andhra Pradesh	23	11	Maharashtra	23	13
Rajasthan	22	10	Haryana	22	11
Maharashtra	21	11	Tamil Nadu	22	11
Tamil Nadu	21	11	Karnataka	21	11
West Bengal	18	8	Assam	21	9
Assam	18	5	Andhra Pradesh	18	8
Uttar Pradesh	17	8	Jharkhand	17	8
Karnataka	13	6	Chhattisgarh	16	8
Madhya Pradesh	11	5	Rajasthan	15	7
Orissa	9	4	Madhya Pradesh	14	7
Chhattisgarh	8	3	Uttar Pradesh	12	6
Jharkhand	7	3	Orissa	8	3
Bihar	6	2	Bihar	7	3
All-India	20	10	All-India	20	10

### 3.3 Average MPCE

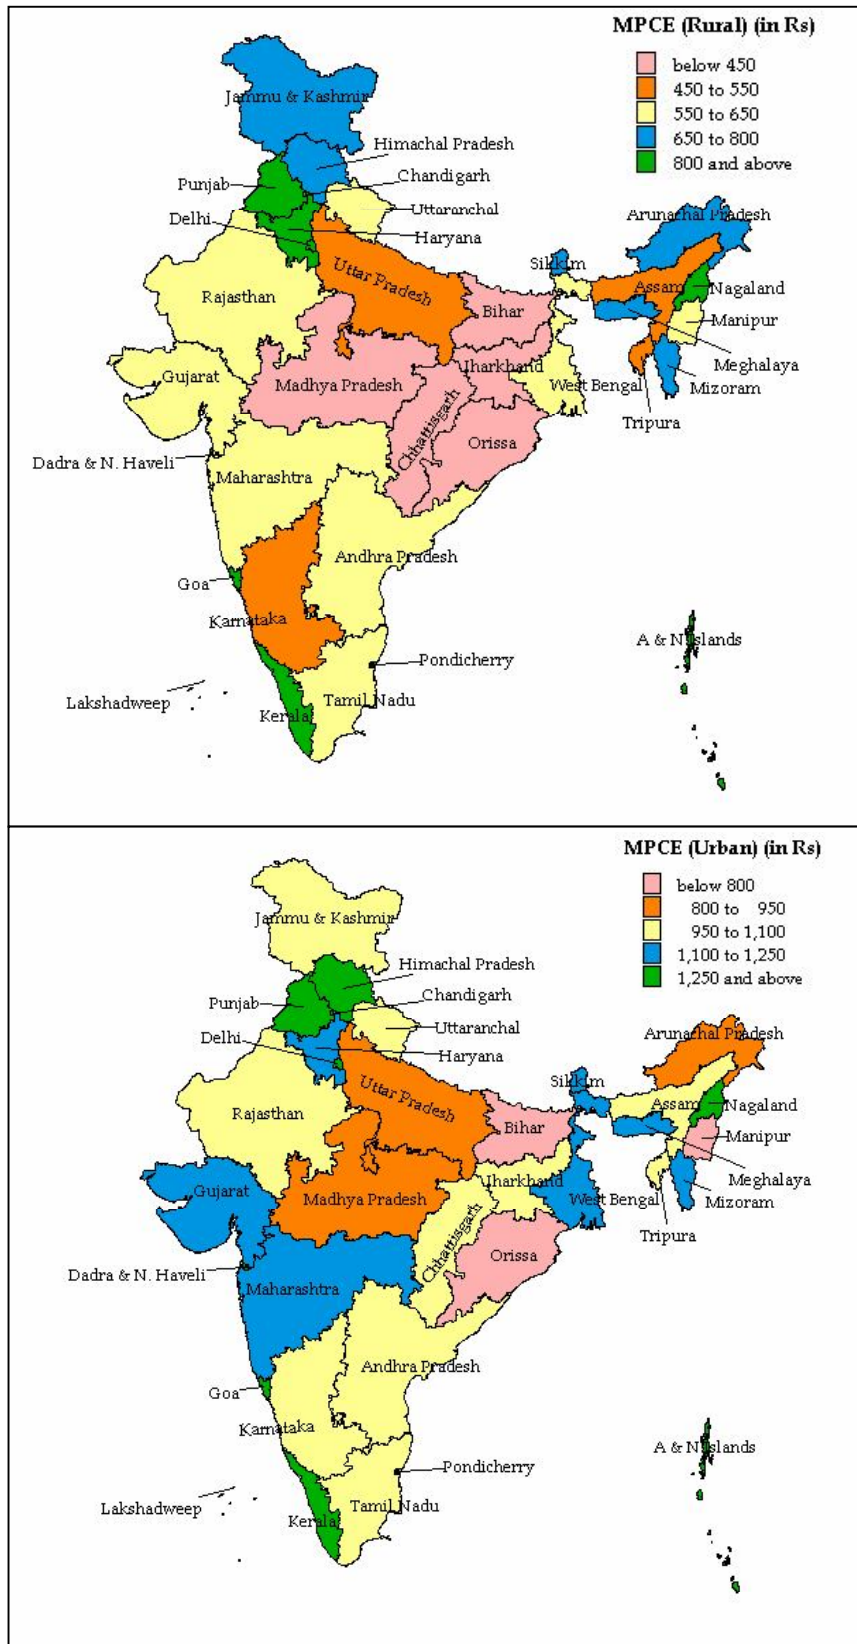

3.3.1 Average MPCE at State level for rural and urban sectors is shown below for the major States and all-India and is also shown in Figure 3, which groups States by broad range of average rural MPCE and average urban MPCE.

**Table P5: Average MPCE in rural and urban areas of major States and all-India**

State	av. MPCE (Rs.)		State	av. MPCE (Rs.)	
	rural	urban		rural	urban
Andhra Pradesh	586	1019	Madhya Pradesh	439	904
Assam	543	1058	Maharashtra	568	1148
Bihar	417	696	Orissa	399	757
Chhattisgarh	425	990	Punjab	847	1326
Gujarat	596	1115	Rajasthan	591	964
Haryana	863	1142	Tamil Nadu	602	1080
Jharkhand	425	985	Uttar Pradesh	647	978
Karnataka	508	1033	West Bengal	562	1124
Kerala	1013	1291	<b>All-India</b>	<b>559</b>	<b>1052</b>

3.3.2 It is worth mentioning that the average MPCE of a State or of the country, as a whole, changes very gradually from year to year, and sample surveys conducted in quick succession, such as the NSS consumer expenditure surveys, may fail to accurately capture the extent of change, owing to sampling fluctuations. Now, while the sample size permitted by resources available for an NSS survey is generally adequate to provide a very good estimate of the *level* of average MPCE at national level, it is always less effective in providing an estimate of the *change* in MPCE over successive years. This is especially so at State level.

**Fig 3**  
Average MPCE in different States and Union Territories

3.3.3 The purpose of the above observations is to warn the unwary reader against attempting to use the State-level averages of MPCE to estimate the *change* in average MPCE of any State over the period between two *successive* rounds of NSS. It needs also to be added that price adjustments will be necessary for comparison across rounds. It may be noted that in the present report, State-level estimates of the previous round have not been placed side by side with those of this round. Change in level and pattern of consumption over time will be discussed in Sections 3.4 to 3.5 and Sections 3.10.3 to 3.12, and the discussion will be based on estimates for rounds of the quinquennial series.

3.3.4 The major States may be grouped by the extent of rural-urban differential in average MPCE. Such a grouping has been done below. In 7 major States out of 17, average urban MPCE was 80-110% higher than average rural MPCE. In another 6 major States, the differential was 50-80%. For two States, the differential was even greater than 110%, while for two other states, it was less than 50%.

Average urban MPCE as a percentage of average rural MPCE: major States							
<150		150-180		180-210		>210	
Kerala	(127)	UP	(151)	Gujarat	(187)	Jharkhand	(232)
Haryana	(132)	Punjab	(157)	Orissa	(190)	Chhattisgarh	(233)
		Rajasthan	(163)	Assam	(195)		
		Bihar	(167)	West Bengal	(200)		
		AP	(174)	Maharashtra	(202)		
		Tamil Nadu	(179)	Karnataka	(203)		
				MP	(206)		

3.3.6 Comparisons of rural and urban average MPCE for any State are open to the criticism that they ignore price differentials between rural and urban sectors. Urban price levels are generally higher than rural price levels and a 15-20% price differential is quite common. Therefore the real difference in level of living between the two sectors may be narrower than what has been shown here. However, the comparison made above should help in judging the extent of *inter-State variation* in rural-urban MPCE differentials.

### 3.4 Trends in all-India average per capita consumption expenditure since 1972-73

3.4.1 Average rural and urban MPCE (all-India) at current prices as obtained from rounds 27, 32, 38, 43, 50, 55 and 61 – the quinquennial series of consumer expenditure surveys – is shown in Table P6. To facilitate comparison at constant prices, consumer price indices (based on CPI for agricultural workers (CPI-AL) for rural areas and CPI for non-manual employees (CPI-UNME) for urban areas) with 1972-73 as base are shown alongside.

3.4.2 It is seen that the index of overall rural average MPCE for 2004-05 at current prices stands at 1265 in rural areas compared with the price index of 922, which means that the increase in per capita consumption at constant prices since 1972-73 might have been of the order of 37%.

**Table P6: Trends in all-India average per capita consumption, 1972-73 to 2004-05**

year	RURAL			URBAN		
	MPCE (Rs.) at current prices	index of MPCE at current prices (1972-73=100)	CPI-AL*	MPCE (Rs.) at current prices	index of MPCE at current prices (1972-73=100)	CPI-UNME*
72-73	44.17	100	100	63.33	100	100
77-78	68.89	156	144	96.15	152	160
83	112.31	254	227	165.80	262	258
87-88	158.10	358	289	249.92	395	364
93-94	286.10	637	520	464.30	723	618
99-00	486.16	1101	833	854.92	1350	998
04-05	558.78	1265	922	1052.36	1662	1230

\*Based on the CPI-AL series with base 1972-73=100. \*\*Based on the CPI-UNME series with base 1972-73=100.

Note that the 1999-2000 survey estimates are based on a reference period of 365 days instead of the usual 30 days for the I-type categories of consumption items (see paragraph 3.0.3) and hence are not strictly comparable with those from other rounds.

3.4.3 For urban India, the index of average MPCE in 2004-05 was 1662 against a price index of 1230 - in real terms, an increase of the order of 35%, very roughly speaking.

### 3.5 Trends in level of consumption expenditure for different segments of population since 1972-73

3.5.1 Can anything be said regarding the change over time in level of living of different percentile groups of the population – for example, the poorest 10%, the middle 20%, or the top 10%? It was mentioned in paragraph 3.2.2 that the reports of the consumer expenditure surveys of the *quinquennial series* give information using MPCE classes formed according to percentile groups of population ranked by MPCE. The lowest 5%, ranked by MPCE, form the bottom MPCE class; the next 5% form the next class. Each of the next 8 classes are formed with 10% of the population (the second to the ninth decile group). Finally, the top two classes are formed, each with 5% of population, as in case of the bottom two classes.

3.5.2 If, therefore, the average MPCE of, say, the lowest MPCE class can be compared at constant prices across successive surveys of the *quinquennial series*, the change in level of living of the bottom 5% of the population becomes apparent. The same is true of every other MPCE class as well. It should, however, be mentioned here that the meaningfulness of such comparisons rests on the assumption that the extent of inflationary impact of price rises faced by different percentile groups of population have been the same.

3.5.3 In Table P7, average MPCE figures for different percentile groups of the population obtained from the 50<sup>th</sup>, 55<sup>th</sup> and 61<sup>st</sup> rounds of NSS – all surveys of the *quinquennial series* – are deflated by suitable price indices and expressed at 1993-94 prices. The CPI-AL series of indices is used for the rural sector and the CPI-UNME series for the urban. The deflators used are open to criticism because they do not measure the effect of consumer price changes

over time on the general population in rural/urban areas and on households in different MPCE classes. Therefore the conclusions reached on the basis of deflated estimates may not be completely accurate.

**Table P7: Comparison of average MPCE at constant prices over rounds**

percentile group of population	average MPCE (Rs.) at constant (1993-94) prices							
	rural				urban			
	50th (U30)	55th (M)	61st		50th (U30)	55th (M)	61st	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
0 - 5%	100	121	114	<b>137</b>	133	159	141	<b>164</b>
5% - 10%	131	153	145	<b>169</b>	176	203	186	<b>210</b>
10% - 20%	153	176	169	<b>193</b>	211	242	223	<b>248</b>
20% - 30%	178	203	195	<b>220</b>	248	288	269	<b>294</b>
30% - 40%	200	228	221	<b>245</b>	287	334	316	<b>342</b>
40% - 50%	222	252	246	<b>271</b>	332	385	368	<b>396</b>
50% - 60%	249	281	275	<b>299</b>	381	447	433	<b>461</b>
60% - 70%	282	313	310	<b>333</b>	448	523	512	<b>545</b>
70% - 80%	325	358	359	<b>380</b>	543	628	619	<b>657</b>
80% - 90%	398	433	442	<b>455</b>	698	800	804	<b>854</b>
90% - 95%	500	537	570	<b>569</b>	923	1052	1088	<b>1144</b>
95% - 100%	872	849	1116	<b>938</b>	1643	1912	2137	<b>1985</b>
all	281	307	319	<b>331</b>	458	532	531	<b>555</b>

3.5.4 For the rural sector as well as for the urban, Table P7 has two columns for the 61<sup>st</sup> round: one, the “MPCE (U30)” based on “last 30 days” reference period for all items, and, two, the “MPCE (M)” based on “last 365 days” reference period for the 5 infrequent-expenditure (I-type) categories and ‘last 30 days” for the rest. (See Chapter Two, paragraph 2.11.) For the 61<sup>st</sup> round, the average MPCE (M) figures are based on a special tabulation involving grouping of the population by percentile classes of MPCE (M).

3.5.5 *Notice that recall period comparability requires that the size distributions based on uniform reference period of 30 days (U30) be compared for the 50<sup>th</sup> and 61<sup>st</sup> rounds (even-numbered columns of Table P7), and those based on the mixed reference period (M) be compared for the 55<sup>th</sup> and 61<sup>st</sup> rounds (odd-numbered columns of Table P7 from col.3 onwards).*

3.5.6 Bearing this in mind, comparison of the time periods 1993-94 (50<sup>th</sup> round) and 2004-05 (61<sup>st</sup> round) using the even-numbered columns of Table P7 reveals that there was, for all percentile groups, an increase in real per capita consumption over this 11-year period. The increase was of the order of 10-12% for most of the lower percentile groups in the rural areas and higher for the top two groups. In urban areas, the increase was under 10% for the lower half of the population but around 15% or more for the upper groups.

3.5.7 Comparing the time periods 1999-2000 (55<sup>th</sup> round) and 2004-05 (61<sup>st</sup> round) using the odd-numbered columns of Table P7 from col.3 onwards, one finds a difference in the rural and urban patterns of change. The percentage rise in real *rural* per capita consumption over this 5-year period (based on cols. 3 and 5 of Table P7) declines gradually as one moves from the lower percentile groups to the higher ones (from about 13-14% for the poorest 5% to less than 5% for the “80-90” and “90-95” groups, though it is over 10% for the “95-100” group. For the urban population, however, the percentage rise (based on cols. 7 and 9 of Table P7) is lowest in the poorest groups, rising from 2-3% for the lowest five groups to about 7-9% for the “80-90” and “90-95” groups.

## PATTERN OF CONSUMPTION

### 3.6 Sources of variation in consumption pattern

3.6.1 Take any two individuals with the same consumption level: their pattern of consumption would differ because of differences in preference patterns. It is the same with States, sectors of States, and different economic strata of population within the same State or geographical area. In this report, by pattern of consumption we mean break-up of consumption expenditure into 32 broad groups of food and non-food items; we go no deeper<sup>7</sup>. Occasionally, we mean the broad pattern of food-non-food break-up.

3.6.2 It is important to note that most of the study of consumption pattern in this report is restricted to *value* of consumption. This is because most of the data discussed in this report is in terms of rupees, not physical quantities. Only in case of cereals do we discuss the consumption pattern in physical terms.

### 3.7 Share of food and share of cereals in total expenditure

3.7.1 At all-India level the share of food in total expenditure was 55% in the rural sector and 43% in the urban sector of the country. Inter-State variation was as shown in Table P8 below. For the rural sector, the major States where the share of food was highest were Assam (66%) and Bihar (65%), the share being lowest in Kerala (45%). For the urban sector, the share of food was highest in Bihar (51%), being also high (50%) in Orissa and Assam, and was lowest in Punjab (38%). The percentage share of food tends to be low for States with higher average MPCE; this is suggested by Engel's law.

**Table P8: Share of food in total consumer expenditure, 2004-05: inter-State variation**

share of food in total exp. (%)	no. of major States	
	R	U
36-40	-	5
41-45	1	7
46-50	2	4
51-55	6	1
56-60	4	-
61-65	3	-
66-70	1	-

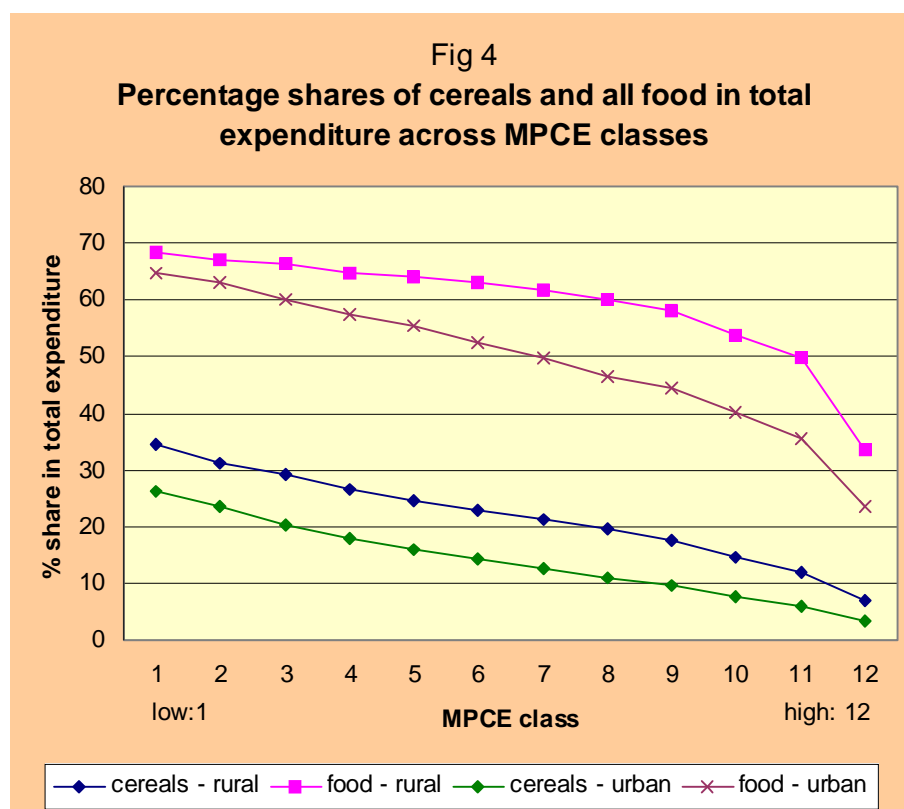

3.7.2 Wider variation, as expected, existed in the share of cereals in total expenditure. This share, for rural and urban areas of selected States, is shown in Table P9. As always, inter-State variation was more moderate among urban areas. Note that the share of cereals, which was 17% or less in urban areas of all major States, was 25% or more in rural areas of 5 of the 17 major States. The share of cereals tends to be higher in States where rice was the major cereal consumed. Thus, for rural India, in each of the six States with 23% or more of total expenditure going towards cereals (lower part of Table P9, RURAL), rice formed 55% or more of total quantity of cereal consumption (see also Table P16 on page 26), the proportion being 75% or more in five of the six States.

<sup>7</sup> NSS Report No.509 (forthcoming) presents more detailed commodity consumption patterns.

**Table P9: Share of cereals in total consumer expenditure: 2004-05, major States**

RURAL		URBAN	
State	% share of cereals in total cons. exp.	State	% share of cereals in total cons. exp.
Haryana	9	Punjab	6
Punjab	9	Haryana	7
Kerala	11	Gujarat	8
		Kerala	8
8 other major States	13-19	Maharashtra	8
West Bengal	23		
Assam	25	10 other major States	10-14
Bihar	27		
Jharkhand	27		
Chhattisgarh	27	Orissa	17
Orissa	28	Bihar	17

3.7.3 Both share of food and share of cereals fall appreciably with rise in MPCE level. In rural India as a whole, for instance, the share of food falls from over 68% in the lowest MPCE class (Rs.0-235) to under 34% in the highest (Rs.1155+). In urban India the fall in the share of food is steeper: from nearly 65% in the lowest class to under 24% in the highest. The share of cereals falls, in rural India, from over 34% in the lowest MPCE class to under 7% in the highest. In urban India the share of cereals drops from 26% in the lowest MPCE class to a mere 3% in the highest. (See Figure 4.)

3.7.4 States with higher average MPCE have a lower share of cereals in total expenditure. It has been observed that the share of cereals, right at the individual or household level, is closely correlated with MPCE class. States with higher average MPCE consist of a larger number of households from the upper MPCE classes and therefore of a larger number of households with a low cereals share, than States with lower average MPCE.

### 3.8 Shares of various food and non-food groups in total expenditure

**Table P10: Break-up of MPCE by item group: all-India, rural and urban, 2004-05**

item group	monthly per capita exp. (Rs.)		item group	monthly per capita exp. (Rs.)	
	rural	urban		rural	urban
cereals & cereal substitutes	101	106	fuel and light	57	105
pulses & their products*	18	24	clothing & footwear***	30	49
milk & milk products	47	83	education	15	53
edible oil	26	36	medical	37	55
egg, fish & meat	19	28	misc. consumer goods	33	73
vegetables	34	47	conveyance	21	69
fruits	10	24	other consumer services	21	74
sugar, salt and spices	27	34	rent	3	59
beverages, refreshments & processed food**	25	65	taxes and cesses	1	8
<b>food total</b>	<b>308</b>	<b>447</b>	durable goods	19	43
pan, tobacco & intoxicants	15	17	<b>non-food total</b>	<b>251</b>	<b>605</b>
			<b>all items</b>	<b>559</b>	<b>1052</b>

\*includes gram

\*\* includes purchased cooked meals

\*\*\*excludes tailoring charges

3.8.1 Table P10 gives the break-up of all-India rural and urban MPCE in 2004-05 into 9 broad groups of food items and 11 broad groups of non-food items. Detailed estimates using 14 food groups and 18 non-food groups are available for the major States in Statement 4 (R & U) on pages 50-55 and for all States/UTs in Table 5 of Appendix A.

3.8.2 The percentage composition of MPCE is given in Table P11 in terms of the same item groups. More detailed break-ups are given in Statement 5 (R & U) on pages 56-61 for the major States. Note that the words "per capita" have been dropped from the column heading in Table P11, as the percentage composition of the aggregate is the same as that of the average.

**Table P11: Percentage composition of consumption expenditure by item group: all-India, rural and urban, 2004-05**

item group	exp. as % of total cons. exp. (Rs.)		item group	exp. as % of total cons. exp. (Rs.)	
	rural	urban		rural	urban
cereals & cereal substitutes	18	10	fuel and light	10	10
pulses & their products*	3	2	clothing & footwear***	5	5
milk & milk products	8	8	education	3	5
edible oil	5	3	medical	7	5
egg, fish & meat	3	3	misc. consumer goods	6	7
vegetables	6	4	conveyance	4	7
fruits	2	2	other consumer services	4	7
sugar, salt and spices	5	3	rent	1	6
beverages, refreshments & processed food**	5	6	taxes and cesses	0	1
<b>food total</b>	<b>55</b>	<b>43</b>	durable goods	3	4
pan, tobacco & intoxicants	3	2	<b>non-food total</b>	<b>45</b>	<b>57</b>
			<b>all items</b>	<b>100</b>	<b>100</b>

\*includes gram

\*\* includes purchased cooked meals

\*\*\*excludes tailoring charges

3.8.3 Table P11 shows that out of every rupee that the average rural Indian spent in 2004-05 on household consumption, 55 paise was spent on food, of which 18 paise was spent on cereals, 8 paise on milk and milk products, 6 paise on vegetables, 5 paise on sugar, salt and spices, and 5 paise on beverages, refreshments, processed food and purchased cooked meals.

3.8.4 The average rural Indian also spent 10 paise (out of every rupee spent on consumption) on fuel for cooking and lighting, 5 paise on clothing and footwear, 3 paise on education, 7 paise on medical expenses, 4 paise on conveyance, another 4 paise on all other consumer services, and 3 paise on consumer durables.

3.8.5 Similar statements can be made for the average urban Indian. In making such statements, however, the following points should be kept firmly in mind (many of these appeared in Chapter Two as well).

1. All averages are computed taking the *entire* estimated population in the denominator. Thus the very low average expenditure on rent in rural India reflects the fact that only about 7% of the country's rural households live in rented dwellings. The actual number of consuming persons in the population is not considered here for any of the item groups. For some item groups such as cereals, the number of consuming persons would be nearly the entire population; for other items, such as tobacco, it would obviously be much smaller. "Expenditure" on food includes the value of self-consumed home produce, calculated at ex farm prices. It includes also the value of food collected free, for example, from forests, imputed at local retail prices.
2. "Expenditure" on fuel, likewise, includes the value of home-grown firewood, calculated at ex farm prices, and the value of firewood and other fuel collected free, imputed at local retail prices.
3. "Processed food" refers to purchased food items such as jam, pickles, etc., of which the ingredients are not known well enough to be reported against the detailed items listed in the consumer expenditure schedule. All food processed at home is accounted against the ingredients. For example, a sweet prepared at home and consumed adds to the household's (and the concerned State/UT's) consumption of cereals, sugar, milk, etc., but not to its consumption of processed food.
4. Spending on tailor-made clothing does not include tailoring charges, which are included in "other consumer services".
5. "Education" includes expenditure on newspapers and periodicals, and on books of all kinds including fiction.

### 3.9 Proportions of households reporting specific items

3.9.1 For every item of consumption, there are some households which report zero consumption during the reference period. Based on the numbers of such households, the proportion of households with zero (or non-zero) consumption of the item during the reference period may be estimated. This can be done for groups of items as well. Table 5 (R and U) in Appendix A, in addition to giving the break-up of MPCE by item group, shows, against each item group, the number of reporting households in the sample and the estimated proportion of "reporting" (or consuming) households in the population. For a few selected item groups, the estimated proportions of households consuming any item of the group during the reference period are shown in Table P12.

3.9.2 Note that by consumption of durable goods we mean any payment made for durable goods during the reference period, and the same applies to education and medical consumption. Also, by consumption of clothing and footwear we mean the use of an article of clothing and footwear for the first time.

**Table P12: Estimated percentages of households consuming selected items: all-India, rural and urban, 2004-05**

item group	percentage of households with non-zero consumption during			
	last 30 days		last 365 days	
	rural	urban	rural	urban
cereals	99	95	-	-
egg, fish & meat	59	58	-	-
fruits (fresh)	73	87	-	-
fruits (dry)	27	43	-	-
pan	31	21	-	-
tobacco	63	39	-	-
intoxicants	16	10	-	-
clothing	34	33	99	100
footwear	19	19	96	98
education	40	57	59	70
medical (institutional)	1.4	1.5	9	10
medical (non-inst.)	61	63	-	-
conveyance	74	83	-	-
rent	5	36	-	-
durable goods	25	26	79	77

### 3.9.1 Per household consumption and consumption per consuming household

3.9.1.1 In Table P13, which looks at only a few selected categories of consumption items, the first two columns of figures give estimates of average consumption per household, which are computed according to the general estimation procedure (see Appendix B for details). This means that households reporting zero consumption of an item group are taken into account in the calculation of the average; that is, both zero and non-zero consumption figures are averaged. In the last two columns of Table P13, estimates of *consumption per consuming household* are presented; that is, only households reporting positive consumption of the item group are taken into account in computing the average. In each row of Table P13, the figures of consumption per household and *consumption per consuming household* differ by a factor which is equal to the relevant *percentage of consuming households* in Table P12.

**Table P13: Consumption per consuming household for selected item groups**

item group	average value of consumption (Rs.) during 30 days			
	per household		per consuming household	
	R	U	R	U
egg, fish and meat	91	124	155	215
pan	12	12	38	56
tobacco	39	38	63	98
intoxicants	22	25	135	239
rent	14	259	270	726

3.9.1.2 Thus Table P13 tells us, for instance, that

- rural households which consumed eggs, fish or meat at least once during the last 30 days spent, on an average, Rs.155 on the “egg, fish and meat” group, and urban households, on an average, Rs.215;
- for rural households in which tobacco was consumed during the last 30 days, the average expenditure on tobacco was Rs.63, while for urban households it was Rs.98;
- urban households reporting expenditure on rent during the last 30 days spent on an average Rs.726 on rent during the last 30 days.<sup>8</sup>

### 3.10 Cereal consumption

3.10.1 It has already been noted (see Table P11) that expenditure on cereals forms 18% of total consumption expenditure in rural India and 10% in urban India.

#### 3.10.1 Cereal consumption patterns

3.10.1.1 The all-India consumption pattern in quantity terms is shown below. Note that “rice” includes all rice products, e.g. *chira*, “wheat” includes all wheat products, e.g. bread, and so on.

**Table P14: Average monthly per capita cereal consumption: 2004-05, all-India, rural and urban**

cereal	monthly per capita consumption (kg)	
	R	U
rice	6.55	4.85
wheat	4.29	4.65
jowar	0.43	0.22
bajra	0.39	0.11
maize	0.31	0.03
other cereals	0.15	0.08
all cereals	12.12	9.94

3.10.1.2 Inter-State variation in level and pattern of cereal consumption is shown in detail in Statement 6 (R & U) on pages 62-63 for all States. A brief idea, as far as the 17 major States are concerned, is given below.

**Table P15: Variation among the major States in cereal consumption level: 2004-05, all-India, rural and urban**

monthly per capita consumption (kg)	no. of major States	
	R	U
8-9	-	3
9-10	2	4
10-11	5	5
11-12	1	2
12-13	4	2
13-14	5	1
all	17	17

<sup>8</sup> Note that three major components of expenditure on rent, namely, house rent, garage rent and residential land rent, during the last 30 days, are recorded in the consumer expenditure schedule as the amount last paid as rent divided by the number of months to which the payment related, and not as the actual expenditure incurred on rent during the last 30 days. (See Appendix C, Schedule 1.0, Block 10, items 520 and 521.)

3.10.1.3 The majority of States formed two groups, predominantly rice- (Group R) and wheat- Group W (consuming) in terms of share in quantity of cereal consumption. In a Group R State, rice (and its products) formed at least 75% of all cereal consumption for both rural and urban sectors. In a Group W State, wheat (and its products) formed at least 65% of all cereal consumption in both sectors. Among the 17 major States, 7 belonged to Group R, 5 to Group W, and another 5 to neither (see Table P16).

Group R States (share of rice ≥ 75%)	% of rice in cereals consumed		Group W States (share of wheat ≥ 65%)	% of wheat in cereals consumed		Other States	% of rice in cereals consumed		% of wheat in cereals consumed	
	R	U		R	U		R	U	R	U
	AP	92		91	Haryana		89	87	Bihar	55
Assam	95	89	MP	65	77	Gujarat	20	25	36	65
Chhattisgarh	96	75	Punjab	91	88	Jharkhand	75	51	22	49
Kerala	90	88	Rajasthan	67	89	Karnataka	49	58	10	18
Orissa	95	84	UP	66	75	Maharashtra	28	36	33	51
Tamil Nadu	93	91								
West Bengal	93	76								

### 3.10.2 Value of cereal consumption

3.10.2.1 Break-up of average value of cereal consumption per person per month over different cereal categories is shown in Statement 7 (pages 64-65) for all States. At the all-India level, value of monthly per capita consumption of cereals was Rs.100.68 for rural India and Rs.105.84 for urban India.

3.10.2.2 Details of variation in value of per capita consumption of different cereals over MPCE classes are given for all States/UTs in Table 4 of Appendix A.

### 3.10.3 The declining consumption of cereals

3.10.3.1 It has been noted in the literature on consumption that the per capita cereal consumption of the Indian population has been declining in both rural and urban areas over the past two or three decades.

3.10.3.2 To examine the decline over the past decade, Table P17 gives per capita quantity of cereal consumption per month in 15 major States as estimated from the 50<sup>th</sup> (1993-94), 55<sup>th</sup> (1999-2000) and 61<sup>st</sup> rounds of NSS. It shows that the decline is spread over all the major States and affects both rural and urban sectors to a similar extent.

3.10.3.3 The question is: Was the fall in consumption of cereals confined to the richer strata of the population? Table P18 shows that the bottom MPCE class (the bottom 5% ranked by MPCE) in both rural and urban sectors experienced a rise in cereal consumption over the past decade. For all other sections of the population, however, the fall is unmistakable.

**Table P17: Changes in average per capita cereal consumption in physical terms over the last decade in the major States**

year	RURAL							
	monthly per capita cereal consumption (kg) in							
	AP	ASM	BHR*	GUJ	HAR	KTK	KRL	MP#
1993-94	13.3	13.2	14.3	10.7	12.9	13.2	10.1	14.2

\*includes Jharkhand

#includes Chhattisgarh

^includes Uttaranchal

3.10.3.4 The overall fall in cereal consumption appears to be a phenomenon similar to the slowing down of increase in cereal consumption as MPCE increases (in urban areas, there actually occurs a fall in per capita cereal consumption after MPCE increases beyond a certain level, as a comparison over columns of Table P18 will show). Just as improvement in economic condition does not increase cereal consumption beyond a certain point, so, with economic development and diversification of the consumption basket over time, the choice appears to be in favour of a reduction of cereal consumption and an increase in consumption of other items such as the “beverages, refreshments and processed food” group. Among the partial explanations that may be put forward for the decline in cereal consumption are:

- Consumption of potato has increased.
- Eating out has increased. (Cereal content of meals taken outside at own cost or at public cost is hardly known.)
- Calorie needs may be declining because labour-saving devices are becoming increasingly available in the household, in the workplace, and in transportation.

3.10.3.5 It is important to remember in this context that cooked cereals purchased from the market, or preparations containing both cereal and non-cereal items similarly purchased, do not get included in the estimate of cereal consumption, as by convention such consumption is recorded in the “beverages, refreshments and processed food” group. In fact, meals consumed in hotels, restaurants and canteens are all accounted by convention in the item group “processed food”. Unfortunately, the cereal content of such consumption cannot be separated out to ascertain whether the total cereal consumption of the population is in fact falling or not.

**Table P18: Changes in per capita cereal consumption in quantity terms over the last decade in different percentile classes of population (ranked by MPCE): all-India, rural and urban**

RURAL						
year	monthly per capita cereal consumption (kg) in population percentile class					
	0-5	5-10	10-20	20-30	30-40	40-50
1993-94	9.68	11.29	12.03	12.63	13.19	13.33
1999-2000	9.78	11.15	11.64	12.27	12.56	12.89
2004-05	9.88	10.87	11.33	11.70	11.98	12.16
year	monthly per capita cereal consumption (kg) in population percentile class					
	50-60	60-70	70-80	80-90	90-95	95-100
1993-94	13.72	14.07	14.41	14.59	14.98	15.78
1999-2000	13.03	13.36	13.45	13.67	13.73	14.19
2004-05	12.37	12.61	12.77	12.72	12.77	13.50
URBAN						
year	monthly per capita cereal consumption (kg) in population percentile class					
	0-5	5-10	10-20	20-30	30-40	40-50
1993-94	8.91	10.11	10.61	10.75	10.89	10.99

1993-94	10.91	10.95	10.73	10.68	10.19	10.29
1999-2000	10.69	10.66	10.50	10.52	9.94	9.72
2004-05	10.08	10.09	9.97	9.63	9.50	9.10

### 3.11 Trends in all-India pattern of consumption expenditure since 1972-73

3.11.1 Statement 9 (R & U) on pages 68-69 gives the percentage composition of household MPCE over the rounds of the quinquennial series (32<sup>nd</sup> to 61<sup>st</sup> round). Table P19 shows the percentage shares of important food groups in 1972-73 and the years of the quinquennial series from 1987-88 onwards.

3.11.2 In 2004-05 the average rural Indian spent 18 paise on cereals out of every rupee he spent on household consumption, compared to 41 paise in 1972-73. The average urban resident spent 10 paise of his rupee on cereals compared to 23 paise in 1972-73.

3.11.3 In both rural and urban India, the share of food in total expenditure continued to fall throughout the three decades prior to 2004-05. The overall fall was from 73% to 55% in rural areas and from 64% to 42% in urban areas. In urban India, apart from cereals and pulses, there has been a fall in the shares of other food groups as well, such as *milk and milk products*, *edible oil*, and *sugar*. In rural India, however, the shares of *milk and milk products*, *egg*, *fish and meat*, and *fruits & nuts* have increased by about 1 percentage point each, the share of *vegetables* has increased by 2.5 percentage points, and that of *beverages, refreshments & processed food* has increased by 2 percentage points since 1972-73, and only the shares of *sugar* and *pulses* (the latter, largely during the last decade) have declined noticeably, apart from cereals.

3.11.4 The share of fuel and light in household consumer expenditure rose from under 6% to 10% between 1972-73 and 2004-05 in both sectors. The share of the “pan, tobacco and intoxicants” group fell noticeably in the urban sector from 2.8% to 1.6%.

**Table P19: Trends in food consumption pattern from 1972-73 to 2004-05, all-India, rural and urban**

sector	year	% shares of major food groups in total expenditure									
		all food	cereals	pulses	milk & milk products	edible oil	egg, fish & meat	vegetables	fruits & nuts	sugar	beverages, etc.
rural	72-73	72.9	40.6	4.3	7.3	3.5	2.5	3.6	1.1	3.8	2.4
	87-88	64.0	26.3	4.0	8.6	5.0	3.3	5.2	1.6	2.9	3.9
	93-94	63.2	24.2	3.8	9.5	4.4	3.3	6.0	1.7	3.1	4.2
	99-00	59.4	22.2	3.8	8.8	3.7	3.3	6.2	1.7	2.4	4.2
	04-05	55.0	18.0	3.1	8.5	4.6	3.3	6.1	1.9	2.4	4.5
urban	72-73	64.5	23.3	3.4	9.3	4.9	3.3	4.4	2.0	3.6	7.6
	87-88	56.4	15.0	3.4	9.5	5.3	3.6	5.3	2.5	2.4	6.8
	93-94	54.7	14.0	3.0	9.8	4.4	3.4	5.5	2.7	2.4	7.2
	99-00	48.1	12.4	2.8	8.7	3.1	3.1	5.1	2.4	1.6	6.4
	04-05	42.5	10.1	2.1	7.9	3.5	2.7	4.5	2.2	1.5	6.2

Note: Shares for 1999-2000 are only approximately comparable to other quinquennial rounds due to difference in recall period for I-type categories (see paragraph 3.0.3) of consumption items.

3.11.5 The share of clothing in total consumer expenditure over the last three decades fell from 7-9% to 4.5% in rural India and from 5-7% to 4% in urban India. The share of “miscellaneous goods and services” (here including education, medical care, rent and taxes, sundry consumables, conveyance and other consumer services including conveyance) grew from under 9% to 23% in rural India and from 19% to 37% in urban India.

## INEQUALITY AND WELFARE

### 3.12 Consumption inequality and welfare

#### 3.12.1 Disparities in total consumption, cereal consumption and consumption of durables

3.12.1.1 The Lorenz curve for total consumer expenditure and specific concentration curves<sup>9</sup> for cereal consumption (in value terms) and expenditure on durable goods are shown in Figure 5<sup>10</sup>. The concentration curve for cereals lies between the Lorenz curve and the egalitarian line, indicating that cereals are a necessity with Engel elasticity<sup>11</sup> between 0 and 1, and disparities in cereal consumption are less marked than disparities in total consumption expenditure. On the other hand, the concentration curve for durable goods lies below the Lorenz curve, indicating that this category of goods is on the whole a luxury for

<sup>9</sup> The Lorenz curve and Lorenz ratio are indicators of inequality. Concentration curve and concentration ratio are generalisations of Lorenz curve and Lorenz ratio, respectively. Specific concentration curves plot cumulated share of each MPCE size group in aggregate consumer expenditure on that specific commodity against the cumulated population shares of MPCE size group. The theory and procedure of deriving Lorenz and concentration curves can be found in Kakwani, N.C. (1980), *Poverty and Inequality: Methods of Estimation and Policy Applications*, Oxford University Press, New York.

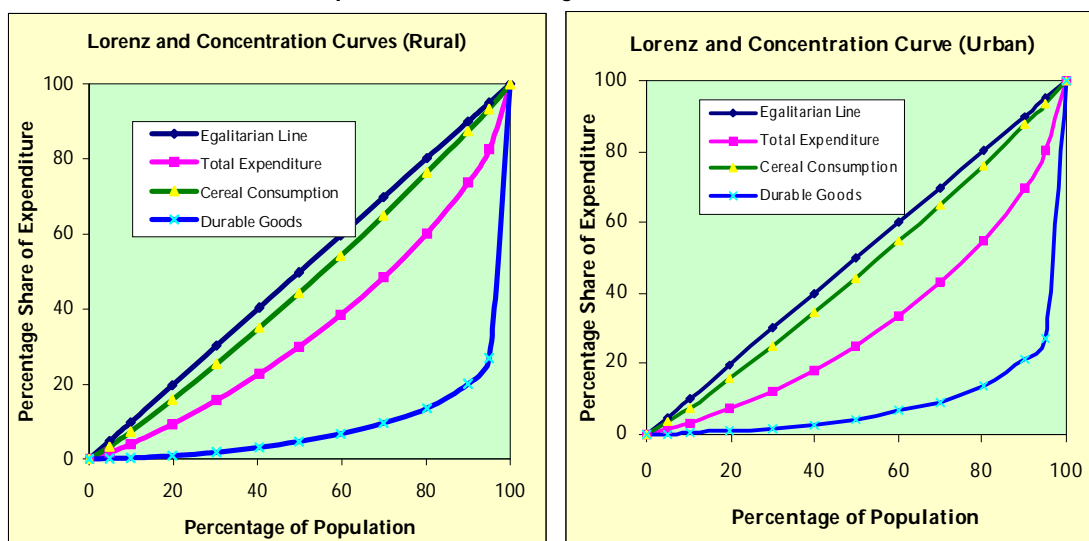

<sup>10</sup> The Lorenz and concentration curves are drawn using 30-days' reference period for all items.

<sup>11</sup> Engel elasticity of an item is the percentage change in **per capita** expenditure on the item in response to one percent change in **per capita** total consumption expenditure or income.

the Indian population, and greater disparities exist in consumption of durable goods than in total consumption. For rural India, the Lorenz ratio for total consumption expenditure is 0.30, while a concentration ratio of 0.08 is obtained for cereal consumption and a concentration ratio of 0.81 is obtained for durable goods expenditure. For urban India, the estimate of Lorenz ratio for total consumer expenditure is 0.37, while the concentration ratio for cereal consumption is around 0.08 and a concentration ratio of 0.81 is obtained for durable goods. The State-wise Lorenz ratios for both rural and urban sectors are calculated separately and presented along with average MPCE in Statement 1 (page 45).

**Fig 5**  
Lorenz and specific concentration curves<sup>12</sup> for total consumption, cereal consumption (value) and expenditure on durable goods for rural and urban India

**Table P20: Lorenz ratio for total consumer expenditure, and concentration ratios for cereal consumption (value) and expenditure on durable goods for rural and urban India**

Lorenz/Concentration ratio* for	Rural	Urban
Total consumer expenditure	0.30	0.37
Cereal consumption (value)	0.08	0.08
Expenditure on durable goods	0.81	0.81

\*based on size distributions of MPCE

### 3.12.2 Change in welfare over time

3.12.2.1 The Lorenz ratio provides a summary measure of relative inequality based on the Lorenz curve. Welfare comparisons of *entire size distributions* of MPCE can be carried out on the basis of non-intersecting Lorenz curves provided the means are the same. In case these average values are not the same or Lorenz curves intersect, the Lorenz curve fails to rank the distributions in terms of welfare. To solve this problem, the Generalised Lorenz Curve, a concept introduced by A.F. Shorrocks<sup>13</sup>, can be used to compare or rank the distributions in

<sup>12</sup> based on data collected using "last 30 days" reference period for all items

<sup>13</sup> Shorrocks, Anthony F. (1983), 'Ranking Income Distributions', *Economica*, **50**, pp. 3-17. Also see Deaton, Angus (1997), *The Analysis of Household Surveys: A Microeconomic Approach to Development Policy*, John Hopkins University Press, Baltimore, USA.

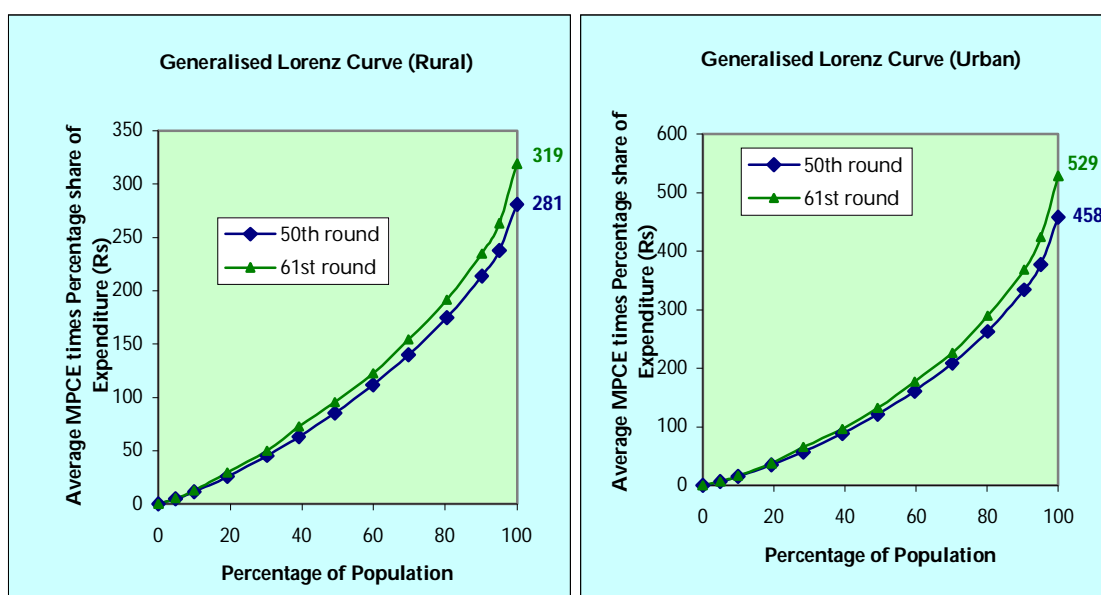

terms of social welfare or level of living. Non-intersecting generalised Lorenz curves can be compared for welfare ranking of size distributions of MPCE in case Lorenz curves intersect and/or means are different.

3.12.2.2 The horizontal axis in the generalised Lorenz Curve (see Technical Note on page 32) is the same as that for the Lorenz curve, i.e., cumulative percentage of population, but the vertical axis shows, instead of percentage share of expenditure (or income), average expenditure (or income) for the entire population multiplied by cumulated percentage share at every point on the curve. The difference from the ordinary Lorenz curve is only a difference in scale and not in shape. If the generalised Lorenz curve in period 1, say, lies above the generalised Lorenz curve in period 2, it means that for all  $\rho$  from 0 to 100, the poorest  $\rho$  percent of the population have greater command over consumer expenditure per capita in period 1 than in period 2 and hence can be considered as having a better level of living or social welfare.

3.12.2.3 Figure 6 shows the generalised Lorenz curves for 50<sup>th</sup> and 61<sup>st</sup> rounds for rural and urban India. To neutralise the price effect, the average MPCEs have been deflated with suitable consumer price indexes, viz., CPI-AL for rural and CPI-UNME for urban India. (The deflators are, of course, open to criticism because they do not measure the effect of consumer price changes over time on the general population in rural/urban India.) Clearly the distribution of MPCE in 2004-05 (61<sup>st</sup> round) is ranked higher than the distribution in 1993-94 (50<sup>th</sup> round) by this method.

3.12.2.4 To compare the size distributions of consumer expenditure obtained from the 55<sup>th</sup> and 61<sup>st</sup> rounds, the MPCE (M) estimates from the 61<sup>st</sup> round (see paragraph 3.5.5) are used. The generalized Lorenz curves are shown in Figure 7.

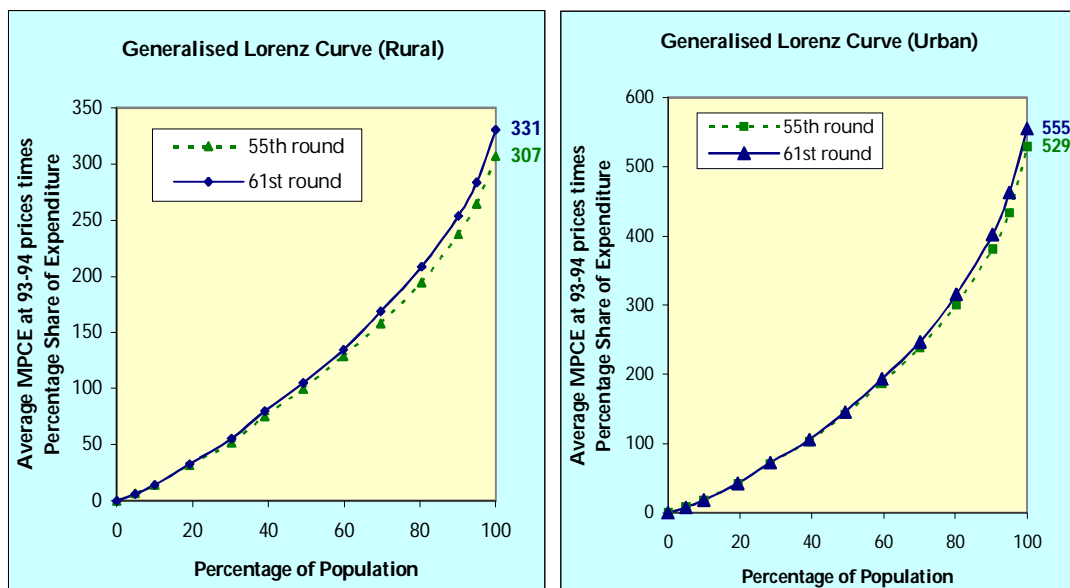

**Fig 6**  
Generalised Lorenz curves for size distributions of MPCE (U30) in 50<sup>th</sup> and 61<sup>st</sup> rounds for rural and urban India

3.12.2.5 From Figure 7 it can be seen that the generalized Lorenz curve for the 61<sup>st</sup> round lies above that for the 55<sup>th</sup> round, implying that the poorest  $x$  percent of population for any  $x$  had

a higher level of living in 2004-05 than in 1999-2000. The distance between the curves is, however, less in the lower percentile groups of population ranked by MPCE (up to the 60<sup>th</sup> percentile the curves are very close together), implying that the difference between the two periods in consumption commanded by the poorer half of the population was very slight.

**Fig 7**  
Generalised Lorenz curves for size distributions of MPCE(M) in 55<sup>th</sup> and 61<sup>st</sup> rounds for rural and urban India

## A TECHNICAL NOTE ON LORENZ AND GENERALIZED LORENZ CURVES

Let  $X$  be a non-negative random variable with probability density function  $f(x)$  and distribution function  $F(x)$ .

$$F(X) = P[X \leq x] = \int_0^x f(x)dx$$

$$\mu = E(X) = \int_0^{\infty} xf(x)dx$$

$$\begin{aligned} \text{Let } F_1(x) &= \frac{\int_0^x xf(x)dx}{\int_0^{\infty} xf(x)dx} \\ &= \frac{\int_0^x xf(x)dx}{\mu} \end{aligned}$$

$$\text{and } C(x) = \mu \times F_1(x) = \int_0^x xf(x)dx$$

Then as  $x$  increases from 0 to  $\infty$ ,  $F(x)$  and  $F_1(x)$  increase from 0 to 1 and  $C(x)$  increases from 0 to  $\mu$ . The relationship between  $F$  and  $F_1$  gives the equation of the Lorenz curve,

where  $F_1=F_1(F)$ . Similarly, the relationship between  $F$  and  $C$  provides the Generalised Lorenz Curve, where  $C=C(F)$ .

In a welfare-theoretic framework, it can be shown that both Lorenz curve and generalized Lorenz curve can be used to rank income distributions. Suppose we have two distributions  $x$  and  $x'$  with means  $\mu$  and  $\mu'$ , and  $L$  and  $L'$  are the corresponding Lorenz curves. Let us also define the Social Welfare Function (SWF) as

$$W = W[u_1(x_1), u_2(x_2), \dots, u_n(x_n)] \text{ or simply,}$$

$$W = W(x_1, x_2, \dots, x_n)$$

Let us also make some reasonable assumptions on the nature of  $W(\cdot)$ .

*Monotonicity.* This condition requires that  $W(x_1, x_2, \dots, x_n)$  is non-decreasing in  $x_i$   $i=1, 2, \dots, n$ . This means that  $W(x_1, x_2, \dots, x_i + \delta, \dots, x_n) > W(x_1, x_2, \dots, x_i, \dots, x_n)$  or  $\frac{\partial W}{\partial x} > 0$ . This condition will be satisfied if  $W(x_1, x_2, \dots, x_n) = \sum_{i=1}^n u_i(x_i)$  where  $x_1, x_2, \dots, x_n$  are the incomes of  $n$  persons and  $u_i(x_i)$  is the unknown utility function of the  $i^{\text{th}}$  person and  $U_i' > 0$  and  $U_i'' < 0$ , i.e., the marginal utility of income is positive and it diminishes with increase in income. More generally, the monotonicity condition will be satisfied if the welfare function is Paretian and the utility levels of the individuals depend only on their own incomes.

*The Principle of Diminishing Transfer.* This principle states that the increase in social welfare generated by a transfer of a given amount of income from a richer to a poorer individual, both of whom are in the lower part of the distribution, increases the social welfare more than a transfer of the same amount from a richer to a poorer individual both of whom are in the upper part of the distribution.

The SWF is:

i) **Increasing in income.** The function  $w=w(x)$  is such that, other things being equal, an increase of the income of any individual  $i$ , at any income level, must lead to a positive variation of welfare. This was explained while assuming the "monotonicity" of the welfare function. In Figure 8, a welfare function is illustrated in two-dimensional space to highlight the contribution to the social welfare of the  $i^{\text{th}}$  income (all other things being equal). For example, income increases  $\Delta x$  at the income levels  $x_1$  and  $x_3$  lead to positive variations of welfare  $\Delta w_1$  and  $\Delta w_3$  respectively<sup>14</sup>. Mathematically, this property is reflected by the positive first derivative of the welfare function:  $\frac{\partial w}{\partial x_i} > 0$ .

ii) **Reflecting inequality-aversion (principle of transfers).** The function  $w=w(x)$  is such that, other things being equal, an increase  $\Delta x$  of a richer individual's income generates a lower welfare increase than the same increase  $\Delta x$  for a poorer individual. In the following figure (Figure 8), for example, an income increase  $\Delta x$  at income level  $x_3$  generates a lower

<sup>14</sup> Similarly, reductions in income  $-\Delta x$  at income levels  $x_2$  and  $x_4$  lead to negative variations of welfare,  $-\Delta w_2$  and  $-\Delta w_4$  respectively.

welfare increase  $\Delta w_3$  than the welfare increase  $\Delta w_1$  generated by the income increase  $\Delta x$  at the income level  $x_1$ .

Therefore, the welfare variation decreases as income increases. Or,

$$(\Delta w_3 - \Delta w_1) < 0$$

The term in brackets can be considered the “change in the variation of welfare” as income increases. Mathematically, for infinitesimal changes of  $x$ , i.e. for  $\Delta x \rightarrow 0$  this property is reflected by the negative second derivative of the welfare function:  $\frac{\partial^2 w}{\partial x^2} < 0$ .

**Fig 8: Principle of Transfers**

Now, under these assumptions about the social welfare function, Atkinson showed that the Lorenz curve can be used to compare two income distributions so long as the Lorenz curves do not intersect. Consider two communities with the same mean income. If the Lorenz curve of one community is inside the Lorenz curve of other community, in the sense that the ordinate of the first LC  $\geq$  the ordinate of the second LC for all values of  $F$  (cumulative distribution of population), then the social welfare measured by the sum of the utilities of all the individuals is greater for the first community than for the second, irrespective of the form of the unknown utility function  $U_i(\cdot)$ . Formally, the Atkinson theorem states:

Let  $x, x'$  be two income distributions with equal means  $\mu_x = \mu_{x'}$ .

Then  $L(x, p) \geq L(x', p) \quad \forall p \in [0, 1] \Leftrightarrow \int U(x) f(x) dx \geq \int U(x) g(x) dx$

where  $f(x)$  and  $g(x)$  are the density functions of  $x$  and  $x'$  respectively.

But if two Lorenz curves intersect or cross each other, then such an unambiguous ranking is not possible (see Figure 9). Two different utility functions may then lead to different orderings of the two communities by social welfare.

This way of ranking the distributions on the basis of the Lorenz curve when the means of the comparable distributions are the same is known as first-order stochastic dominance. In many cases, either the means are not the same or the Lorenz curves intersect and do not allow one to rank the distributions. Prof. Anthony F. Shorrocks proposed a concept of Generalised Lorenz Curve (GLC) to sort out this problem. He showed that the

distributions could be ranked on the basis of generalized Lorenz curves provided the social welfare functions follow the above-mentioned assumptions of monotonicity and principle of transfers. In the GLC, the ordinate is mean times the percentage share of income.

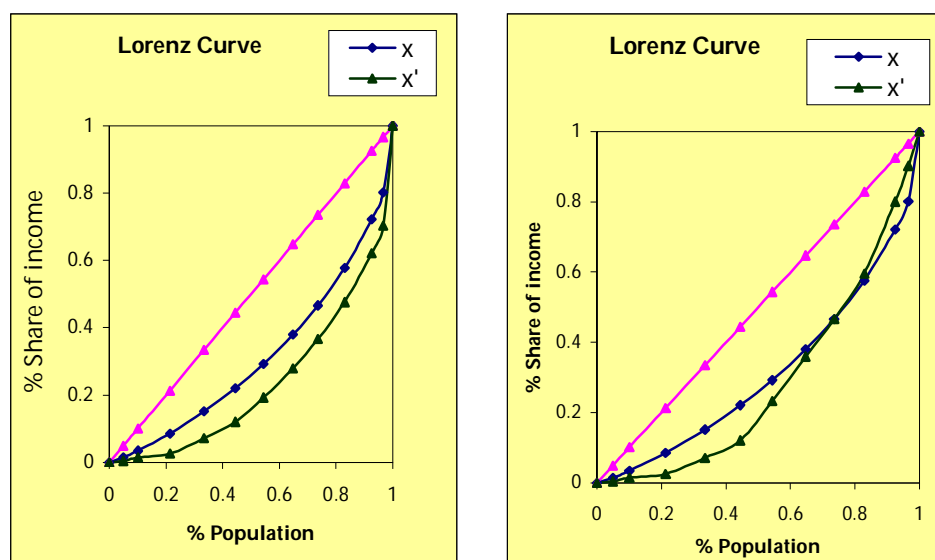

Thus  $GL(x,p) = \mu \times L(x,p) \quad \forall p \in [0,1]$  where  $\mu$  is the mean of the distribution and  $L(x,p)$  is the Lorenz curve ordinate. The Shorrocks theorem is parallel to the result of the Atkinson theorem, but without the restriction on the means. Formally, the Shorrocks theorem states:

Let  $x, x'$  be two income distributions.

$$\text{Then } GL(x,p) \geq GL(x',p) \quad \forall p \in [0,1] \Leftrightarrow \int U(x)f(x)dx \geq \int U(x)g(x)dx$$

where  $f(x)$  and  $g(x)$  are density functions of  $x$  and  $x'$  respectively, for every social utility function  $U(x)$  such that  $U'(x) > 0$  and  $U''(x) < 0$ .

**Fig 9**  
Lorenz Curves: (a) non-intersecting (b) intersecting

Thus, if the generalised Lorenz curves do not intersect, one can compare the two distributions on welfare grounds. If the ordinate of the first GLC is more than the ordinate of the second GLC, the level of welfare of the first distribution is higher than that of the second. This is known as second order stochastic dominance in the literature on income distribution. But in case GLCs intersect, we cannot compare distributions on the basis of second order stochastic dominance.

Note that the great attraction of Atkinson's and Shorrocks's results is that they permit us to rank the distributions in terms of the social welfare levels even without knowing the specific utility function. Figures 9 and 10 depict cases where the Atkinson and Shorrocks theorems apply.

**Fig 10**  
**Generalized Lorenz Curves being used to compare distributions with intersecting Lorenz curves**

## Chapter Four

### Alternative Estimates of Consumption of Some Items by Use of Different Recall Periods

4.0.0 It was mentioned in Chapters Two and Three that for some groups of relatively infrequently purchased consumption items, two reference periods were used for data collection instead of one. The item groups were: clothing (and bedding), footwear, education, medical (institutional) and durable goods. The additional reference period used was: “last 365 days”. This means that while for most of the categories of consumption, we have only one estimate of per capita consumption, for these we have two estimates based on alternative recall periods.

4.0.1 The reasons for bringing such a complexity into the data collection procedure are discussed in the next two sections.

#### 4.1 Last 30 days versus last 365 days

4.1.1 Survey methodology usually distinguishes between two major types of items. There are items that are frequently purchased and are non-salient in the respondent’s memory; for these, a shorter recall period is deemed desirable. For items that are (relatively) infrequently purchased and hence salient in the respondent’s memory, a longer recall period is deemed desirable.

4.1.2 Two biases generally arise in recall-based reporting. One is the *telescoping effect*, that is, the incorrect inclusion of items consumed/ purchased outside the recall period. This effect is usually greater with short reference periods. The other is *recall lapse*, which arises due to longer recall periods.

4.1.3 It is known that using long recall periods invites recall errors. Still, to form an idea of the “normal” level of consumption of a household, a 30-day reporting period is not enough. Expenditures on certain categories, in particular the five mentioned above, do not have a monthly regularity.

4.1.4 The “last 30 days” reference period usually performs badly for the infrequent, lumpy expenditures – some incurred with an annual periodicity, others at much longer intervals, such as durables, and some unforeseeable contingencies, such as major medical expenses. The five item groups are affected by transitory elements – seasonality and other short-term fluctuations.

4.1.5 For a long time, the failure of the “last 30 days” reporting period to capture infrequent expenditures was justified on the grounds that the ups and downs in data inherent in a short reference period cancel out in a large-scale sample survey: the estimated aggregates and averages over the survey period are reasonably free from the effects of these fluctuations so long as interviews of sample households are reasonably evenly spaced throughout the survey period, usually of one year. But, over the last two or three decades, the emphasis in the study of consumption slowly moved away from the estimates of average or aggregate

consumption to the size distribution of consumption around the average MPCE. The emphasis shifted, in particular, to the “lower tail” of the distribution and the information it contains on poverty – poverty in terms of consumption levels or purchasing power.

4.1.6 To estimate not just the average of the distribution, but the entire distribution around the average, the consumption level of the *individual household* must be more accurately estimated. Attempts must be made to get an approximation to the permanent consumption of the household. This can only be done by having a longer reporting period such as a year for, if not all items, at least the five infrequent-expenditure (“I-type”) categories listed in paragraph 4.0.0 above.

4.1.7 In its quinquennial series of consumer expenditure surveys, the NSS has for some time past (with the exception of the 55<sup>th</sup> round) been collecting data on these five categories<sup>15</sup> with both “365 days” and “30 days” reference periods, as it did in the 61<sup>st</sup> round. But “last-365-days”-based estimates have usually not been released on grounds of maintaining comparability of the estimates across rounds, which have generally been based on “last 30 days” data for all items<sup>16</sup>.

## 4.2 Two kinds of experiments

4.2.1 Important experiments on the effects of reference period on consumption data were carried out on a national scale in the 51<sup>st</sup> to 54<sup>th</sup> rounds of NSS. For the five relatively infrequent (or I-type for short, see paragraph 4.0.0) categories, “last 30 days” data were collected in one sample of households and “last 365 days” data in another independent (matched) sample. These experiments provided another data set for study of the 30-days-vs.-365-days question.

4.2.2 Such experiments, where the “last 30 days” and “last 365 days” recall periods were used in different samples of households, were unlike the experiments on reference period of the rounds of the quinquennial series, where each household, in the course of a single interview, was asked to report data for both “last 30 days” and “last 365 days”.

4.2.3 The 61<sup>st</sup> round survey again used the strategy of the 50<sup>th</sup> (1993-94) and earlier rounds of the quinquennial series of having, for the I-type item categories, both the “last 30 days” and the “last 365 days” reference period *together, in every sample household*. But the purpose, this time, was not so much to compare the effects of the two reference periods – the more important purpose was to have the same method of data collection as the 50<sup>th</sup> round survey did, to maintain comparability. In other words, given the sensitivity of reported consumption to recall periods, any schedule of enquiry using a “double” reference period for a particular item of consumption was recognized as a different method of data collection from a schedule using only one reference period for that item. Therefore the method of the 50<sup>th</sup> round was copied in the 61<sup>st</sup>, so that (inter-temporal) comparison of estimates from the two rounds might stay free from the “reference period effect”.

<sup>15</sup> Up to the 43<sup>rd</sup> round (1987-88), only three of the five categories were given the “double reference period” treatment; education and institutional medical care entered the list only from the 50<sup>th</sup> round onwards.

<sup>16</sup> Estimates based on “last 365 days” from the 38<sup>th</sup> round were presented in a different report (NSS Report No.357: *Tables with Notes on Distribution of Households by Monthly Per Capita Expenditure Class after Adjustment*) specially prepared for the purpose. In case of the 50<sup>th</sup> round, too, such estimates were placed in a report (NSS Report No.404: *Consumption of Some Important Commodities in India*) different from that in which the basic estimates of level and pattern of consumer expenditure were presented.

4.2.4 However, the experiments conducted in the rounds of the quinquennial series (using a double reference period) provide useful data sets with which to analyse the difference in household-level and average consumption data obtained when double reference periods are used. It is from this angle that the alternative estimates obtained in the 61<sup>st</sup> round for the I-type categories and also of total household consumption will now be examined. What has been said above should make it clear that the conclusions *cannot* be extended to surveys where “30 days” and “365 days” are used independently, in different samples of households. For the same reason, the last-30-days-vs.-last-365-days results of the 51<sup>st</sup> to 54<sup>th</sup> rounds, where the two reference periods *were* used in different samples, are not being presented here.

### 4.3 “Last 30 days” and “last 365 days” estimates from the 50<sup>th</sup> and the 61<sup>st</sup> rounds

4.3.1 For rural and urban sectors of each of the 35 State/UTs, two estimates of per capita consumption of clothing (and bedding) exist, one using “last 30 days” data, and the other using “last 365 days” data. (See Table 5 (R & U) of Appendix A.) The same is true for footwear, education, medical care (institutional), and durable goods. Similar data are available for the 50<sup>th</sup> round of NSS (1993-94), where, also, a double reference period was used for the I-type categories<sup>17</sup>.

4.3.2 Using these two data sets, Tables P21 to P25 have been drawn up below. Each table relates to one I-type category, and shows the number of States for which the 30- days-based estimate exceeds the 365-days-based estimate, and the number of States for which the reverse is true.

4.3.3 *Clothing*: The 365-days-based estimates are higher in an overwhelming majority of cases for both rural and urban sectors in both rounds: the “30 days” estimates are higher in less than 20% of State/UTs in all cases.

**Table P21: Clothing: counts of State/UTs giving higher estimates of per capita consumption by “last 30 days” than “last 365 days”, and the reverse**

State/UTs with	50 <sup>th</sup> & 61 <sup>st</sup> rounds			
	RURAL		URBAN	
	50 <sup>th</sup> round	61 <sup>st</sup> round	50 <sup>th</sup> round	61 <sup>st</sup> round
$C_{30} > C_{365}$	6	2	6	5
$C_{30} < C_{365}$	26	33	26	30
all	32	35	32	35
$C_{30}$ : “last 30 days” estimate	$C_{365}$ : “last 365 days” estimate			

4.3.4 *Footwear*: Here also the “last 365 days” estimates are higher in the vast majority of cases: in the 50<sup>th</sup> round the “last 30 days” estimates were higher in not more than 25% cases, while in the 61<sup>st</sup> round such cases are rarer.

<sup>17</sup> See NSS Report No.404: *Consumption of Some Important Commodities in India*.

**Table P22: Footwear: counts of State/UTs giving higher estimates of per capita consumption by “last 30 days” than “last 365 days”, and the reverse**

State/UTs with	50 <sup>th</sup> & 61 <sup>st</sup> rounds			
	no. of State/UTs RURAL		no. of State/UTs URBAN	
	50 <sup>th</sup> round	61 <sup>st</sup> round	50 <sup>th</sup> round	61 <sup>st</sup> round
F <sub>30</sub> > F <sub>365</sub>	8	3	7	6
F <sub>30</sub> < F <sub>365</sub>	24	32	25	29
all	32	35	32	35

F<sub>30</sub>: “last 30 days” estimate      F<sub>365</sub>: “last 365 days” estimate

4.3.5 *Education*: In the 50<sup>th</sup> round the “last 30 days” estimates were higher in a third of all cases in the rural sector and nearly one-half of all cases in the urban sector. But in the 61<sup>st</sup> round such cases form less than 25% of the total number of State/UTs in the rural sector and are rarer still in the urban.

**Table P23: Education: counts of State/UTs giving higher estimates of per capita consumption by “last 30 days” than “last 365 days”, and the reverse**

State/UTs with	50 <sup>th</sup> & 61 <sup>st</sup> rounds			
	no. of State/UTs RURAL		no. of State/UTs URBAN	
	50 <sup>th</sup> round	61 <sup>st</sup> round	50 <sup>th</sup> round	61 <sup>st</sup> round
E <sub>30</sub> > E <sub>365</sub>	10	8	15	4
E <sub>30</sub> < E <sub>365</sub>	22	27	17	31
all	32	35	32	35

E<sub>30</sub>: “last 30 days” estimate      E<sub>365</sub>: “last 365 days” estimate

4.3.6 *Medical (institutional)*: Here the evidence of the two rounds is conflicting. In the 50<sup>th</sup> round there were more State/UTs with higher estimates from “last 30 days” data than from “last 365 days” data. In the 61<sup>st</sup> round only about one-third of the State/UTs give higher estimates with “last 30 days”. This is true for both rural and urban sectors.

**Table P24: Medical (institutional): counts of State/UTs giving higher estimates of per capita consumption by “last 30 days” than “last 365 days”, and the reverse**

State/UTs with	50 <sup>th</sup> & 61 <sup>st</sup> rounds			
	no. of State/UTs RURAL		no. of State/UTs: URBAN	
	50 <sup>th</sup> round	61 <sup>st</sup> round	50 <sup>th</sup> round	61 <sup>st</sup> round
M <sub>30</sub> > M <sub>365</sub>	18	13	18	13
M <sub>30</sub> = M <sub>365</sub>	1	-	2	-
M <sub>30</sub> < M <sub>365</sub>	13	22	12	22
all	32	35	32	35

M<sub>30</sub>: “last 30 days” estimate      M<sub>365</sub>: “last 365 days” estimate

4.3.7 *Durable goods*: In most cases it is the “last 365 days” estimates that are higher. The exception is the urban sector in the 50<sup>th</sup> round, in which the State/UTs with higher “last 30 days” estimates outnumbered the rest.

**Table P25: Durable goods: counts of State/UTs giving higher estimates of per capita consumption by “30 days” than “365 days”, and the reverse**

State/UTs with	50 <sup>th</sup> & 61 <sup>st</sup> rounds			
	no. of State/UTs RURAL		no. of State/UTs URBAN	
	50 <sup>th</sup> round	61 <sup>st</sup> round	50 <sup>th</sup> round	61 <sup>st</sup> round
D <sub>30</sub> > D <sub>365</sub>	9	11	19	10
D <sub>30</sub> = D <sub>365</sub>	1	-	2	-
D <sub>30</sub> < D <sub>365</sub>	22	24	13	25
all	32	35	32	35

D<sub>30</sub>: “last 30 days” estimate      D<sub>365</sub>: “last 365 days” estimate

4.3.8 In general, the data suggest that with the double reference period, it is the “last 365 days” estimates that are usually higher. It is likely that in a situation of unwilling response on the part of the informant, it is easier to under-report the 30-days data (e.g. by declaring “no expenditure during the last 30 days”, as is possible with the I-type categories) than to under-report the 365-days data (where some consumption usually has to be reported – see Chapter Three, Table P12). Also, whatever data is reported for “last 30 days” automatically gets reported for the “last 365 days” in this kind of “double reference period” survey. As for the effort needed to recall a year’s consumption of clothing, this may not be too troublesome except for very high-income households. If some annual budgeting for clothing is done by the household, the annual expenditure on clothing may be approximately known to the informant, whereas monthly expenditures, not being so well known, may be missed in the recall effort. Medical (institutional) expenditures appear to be so rare (Table P12) that it should not be difficult at all to report them with a “last 365 days” reference period; also, the total expenditure in a hospitalisation case is usually known to the person who incurred the expenditure.

4.3.9 Statements 10R and 10U (pages 70-71) show, for rural and urban sectors respectively, the percentage differences between “last 30 days” and “last 365 days” based estimates of State-level per capita expenditure on the five categories of consumption items, as obtained from the 50<sup>th</sup> round, and as obtained from the 61<sup>st</sup> round survey. The all-India divergence between the estimates (as a percentage of the “last 30 days”-based estimate) is shown below in Table P26.

**Table P26: Percentage divergence of “last-365-days”-based estimate from “last-30-days”-based estimate by sector for each of five categories of less frequently purchased items, 50<sup>th</sup> and 61<sup>st</sup> rounds**

all-India		$(Y_{365}^{\#} - Y_{30})/Y_{30}$ expressed in percentage form				
sector	round	clothing	footwear	educa- tion	medical (inst.)	durables
rural	50 <sup>th</sup>	40.10	13.18	3.68	-26.84	-14.36
	61 <sup>st</sup>	54.17	38.21	21.21	-6.18	13.05
urban	50 <sup>th</sup>	52.79	32.59	-7.75	-35.77	-19.80
	61 <sup>st</sup>	46.95	58.44	39.87	21.69	10.18

# “last 365 days” estimate

\* “last 30 days” estimate

#### 4.4 Effect on household MPCE of using “last 365 days” for clothing, footwear, etc.

4.4.1 It was mentioned in Chapter Three, paragraph 3.0.3, that discussion of the basic results of the survey uses a uniform 30-day reference period for all items of consumption.

But, for each sample household, the overall level of living indicator, or MPCE, was also worked out using the 365-day data for those categories for which “last 365 days” data had been collected. This gave an alternative figure for MPCE of each household, from which an alternative distribution of households and persons by size of MPCE could be worked out. This alternative MPCE is referred to in this report as “MPCE (M)”. (See also Chapter Two, paragraph 2.11.) For a clearer distinction, the MPCE worked out using a uniform reference period of “last 30 days” has occasionally been referred to as “MPCE (U30)”.

4.4.2 MPCE (M), thus defined, is *a priori* less variable than MPCE (U30). The latter is likely to contain more extreme values, as expenditure on, say, major durable goods, or expenditure on institutional medical expenses during the last 30 days would have a large effect on MPCE (U30). On the other hand, such abnormal expenditures would be ironed out in using the “365-day” data for these categories in computing MPCE (M).

4.4.3 At all-India level, the effect on a household’s MPCE of the use of the “MPCE (M)” method in place of “MPCE (U30)” is presented in detail in Table 6 (R&U) of Appendix A. This table gives, out of every 1000 households placed in an MPCE class by the “MPCE (U30)” method, the numbers of households that would be placed in each of the 12 MPCE classes after “adjustment” (i.e. by using “MPCE (M)” instead).

4.4.4 Table P27-R shows, for rural India as a whole, how many households in each MPCE class move up the MPCE range, how many move down, and how many stay at the same level after MPCE is “adjusted”. More precisely, it shows the estimated proportion of households that climb to a higher MPCE class, the proportion of those that slip down to a lower class, and the proportion of those that stay on in the same class when MPCE is adjusted. Note that small movements of MPCE which do not change the MPCE class of a household are not reflected in the table.

**Table P27-R: Distribution of rural households by effect on MPCE class of “adjustment” (use of “last 365 days” instead of “last 30 days” for I-type groups)**

MPCE class, using “MPCE (U30)”	per 1000 no. of households whose “MPCE (M)” is in			
	a lower class	the same class	a higher class	any class
(1)	(2)	(3)	(4)	(5)
0 - 235	0	567	432	1000
235 - 270	18	244	738	1000
270 - 320	24	371	603	1000
320 - 365	45	301	654	1000
365 - 410	59	261	680	1000
410 - 455	72	249	679	1000
455 - 510	94	293	612	1000
510 - 580	110	343	546	1000
580 - 690	115	481	404	1000
690 - 890	149	607	245	1000
890 - 1155	181	561	258	1000
1155 & more	191	809	0	1000

4.4.5 It is clear that in all rows of the above table except the row representing the topmost class, many more households move up than down as a result of adjustment.

4.4.6 This suggests that for a typical household, there are unusually large expenditures in only one or two months, perhaps, which means that in the *majority of months*, a month's MPCE (U30) is *below* that of MPCE (M). More likely than not, a household will be surveyed in one of the "usual" months. Adjustment of MPCE for such a household therefore means an increase, which sometimes pushes it into a higher MPCE class.

4.4.7 However, some households will be surveyed in the one or two months in which they incur unusually high expenditures. In these months, MPCE (U30) exceeds MPCE (M) quite substantially. Therefore such a household, before adjustment, will be placed in a higher MPCE class than the one in which it settles after adjustment. Such households will contribute to column (2) of the table.

4.4.8 Many of these latter households will, in fact, be placed in the topmost class before adjustment (purchase of a TV or a fridge may easily cause a household's 30-days MPCE to go up by a thousand rupees, unless the household is very large), although their usual MPCE may be much less. Adjustment will certainly bring them down to a lower MPCE class.

**Table P27-U: Distribution of urban households by effect on MPCE class of "adjustment" (use of "last 365 days" instead of "last 30 days" for I-type groups)**

MPCE class, using "MPCE (U30)"	per 1000 no. of households whose MPCE "(M)" is in			
	a lower class	the same class	a higher class	any class
(1)	(2)	(3)	(4)	(5)
0 - 335	0	659	340	1000
335 - 395	33	349	616	1000
395 - 485	43	475	482	1000
485 - 580	56	444	500	1000
580 - 675	64	411	525	1000
675 - 790	99	403	497	1000
790 - 930	97	425	478	1000
930 - 1100	97	441	462	1000
1100 - 1380	88	560	352	1000
1380 - 1880	107	623	270	1000
1880 - 2540	123	599	277	1000
2540 & more	135	865	0	1000

4.4.9 The same arguments apply to the urban households, the broad effect of adjustment on whom is shown in Table P27-U above.

#### 4.5 Effect on measurement of inequality

4.5.1 Since (see paragraph 4.4.2) MPCE (U30) is inherently more variable than MPCE (M) (where the fluctuations of monthly consumption are smoothed out in the 12-month average), one may expect that indicators of inequality based on size distributions of MPCE(M) would show lower values than those based on MPCE (U30).

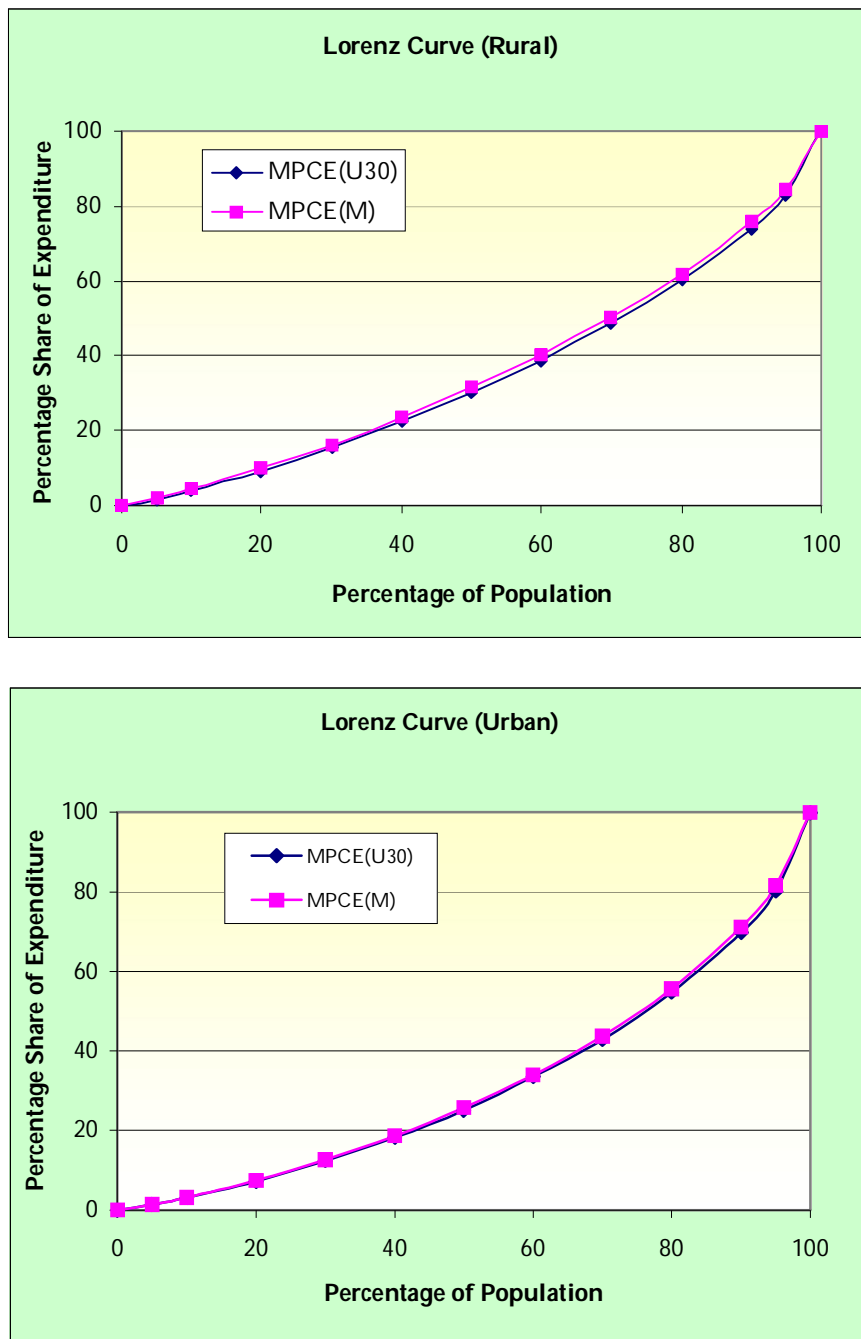

4.5.2 Figure 11, in which Lorenz curves for the size distributions of MPCE (U30) and MPCE (M) respectively are plotted on the same diagram for rural India, and again for urban India, bears this out: the Lorenz curve for MPCE (M) lies inside the curve for MPCE (U30). The

average distance between the curves is, incidentally, greater for the rural than for the urban sector.

4.5.3 The Lorenz ratios for rural India are 0.30 for MPCE (U30) and 0.28 for MPCE (M). The ratios for urban India are 0.37 for MPCE (U30) and 0.36 for MPCE (M).

**Fig 11**

## **Appendix B**

# **Sample Design and Estimation Procedure**

# Sample Design and Estimation Procedure

## 1. Outline of Survey Programme

1.1 **Subject Coverage:** 'Consumer Expenditure' and 'Employment and Unemployment' were the two subjects of enquiry of the 61<sup>st</sup> round (July 2004-June 2005) of NSS. These two subjects are covered together in the quinquennial series of NSS surveys. The 61<sup>st</sup> round survey was the seventh in this series, the last one having been conducted in the 55<sup>th</sup> round (1999-2000) of NSS.

1.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of a bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

1.3 **Period of survey and work programme:** The period of survey was of one year's duration starting on 1<sup>st</sup> July 2004 and ending on 30<sup>th</sup> June 2005. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

sub-round 1 :	July - September 2004
sub-round 2 :	October - December 2004
sub-round 3 :	January - March 2005
sub-round 4 :	April - June 2005

An equal number of sample villages/blocks (FSUs) was allotted for survey to each of these four sub-rounds with a view to ensuring uniform spread of sample FSUs over the entire survey period. Each FSU was surveyed during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.*

1.4 **Schedules of enquiry:** There were three schedules of enquiry:

Schedule 0.0	: list of households
Schedule 1.0	: consumer expenditure
Schedule 10	: employment and unemployment

1.5 **Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Dadra & Nagar Haveli and Lakshadweep participated at least on an equal matching basis. The scale of the survey conducted by a State /UT relative to the Central sample survey in the State/UT was as follows:

Nagaland (U)	: triple
J & K , Manipur & Delhi	: double
Goa, Maharashtra (U)	: one and a half
Remaining States/UTs	: equal

## 2. Sample Design

**2.1 Outline of sample design:** A stratified multi-stage design was adopted for the 61<sup>st</sup> round survey. The first-stage units (FSU) were the 2001 Census villages in the rural sector and Urban Frame Survey blocks in the urban sector. The ultimate stage units, in both sectors, were households. In the case of large villages/ blocks requiring formation of hamlet-groups (hg)/ sub-blocks (sb), the selection of two hg's/ sb's from each FSU formed an intermediate stage of sampling.

**2.2 Sampling Frame for First-Stage Units:** *For the rural sector*, the list of 2001 Census villages (*panchayat* wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available Urban Frame Survey (UFS) blocks was considered as the sampling frame.

**2.3 Stratification:** Within each district of a State/UT, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, if there were one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of these also formed a separate basic stratum and the remaining urban areas of the district was considered as another basic stratum. There are 27 towns with population 10 lakhs or more at all-India level as per Census 2001.

### 2.4 Sub-stratification:

**2.4.1 Rural sector:** If 'r' be the sample size allocated for a rural stratum, the number of sub-strata formed was 'r/2'. The villages within a district as per frame were first arranged in ascending order of population. Then sub-strata 1 to 'r/2' were demarcated in such a way that each sub-stratum comprised a group of successive villages of the arranged frame and had more or less equal population.

**2.4.2 Urban sector:** If 'u' be the sample size for an urban stratum, 'u/2' sub-strata were formed. The towns within a district, except those with population 10 lakhs or more, were first arranged in ascending order of population. Next, UFS blocks of each town were arranged by IV unit no. × block no. in ascending order. From this arranged frame of UFS blocks of all the towns, 'u/2' sub-strata were formed in such a way that each sub-stratum had more or less equal number of UFS blocks.

**2.4.3** For towns with population 10 lakhs or more, the urban blocks were first arranged by IV unit no. × block no. in ascending order. Then 'u/2' number of sub-strata were formed in such a way that each sub-stratum had more or less equal number of blocks.

**2.5 Total sample size (FSUs):** 12784 FSUs were allocated at all-India level on the basis of investigator strength in different States/UTs for the Central sample and 14992 FSUs were allocated for the State sample.

**2.6 Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to the availability of investigators ensuring more or less uniform work-load.

**2.7 Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger

States like Maharashtra, Tamil Nadu etc. should not exceed the rural sample size. A minimum of 8 FSUs was allocated to each State/UT separately for rural and urban areas.

**2.8 Allocation to strata:** Within each sector of a State/UT, the sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 4 with a minimum sample size of 4.

**2.9 Selection of FSUs:** Two FSUs were selected from each sub-stratum of a district of the rural sector with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 2001. For the urban sector, two FSUs were selected from each sub-stratum by using Simple Random Sampling Without Replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both rural and urban sectors.

## 2.10 Selection of hamlet-groups/sub-blocks/households: important steps

**2.10.1 Criterion for hamlet-group/sub-block formation:** Large villages/blocks having approximate present population of 1200 or more were divided into a suitable number (say, D) of 'hamlet-groups' (hg) in the rural sector and 'sub-blocks' (sb) in the urban sector. The number of hg's/ sb's to be formed was decided as shown below.

approximate present population of the sample village/block	no. of hgs/sbs to be formed (D)
less than 1200*	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

\* i.e., no hamlet-group/sub-block formation

**2.10.2** For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur, Doda districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups formed was as follows.

approximate present population of the sample village	no. of hgs to be formed
less than 600	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

**2.11** Each hamlet-group/sub-block was formed by grouping contiguous areas so that the hg's/ sb's had more or less equal population content. To form the sampling frame for selection of households, two hamlet-groups/sub-blocks were selected by SRSWOR from those formed in a large village/block. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

### 3. Formation of Second Stage Strata and allocation of households

For both Schedule 1.0 and Schedule 10, households listed in the selected village/block/hamlet-groups/sub-blocks were stratified into three second-stage strata (SSS) as given below.

3.1 **Rural:** The three second-stage strata (SSS) in the rural sector were formed as follows:

- SSS 1: relatively affluent households
- SSS 2: from the remaining households, households having principal earning from non- agricultural activity
- SSS 3: other households

3.2 **Urban:** In the urban sector, the three second-stage strata (SSS) were formed using information collected on the Monthly Per Capita Expenditure (MPCE) of households, as follows:

- SSS 1: households with MPCE more than A (i.e.  $MPCE > A$ )
- SSS 2: households with MPCE equal to or less than A but equal to or more than B (i.e.  $B \leq MPCE \leq A$ )
- SSS 3: households with MPCE less than B (i.e.  $MPCE < B$ )

where A and B were values of MPCE chosen separately for each NSS Region such that, according to data collected in the 55<sup>th</sup> round of NSS, the top 10% of households in the region had MPCE more than A and the bottom 30% had MPCE less than B.

3.3 Schedule 1.0 was surveyed in 10 households in each FSU. The allocation of sample households to second-stage strata was as follows:

SSS	composition of SSS	no. of hhs to be surveyed	
		without hg/sb formation	with hg/sb formation (for each hg/sb)
<b>rural</b>			
SSS 1:	relatively affluent households	2	1
SSS 2:	of the rest, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	4	2
<b>urban</b>			
SSS 1:	households with $MPCE > A$	2	1
SSS 2:	other households with MPCE equal to or less than A but equal to or more than B (i.e. $B \leq MPCE \leq A$ )	4	2
SSS 3:	households with MPCE less than B	4	2

4. **Selection of households for Schedule 1.0:** From each SSS the sample households for Schedule 1.0 were selected by SRSWOR.

#### 5. Estimation Procedure

##### 5.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU [village (panchayat ward) / block]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb (j = 1, 2 or 3)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample village (panchayat ward) / block

$D^* = 1$  if  $D = 1$

=  $D / 2$  for FSUs with  $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes for all the FSUs of a rural sub-stratum)

z = size of sample village used for selection.

n = number of sample village / block surveyed including zero cases but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of a village/block/hamlet-group/sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

$\hat{X}$ ,  $\hat{Y}$  = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$  = observed value of the characteristic y for the k<sup>th</sup> household in the j<sup>th</sup> second-stage stratum of the d<sup>th</sup> hg/sb (d = 1, 2) of the i<sup>th</sup> FSU belonging to the m<sup>th</sup> sub-sample for the t<sup>th</sup> sub-stratum of s<sup>th</sup> stratum;

However, for ease of understanding, a few symbols are suppressed in the following paragraphs where they are obvious.

##### 5.2 Formulae for estimation of aggregates based on Schedule 1.0 for a particular sub-sample and stratum in rural/ urban sector:

###### 5.2.1 Rural:

Estimation formula for a sub-stratum:

(i) For households selected in j<sup>th</sup> second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

### 5.2.2 Urban:

Estimation formula for a sub-stratum:

(i) For households selected in  $j^{\text{th}}$  second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

### 5.2.3 Estimate for a stratum:

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

### 5.3 Overall Estimate for Aggregates:

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

### 5.4 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

### 5.5 Estimates of Ratios:

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) is obtained as.

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

5.6 **Estimates of Error:** The estimated variances of the above estimates are as follows:

5.6.1 **For aggregate  $\hat{Y}$ :**

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$$

where  $V\hat{a}r(\hat{Y}_s)$  are as given below.

5.6.1.1 For strata with PPSWR selection at first stage:

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \left[ \sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left( \frac{Z_{sti} \hat{Y}_{sti}}{Z_{sti}} - \hat{Y}_{st} \right)^2 \right],$$

$$\text{where } \hat{Y}_{sti} = \sum_j Y_{stij},$$

$$\hat{Y}_{stij} = D_{sti}^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

5.6.1.2 For strata with SRSWOR selection at first stage:

$$V\hat{a}r_{srswor}(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2,$$

where  $\hat{Y}_{st1}$  and  $\hat{Y}_{st2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

5.6.2 **For ratio  $\hat{R}$ :**

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[ \sum_s M\hat{S}E_s(\hat{R}) + \sum_{s'} M\hat{S}E_{s'}(\hat{R}) \right]$$

where s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

5.6.2.1 For strata with PPSWR selection at first stage:

$$M\hat{S}E_s(\hat{R}) = \sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left[ \frac{Z_{sti}}{Z_{sti}} (\hat{Y}_{sti} - \hat{R} \hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R} \hat{X}_{st}) \right]^2$$

where

$$\hat{Y}_{sti} = \sum_j \hat{Y}_{stij}, \quad \hat{X}_{sti} = \sum_j \hat{X}_{stij},$$

$$\hat{Y}_{stij} = D_{sti}^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right],$$

$$\hat{X}_{stij} = D_{stii}^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} x_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} x_{i2jk} \right]$$

5.6.2.2 For strata with SRSWOR selection at first stage:

$$M\hat{S}E_{s'}(\hat{R}) = \sum_t \frac{1}{4} \left[ \left( \hat{Y}_{s't1} - \hat{Y}_{s't2} \right)^2 + \hat{R}^2 \left( \hat{X}_{s't1} - \hat{X}_{s't2} \right)^2 - 2\hat{R} \left( \hat{Y}_{s't1} - \hat{Y}_{s't2} \right) \left( \hat{X}_{s't1} - \hat{X}_{s't2} \right) \right]$$

where  $\hat{Y}_{s't1}$  and  $\hat{Y}_{s't2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

5.6.3 Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

## 6. Multipliers:

The formulae for multipliers for a sub-sample are given below for Schedule 1.0:

sub-stratum	formula for multipliers	
	hg / sb 1	hg / sb 2
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi1j}}{h_{stmi1j}}$ j = 1, 2, 3	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$ j = 1, 2, 3
urban	$\frac{N_{st}}{n_{stmj}} \times D_{stmi}^* \times \frac{H_{stmi1j}}{h_{stmi1j}}$ j = 1, 2, 3	$\frac{N_{st}}{n_{stmj}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$ j = 1, 2, 3

Note: (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.

(ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.
