

*Report No. 536(65/21.1/1)*

# **Domestic Tourism in India, 2008-09**

**NSS 65<sup>th</sup> Round  
(July 2008 -June 2009)**

**National Sample Survey Office  
National Statistical Organisation  
Ministry of Statistics and Programme Implementation  
Government of India  
October 2010**

## Preface

The National Sample Survey Office (NSSO) conducted an all-India survey of households in the 65<sup>th</sup> round of NSS during July 2008 - June 2009. The survey comprised enquiries on (i) domestic tourism (ii) housing condition (iii) condition of urban slums. The subject of domestic tourism was covered in the NSS household survey during the 65<sup>th</sup> Round on the request of Ministry of Tourism, Govt. of India. This has not been covered in any earlier NSS round as comprehensively as in the 65<sup>th</sup> round. In the 54<sup>th</sup> round (January-June 1998) of NSS, one of the subjects covered was tours involving overnight stay. The results of the 54<sup>th</sup> round enquiry on travel (which included commuting to work or for education as well as tours involving overnight stay) were published in NSS Report No.450.

This report, based on data collected in the 65<sup>th</sup> round, *inter alia*, presents the magnitude of domestic tourism activity as revealed by estimates of numbers of households and persons making overnight and same-day trips during a year. It studies the numbers of overnight and same-day trips per household and per person and provides key indicators on domestic tourism in cross classification of household and individual characteristics such as economic level, occupation, religion, social group, sex, age and activity status. It examines the pattern of trips undertaken in respect of trip features such as leading purpose, duration, type of main destination, number of places visited, and the expenditure related to trips by leading purpose of trip, by broad head of expenditure, etc. Estimates are provided separately for overnight trip and same-day trip and for rural and urban sectors at all-India or State/Union Territory level.

Chapter One of the report is introductory. Major definitions and concepts related to the survey are given in Chapter Two. Chapter Three contains the survey findings on (a) incidence and characteristics of trips (b) participation of various population groups in domestic tourism activity (c) visitor-trip characteristics and (d) occurrence of domestic tourism activity among households and persons in a one-year period. Findings on expenditure related to trips are presented in Chapter Four. Detailed statistical tables are presented in Appendix A. The sampling design and estimation procedure is explained in Appendix B, and a facsimile of the schedule of enquiry canvassed in the field is provided as Appendix C.

The Survey Design and Research Division (SDRD) of the NSSO undertook the development of the survey methodology and survey instruments, and the drafting and finalisation of the report. The field work was carried out by the Field Operations Division (FOD) of NSSO and the data processing and tabulation work by the Data Processing Division (DPD) of NSSO. The Coordination and Publication Division (CPD) coordinated various activities pertaining to the survey.

I am indebted to the members of the then Steering Committee of National Sample Survey, the Working Group for NSS 65<sup>th</sup> round and the National Statistical Commission for their valuable guidance at various stages of survey activities from designing of the questionnaire to the preparation of this report. I gratefully acknowledge the contribution of the Ministry of Tourism, Government of India, for publicity of the survey during field operations. I also express my thanks to various officers of different divisions of the NSSO involved in the preparation of this report.

I hope the report will be found useful by policy makers, academicians and researchers.

New Delhi  
October 2010

J. Dash  
Director General & Chief Executive Officer  
National Sample Survey Office

## विशेषताएं

'भारत में घरेलू पर्यटन' के परिणाम भारत में फैले सभी राज्यों एवं संघ राज्य क्षेत्रों के 8,109 प्रतिदर्श ग्रामों एवं 4,719 नगरीय खण्डों के 1,53,308 संवेक्षित परिवारों से जुलाई 2008 से जून 2009 के दौरान इकट्ठे किए गए आंकड़ों पर आधारित हैं। सभी आकलन 365 दिनों की अवधि से संबंधित हैं। जनसांख्यिकी क्षेत्र में घरेलू पर्यटन का अध्ययन करने के मुख्य सूचक 'भ्रमण (ट्रिप)' की संकल्पना पर आधारित हैं, जिसे परिवार के सदस्यों 'घरेलू पर्यटकों' के रूप में भ्रमण की एक इकाई के रूप माना गया है।

### एक वर्ष में किए गए भ्रमणों की संख्या

- एक वर्ष की अवधि में, प्रति 100 भारतीय परिवारों द्वारा 418 रात्रि वाले भ्रमण किए गए (औसत 4 प्रति परिवार)। प्रति 100 परिवार भ्रमणों की संख्या ग्रामीण आबादी के लिए 440 थी, जो नगरीय आबादी जिसकी भ्रमण संख्या 365 थी, से काफी अधिक थी।
- उसी-दिन भ्रमणों की संख्या जो एक वर्ष में प्रति 100 परिवार 753 थी, रात्रि विश्राम वाले भ्रमणों की संख्या से काफी अधिक थी। ग्रामीण परिवारों ने 844 प्रति 100 परिवार के हिसाब से उसी दिन का भ्रमण किया, जो कि नगरीय परिवारों की दर 537 भ्रमण प्रति 100 परिवार से प्रत्यक्ष रूप से काफी अधिक था।
- आबादी में प्रति 100 व्यक्ति रात्रि वाले भ्रमणों की संख्या ग्रामीण भारत में 210 और नगरीय भारत में 207 थी, जो मोटे तौर पर समान ही थी।
- प्रति 100 व्यक्ति रात्रि वाले भ्रमणों की संख्या पुरुषों के लिए अधिक थी जो कि ग्रामीण आबादी के लिए 225 और नगरीय आबादी के लिए 220 थी जबकि महिलाओं के लिए यह ग्रामीण के लिए 194 और नगरीय के लिए 192 थी।
- प्रति 100 व्यक्ति उसी-दिन भ्रमणों की संख्या ग्रामीण भारत में 330 और नगरीय भारत में 263 थी। ग्रामीण भारत में पुरुषों के लिए यह 389 और महिलाओं के लिए 266 थी और नगरीय भारत में यह पुरुषों के लिए 297 और महिलाओं के लिए 226 थी।
- उम्र बढ़ने के साथ रात्रि वाले भ्रमण और उसी-दिन वाले भ्रमणों की संख्या प्रति व्यक्ति धीरे-धीरे बढ़ी और फिर कम हो गयी। यह ग्रामीण भारत में 30-34 वर्ष आयु वर्ग के लिए सबसे अधिक थी और नगरीय भारत में 40-44 वर्ष आयु वर्ग के लिए यह सबसे अधिक थी। 15 वर्ष से कम आयु वाले बच्चों में उसी-दिन वाले एवं रात्रि वाले दोनों भ्रमणों की संख्या प्रति बच्चा ग्रामीण भारत और नगरीय भारत दोनों में ही 0-4 वर्ष आयु वर्ग के लिए सबसे अधिक थी।
- प्रति 100 व्यक्ति रात्रि वाले या उसी-दिन वाले भ्रमणों की संख्या में विभिन्न व्यवसायों या उद्योगों के व्यक्तियों में ज्यादा भिन्नता नहीं थी।

### भ्रमणों की विशेषताएं :

- रात्रि वाले/उसी-दिन वाले : ग्रामीण आबादी के लिए सभी भ्रमणों का एक-तिहाई से थोड़ा अधिक रात्रि वाले भ्रमण थे और लगभग दो-तिहाई उसी दिन वाले भ्रमण थे। नगरीय आबादी के लिए, रात्रि वाले भ्रमणों का अनुपात 40% से थोड़ा अधिक था।

- **भ्रमण आकार** : ग्रामीण आबादी के लिए, प्रत्येक 100 रात्रि वाले भ्रमणों में 223 सदस्यों की हिस्सेदारी थी जबकि प्रत्येक 100 उसी-दिन वाले भ्रमणों में 183 सदस्यों की हिस्सेदारी थी। नगरीय आबादी के लिए, प्रत्येक 100 रात्रि वाले भ्रमणों में 232 सदस्य थे और प्रत्येक 100 उसी-दिन वाले भ्रमणों में 200 सदस्य थे।
- **मुख्य उद्देश्य (रात्रि वाले भ्रमण)** : भ्रमण जिनका उद्देश्य 'सामाजिक' (सामाजिक मेलजोल) था, ग्रामीण आबादी के लिए रात्रि वाले भ्रमणों का प्रतिशत 75% था और नगरीय आबादी के लिए इसका प्रतिशत 71% था। 'धार्मिक और तीर्थ' उद्देश्यों वाले भ्रमणों का प्रतिशत ग्रामीण आबादी के लिए रात्रि वाले भ्रमणों का लगभग 9% था और नगरीय आबादी के लिए 12% था। 'स्वास्थ्य और चिकित्सा' प्रयोजनों वाले भ्रमणों का प्रतिशत ग्रामीण आबादी के रात्रि वाले भ्रमणों का 7% था और नगरीय आबादी के लिए 3.5% था। 'छुट्टी बिताना, अवकाश और मनोविनोद' के लिए भ्रमणों का प्रतिशत नगरीय आबादी के रात्रि वाले भ्रमणों का 5% था परंतु ग्रामीण लोगों के लिए यह केवल 2% था।
- **मुख्य उद्देश्य (उसी-दिन वाले भ्रमण)** : उसी-दिन वाले भ्रमणों का लगभग 55% नगरीय आबादी द्वारा और 38% ग्रामीण आबादी द्वारा सामाजिक मेलजोल के लिए प्रयोग किया गया। उसी-दिन वाले भ्रमणों के लिए अगला मुख्य प्रयोजन 'खरीदारी' था जो ग्रामीण भारत में 23% था परंतु नगरीय भारत में तुलनात्मक रूप से कम अर्थात् केवल लगभग 7% ही था। 'स्वास्थ्य और चिकित्सा' प्रयोजन भी ग्रामीण भारत में ज्यादा आम पाया गया जो 17% था और नगरीय भारत में इसका प्रतिशत लगभग 8% ही था।
- **अवधि** : रात्रि वाले भ्रमणों में बितायी गयी रातों की औसत संख्या ग्रामीण आबादी के लिए लगभग 3 और नगरीय आबादी के लिए लगभग 4 थी। तथापि, नगरीय आबादी द्वारा किये गये रात्रि वाले भ्रमणों की औसत अवधि फरवरी और अगस्त माह में 3.5 रातों से लेकर जुलाई माह में 5.6 रातों तक पायी गयी। ग्रामीण क्षेत्रों में माहवार भिन्नता अपेक्षाकृत कम थी जिसकी औसत अवधि फरवरी में 2.7 रातों से लेकर जून में 3.4 रातों तक पायी गयी।
- **गन्तव्य स्थल** : अपने ही जिले में पर्यटकों के रात्रि वाले भ्रमणों का प्रतिशत ग्रामीण आबादी के लिए लगभग 66% था परंतु नगरीय आबादी के लिए यह केवल 30% था। नगरीय आबादी के लिए रात्रि वाले भ्रमणों के अन्तर्गत 49% पर्यटकों ने अपने जिले से बाहर परंतु अपने ही राज्य में भ्रमण किया, तथा ग्रामीण आबादी के लिए 28% रात्रि भ्रमण वाले पर्यटक इस प्रकार के पाये गये। 21% नगरीय और 6% ग्रामीण पर्यटकों ने अपने राज्य से बाहर रात्रि वाले भ्रमणों का पर्यटन किया।
- **भ्रमण किये गये स्थलों की संख्या** : अपने राज्य से बाहर प्रत्येक 100 भ्रमणों में लगभग 150 स्थानों का भ्रमण किया गया। अपने जिले से बाहर परन्तु अपने ही राज्य के भीतर प्रत्येक 100 भ्रमणों में लगभग 119 स्थानों का भ्रमण किया गया। अपने ही जिले के भीतर प्रत्येक 100 भ्रमणों में लगभग 104 स्थानों का भ्रमण किया गया।

#### पर्यटक विशिष्टताएं और भ्रमणों की पर्यटक-विशिष्ट विशेषताएं

- **लिंग विवरण** : रात्रि वाले भ्रमणों के प्रत्येक 1000 पर्यटकों में नगरीय क्षेत्र में 537 पुरुष और 463 महिलायें थीं जबकि ग्रामीण क्षेत्र में 525 पुरुष और 475 महिलायें थीं। उसी-दिन वाले

- भ्रमणों के अन्तर्गत पुरुष-महिला अनुपात में इन क्षेत्रों में ज्यादा अंतर नहीं था और इसका अनुपात लगभग 55:45 था ।
- **पर्यटक उद्देश्य** : रात्रि वाले या उसी-दिन वाले पर्यटक भ्रमणों के उद्देश्य का ब्यौरा जिसके लिए पर्यटक द्वारा भ्रमण किया गया, रात्रि वाले/उसी-दिन वाले भ्रमणों के मुख्य उद्देश्य के ब्यौरे से ज्यादा अलग नहीं था ।
  - **यात्रा का साधन** : रात्रि वाले भ्रमणों और उसी-दिन वाले भ्रमणों दोनों के लिए ही बसें यात्रा का प्रमुख साधन थीं । ग्रामीण आबादी के रात्रि वाले भ्रमणों के लिए दो-तिहाई (67%) और नगरीय आबादी के रात्रि वाले भ्रमणों के लिए 57% तथा उसी-दिन वाले भ्रमणों के लिए ग्रामीण और नगरीय के लिए 57-61% इस साधन का इस्तेमाल किया गया । ग्रामीण और नगरीय दोनों क्षेत्रों के लिए, लगभग 21% उसी-दिन वाले पर्यटक भ्रमण अपने परिवहन (अपनी गाड़ी) द्वारा किए गए ।
  - नगरीय भारतीयों द्वारा 27% रात्रि वाले पर्यटक-भ्रमणों के लिए ट्रेनों का प्रमुख यात्रा-साधन के रूप में इस्तेमाल किया गया । ग्रामीण भारतीयों द्वारा इस पर्यटक भ्रमण के लिए इस साधन का 7% इस्तेमाल किया गया । उसी-दिन वाले पर्यटक-भ्रमणों के लिए नगरीय भारतीयों द्वारा 9% ट्रेनों का इस्तेमाल किया गया जबकि ग्रामीण भारतीयों के लिए इसका इस्तेमाल केवल 2% था ।
  - **उठरने का प्रकार** : 85% ग्रामीण और 80% नगरीय रात्रि वाले पर्यटक-भ्रमणों में, पर्यटकों ने अपने उठरने का प्रमुख हिस्सा मित्रों और सम्बन्धियों के साथ उठर कर बिताया ।

#### इस-वर्ष की अवधि में घरेलू पर्यटन क्रियाकलाप का होना

- लगभग 77% ग्रामीण और नगरीय दोनों आबादी ने एक-वर्ष की अवधि के दौरान कम से कम एक रात्रि-वाले भ्रमणों में हिस्सा लिया । उसी-दिन वाले भ्रमणों के लिए कम से कम एक भ्रमण करने वाली आबादी का अनुपात ग्रामीण भारत में 76% और नगरीय भारत में 70% था ।
- ऐसे परिवार जिनके कम से कम एक सदस्य ने पिछले एक वर्ष के दौरान एक रात्रि वाला भ्रमण किया, ऐसे कुल परिवार 92% थे (ग्रामीण क्षेत्र में लगभग 93% और नगरीय क्षेत्र में 90%) ।
- 96% ग्रामीण परिवारों परन्तु केवल 86% नगरीय परिवारों का कम से कम एक सदस्य ऐसा था जिसने पिछले एक वर्ष के दौरान एक उसी-दिन वाले भ्रमण में भाग लिया, जिसके फलस्वरूप भारत का कुल प्रतिशत 93% रहा ।
- ऐसे परिवारों का प्रतिशत जिनके कम से कम एक सदस्य ने पिछले एक वर्ष के दौरान एक रात्रि वाला भ्रमण किया, पारिवारिक व्यवसाय, पारिवारिक सामाजिक वर्ग या पारिवारिक धर्म के परिप्रेक्ष्य में ज्यादा भिन्न नहीं पाया गया । न ही पारिवारिक आर्थिक स्तर के आधार पर ही स्पष्ट रूप से भिन्न पाया गया ।

#### भ्रमणों पर व्यय

- अखिल भारतीय स्तर पर प्रति रात्रि वाले भ्रमण पर औसत व्यय ग्रामीण आबादी के लिए रु. 821.00 और नगरीय आबादी के लिए रु. 1636.00 था ।
- 'सामाजिक' उद्देश्य से किये गये रात्रि वाले भ्रमणों पर प्रति भ्रमण व्यय ग्रामीण आबादी के लिए रु. 466.00 (सभी प्रयोजनों के लिए औसत भ्रमण पर हुए व्यय से 43% कम) तथा नगरीय आबादी

के लिए रु. 989.00 (औसत से 40% कम) था। 'स्वास्थ्य और चिकित्सा' प्रयोजनों से किये गये रात्रि वाले भ्रमण पर हुआ व्यय ग्रामीण और नगरीय आबादी दोनों के औसत भ्रमण पर हुए व्यय का 4 गुणा था। 'छुट्टी बिताना, अवकाश और मनोविनोद' के लिए नगरीय आबादी के रात्रि वाले भ्रमण पर हुआ व्यय औसत से तीन गुणा अधिक था और इसका 'व्यवसाय' संबंधी भ्रमण पर हुआ व्यय सभी प्रयोजनों के औसत भ्रमण पर हुए व्यय का दो गुणा था। दोनों क्षेत्रों में, धार्मिक भ्रमणों पर होने वाला प्रति भ्रमण व्यय सभी प्रयोजन औसत से थोड़ा अधिक था।

- प्रति रात्रि वाले पर्यटक भ्रमण पर औसत व्यय ग्रामीण भारत में 369.00 और नगरीय भारत में रु. 715.00 था।
- 'सामाजिक' कारणों से किया गया प्रति रात्रि वाला पर्यटक भ्रमण पर औसत व्यय ग्रामीण भारत में रु. 202.00 और नगरीय भारत में रु. 418.00 था। नगरीय भारत में 'धार्मिक और तीर्थ' भ्रमण पर हुआ औसत व्यय प्रति पर्यटक-भ्रमण 699.00 था, जो सभी-प्रयोजन औसत से कम था।
- ग्रामीण और नगरीय भारत दोनों में 'सामाजिक' प्रयोजन से किये गये भ्रमण पर हुआ व्यय सभी रात्रि वाले भ्रमणों पर हुए व्यय का लगभग 43% था। 'स्वास्थ्य और चिकित्सा' प्रयोजनों से किये गये भ्रमण पर हुआ व्यय रात्रि वाले भ्रमणों पर हुए व्यय का 30% ग्रामीण आबादी के लिए और 15% नगरीय आबादी के लिए था। 'धार्मिक और तीर्थ' भ्रमण का हिस्सा ग्रामीण क्षेत्र में लगभग 11% और नगरीय क्षेत्र में लगभग 14% था।
- रात्रि वाले भ्रमणों के लिए परिवहन पर होने वाले व्यय का हिस्सा ग्रामीण भारत में 20% जबकि नगरीय भारत में 33% था। खरीदारी का हिस्सा ग्रामीण भारत में 30% और नगरीय भारत में 25% था। मनोविनोद, धार्मिक, सांस्कृतिक, खेलकूद और स्वास्थ्य संबंधी व्यय का हिस्सा ग्रामीण भारत में 32% था परंतु नगरीय भारत में यह केवल 15% था।
- रात्रि वाले भ्रमणों में भोजन और पेय पर होने वाले व्यय का हिस्सा ग्रामीण और नगरीय भारत दोनों के लिए ही लगभग 9-10% था। वास का हिस्सा ग्रामीण भारत में 3% और नगरीय भारत में लगभग 6% (एक 'पैकेज' के रूप में किये गये भुगतान को छोड़कर)।
- उसी-दिन वाले भ्रमणों के लिए खरीदारी व्यय का सबसे बड़ा भाग थी जो ग्रामीण आबादी के लिए व्यय का 60% और नगरीय आबादी के लिए व्यय का 44% थी।
- 'सामाजिक' रात्रि वाले भ्रमणों के लिए खरीदारी पर हुआ व्यय कुल व्यय का ग्रामीण भारत में 51% और नगरीय भारत में लगभग 38% था। नगरीय आबादी के लिए, 'सामाजिक' और 'धार्मिक और तीर्थ' भ्रमणों के लिए व्यय का सबसे बड़ा हिस्सा परिवहन का रहा (लगभग 43%)। ग्रामीण आबादी के लिए मनोविनोद, धार्मिक, सांस्कृतिक, खेलकूद और स्वास्थ्य संबंधी व्यय का हिस्सा 'स्वास्थ्य और चिकित्सा' भ्रमणों में 78% से ज्यादा था परंतु 'धार्मिक' भ्रमणों में 10% से कम था तथा 'सामाजिक' भ्रमणों के लिए उससे भी कम था।
- घरेलू पर्यटन पर परिवारों द्वारा किये गये कुल व्यय में से, रात्रि वाले भ्रमणों पर ग्रामीण आबादी द्वारा किया गया व्यय 61%-36% था तथा नगरीय परिवारों द्वारा किया गया व्यय 25% था। कुल व्यय में उसी-दिन वाले भ्रमणों पर किये गये व्यय का हिस्सा 39% था जिसमें ग्रामीणों द्वारा 30% का व्यय और नगरीय परिवारों द्वारा 9% का व्यय किया गया। अतः कुल घरेलू पर्यटन व्यय में ग्रामीण परिवारों का हिस्सा लगभग दो-तिहाई (66%) था।

\*\*\*\*\*

# Highlights

*The results on 'Domestic Tourism in India' are based on data collected during July 2008 - June 2009 from 1,53,308 surveyed households in 8,109 sample villages and 4,719 urban blocks spread over all States and Union Territories of India. All estimates relate to a period of 365 days. The important indicators for studying domestic tourism in a demographic domain are derived through the concept of 'trip', which is devised as a unit of movement of members of a household as 'domestic visitors'.*

## NUMBER OF TRIPS MADE IN A YEAR

- ✚ In a one-year period, 418 *overnight* trips were made per 100 Indian *households* (on an average, about 4 per household). The number of trips per 100 households was 440 for the rural population, perceptibly higher than for the urban population, for which it was 365.
- ✚ The incidence of *same-day* trips, at 753 per 100 *households* in a year, was substantially higher than that of overnight trips. Rural households undertook same-day trips at the rate of 844 per 100 households, which was noticeably higher than 537 trips per 100 households, the rate for urban households.
- ✚ The number of *overnight* trips made per 100 *persons* in the population was 210 in rural India and 207, that is, roughly the same level, in urban India.
- ✚ The number of *overnight* trips per 100 *persons* was higher for males – 225 for the rural population and 220 for the urban – than for females – 194, rural, and 192, urban.
- ✚ The number of *same-day* trips per 100 of *population* was 330 in rural India and 263 in urban India. In rural India it was 389 for males and 266 for females, and in urban India it was 297 among males and 226 among females.
- ✚ With increase in *age*, the number of overnight as well as same-day trips per person rose gradually and then declined, being highest for the age-group 30-34 in rural India and highest for the age-group 40-44 in urban India. Among children under 15, however, the number of trips, both same day as well as overnight, per child was highest in the lowest age group 0-4 for rural as well as urban India.
- ✚ There was not much variation among persons of different *occupations* or *industries* in number of overnight or same-day trips per 100 persons.

## CHARACTERISTICS OF TRIPS

- ✚ **Overnight/ Same-day:** For the rural population, slightly over one-third of all trips were overnight trips and nearly two-thirds were same-day trips. For the urban population, the proportion of overnight trips was a little higher – over 40%.
- ✚ **Trip size:** For the rural population, every 100 overnight trips had 223 participating members, and every 100 same-day trips had 183. For the urban population, every 100 overnight trips had 232 participants, and every 100 same-day trips had 200 participants.

- ✚ **Leading purpose (overnight trips):** Trips whose purpose was ‘social’ (social visits) accounted for 75% of overnight trips of the rural population and 71% of overnight trips of the urban population. Trips with ‘religious and pilgrimage’ purposes accounted for about 9% of overnight trips for the rural population and 12% for the urban population. Trips for ‘health and medical’ purposes formed 7% of overnight trips of the rural population and about 3½% for the urban population of India. Trips for ‘holidaying, leisure and recreation’ accounted for 5% of overnight trips of urban people but only 2% for rural people.
- ✚ **Leading purpose (same-day trips):** About 55% of same-day trips of the urban population and 38% for the rural population were made for ‘social’ visits. ‘Shopping’ was found to be the next leading purpose for undertaking same-day trips in rural India, accounting for 23% of such trips, but was less common in urban India, where its share was only about 7%. ‘Health and medical’ purposes, too, were much more common in rural India, accounting for 17% of same-day trips, and less common in urban India, where their share was about 8%.
- ✚ **Duration:** The average number of nights spent on overnight trips was about 3 for the rural population and about 4 for the urban. However, the average duration of overnight trips undertaken by the urban population varied from 3.5 nights in the months of February and August to 5.6 in the month of July. In rural areas month-to-month variation was relatively low, the average duration varying from 2.7 nights in February to 3.4 nights in June.
- ✚ **Destination location:** Travel within one’s own district accounted for about 66% of overnight visitor-trips of the rural population but only about 30% for the urban population. For the urban population, 49% of overnight visitor-trips were to a place outside one’s district but within one’s state; for the rural population, 28% of overnight visitor-trips were of this kind. 21% of urban and 6% of rural overnight visitor-trips involved travel beyond one’s state.
- ✚ **Number of places visited:** For every 100 trips made to a destination outside one’s state, about 150 places were visited. For every 100 trips made to a destination outside one’s district but within one’s state, about 119 places were visited. For every 100 trips made to a destination within one’s district, about 104 places were visited.

## VISITOR CHARACTERISTICS AND VISITOR-SPECIFIC CHARACTERISTICS OF TRIPS

- ✚ **Gender profile:** Among every 1000 overnight visitors, 537 were males and 463 were females for the urban sector while 525 were males and 475 females for the rural sector. Among same-day visitors the male-female break-up did not differ much across sectors and was about 55:45.
- ✚ **Visitor purpose:** The break-up of overnight or same-day visitor-trips by the purpose that led the visitor to make the trip did not differ appreciably from the break-up of overnight/same-day trips by leading purpose.

- ✚ **Mode of travel:** Buses were the dominant mode of travel for overnight and same-day trips alike, accounting for two-thirds (67%) of overnight visitor-trips of the rural population, 57% of overnight visitor-trips by the urban population, and 57-61% of same-day visitor-trips of the rural and urban populations. About 21% of same-day visitor-trips, for both rural and urban sectors, were by own transport.
- ✚ Trains were used as the major mode of travel for 27% of overnight visitor-trips by urban Indians; for rural Indians their share in overnight visitor-trips was 7%. Trains were also used in 9% of same-day visitor-trips by urban Indians but their share was only 2% for rural Indians.
- ✚ **Type of stay:** In case of 85% of rural and 80% of urban overnight visitor-trips, the visitors stayed with friends and relatives for the major part of their stay.

#### OCCURRENCE OF DOMESTIC TOURISM ACTIVITY IN A ONE-YEAR PERIOD

- ✚ About 77% of the population of both rural and urban sectors took part in at least one overnight trip during a one-year period. For same-day trips the proportion of population making at least one trip was about 76% in rural India and 70% in urban India.
- ✚ Households in which at least one member had made an overnight trip during the past one year formed 92% of all households (about 93% in the rural sector and 90% in the urban sector).
- ✚ As many as 96% of rural households, but only 86% of urban households, had at least one member who had taken part in a same-day trip during the past one year, the overall percentage for India being 93%.
- ✚ The percentage of households with at least one member making an overnight trip during the past one year did not vary appreciably with household occupation, household social group or household religion. Nor was there any clear pattern of variation with household economic level.

#### EXPENDITURE ON TRIPS

- ✚ At all-India level, average expenditure per overnight trip was Rs.821 for the rural population and Rs.1,636 for the urban population.
- ✚ Overnight trips with 'social' leading purpose had a per-trip expenditure of Rs.466 (43% lower than the average trip considering all purposes) for the rural population and Rs.989 for the urban population (40% lower than average). Overnight trips for 'health and medical' purposes were four times as expensive as the average trip for both rural and urban populations. The urban population's overnight trips for 'holidaying, leisure and recreation' were on the average more than three times as expensive, and its 'business' trips twice as expensive as the average trip considering all purposes. In both sectors, religious trips had a per-trip expenditure close to, but slightly higher than, the all-purposes average.

## Highlights

---

- ✚ Average expenditure per overnight visitor-trip was Rs.369 in rural India and Rs.715 in urban India.
- ✚ Average expenditure per overnight visitor-trip made for 'social' reasons was only Rs.202 in rural India and Rs.418 in urban India. In urban India 'religious and pilgrimage' trips had an average expenditure per visitor-trip of Rs.699, lower than the all-purposes average.
- ✚ In both rural and urban India, 'social' purpose trips accounted for about 43% of all overnight trip expenditure. Trips for 'health and medical' purposes had a share of 30% in overnight trip expenditure for the rural population and 15% for the urban. 'Religious and pilgrimage' trips had a share of about 11% in the rural sector and about 14% in the urban.
- ✚ The share of *transport* in overnight trip expenditure was 20% in rural India but as much as 33% in urban India. The share of *shopping* was 30% in rural India and 25% in urban India. The share of *recreation, religious, cultural, sporting and health-related* expenditure was as high as 32% in rural India but only 15% in urban India.
- ✚ The share of food and drink in overnight trip expenditure was about 9-10% for both rural and urban India. The share of *accommodation* was 3% in rural India and about 6% (excluding payments made as part of a 'package') in urban India.
- ✚ For same-day trips, *shopping* was the largest component of expenditure, accounting for 60% of expenditure in case of the rural population and 44% in case of the urban.
- ✚ For 'social' overnight trips, *shopping* expenditure formed 51% of the total in rural India and about 38% in urban India. For the urban population, *transport* commanded the largest share of expenditure (around 43%) for both 'social' and 'religious and pilgrimage' trips. The share of *recreation, religious, cultural, sporting and health-related* expenditure for the rural population was over 78% in 'health and medical' trips but under 10% in 'religious' trips and lower still in trips for 'social' visits.
- ✚ Of the total expenditure by households on domestic tourism, expenditure on overnight trips accounted for 61% – 36% being incurred by rural and 25% by urban households. Same-day trips had a share of 39% in total expenditure, 30% incurred by rural and 9% by urban households. Thus, of the total domestic tourism expenditure, the share of the rural households was about two-thirds (66%).

# Chapter One

## Introduction

### 1.1 The report in perspective

1.1.1 An all-India household survey on domestic tourism during the period July 2008 to June 2009 was carried out by the National Sample Survey Office (NSSO), National Statistical Organisation, Ministry of Statistics and Programme Implementation, Government of India, as part of the 65<sup>th</sup> round of National Sample Survey (NSS). The data were collected through a schedule of enquiry (Schedule 21.1). The aim, *inter alia*, was to provide estimates of the volume of domestic tourism in terms of number of *visitors* (i.e. persons performing trips), number of households undertaking domestic tourism activity and number of trips that contributed to domestic tourism in India. It was also intended to study domestic tourism activity by different population categories such as age, economic level, activity status, occupation and industry of work, etc.; characteristics of trips such as purpose, main destination, etc. and the expenditure incurred by the households in domestic tourism activity. Based on the data collected during the survey period (July 2008 - June 2009), estimates pertaining to domestic tourism in India along with various characteristics associated with these have been generated and presented in this report.

### 1.2 Background

1.2.1 *Past Surveys*: Domestic tourism has not been covered comprehensively in any earlier NSS round. In the 54<sup>th</sup> round (January-June 1998) of NSS, one of the subjects covered was tours involving overnight stay. The main household schedule of that round recorded details of journeys on tours involving overnight stay undertaken by household members during a specified period.

1.2.2 The results of the 54<sup>th</sup> round enquiry on travel (which included commuting to work or for education as well as tours involving overnight stay) were published in NSS Report No.450. The report, in its chapter on tours involving overnight stay, gave State-sector-wise estimates of rate of occurrence of such journeys per 100 households and per 1000 population in 60 days, distribution of journeys by mode of journey, distance travelled and purpose, and average number of travellers, average duration of a journey and average expenditure on a journey for each mode and purpose. Because of differences in the coverage of “tours involving overnight stay” as studied in the 54<sup>th</sup> round survey from the “overnight trips” of the 65<sup>th</sup> round survey, it is not possible to compare the estimates from the two surveys in this report.<sup>1</sup>

1.2.3 *The present survey*: Considering the significant impact of domestic tourism in the national economy, as per the proposal of the Ministry of Tourism, the then Steering Committee of NSSO decided to conduct an annual household survey on domestic tourism during NSS 65<sup>th</sup> round.

---

<sup>1</sup> The two main differences between the 54<sup>th</sup> round concept of tour involving overnight stay and the concept of overnight trip adopted in the survey under study (65<sup>th</sup> round) are: (i) movements within the regular routine of a person's life (which included commuting) were excluded from the coverage of domestic tourism (that is, not considered trips) in the 65<sup>th</sup> round and (ii) expenditure on tours in the 54<sup>th</sup> round included only expenditure on passenger transport, whereas in the 65<sup>th</sup> round all expenditure related to the trip and made before, after, or during the trip were included.

### 1.3 Scope of the present survey

1.3.1 *Items of enquiry:* In the present survey on domestic tourism, a schedule of enquiry (Schedule 21.1) was used for collection of data from the sample households. Data were collected on household characteristics such as household size, principal industry, principal occupation, household type, religion, social group, household consumption expenditure, number of overnight trips and same-day trips undertaken by the household, visits, (if any) of NRIs to the household and their impact, renting out of some portion of the house to tourists during the last 365 days, and awareness, source of information, and impact of the “Incredible India” campaign by the Government of India or other tourism promotional campaigns.

1.3.2 Data were also collected for each household member on age, sex, marital status, educational level, usual principal activity status, industry (NIC) and occupation (NCO) of employed members, number of overnight trips completed during (a) last 30 days and (b) last 365 days and number of same-day trips completed by the member during (a) last 30 days and (b) last 365 days.

1.3.3 For each overnight trip and each same-day trip made during the last 30 days by one or more household members, two kinds of data were collected. One was trip characteristics, which included leading purpose of the trip, main destination, number of places visited, number of household members going on the trip along with month(s) of visit for the trip. The other was the characteristics corresponding to different trip members such as mode of travel, type of stay, and number of nights spent outside usual place of residence (including journey), the last item being collected for overnight trips only.

1.3.4 For the latest three overnight trips completed during the last 30 days, detailed data were collected on particulars of expenditure on different items under the broad heads of accommodation; food and drink; transport; shopping; recreation; religious, cultural, sporting and health-related activities; and other expenditure, along with information on reimbursement/direct payment by any institution for such trips. For same-day trips, instead of separate break-ups of expenditure for the latest three different trips, the break-up of total expenditure incurred on all same-day trips completed during last 30 days was recorded.

1.3.5 *Choice of reference period:* For a subject such as domestic tourism, the choice of the length of the period for which data are to be sought is always a difficult one. Too short a period makes the data vulnerable to sampling fluctuations. On the other hand, a long reference period creates problems of recall lapse, especially when it is not only the number of trips made during the period but also various details of each trip undertaken that have to be studied. In this survey, a combination of reference periods was used in the sense that while number of trips made by each household member was recorded with a reference period of ‘last 365 days’ (and used to build up various measures of the level of tourism activity), the various characteristics of trips such as purpose, destination, mode of travel, etc., were, to minimize recall lapse, recorded only for trips completed within the ‘last 30 days’ by the members of the surveyed households. Details of expenditure relating to trips, as elaborated in the last paragraph, were also recorded with reference to the trips completed within the ‘last 30 days’ only.

1.3.6 *Geographical coverage:* The survey covered the whole of the Indian Union except (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

## 1.4 Outline of the survey

1.4.1 *Period of survey and work programme:* The fieldwork of the 65<sup>th</sup> round of NSSO started from 1<sup>st</sup> July 2008 and continued till 30<sup>th</sup> June 2009. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months. An equal number of sample villages/blocks (first-stage units or FSUs), as far as possible, was allotted for survey in each of these four sub-rounds.

1.4.2 *Method of data collection:* The survey used the recall-based interview method using a schedule for data collection from a sample of randomly selected households. The sample design based on which selection of households was made is briefly stated in the following sub-section.

1.4.3 *Central and State samples:* As is usual, the Governments of different States and UTs participated in the survey by canvassing Schedule 21.1 in a separately drawn sample of villages and blocks called the State sample, as distinct from the Central sample surveyed by NSSO officials. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units for the 'Central sample'. For these two districts, the villages and blocks drawn as 'State sample' were themselves used for drawing the Central sample of households.

## 1.5 Sampling design

1.5.1 A stratified multi-stage design was adopted for the 65<sup>th</sup> round survey. The first-stage units (FSUs) were the 2001 census villages (*panchayat* wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. For towns with no UFS frame available, each town was treated as an FSU. The ultimate stage sampling units, in both sectors, were the households. In case of large FSUs, one intermediate stage of sampling was the division of the FSU into a number of parts and random selection of one part for survey. As regards the sample size, 12952 first stage units (FSUs) – 8,188 villages and 4,764 urban blocks – were allocated at all-India level for the Central sample. Of these, 8,109 villages and 4,719 urban blocks were actually surveyed.

1.5.2 For canvassing the detailed enquiry Schedule 21.1, a sample of 12 households (second stage units) was planned to be surveyed from each selected village and urban block. In the Central sample, 1,53,308 households were actually surveyed – 97,074 in rural areas and 56,234 in urban areas. Statement 1.0 presents the number of villages and urban blocks allotted and finally surveyed for NSS 65<sup>th</sup> round besides the numbers of sample households and persons surveyed for Sch.21.1.

1.5.3 Details of sampling design and estimation procedure are given in Appendix B.

## 1.6 Contents of the Report

1.6.1 This report is based on central sample only. It presents and discusses estimates of various aspects of domestic tourism, along with their correlates, as obtained from the data collected on relevant items for the entire round. Estimates for overnight trips and same-day trips are provided separately for rural and urban sectors at all-India or State/Union Territory level. This report is based on the Central sample only.

<b>Statement 1.0 : Number of villages/blocks allotted and surveyed for NSS 65<sup>th</sup> Round Central sample), corresponding number of households and persons surveyed for Schedule 21.1</b>

Ref: Table 1 in Appendix A

1.6.2 The report contains four chapters, including the present introductory chapter. Chapter Two states in detail the concepts and definitions of terms used in the survey. Chapter Three discusses the various features of domestic tourism and Chapter Four, the expenditure related to domestic tourism. The detailed tables on which the findings of this survey are based are presented in Appendix A. The sample design and estimation procedure is explained in Appendix B. Appendix C is a copy of the schedule of enquiry through which the data were collected.

1.6.3 The analysis has been done primarily at all-India level while the corresponding state level estimates of a few key parameters have been summarised in the state-level statements. By and large, ratios obtained from the survey are presented, while the aggregates of population/household are given as marginal row/column totals in the detailed Appendix tables.

1.6.4 The estimates, in this report, are generally presented as ratios. However, the estimates of aggregates are also given in the margin of the detailed tables in Appendix A<sup>2</sup>. In order to facilitate the users to derive aggregates corresponding to projections of population made by the Office of the Registrar General of India (RGI), projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 supplied by the RGI Office is given in Appendix D, along with those projected for 1<sup>st</sup> January 2009 using compound rate of growth. The projections have been given separately for male and female population of rural and urban sectors.

---

<sup>2</sup> In the detailed tables, however, in some of the deeper classifications, some sample sizes may be small and this may have a bearing on the precision of the corresponding estimates.

## Chapter Two

# Concepts and Definitions

**2.0** Important concepts and definitions used in this survey as given in the instructions to field staff conducting the survey are stated below.

**2.1 Household:** A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb “normally” meant that the temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but the temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer’s/host’s household. “Living together” was given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person’s family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.

**2.2 Monthly per capita consumer expenditure (MPCE):** For a household, MPCE was the total consumer expenditure over all items divided by the household size and expressed on a per month (30 days) basis.

2.2.1 As it is difficult to collect reliable income data, the NSSO, collects data on consumption expenditure in its surveys. In the present survey on *Domestic Tourism (Schedule 21.1)*, data on household consumer expenditure during the last 30 days was ascertained through five questions (see Appendix C), to facilitate the ordering of households in respective level of living for deeper synthesis of survey results. This helps in portraying the survey variables in the hierarchy of levels of living of the households classified as quintile classes of MPCE.

2.2.2 **Quintile classes of MPCE:** The population of any region or domain can be divided into five quintile classes of MPCE, where the 1<sup>st</sup> quintile of the distribution of MPCE means the level of MPCE below 20 per cent of the population lie, the second quintile, the level below which 40 per cent of the population lie, and so on. In this round quintiles were estimated separately for the distribution of MPCE in the rural and urban sector of each State/U.T and all-India. Some of the aspects of domestic tourism have been studied with respect to the level of living of the households which was proxied by monthly per capita consumer expenditure. This ordering of the households in respect of level of living has been derived as the distribution of the households in the quintile classes corresponding to the distribution of the population in the quintile classes.

**2.3 Travel:** It is the movement of persons between different geographic boundaries, *for any purpose and any duration*. Those who *travel* are referred to as travelers. Travel can occur within a country (domestic travel) or involve more than one country (international travel).

**2.4 Usual Place of Residence:** The *usual place of residence* (UPR) of a person is the place (village/town) where the person had been staying continuously for at least six months immediately prior to the date of survey. Even if a person was not staying in the village/town continuously for six months immediately prior to the date of survey but was then staying there with intention to stay there continuously for six months then that place was taken as his/her UPR.

**2.5 Usual Environment:** The *usual environment* (UE) of an individual referred to the notional geographical space, extending beyond the UPR of an individual, within which he/she moved in the course of *his/her regular routine of life*. By the term ***movement of a person within his/her regular routine of life*** is meant the regular and frequent (nearly every day/every week/every fortnight) movements of a person between his/her UPR and some place for the purpose of work or study, visiting homes of friends or relatives, shopping centers, religious places, centres of health care or any other facilities that might be at a substantial distance away but nevertheless were regularly and frequently visited. Such movements might be within his/her UPR or beyond it.

## 2.6 Trip

2.6.1 With reference to domestic tourism, the term *trip* related to those household members who were resident Indians. It refers to the movement - ***for a duration of not more than six months*** - by one or more household members traveling to a place outside their ***usual environment (which includes the usual place of residence(UPR)) and return to their UPR (a round trip)*** for purposes other than those of migration or getting employed or setting up of residence in that place and which is outside their regular routine of life.

2.6.2 Thus, all movements of persons commuting regularly and frequently (nearly every day/every week/every fortnight) between their UPR and some fixed places for the purpose of work or study, visiting homes of friends or relatives, shopping centers, religious places, centres of health care or any other facilities that might be at a substantial distance away but nevertheless were regularly and frequently visited, were **not** considered as trips. Similarly, all movements of persons, whose nature of activities within their regular routine of life involved making movements outside their UPR to different places, like travelling salesmen, mobile hawkers, medical representatives, on-board staff of airlines/railways or of buses, hired taxis, etc were **not** considered as trips.

2.6.3 *Exceptions for exclusion from the coverage of trip as mentioned above:* All domestic movements performed by air except for the purpose of migration or getting employed or setting up of residence in that place were considered as trips even if such movements falls within the *regular routine of life* of the visitor. However, domestic movements performed by on-board aircraft crew as part of their duty were not considered as trips.

2.6.4 A trip might be made up of *visits* (i.e. stay for a purpose in a place visited during a trip – details in sub-section 2.7) to different places. A trip might be single-member or multi-member; in other words, a trip might be undertaken by one or more members of the sample household with or without members of other households participating. Member(s) of sample

households participating in a trip were *visitors* (details in sub-section 2.7). A trip might be *same-day* or *overnight*. An *overnight* trip was of duration at least one night outside the usual environment. In case of a single night overnight trip, the night was spread over two consecutive dates implying that it had started before and ended after twelve midnight. A *same-day* trip was a trip which did not cover even a single night i.e., the trip started and ended on the same day (0000 hrs to 2359 hrs).

2.6.5 A trip was **uniquely specified** by its set of *destinations*, its leading purpose and its *starting and ending date* (the last for overnight trips only). Some elaboration of various features associated with a trip, be it single or multi-member, is in order .

2.6.5.1 In case of a multi-member trip for which the set of destinations differed slightly from person to person (among those who undertook the trip) if the persons were together for most of the time (duration of the trip), they were considered to be on the same trip. But if two members of a household spent most of the time away from each other during the period since leaving their residence to returning to their residence, then they were considered to have been on two different trips even though their starting and returning dates were the same.

2.6.5.2 **Main destination:** The *main destination* of a trip was the place, visiting of which was central to the decision to undertake the trip. However, if no such place could be identified by the informant, the main destination was to be defined as the place where the visitors spent most of their time during the trip. If the visitors spent the same amount of time in two or more places during the trip, then the main destination is defined as the one among these places that was the farthest from the usual place of residence of the visitors. **The main destination of a trip was same for all the members who undertook that trip.**

2.6.5.3 **Starting and ending dates:** The starting (ending) month was the month of starting (completing) of the trip. In case of a multi-member trip for which one (or more) member(s) among those who went on a trip starting later - or returning earlier - than the others due to other engagements, if both the *starting date* and the *ending date* for this member were different from that of the rest of the members, then this member was considered to have undertaken a different trip from the rest. However, if at least one of these two dates was the same for this member as for the rest of the members, and the other date, too, did not differ from that of the rest of the members by more than 3 days, then such a member was considered to have gone on the same trip as the rest of the members. In these cases the earliest starting date (latest ending date) was used to determine the starting month (ending month).

2.6.5.4 **Purpose of a trip:** The *purpose of a trip* of a household member was that purpose but for which he/she would not have undertaken the trip. In the survey, these purposes were broadly categorized as: business; holidaying, leisure and recreation; social including visiting friends and relatives, attending marriages, etc.; religious and pilgrimage; education and training; health and medical ; shopping and others (e.g. volunteer work).

2.6.5.5 **Leading purpose of a trip:** The *leading purpose of a trip* as a whole was that purpose without which none of the household members in that trip would have undertaken the trip. There might be exceptional situations where no one purpose could be identified as the leading purpose. For example, there could be two or more purposes, say, pilgrimage and health, recorded for different trip members. In such a case, the leading purpose was identified

as that purpose which the informant considered to be the most important for performing the trip. **The leading purpose of a trip was the same for all the members who undertook that trip.**

**2.6.5.6 Type of a trip :** a trip could be of two types – *package or non-package*. The term package trip as used in the survey is detailed below.

**2.6.5.6.1 Package Trip:** A package was a combination of transport and any one or more chargeable travel services (e.g., accommodation, meals/food, entertainment and/or sightseeing, etc.) and sold by tour operators through travel agencies or directly to final consumers as a single product for a single price. The components of a package tour might be pre-established or tailor-made, in which case, the visitor chooses a combination of services he/she wishes to acquire from a pre-established list of such services. ***If such a package was availed of for a major part of time in a trip, such a trip was considered as a package trip.***

**2.6.5.6.2** For the purpose of the survey, if the expenditure on transport and one or more chargeable travel services *availed for some time during the trip* did not cover the whole trip but covered only a minor time of the duration of the trip then such a trip was not considered as package trip although the trip has a package component. Therefore, a trip which was not a package trip could have both package and non-package components. Similarly, a package trip could also contain *non-package* component in addition to its *package* component, e.g., a visitor could avail himself of accommodation and other services in the package through some tour operator but made some special sight-seeing arrangements in some places of visit in the trip on his own. Thus, a package trip must have had a package component but not *vice versa*.

**2.6.5.7 Mode of travel:** *Mode of travel* refers to means of transport used by visitor(s) to travel in a trip. The travel relevant here was the travelling done to cover the distances to the destinations and not joyrides or movement for adventure, as in skiing or boating for pleasure, or walking inside a museum, fort or maze. One or more of the following means of transport were possible in a trip, viz.: on foot, bus, train(railways), ship/boat, air, own transport: bicycle, two-wheeler, rickshaw, auto rickshaw, car/jeep, tractor/truck, animal driven transport, transport equipment rental (hired transport): bicycle, two-wheeler, rickshaw, auto rickshaw, car/jeep, tractor/truck, animal driven transport and others .

**2.6.5.7.1 Major mode of travel :** The means of transport by which maximum distance was traveled was treated as ‘major’ *mode of travel* for that trip. In case more than one such mode was there (e.g. train, air) for which equal distance was traveled then that means which was more expensive was treated as ‘major’ *mode of travel* for that trip.

**2.6.5.7.2 Minor mode of travel :** The means of transport by which second maximum distance was traveled was treated as ‘minor’ *mode of travel* for that trip .

**2.6.5.8 Type of stay:** The *type of stay* refers to the accommodation used for stay by visitor(s) in a trip. Accommodation refers to the space, usually for paid lodging, where the visitor(s) spent some considerable time for spending night, taking rest, spending some leisure time, refreshing oneself, etc. during the trip. It could be: hotel, private guest house, Government guest house, dharamshala, rented house, friends and relatives or others including carriages / coaches.

**2.6.5.8.1 Major type of stay:** The category of accommodation where the highest number of nights (for overnight trips) or maximum time (for same-day trips) was spent was treated as 'major' type of stay. In case more than one such category was there (e.g. hotel, *Dharmashala*) where same no. of nights (equal length of time) was spent then that type which was more expensive was treated as 'major' type of stay.

**2.6.5.8.2 Minor type of stay:** The category of accommodation where the second highest number of nights for overnight trips - or second highest length of time for same-day trips - was spent was treated as 'minor' type of stay.

**2.6.5.7 No. of nights spent outside usual place of residence (including journey):** This was the number of nights spent by the visitor outside his/her usual place of residence from starting of the trip to the completion of the trip, including the nights spent in transit.

**2.6.5.9 No. of places visited during the trip:** The '*main destination*' was counted as a place of visit. If two or more places were reported to have been visited which were in the same town or in the same village, they were counted once only.

**2.7 Visit:** The term *visit* referred to the stay (overnight or same-day) for a purpose in a place visited during a trip. The stay need not be overnight to qualify as a visit. **Entering a geographical boundary without stopping there for a purpose was considered as being in transit and did not qualify as a visit to that area.** It may be noted that a trip might consist of **visits** to one or more places.

**2.7.1 Visitor:** A person performing a trip as elaborated above was termed a *visitor* in this survey.

**2.7.2 Domestic Visitor:** A domestic visitor was a household member, who had completed a 'trip'. In other words, a *domestic visitor* was a person (household member), residing in the country, who traveled to a place within the country, outside his / her **usual place of residence and not as a part of his/her regular routine of life**, for duration of not more than **six** months at a time and completed the trip during the reference period and whose main purpose of visit was other than (a) getting engaged in employment or taking up an occupation in that place **or** (b) setting up of residence in that place **or** (c) migrating to that place.

**2.7.3** Thus, from the purview of domestic visitors in the survey, the following were **excluded:**

(i) persons commuting regularly and frequently (nearly every day, every week or every fortnight) between their usual place of residence and place of work or study, visiting frequently places within their current routine of life in the neighbouring areas (which might be outside their UPR), for instance, visiting homes of friends or relatives, shopping centres, religious places, centres of health care or any other facilities that might be at a distance but nevertheless were regularly and frequently visited

(ii) persons arriving at a place, with or without a contract, to take up an occupation or to engage in employment in that place

(iii) persons arriving at a place for setting up of residence in that place

(iv) persons who traveled to work temporarily (i.e. less than six months) in institutions within the country

(v) foreigners resident in India

(vi) persons arriving at a place on migration or migrants. A migrant was a person whose place of enumeration was different from his/her last usual place of residence (UPR)

(vii) persons, whose nature of activities within their regular routine of life involved making movements outside their UPR to different places, like travelling salesmen, mobile hawkers, medical representatives, on-board staff of airlines/ railways or buses, hired taxis etc.

2.7.4 On the other hand, the following were **included** in the purview of domestic visitors in the survey:

(i) persons who completed a trip during the reference period and the duration of trip was not more than six months

(ii) persons who were household members at the time of canvassing the schedule but were not household members at the time of actually completing a trip within the reference period

(iii) persons on a trip for any of the following purposes: business; holidaying, leisure and recreation; social including visiting friends and relatives, attending marriages, etc.); religious and pilgrimage; education and training; health and medical; shopping; others (e.g. volunteer work)

(iv) domestic component (not in transit) of the trip of a household member visiting a place outside the country

2.7.5 Domestic visitors were classified into two categories: *domestic overnight visitors* and *domestic same-day visitors*. In this survey, information was collected for both these categories in respect of those visitors who belong to the sample households.

**2.7.5.1 Domestic Overnight Visitor:** A *domestic overnight visitor* was a domestic visitor who spent at least one night in a trip during last 365 days. This means that the trip covered at least two calendar days, wholly or partly.

**2.7.5.2 Domestic Same-day Visitor:** A *domestic same-day visitor* was a domestic visitor who did not spend even a single night in any trip during last 365 days. This means that the trip started and ended on the same day (0000 hrs to 2359 hrs).

**2.7.6 Domestic Tourism:** It covered trips of household members within the territory of India, i.e. of domestic visitors<sup>1</sup>, either as a domestic trip or as part of an international trip.

---

<sup>1</sup> An important clarification regarding usage of the term 'visitor' as used in this survey : In this survey, a household, say H-a, reporting a domestic visitor: overnight or same-day, was one whose at least one member made a trip: overnight or same-day, during last 365 days. **However, any non-member (of household H-a) making a visit to household H-a is NOT a 'visitor' with respect to sample household H-a as per this survey.** Further, the survey being on *domestic tourism* in India, the term *visitor* and *domestic visitor* are one and the same. Thus, throughout the remaining part of this report, the term *visitor* has been used.

## 2.8 Tourism Expenditure

2.8.1 For the purpose of this survey, *tourism expenditure* included expenditure made not just during the trip but also the expenditure related to the trip even if made before or after the trip. It included all expenses related to the trip paid or payable by the household. It also included expenditure related to the trip, whether directly paid or reimbursed, by some institution like Government or other agencies on behalf of the selected household. All expenditure in connection with the trip except those used/intended to be used for productive purposes/enterprises was included. All expenditure made by a sample household (whose members were on a trip) on members of other households was included. But all expenditure made by other households for any trip undertaken by a sample household was excluded.

2.8.2 Tourism expenditure was classified as (a) package component and (b) non-package component, with the latter further sub-divided as: (i) accommodation (ii) food and drink (iii) transport (iv) recreation, religious, cultural, sporting and health related activities (v) shopping and (vi) others.

2.8.3 Tourism expenditure included (i) monetary expenditure on goods and services paid or payable by the visitor out of his/her own pocket (ii) direct expenditure by the visitor reimbursed by some institution like Government or other agencies or expenses of the visitor directly paid by such institutions (iii) expenditure incurred on items of high unit values like cars, computers, etc. related to a trip if those are used for consumption purpose and not for productive purpose.

2.8.4 Tourism expenditure excluded (i) payment of taxes and duties not levied on products (goods and services) (ii) purchase of financial and non-financial assets, including land, real estate (iii) all transfers of cash or used goods such as donations to charities or to members of other households as these do not correspond to the purchase of consumption goods or services from these charities or individuals. Alms are also excluded.

**2.9 Non-Resident Indian (NRI):** Indian citizens (including officials of Indian diplomatic missions abroad ) who stay abroad for employment or for carrying on business or vocation or any other purpose indicating a period of stay abroad exceeding 6 months were considered as Non-Resident Indian (NRI) for the purpose of this survey.

**2.10 Major states:** This refers to the 17 States of India that had a population of 20 million or more according to the 2001 Census. Together these States accounted for 94.7% of India's population in 2001. They are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

## Chapter Three

### Characteristics of Domestic Tourism

3.0.1 The present chapter elucidates various aspects of domestic tourism based on the information collected in the NSS 65<sup>th</sup> round, being confined to the framework of concepts and definitions adopted in the survey. In this framework, the activity of domestic tourism undertaken by the members of the households has two distinct features, viz. the *trip* and the *visitor*. As elaborated in Chapter Two, the trip, either same-day or overnight, was the ultimate unit to study the activity of domestic tourism and it related to the movement of one or more members of the household to a main destination with a leading purpose. The members of the households who happened to be the members of the trip are the visitors and the information profiling the visitors was also collected in the survey. The salient characteristics of domestic tourism activities presented in this chapter, accordingly, cover its intensity and variations over different categories of households, visitors and trips.

3.0.2 The chapter presents the average number of trips made during a year by households and persons in different States/UTs, and by persons of different ages, occupations and industries. The break-up of trips (occasionally, of visitor-trips) by various trip characteristics such as leading purpose, month of visit, and main destination type (within or outside district/state) and the distribution of visitors by activity status, are also examined. Further, the break-up of visitor-trips by important visitor-trip characteristics: purpose of visit, mode of transport, and major place of stay, are studied. In other words, questions such as “Which were the most common purposes for which people went on overnight trips?” “Which modes of transport were most commonly used for same-day trips?” are answered. Estimates of occurrence of domestic tourism activity are also presented in terms of percentages of *persons* and households reporting at least one overnight/same-day trip during a one-year period – in case of households, separately for different household occupations, social groups and religions.

3.0.3 The findings presented in this chapter are grouped into four sections: (a) incidence and characteristics of trips; (b) participation of various population groups; (c) visitor-trip characteristics; and (d) occurrence of domestic tourism activity among households and persons in a one-year period.

3.0.4 Two different reference periods – ‘last 30 days’ and ‘last 365 days’ preceding the date of survey - were used for collecting information related to trips. However, the aggregate estimates on trips and trip-related characteristics have been generated pertaining to a one-year period unless otherwise specified and the procedure thereof is explained in the Appendix B on ‘Sample Design and Estimation Procedure’.

#### SECTION A: INCIDENCE AND CHARACTERISTICS OF TRIPS

##### 3.1. Incidence of trips per household

3.1.1 As stated earlier, a trip was the basic unit to study the activity of domestic tourism and it corresponded to movement of the members of the households outside their usual place of residence (excluding the movements which were part of the usual routine of life) with distinctive leading purposes, destinations and other trip characteristics. Thus one of the important measures of intensity of domestic tourism is the number of trips during one year per household. On an average, four overnight trips in a year were undertaken by an Indian

household, with trips made by rural households marginally higher in number than their urban counterpart (Statement 3.1). To be more precise, 418 overnight trips were undertaken per 100 households at all-India level – 440 trips per 100 households in rural areas and 365 in urban areas.

**Statement 3.1: Average number of overnight and same-day trips \* per 100 households: all-India**

Kind of trip	Average number of trips per 100 households		
	rural	urban	rural+urban
Overnight	440	365	418
Same-day	844	537	753

Ref: Table 3, 53, 54 in Appendix A

\*last 365 days

3.1.2 The incidence of same-day trips among Indian households, at eight in a year, was thus almost double that of overnight trips. The average number of same-day trips per 100 households during a year was noticeably higher in rural India (844) than in urban India (537). The all-India average was 753.

**Statement 3.2: Average number of trips\* per 100 households in different state /u.t.s**

state/u.t.	overnight			same-day		
	rural	urban	rural+urban	rural	urban	rural+urban
Andhra Pradesh	469	416	453	853	444	727
Arunachal Pradesh	332	171	297	576	259	508

<b>All-India</b>	<b>440</b>	<b>365</b>	<b>418</b>	<b>844</b>	<b>537</b>	<b>753</b>

Ref: Tables 3,53,54 in Appendix-A

\*last 365 days

3.1.3 The intensity of domestic tourism activity was also compared over States and was found to show considerable variation. The State-wise incidence of average number of overnight as well as same trips per 100 households is presented above in Statement 3.2. Average number of overnight trips during a year per urban household in Jammu & Kashmir and Himachal Pradesh was almost double the all-India average. In these two States, this

average was considerably higher in respect of rural households as well. As regards same-day trips, the incidence was significantly higher in Jammu & Kashmir, Himachal Pradesh, Kerala and Orissa, in both rural and urban areas.

### 3.2 Trips: overnight and same-day

3.2.1 For the rural population of India, slightly over one-third (34.3%) of all trips were overnight trips and nearly two-thirds (65.7%) were same-day trips (Statement 3.3). For the urban population, the proportion of overnight trips was somewhat higher (40.5%), the proportion of same-day trips being 59.5%.

**Statement 3.3: Percentage of overnight and same-day trips\* to total: all-India**

Sector	Percentage of trips		
	Overnight	Same-day	All
Rural	34.3	65.7	100.0
Urban	40.5	59.5	100.0
<b>Combined</b>	<b>35.7</b>	<b>64.3</b>	<b>100.0</b>

Ref: Table 49 in Appendix A

\*last 365 days

3.2.2 Statement 3.4 shows inter-State and sectoral variation in the proportion of overnight (and same-day) trips. The percentage of overnight trips for the rural population in every major State<sup>1</sup> except Kerala (24%) and Orissa (28%) was at least 30%, the highest percentages being those of Haryana and Rajasthan (around 40%). As for the urban population of the major States, the proportion of overnight trips was again lowest in Kerala (30%), and was also below 35% in three other States – Assam, West Bengal and Orissa – the highest proportion of overnight trips being reported by Andhra Pradesh, Rajasthan and Karnataka (47-48%).

3.2.3 The situation was almost reverse for same-day trips. Here, The percentage of same-day trips for the rural population in every major State except Haryana and Rajasthan (both around 60%) was at least 61%, the highest percentages being those of Kerala (76%) and Orissa (72%). As for the urban population of the major States, the proportion of same-day trips was lowest in Andhra Pradesh and Rajasthan (about 52%), and above 65% in three other States – Assam, West Bengal and Orissa – the highest proportion being reported by Kerala (70%).

<sup>1</sup> Major States are the 17 States of India that had a population of 20 million or more according to the 2001 Census. Together these States accounted for 94.7% of India's population in 2001.

Statement 3.4: Percentage of overnight and same-day trips\* to total: States/UTs

state/ut	percentage of trips								
	rural			urban			rural+ urban		
	overnight	same-day	all	overnight	same-day	all	overnight	same-day	all

### 3.3 Leading purpose of trips

3.3.1 In the survey, for each reported trip, a distinct leading purpose was identified. The leading purpose of a trip was understood as the purpose in the absence of which the trip would not have been undertaken. It was recognized that if the individual purposes of different participants differed, there might be trips without a leading purpose in the above sense. Thus two members on a trip might have had different purposes each strong enough to make the trip possible even if the other person dropped out of the trip. In such cases the most important purpose among the purposes of the individual participants, as perceived by the informant, was identified as the leading purpose of the trip. The all-India break-up of overnight and same-day trips by leading purpose is shown in Statement 3.5.

**Statement 3.5: Percentage distribution of overnight and same-day trips \*by leading purpose**

leading purpose	percentage of trips with the purpose among					
	overnight trips			same-day trips		
	rural	urban	rural +urban	rural	urban	rural +urban
business	2.3	3.4	2.7	5.2	7.6	5.5
holidaying, leisure and recreation	1.9	5.0	2.8	2.4	5.4	2.8
social	75.0	71.3	74.0	37.9	54.6	40.3

Ref: Tables 50 &amp; 54 in Appendix A

\*last 365 days

3.3.2 *Leading purpose: overnight trips:* By far the most common leading purpose of overnight trips was *social* – this included visiting friends and relatives and attending marriages. The *social* purpose accounted for 75% of overnight trips made by the rural population and 71% of such trips made by the urban population. *Religious trips and pilgrimages* accounted for 12% of urban and 9% of rural Indians' overnight trips. Overnight trips for *health and medical* purposes were more common in rural India, where they had a share of 7.3% compared to 3.5% in urban India. 5% of the overnight trips of the urban population and only 2% of those of rural population were reported to be for *holidaying, leisure and recreation*.

3.3.3 *Leading purpose: same-day trips:* *Social* visits were the leading purpose of 38% of the same-day trips of rural Indians and nearly 55% of those of urban Indians. *Shopping* – very rarely the purpose of an overnight trip – was the leading purpose of 23% of same-day trips by the rural population but less than 7% for the urban population. In both rural and urban India, many more same-day trips were made for *health and medical* reasons (17% rural, 8% urban) than overnight trips. Same-day trips were made for *religious* purposes slightly less often (6% rural, 11% urban) than overnight trips were.

### 3.4 Month of visit

3.4.1 Taking the 'month of visit' as the ending month (in case the starting and ending months are different), the percentage distribution of trips over months of the year is shown in Statement 3.6. It may be noted that the estimates are based on information on trips made by sample household members in the 30 days preceding the day the household was interviewed. Since exactly equal numbers of households were not interviewed in every month of the survey year, the numbers of trips recorded as made in January, February, etc. depend not only on the real intensity of tourism activity during these months but also on the numbers of households surveyed during these months and in the succeeding months (e.g. trips made in January may be recorded by interviews taking place in January or in February). Under the circumstances, it may not be appropriate to read too much into the month-to-month differences in percentage of trips, which are not very large except that the figures for June for both sectors, and the figures for July in the urban sector, are noticeably low compared to, say, the figures for May or August.<sup>2</sup> By and large, it is seen that 7-10% of trips were made in most

<sup>2</sup> It was mentioned that January (2009) trips would be recorded by interviews made in January or February (2009). The case of June is a little different. June trips would be recorded by interviews made in July 2008 (June 2008 trips) and by interviews made in June 2009 (June 2009 trips). Because of the logistics of launching of surveys, however, it is often the case that the survey work is not in full swing before the second half of July. This would affect the estimates of not only June but also July, as July trips have to be recorded by interviews in July and August.

months of the year. The low percentage shares of June (and also July for the urban sector) are offset by above-average shares in the months immediately following.

**Statement 3.6: Percentage distribution of overnight and same-day trips by month of visit**

month@	percentage of trips made in the month					
	overnight trips			same-day trips		
	rural	urban	rural+urban	rural	urban	rural+urban
January	7.7	8.6	7.9	8.1	8.7	8.2

@ending month for overnight trip

### 3.5 Trip duration

3.5.1 Statement 3.7 gives the average duration of overnight trips in number of nights, separately for trips ending in different months. The duration of each reported trip was ascertained by the survey in terms of the number of nights spent. On an average, the duration of a trip was 3.1 nights for rural households and 4.2 nights for urban households. The average duration of trips is seen to have greater variability over months in the urban sector, where it varied from 3.5 in February and August to 5.6 in July. In the rural sector it was highest in June at 3.4 and within 2.7 to 3.3 in all other months.

**Statement 3.7: Average duration of overnight trips\* (no. of nights spent)**

month@	Average duration of overnight trips (no. of nights spent)		
	rural	urban	rural+ urban
January	3.1	3.8	3.4
February	2.7	3.5	2.9
March	2.9	3.6	3.1
April	3.0	4.6	3.4
May	3.2	4.2	3.5
June	3.4	4.7	3.6
July	2.9	5.6	3.2
August	3.1	3.5	3.2
September	3.1	5.0	3.9
October	3.3	5.1	3.9
November	2.9	3.6	3.1
December	3.1	3.9	3.4

### 3.6 Package and non-package trips

3.6.1 Among the characteristics of trips identified was whether or not it was a package trip. A package trip was one (see Chapter Two, paragraph 2.6.5.6.1) in which a package was availed of for the major part of the duration of the trip. A package was a combination of transport and any one or more chargeable travel services – e.g., accommodation, meals/food, entertainment, sightseeing – and sold by tour operators through travel agencies or directly to final consumers as a single product for a single price. (The components of a package tour might be pre-established or tailor-made.) The survey revealed only a marginal presence of package trips in domestic travel habits of Indian households.<sup>3</sup> Statement 3.8 shows that only 1.3% of overnight trips for the urban population and 0.8% for the rural were package trips. Among same-day trips, only 0.7% of trips by the urban population and 0.3% of those by the rural population were of the package type.

**Statement 3.8: Percentage distribution of overnight and same-day trips by type of trip**

type of trip	percentage of trips of the type among					
	overnight trips			same-day trips		
	rural	urban	rural+ urban	rural	urban	rural+ urban
package	0.8	1.3	0.9	0.3	0.7	0.4
non-package	99.2	98.7	99.1	99.7	99.3	99.6
all	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 50 & 54 in Appendix A

### 3.7 Destination type

3.7.1 For each trip, a main destination was identified and classified according to whether it was within the district to which the household residence belonged, or outside the district but within the same State, or outside the State. This would enable the study of the relative frequencies of trips by these three destination types. One may also study the relative frequencies of visitor-trips by destination type (counting each trip as many times as the number of participating members) and so get an idea of the relative volumes of visitor movements of these three kinds. This, in fact, has been done in Statement 3.9.

3.7.2 *Destination type: overnight trips:* About 21% of urban, but only 6% of rural overnight visitor-trips involved travel to a different state from their place of residence. In the majority (66%) of overnight visitor-trips of the rural population, the visitors remained within their district, while in 28%, they travelled beyond their district to a place within their state. Among overnight visitor-trips of the urban population, it was journeys beyond one's district (within the state) that were more common (49%), with only about 30% that were limited within the boundaries of the visitors' district.

3.7.3 *Destination type: same-day trips:* Travel within one's state accounted for nearly 99% of rural and about 96% of urban same-day visitor-trips. About 33% of urban but only 9% of rural same-day visitor-trips involved travel beyond the boundaries of the visitors' district, remaining within their state. The majority of same-day visitor-trips – nearly 90% in rural and 63% in urban India – kept the visitors within the district of their residence.

<sup>3</sup> It should be noted, however, that many non-package trips might have had a package component.

**Statement 3.9: Percentage distribution of overnight and same-day visitor-trips\* by main destination type**

destination type	percentage to total no. of overnight visitor-trips			percentage to total no. of same-day visitor-trips		
	rural	urban	rural+ urban	rural	urban	rural+ urban
within district	65.7	29.6	54.9	89.5	62.8	85.3
outside district but within state	28.2	49.3	34.5	9.1	32.8	12.9
outside state	6.0	20.9	10.5	1.1	4.4	1.6
all	100.0	100.0	100.0	100.0	100.0	100.0

Ref: Tables 41 &amp; 46 in Appendix A

\*last 365 days

**3.8 Number of places visited per overnight trip**

3.8.1 Another parameter of interest in the activity of domestic tourism is the number of places visited per trip. This indicator is more relevant for overnight trips. The estimated average number of places (towns or villages) visited per overnight trip was studied by sector of location of the visitor household and main destination type; the results are shown in Statement 3.10. The estimates show negligible variation over sectors. It is seen that for every 100 trips made to a main destination outside the visitor household's state, about 150 places were visited. For every 100 trips to outside-district but within-state destinations, about 118 places were visited (about 6 places visited for every 5 trips), while trips within one's district rarely saw more than one place visited.

**Statement 3.10: Average no. of places visited per 100 overnight trips\* by main destination type**

destination type	average no. of places visited per 100 overnight trip		
	rural	urban	rural+ urban
within district	104	105	104
outside district but within state	119	118	119
outside state	150	152	151

Ref: Table 53 in Appendix A

\*last 365 days

**3.9 Trip size and leading purpose**

3.9.1 A trip would comprise one or a group of members of a household. Hence, in studying the characteristics of trips, it is also worthwhile to look into the question of how many persons travelled together on a trip. In other words, it is relevant to examine the average trip size in terms of the average number of household members per trip. The number of household members participating in a trip reported by a household could vary from 1 to the size of the household. Statement 3.11 gives an idea of the average trip size by presenting the average number of visitors per 100 trips, separately for same-day and overnight trips, and separately for overnight trips with different leading purposes. In rural areas, every 100 overnight trips had 223 participating members (2.2 per trip) and every 100 same-day trips had 183 members (1.8 per trip). In urban areas, every 100 overnight trips had 232 participants (2.3 per trip) and every 100 same-day trips had 200 participants (2.0 per trip).

**Statement 3.11: Average number of visitors per 100 trips\***

trip category	leading purpose	rural	urban	rural+ urban
overnight	business	129	126	128
	holidaying, leisure and recreation	208	216	213
	social	230	236	232
	religious & pilgrimage	228	275	245
	education & training	130	134	132
	health & medical	215	206	213
	shopping	141	135	140
	other	184	158	177
	all (including n.r.)	223	232	225
same-day	all	183	200	

Note: Figures derived from Tables 56 & 58 in Appendix A

\*last 365 days

3.9.2 As expected, average size of the group travelling on an overnight trip varied noticeably with the leading purpose of the trip. Business trips and trips for education and training had the smallest number of members travelling together (about 130 per 100 trips for both rural and urban areas) and shopping trips, too, had only 135-140 members per 100 trips. On the other hand, about 230 members (2.3 per trip) travelled in every 100 social or religious trips of rural households and every 100 social trips of urban households, and as many as 275 members (2.75 per trip) travelled in every 100 religious trips of urban households.

## SECTION B: PARTICIPATION OF VARIOUS POPULATION GROUPS

3.10.0 As stated earlier, the trips recorded for a sample household were movements in which members of the household had participated. Various characteristics of each household member such as age, occupation, etc. were also recorded as part of the survey. This personwise information enables the study of participation in domestic tourism activity by different population categories.

### 3.10 Overall incidence per person

3.10.1 A distinction evident in the incidence of trips undertaken in a year by persons in rural and urban areas is that the incidence was appreciably higher for rural persons in case of same-day trips but of the same order for both sectors in case of overnight trips. The average number of overnight trips made by a person (Statement 3.12) was estimated as 2.10 for rural Indians and 2.07 for urban Indians. The average number of same-day trips was considerably higher, especially in rural India (3.30) and also in urban India (2.63).

### 3.11 The gender effect

3.11.1 Statement 3.12 also brings out male-female differences in number of trips per person. For overnight trips the average for females, in both sectors, was below the average for males by about 30 per 100 persons. Male-female differences were wider for same-day trips, with rural females making 266 same-day trips per 100 persons while rural males made 389 (46% more). Urban females made 226 same-day trips per 100 persons while urban males made 297 (31% more).

**Statement 3.12: Average number of same-day and overnight trips\* per 100 persons of each sex: all-India**

Kind of trip	Average number of trips per 100 persons					
	Rural			Urban		
	male	female	all	male	female	all
Overnight	225	194	210	220	192	207
Same-day	389	266	330	297	226	263

Ref: Tables 30, 35, 40 &amp; 45 in Appendix A

\*last 365 days

3.11.2 *Gender profile of visitors:* As an overnight/ same-day visitor is understood as a person who made at least one overnight/ same-day trip during the reference period of 'last 365 days', the population of overnight or same-day visitors can be identified and various characteristics studied. One matter of interest here would be the gender profile of visitors, shown by their male-female break-up. This is given in Statement 3.13. Thus, among every 1000 overnight urban visitors, 537 were males and 463, and the proportion of males was slightly lower among rural overnight visitors, but higher for same-day visitors – both rural and urban – among whom the male-female ratio was about 55 to 45 in the urban sector and slightly lower in the rural sector.

**Statement 3.13: Percentage distribution of overnight and same-day visitors by gender of visitor**

Gender	Overnight visitors		Same-day visitors	
	Rural	Urban	Rural	Urban
male	52.5	53.7	54.5	55.1
female	47.5	46.3	45.5	44.9
Total	100.0	100.0	100.0	100.0

Ref: Tables 30 and 35 in Appendix A

### 3.12 The effect of age

3.12.1 Statement 3.14 shows the variation with age in average number of trips made by a person. In all, 18 age-groups are considered, all of width 5 years except the last. For both overnight and same-day trips, the average number of trips per person is seen to rise gradually up to a certain age-group and then decline, the decline being steeper for overnight trips. The average number of both overnight and same-day trips made by children was higher than the average number of trips made by the aged. Younger children made more trips than older ones, presumably because they could not be left alone by their parents; thus the average number of trips falls instead of rising as one moves up the age range from 0-4 to 10-14. This was true for rural as well as urban India. In rural India the average number of trips, both overnight and same-day, was highest in the age-group 30-34; in urban India it was highest in the age-group 40-44. An interesting phenomenon regarding trips made by the elderly was revealed in this study. In case of overnight trips, persons of age 60 years and above had a lower average per year than the all-ages average both in rural and urban sectors. However, in case of same-day trips of the rural population, even elderly persons in the age group 65-69 made more trips per year than the rural all-ages average of 3.30 per person. In urban areas, the age-group 60-64 was the oldest group to surpass the all-ages average of 2.63 same-day trips per year.

**Statement 3.14: Average no. of trips per person\* for different age-groups**

age-group	average no. of trips					
	overnight			same-day		
	rural	urban	rural+ urban	rural	urban	rural+ urban
0-4	1.99	1.94	1.98	2.22	1.96	2.16
5-9	1.83	1.90	1.85	2.03	1.91	2.01
10-14	1.64	1.78	1.67	2.05	1.93	2.02

Ref: Tables 30 &amp; 35 in Appendix A

\*in last 365 days

### 3.13 Variation with occupation

3.13.1 Statement 3.15 shows variation with occupation in the average number of overnight and same-day trips in a one-year period, with nine occupational categories of households considered.<sup>4</sup> It is seen that for all the categories listed, the average number of trips, whether overnight or same-day, was higher than the average (“all” row) for the population of the sector (rural/urban) as a whole, implying that the persons with no occupation made fewer trips on the average than the working or gainfully employed population. This is not surprising in view of the fact that the aged, as well as children of the 5-14 age-group, who would form a sizeable proportion of those without any occupation, made fewer trips on the average than the rest of the population (see previous paragraph). Among the gainfully employed, the professionals and associate professionals made trips more frequently than the rest, and so did clerks. Skilled agricultural and fishery workers had the highest average number of same-day trips (4.21) in urban India, but did not enjoy this distinction in case of overnight trips or the rural sector.

<sup>4</sup> The “all” row of Statement 3.15 covers not only these nine categories but the entire population, including the residual category “persons with blank occupation (NCO) code”. This includes persons too young or too old to work, housewives, students, pensioners, rentiers, remittance receivers, beggars, prostitutes and other persons not gainfully employed. No estimate of average number of trips was generated for this heterogeneous category. The “all” estimate also takes into account those sample persons for whom the occupation code was not recorded.

**Statement 3.15: Average no. of trips per person\* for different occupation groups**

occupation	average no. of					
	overnight trips			same-day trips		
	rural	urban	rural+urban	rural	urban	rural+urban
legislators, senior officials and managers	2.74	2.56	2.62	5.29	3.65	4.23
professionals	3.10	2.69	2.85	6.69	4.04	5.10
associate professionals	3.16	2.64	2.88	6.76	3.87	5.20
clerks	2.87	2.55	2.64	5.82	3.71	4.36
service workers and shop & market sales workers	2.50	2.35	2.42	5.24	3.46	4.31
skilled agricultural and fishery workers	2.57	2.59	2.57	4.57	4.21	4.56
craft and related trades workers	2.52	2.27	2.40	5.04	3.49	4.31
plant and machine operators and assemblers	2.73	2.55	2.64	5.67	3.50	4.58
elementary occupations	2.44	2.13	2.40	4.47	2.99	4.25
<b>all</b>	<b>2.10</b>	<b>2.07</b>	<b>2.09</b>	<b>3.30</b>	<b>2.63</b>	<b>3.12</b>

Ref: Tables 33 &amp; 38 in Appendix A

\*in last 365 days

### 3.14 Variation with industry

3.14.1 Statement 3.16 shows variation with industry of employment (NIC industry group) in average number of overnight and same-day trips during a one-year period. As in case of occupation, “all” includes those with blank industry code, which applies to all those not gainfully employed. Again it is clear, from a comparison of the “all” row figures with the rows for specific industries, that, with the exception of persons employed by private households<sup>5</sup>, persons not gainfully employed in any industry made fewer trips on an average than the gainfully employed population. Variation over industry groups in number of trips per person was relatively low for overnight trips and a little more prominent in case of same-day trips, especially in the rural sector. Among the gainfully employed, there were no striking inter-industry differences in case of overnight trips. In rural India, those employed in “electricity, gas and water supply”, “financial intermediation”, “education”, “health and social work”, and “real estate, renting and business activities” had higher averages than other industry groups – 3 or more overnight trips in a year, and 6 or more same-day trips in a year.

**Statement 3.16: Average no. of trips per person \* for different industry groups**

industry	average no. of					
	overnight trips			same-day trips		
	rural	urban	rural+urban	rural	urban	rural+urban
agriculture, hunting and forestry	2.51	2.37	2.50	4.49	3.76	4.47
fishing	2.15	2.88	2.36	4.39	4.77	4.50
mining and quarrying	2.69	2.59	2.66	5.12	3.52	4.65
manufacturing	2.49	2.27	2.38	5.01	3.28	4.12

<b>all</b>	<b>2.10</b>	<b>2.07</b>	<b>2.09</b>	<b>3.30</b>	<b>2.63</b>	<b>3.12</b>

Ref: Tables 34 &amp; 39 in Appendix A

\*in last 365 days

<sup>5</sup> The all-India sample included only 16 persons who were reported to be employed by extra-territorial organizations.

### 3.15 Distribution of visitors by broad activity status

3.15.1 A related point of interest is the percentage break-up of visitors by broad activity status: that is, into the categories “employed”, “unemployed”, and “out of labour force”. Statement 3.17 shows this break-up for both overnight and same-day trips, and, side by side, the shares of these three categories in the entire population. It is seen that the percentage share of the “out of labour force” category in the number of overnight visitors for rural and urban India is about 2 to 3 percentage points lower than the share of this category in the entire population, and the share of the same category in the number of same-day visitors is about 7 percentage points lower than its share in the entire population. The share of the other major group, the employed, in overall population is, correspondingly, lower than its share in the number of overnight and same-day visitors. This finding is not surprising in view of the results presented above on number of trips by different age-groups and the fact that the “not in labour force” category would include large numbers of the aged and children too young to work.

**Statement 3.17: Percentage distribution of overnight and same-day visitors by broad activity status**

broad activity status	rural			urban			rural+ urban		
	percentage of visitors		percentage of population	percentage of visitors		percentage of population	percentage of visitors		percentage of population

## SECTION C: VISITOR-TRIP CHARACTERISTICS

3.16.0 The classification of trips by characteristics of trips such as leading purpose of trip and month of visit was studied in Section A of this chapter. Certain features of trips, however, differ not only from trip to trip but, for the same trip, may vary from one participant to another – and therefore were recorded separately by the survey for each trip for each participant. These include (major) mode of travel, major place of stay, and even purpose of the visitor (as distinct from leading purpose, which is fixed for a particular trip). These characteristics are termed visitor-trip characteristics as they may vary with each visitor-trip combination. It follows that the relative frequencies of reporting of each category of reported purpose, or reported mode of travel, should be counted in terms of number of visitor-trips, rather than in terms of number of trips or visitors. This is done in this section, where the relative prevalence of different purposes, modes of travel, etc., is discussed.

### 3.16 Visitor purpose

3.16.1 *Visitor purpose: overnight trips:* The estimated break-up of trips by leading purpose – the purpose in the absence of which the trip would not have been undertaken – has already been discussed in Section 3.3. The reason prompting some of the participants to make the trip may, however, differ from the leading purpose. Statement 3.18 shows the all-India percentage break-up of rural/urban visitors-trips<sup>6</sup> by visitor purpose, separately for overnight and same-

<sup>6</sup> Sometimes words such as “percentage of visitors” have been used in this section for simplicity; it should be remembered, however, that strictly speaking, it is “visitor-trips” that are being counted here, or, in other words, that a visitor is counted as many times as the number of trips he or she made.

day trips. By far the commonest purpose reported by persons who made overnight trips was *social*. This purpose alone prompted 77% of rural and 73% of urban overnight visitors to make their trips. *Religious* purposes, including pilgrimages, accounted for 9% of rural and about 15% of urban visitors, *health and medical* purposes for 7% of rural and 3% of urban visitors, and *holidaying, leisure and recreation* for about 2% of rural and 5% of urban visitors.

**Statement 3.18: Percentage distribution of overnight and same-day visitor-trips by purpose of visit**

purpose	percentage to total no. of overnight visitor-trips			percentage to total no. of same-day visitor-trips		
	rural	urban	rural+urban	rural	urban	rural+urban
business	1.3	1.8	1.5	3.7	4.5	3.8
holidaying, leisure and recreation	1.7	4.7	2.6	2.6	5.6	3.1
social	77.3	72.8	76.0	39.8	55.6	42.3
religious & pilgrimage	9.0	14.8	10.7	8.4	14.8	9.4
education & training	0.5	0.8	0.6	0.7	1.1	0.8
health & medical	7.0	3.1	5.8	19.2	8.4	17.5
shopping	0.3	0.1	0.2	18.7	6.0	16.7
others	2.8	2.0	2.6	7.0	4.0	6.5
<b>all</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>

Ref: Tables 40& 45 in Appendix A

3.16.2 *Visitor purpose: same-day trips*: Statement 3.18 shows that for same-day visitors, the predominant purpose of trips was again *social*, but that the share of the *social* purpose was smaller, especially for the rural population (about 40%) and also for the urban (about 56%). For the rural population this was explained by the much larger shares of *health and medical* and *shopping* (about 19% each). The same two purposes together accounted for about 14% of the visitor-trips for the urban population.

3.16.3 *Leading purpose and visitor purpose*: Comparison of Statement 3.18 with Statement 3.5 does not reveal any striking differences in the break-up of trips by leading purpose from the break-up of visitor-trips by visitor purpose. For both overnight and same-day trips, the percentage of trips with leading purpose *business* is smaller than the percentage of visitor-trips where the visitor's purpose is *business*. This is not surprising as (a) the average number of persons travelling together on a *business* trip is smaller (see paragraph 3.9.2) than the average number of persons travelling together on a *social* trip, and (b) a *business* trip may occasionally include one or more household members whose purpose of travel is *health* or *shopping*, but the converse would be relatively rare.

### 3.17 Mode of travel

3.17.1 As a typical trip involves more than one mode of transport, it needs to be clarified that it is the major mode reported for each visitor – in other words, the mode by which the visitor covered the longest distance – that is being referred to here. Statement 3.19 gives the percentage distribution of visitor-trips by mode of travel separately for overnight and same-day trips made by rural and urban Indians.

3.17.2 Buses were the dominant mode of travel for overnight and same-day trips alike, accounting for two-thirds (67%) of overnight trips<sup>7</sup> by the rural population, 57% of trips by the urban population, and 57-61% of same-day trips by the rural and urban populations. Trains were used for 27% of overnight trips by urban Indians; for rural Indians their share in

<sup>7</sup> Strictly, visitor-trips; the word "trips" is used here for simplicity.

overnight trips was 7%. Trains were also used in 9% of same-day trips by urban Indians but their share was only 2% for rural Indians.

**Statement 3.19: Percentage distribution of overnight and same-day visitor-trips by mode of transport**

mode of transport	percentage to total no. of overnight visitor-trips			percentage to total no. of same-day visitor-trips		
	rural	urban	rural+urban	rural	urban	rural+urban
on foot	2.7	0.3	2.0	6.8	0.7	5.9
bus	67.4	57.0	64.3	57.5	60.8	58.0
train	7.4	27.3	13.4	1.7	8.7	2.8
ship/boat	0.1	0.0	0.1	0.1	0.1	0.1
air	0.0	0.3	0.1	0.0	0.0	0.0
own transport	11.5	9.7	11.0	20.9	20.8	20.9
transport-equipment rental	10.2	5.0	8.6	12.4	8.5	11.8
others	0.6	0.4	0.5	0.6	0.5	0.6
<b>all</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

Ref: Tables 43& 47 in Appendix A

3.17.3 Rented transport<sup>8</sup> had a larger share in rural areas than in urban: 10% for overnight trips (5% in urban areas) and over 12% for same-day trips (8.5% in urban areas). Three types of owned transport – bicycles, motorized two-wheelers and motor cars (including jeeps) – together accounted for 19% of same-day trips in both rural and urban India, with the share of the bicycle and the motor car, of course, differing substantially between the sectors. The motorized two-wheeler (owned) accounted for 7% of same-day trips in rural areas and nearly 9% in urban areas. Urban people used their own motorcars or jeeps for about 5% of overnight trips and about 9% of same-day trips. About 9% of same-day trips in rural India were made on bicycles.

### 3.18 Major type of stay

3.18.1 For a visitor on a trip, this refers to the type of accommodation : hotel, guest house, etc., where the visitor spent the greatest number of nights for overnight trips or maximum time for same-day trips. For same-day trips, the estimates (Statement 3.20) are not of great interest as the majority – 82% in rural areas and 74% in urban – did not stay anywhere on the trip,<sup>9</sup> while most of those who did, stayed with friends and relatives. For overnight trips, an overwhelmingly large number of visitors (strictly, visitor-trips) – 85% in rural areas and 80% in urban areas – reported that their major type of stay was with friends and relatives. This is, of course, not surprising in view of the fact that 77% of trips of urban visitors and 73% of trips of rural visitors were for a *social* purpose (Section 3.16). It would appear from the estimates that friends and relatives provided accommodation not only when trips were for such purposes but, frequently, for other (for example, religious) purposes as well. Hotels were the major type of stay for an estimated 1.3% of rural and less than 5% of urban overnight visitors, and *dharamshalas* for about 3% of rural and 4% of urban overnight visitors.

<sup>8</sup> Note that owned transport and transport rented for private use were classified separately in the schedule of enquiry. In Tables 43 and 47 in Appendix A, estimates are given separately for different forms of owned transport but not for different forms of rented transport.

<sup>9</sup> Same-day trips are those that started and ended on the same day (0000 hours to 2359 hours).

**Statement 3.20: Percentage distribution of overnight and same-day visitor-trips by major place of stay**

mode of stay	percentage to total no. of overnight visitor-trips			percentage to total no. of same-day visitor-trips		
	rural	urban	rural+urban	rural	urban	rural+urban
hotel	1.3	4.7	2.3	0.1	0.2	0.1

## SECTION D: OCCURRENCE OF DOMESTIC TOURISM ACTIVITY IN A ONE-YEAR PERIOD

### 3.19 Measures of occurrence

3.19.1 Instead of measuring the level of tourism activity in terms of number of trips per household or per person, an alternative way would be to measure the proportion of persons or households participating (at least once) in trips during a period such as one year. We may call this a measure of the occurrence of tourism activity among households or persons.

3.19.2 It may be observed that the choice of the period during which occurrence of tourism activity is to be observed in households or persons will affect the quality of the measure that is being proposed here. Too short a period will render the measure vulnerable to sampling fluctuations. If, on the other hand, too long a period is chosen, near-100% occurrence rates (nearly all households or persons reporting at least one trip) will be observed for every category of households and persons, which means the measure will be insensitive, failing to discriminate between states or between socio-economic categories in respect of level of tourism activity. In this survey, a period of 'last 365 days' was used to observe the occurrence of tourism activity, giving rise to estimates of occurrence during a one-year period.

### 3.20 Occurrence among persons

3.20.1 As explained above, one measure of the intensity of tourism activity is provided by the **percentage of persons who made at least one trip (overnight/ same-day) during the last one year** (or percentage of visitors). This percentage is occasionally referred to as **T<sub>P</sub>(O) for overnight trips and T<sub>P</sub>(S) for same-day trips**.

3.20.2 Statement 3.21 shows all-India levels of T<sub>P</sub>(S) and T<sub>P</sub>(O) for rural and urban areas separately and for the two sectors combined. It reveals that at the all-India level, the percentage of persons reporting at least one *overnight* trip in the last one year was around 77% and roughly the same for rural and urban areas. Further, the percentage of persons reporting at least one *same-day* trip during the last one year was 75.6% in rural areas but appreciably less – about 70% – in urban areas. The overall percentage – rural and urban considered together – was 74%.

**Statement 3.21: Percentage of persons undertaking overnight and same-day trips\*: all-India**

Kind of trip	Percentage of persons reporting trips		
	rural	urban	rural + urban
Overnight	77.4	77.3	77.4
Same-day	75.6	70.3	74.2

Ref: Table 1 &amp; 2 in Appendix A

\*last 365 days

\*last 365 days

3.20.3 The propensity to engage in the activity of domestic tourism has considerable inter-State variation. This inter-State variation in  $T_P(S)$  and  $T_P(O)$  is shown in Statement 3.22 for both rural and urban sectors as well as for the entire area of each State. The main features are stated below.

- The percentage of population taking part in at least one *overnight* trip during the past one year varied from 60% to 90% for all States and UTs except Assam (50%), five of the North-Eastern States (20-45%), and two UTs (see column 3 of the statement). For 20 States and UTs, the  $T_P(O)$  was between 70% and 85%.
- The percentage of population reporting at least one *same-day* trip varied between 64% and 83% for 22 States and UTs, and between 64% and 92% for all States and UTs except for 4 of the North-Eastern States, 2 UTs and Bihar (54%).
- The absolute difference between same-day and overnight figures  $T_P(S)$  and  $T_P(O)$  (rural and urban sectors combined) was within 12 percentage points in nearly all major States, the exceptions being Assam and Kerala, where  $T_P(S)$  exceeded  $T_P(O)$  by about 21 and 13 respectively.
- The absolute difference between rural and urban percentages of persons reporting at least one overnight trip was within 9 percentage points in all the major States.
- The percentage of rural population reporting at least one same-day trip, which exceeded the urban percentage at all-India level by 5 (rural  $T_P(S)$ =75.6, urban  $T_P(S)$ =70.3), also

exceeded the urban percentage by 10 in West Bengal, 12.5 in Punjab, 19 in Rajasthan, 20 in Andhra Pradesh, and 21 in Maharashtra.

- In the North-Eastern region, with the exception of Sikkim and Tripura, all the  $T_P(S)$  and  $T_P(O)$  values – rural and urban – were low, especially in Mizoram (26 or less), Manipur and Arunachal Pradesh (below 46), and Nagaland (57 or less), suggesting that poor communication facilities remained a significant barrier to domestic tourism.

### 3.21 Occurrence among households

3.21.1 Like percentage of persons reporting trips, the **percentage of households where at least one member made a trip (overnight/ same-day) during the last one year** provides a measure of the intensity of tourism activity. This percentage is occasionally referred to as  $T_H(O)$  for overnight trips and  $T_H(S)$  for same-day trips.

Statement 3.23: Percentage of households reporting overnight and same-day trips\* : all-India

Kind of trip	Percentage of households reporting trips		
	rural	urban	rural+urban
Overnight	92.6	89.9	91.8
Same-day	96.0	85.7	92.9

Ref: Tables 2 & 4 in Appendix A

\*last 365 days

3.21.2 Statement 3.23 shows all-India levels of  $T_H(S)$  and  $T_H(O)$  for rural and urban areas separately and for the two sectors combined. It is seen from the statement that at all-India level, the percentage of households reporting at least one trip in the last one year was 92.9% for same-day trips ( $T_H(S)=92.9$ ) and only slightly less, 91.8%, for overnight trips ( $T_H(O)=91.8$ ). In urban areas, the percentage of households reporting overnight trips (89.9%) was larger than the percentage reporting same-day trips (85.7%), but the reverse was true for rural areas, where same-day trips were reported by a larger number of households (as many as 96%) than overnight trips (92.6%). Both overnight and same-day trips were reported by a larger proportion of rural households than urban households. Compared with the figures of percentages of households reporting trips, the estimates of percentages of *persons* making trips (Statement 3.18) are lower, but not as low as they would have been if, in most households, only one or two household members went on trips.

3.21.3 The values for  $T_H(S)$  and  $T_H(O)$  for both rural and urban sectors as well as for the entire area of each State is shown in Statement 3.24. The main features are stated below.

- Apart from Assam (81%), Kerala (83%) and Bihar (85%), all major States<sup>10</sup> had 90% or more households reporting at least one overnight trip ( $T_H(O) \geq 90$ ) during a one-year period (see column 3 of the statement). There were only 6 States/UTs with  $T_H(O) < 80$ , of which 4 were North-Eastern States and 2 were UTs.
- All major States had at least 84% households reporting at least one same-day trip in a one-year period, and except for Maharashtra, Punjab and Bihar, all had  $T_H(S) > 90$ .
- The absolute difference between  $T_H(S)$  and  $T_H(O)$  (rural and urban sectors combined) was less than 5 in all the major States except Assam and Tamil Nadu, where  $T_H(S)$  exceeded  $T_H(O)$  by about 11 and 6 respectively.

<sup>10</sup> Major States are the 17 States of India that had a population of 20 million or more according to the 2001 Census. Together these States accounted for 94.7% of India's population in 2001.

- The absolute difference between rural and urban percentages of households reporting at least one overnight trip did not exceed 6 in any major State except West Bengal and Maharashtra, where the rural-urban difference was 12 and 9 respectively.
- The percentage of rural households reporting at least one same-day trip, which exceeded the urban percentage at all-India level by 10 (rural  $T_H(S)=96.0$ , urban  $T_H(S)=85.7$ ), also exceeded the urban percentage by 23 in Maharashtra, 15-17 in Rajasthan, Andhra Pradesh and Punjab, and 11-12 in Gujarat and West Bengal.

Statement 3.24: Percentage of households reporting overnight and same-day trips\*: States/UTs

State/UT	Percentage of households reporting trips					
	Overnight			Same-day

### 3.22 Household occupation

3.22.1 Statement 3.25 shows the variation in the all-India rural and urban percentages of households reporting overnight and same-day trips over nine occupational categories of households. Except for the fact that overnight trips were reported somewhat more frequently by households that were “associate professionals” by occupation (in rural areas, 97.4% such households reported at least one overnight trip in the last one year compared to 92.6% for all rural households), deviations of more than 3 percentage points from the all-occupations average were rare, for overnight as well as same-day trips.

**Statement 3.25: Percentage of households reporting overnight and same-day trips\* by household occupation**

occupation	Percentage of households reporting trips					
	Rural			Urban		
	Overnight	Same-day	Both	Overnight	Same-day	Both
legislators, senior officials and managers	92.6	96.0	91.0	90.7	87.9	83.0
professionals	92.6	96.0	91.0	90.9	87.6	82.7
associate professionals	97.4	96.0	95.9	93.0	88.7	83.6
clerks	92.6	96.0	91.0	91.5	87.3	84.0
service workers and shop & market sales workers	90.7	94.0	89.2	89.9	85.7	80.8
skilled agricultural and fishery workers	94.3	97.0	93.3	89.9	93.5	88.6
craft and related trades workers	92.6	96.0	91.0	88.8	86.2	80.8
plant and machine operators and assemblers	95.9	99.4	94.3	91.1	86.8	81.9
elementary occupations	91.5	96.3	90.5	87.6	82.5	77.7
all	92.6	96.0	91.0	89.9	85.7	80.8

### 3.23 Household social group

3.23.1 Statement 3.26 shows variation over social groups in the all-India rural and urban percentages of households reporting overnight and same-day trips during a one-year period. It is seen that the only notable variation is in the  $T_H(S)$  values for urban India, which are: 90 for OBC, 85 for SC, 83 for Others, and 77 for ST. In case of overnight trips, too, the highest figure for urban India is reported by the OBC group, though the variation between groups is much less. For rural India, in case of both overnight and same-day trips, the percentages for the different social groups deviate only very slightly from the all-groups average.

**Statement 3.26: Percentage of households reporting overnight and same-day trips\* by social group**

Social group	Percentage of households reporting					
	overnight trips			same-day trips		
	rural	urban	rural + urban	rural	urban	rural + urban
ST	90.9	89.3	90.8	95.3	77.3	93.3
SC	92.8	89.6	92.2	95.8	85.2	93.6
OBC	92.8	91.3	92.4	96.3	90.1	94.6
Others	92.9	88.9	91.0	96.0	82.8	90.2
all	92.6	89.9	91.8	96.0	85.7	92.9

Ref: Table 5 in Appendix A

\*last 365 days

### 3.24 Household type

3.24.1 Statement 3.27 shows variation over household (occupational) types in the all-India rural and urban percentages of households reporting overnight and same-day trips during a one-year period. There are no striking variations in the percentages. In case of same-day trips, the percentages for the four household types in urban India range from 82 for “others” to 89 for the self-employed. For overnight trips, and also for same-day trips in rural India, the variation among household types is still less pronounced.

**Statement 3.27: Percentage of households reporting overnight and same-day trips\* by household type**

Household type	Percentage of households reporting	
	Overnight trips	Same-day trips
<b>Rural</b>		
Self-employed in non-agriculture	92.4	96.2
Agricultural labour	90.8	95.8
Other labour	92.6	97.5
Self-employed in agriculture	94.5	96.9
others	91.0	92.3
<b>all</b>	<b>92.6</b>	<b>96.0</b>
<b>Urban</b>		
Self-employed	90.7	89.3
Regular wage/salaried	89.7	83.1
Casual labour	87.9	87.0
others	90.0	82.4
<b>all</b>	<b>89.9</b>	<b>85.7</b>

Ref: Tables 15 (R&amp;U) in Appendix A

\*last 365 days

### 3.25 Household religion

3.25.1 Statement 3.28 shows the variation in  $T_H(O)$  and  $T_H(S)$  among households of different religions. The estimates for “Jains”, “others” and “Buddhists” are based on 418,1216 and 1753 sample households respectively at the all-India level. Estimated percentages of households reporting trips, for all other religions, are above 80. Apart from the fact that only about 82% of Christian households in rural areas reported overnight trips compared to the all-religions average of 92.6%, there was little variation worthy of note among these religions. The percentage for individual religions rarely differed by more than 3 percentage points from the all-religions average, though divergences were somewhat greater in case of same-day trips by urban households. In rural areas, the largest two religious groups, Hindus and Muslims, had higher percentages reporting both overnight and same-day trips than other religions.

**Statement 3.28: Percentage of households reporting overnight and same-day trips\* by religion**

Religion	Percentage of households reporting					
	overnight trips			same-day trips		
	rural	urban	rural + urban	rural	urban	rural + urban
Hinduism	93.2	90.6	92.5	96.2	85.6	93.2
Islam	90.3	86.8	89.1	95.4	85.8	92.1
Christianity	81.9	85.7	83.5	93.9	88.9	91.9
Sikhism	89.4	94.3	90.9	93.2	91.3	92.6
Jainism	85.6	94.1	92.1	93.0	92.5	92.6
Buddhism	88.4	84.3	86.9	89.7	68.2	81.6
Others (incl. Zoroastrianism)	89.0	70.7	84.7	89.4	60.4	82.6
<b>all</b>	<b>92.6</b>	<b>89.9</b>	<b>91.8</b>	<b>96.0</b>	<b>85.7</b>	<b>93.0</b>

### 3.26 Household economic level

3.26.1 Statement 3.29 examines whether the all-India percentages of rural and urban households reporting overnight and same-day trips vary with the MPCE level of the households. For this purpose rural households are classified into five ranges (quintile classes) of MPCE so that each range contains one-fifth of the rural population of India. A similar classification is made of urban households. Some variation over MPCE levels is noticed in the percentages of urban households reporting same-day trips, with the second quintile (20<sup>th</sup>

to 40<sup>th</sup> percentiles) showing a figure of 90.8%, 5 percentage points higher than the all-classes percentage, and the topmost quintile showing a figure of 81.7%, which is 4 percentage points lower than the all-classes percentage. Apart from this, however, deviations of even 2 percentage points from the overall percentage are rare.

**Statement 3.29: Percentage distribution of households reporting overnight and same-day trips\* over quintile classes of MPCE**

Quintile class of MPCE (%)	Percentage of households in the class among			
	hhs reporting overnight trips		hhs reporting same-day trips	
	Rural	Urban	Rural	Urban
0-20	91.0	88.1	94.5	88.2
20-40	93.2	89.6	95.3	90.8
40-60	92.7	89.0	96.3	86.8
60-80	92.5	90.2	96.3	83.7
80-100	93.0	91.6	97.0	81.7
all	92.6	89.9	96.0	85.7

### 3.27 Households visited by NRIs<sup>11</sup>: impact of the NRI visit(s)

3.27.1 Statement 3.30 summarises the responses of households that had been visited by any NRI during the past one year to the question: What was the impact of the NRI visit (that is, on tourism activity of the household members)? The majority of households (nearly 60% in rural areas and 53% in urban) visited by NRI(s) reported “no impact”. One in eight of the rural households and about one in six of the urban households reported, however, that the visit had resulted in their making at least one trip themselves. 11% of the rural households and 13% of the urban households were willing but unable to make a trip due to other constraints.

**Statement 3.30: Households visited by NRIs: Percentage distribution by impact of NRI visit**

Impact	Percentage of households		
	rural	urban	rural + urban
Resulted in one or more trip	12.5	15.9	13.7
Planning to make	5.5	12.4	7.9
Willing but unable to make a trip due to other constraints	11.1	13.3	11.9
No impact	59.7	53.2	57.5
Cannot say	11.1	5.2	9.1
total	100.0	100.0	100.0
% of households visited by NRIs	1.6	2.0	1.8

Ref: Table 4 in Appendix A

<sup>11</sup> Non-Resident Indians

## Chapter Four

### Expenditure on Trips

4.0.1 This chapter deals with expenditure incurred in connection with overnight and same-day trips. As explained in Chapter Two, all expenditure incurred by the surveyed households on or in connection with a trip made by any of their members, or members of other households, was recorded as expenditure on the trip provided it was not incurred for productive purposes. Estimates were generated for average expenditure per trip and per overnight visitor-trip by sector and State/UT of the reporting households, as well as separately for each leading purpose; only all-India estimates for a one-year period days are discussed here. The break-up of overnight and same-day trip expenditure over broad expenditure heads is also examined. For overnight trips, it is further investigated how the expenditure pattern varies with the leading purpose of a trip.

#### 4.1 Expenditure per overnight trip and leading purpose

4.1.1 At all-India level, the average expenditure per overnight trip was estimated<sup>1</sup> as Rs.821 for the rural population and Rs.1636 (very nearly double) for the urban population (Statement 4.1).<sup>2</sup>

4.1.2 It may be recalled (Chapter Three, Section 3.3) that there was a preponderance of social purposes among the factors giving rise to domestic tourism activity in the country with the leading purpose of 75% of overnight trips for the rural sector and 71% for the urban being reported as *social*. Next came *religious trips and pilgrimages*, with a share of 9% for the rural and over 12% for the urban sector. The share of *medical and health* was small in the urban sector (3.5%) compared to the rural (7%). In the urban sector, *holidaying, leisure and recreation* commanded a share of 5% and *business* of over 3%. No other purpose had a share of 3% or more in either sector.

4.1.3 Statement 4.1 shows that for both the rural and the urban population, trips with *social* leading purpose had a considerably lower-than-average expenditure per trip – 43% lower than the overall (all-purposes) average for the rural population and 40% lower for the urban. Average expenditure on such trips was only Rs.466 for the rural sector and Rs.989 for the urban sector and was the lowest among all the purposes used for classification of trips by leading purpose. One may recall, in this connection, that the major place of stay of the visitor in 85% of visitor-trips for the rural population and 80% for the urban was with *friends and relatives* (Chapter Three, Section 3.18) – this suggests that visitors stayed with friends and relatives in the overwhelming majority of *social* visits and helps to understand how expenditure on such visits remained low.

---

<sup>1</sup> Relative Standard Error(RSE) of the average expenditure per overnight trip was 4.15 for rural India and 8.58 for urban India. The state-wise RSEs are presented in Statement 4.6 at the end of this Chapter.

<sup>2</sup> For same-day trips, data on expenditure was not collected separately trip-wise, hence the expenditure per trip could not be separated by leading purpose or any other trip characteristic.

**Statement 4.1: Average expenditure per overnight trip by leading purpose**

leading purpose	average expenditure per trip (Rs.)		
	rural	urban	rural+urban
business	1194	3586	2002
holidaying, leisure and recreation	1214	5287	3174
social	466	989	596
religious & pilgrimage	997	1919	1301
education & training	996	1995	1337
health & medical	3416	6956	3918
shopping	3086	5491	3365
others	1912	1676	1857
<b>all</b>	<b>821</b>	<b>1636</b>	<b>1038</b>

Ref: Table 56 in Appendix A

4.1.4 On the other hand, trips for *health and medical* purposes were the most expensive in both rural and urban sectors – expenditure on such trips being, on the average, more than four times as high as the all-purpose average for both rural and urban populations. The urban population's trips for *holidaying, leisure and recreation* were on the average more than three times as expensive, and its *business* trips twice as expensive, as the overall average.

4.1.5 In both sectors, *religious* trips were only slightly more expensive than average, about 21% more for the rural sector and 17% more for the urban.

## 4.2 Expenditure per overnight visitor-trip and leading purpose

**Statement 4.2: Average expenditure per overnight visitor-trip by leading purpose**

leading purpose	average expenditure per visitor-trip (rs.)		
	rural	urban	rural+urban
business	923	2845	1561
holidaying, leisure and recreation	584	2444	1497
social	202	418	257
religious & pilgrimage	437	699	534
education & training	765	1485	1016
health & medical	1588	3375	1832
shopping	2185	4066	2395
others	1038	1061	1043
<b>all</b>	<b>369</b>	<b>715</b>	<b>460</b>

Ref: Table 56 in Appendix A

4.2.1 Statement 4.2 gives average trip expenditure per overnight visitor, separately for trips with different leading purposes. The estimates of expenditure per visitor-trip are smaller than the estimates of per-trip expenditure – the expenditure on a trip, in general, gets spread over more than one participant. The estimates, in fact, differ from the corresponding estimates in Statement 4.1 by factors equal to the average number of visitors per trip, for each purpose and each sector. At all-India level, the average expenditure per overnight visitor-trip was estimated as Rs.369 for the rural population and Rs.715 for the urban population.

4.2.2 Had trips with different leading purposes had the same average number of visitors per trip, the estimates in Statement 4.2 would, for each sector, be exactly proportional to those in Statement 4.1. But average number of persons per trip varies with leading purpose: a business trip is likely to have fewer participants than a trip whose leading purpose is holidaying (Chapter Three, Statement 3.11). This explains why average expenditure *per visitor-trip*, for trips with leading purpose “business”, was only 21-23% lower than average expenditure *per trip*, while for trips with leading purpose “holidaying, leisure and recreation”, expenditure *per visitor* was less than half of average expenditure *per trip* – the expenditure was shared by a larger number of visitors.

4.2.3 Expenditure on *social* trips was low compared to the overall average in terms of expenditure per visitor-trip, just as it was low in terms of expenditure per trip. It was, in fact, on the average 45% lower than the overall average for the rural sector and 42% lower for the urban sector. Finally, urban average expenditure per visitor-trip for *religious* trips (Rs.699) was substantially lower than expenditure per trip (Rs.1919), indicating a large number of visitors per trip (see Statement 3.11 for the exact average of trip size). Thus, for religious trips in urban sector, expenditure per *visitor-trip* became lower than the overall average, whereas expenditure per religious *trip* was, as seen in paragraph 4.1.5, 17% higher than the overall average.

### 4.3 Break-up of overnight trip expenditure by leading purpose

**Statement 4.3: Percentage break-up of expenditure on overnight trips by leading purpose**

leading purpose	percentage share in total expenditure on overnight trips		
	rural	urban	rural+urban
business	3.39	7.43	5.06
holidaying, leisure and recreation	2.77	15.98	8.21
social	42.47	42.58	42.51
religious & pilgrimage	10.64	14.40	12.19
education & training	1.09	1.62	1.31
health & medical	30.28	14.53	23.79
shopping	1.70	0.57	1.24
others	7.61	2.88	5.66
<b>all</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>

Ref: Table 56 in Appendix A

4.3.1 Statement 4.3 gives the break-up of estimated expenditure on overnight trips by leading purpose of trip, separately for the rural and urban populations. It was seen above (paragraph 4.1.3) that among trips with different leading purposes, expenditure per overnight trip, for both rural and urban travellers, was the lowest for *social* (leading purpose) trips. As such, the share of *social* trips was, in both sectors, only 42-43% (Statement 4.3), even though such trips accounted for 75% of all overnight trips for the rural population and 71% for the urban.

4.3.2 Trips with *health and medical* purposes, which were seen earlier (paragraph 4.1.4) to be on the average four times as expensive as the all-trips average, are seen to account for 30% of all expenditure on overnight trips for the rural population and 15% for the urban. It may be recalled (see Chapter Three, Statement 3.5) that such trips accounted for 7.3% of the rural population’s overnight trips and 3.5% of those of the urban population.

4.3.3 *Religious and pilgrimage* trips, which accounted for about 9% of all overnight trips of the rural population and about 12% in case of the urban population (Chapter Three, Statement 3.5), had a share of about 11% in overnight trip expenditure for the rural sector and about 14% for the urban sector.

#### **4.4 Break-up of trip expenditure by broad expenditure head**

4.4.1 *Package component of trips*: Trip expenditure in general has several components present in varying combinations: transport, food, accommodation, shopping, sight-seeing, etc. As is the practice in tourism activity, some of these components become commercially available in the form of a package.<sup>3</sup> Visitors who avail themselves of such packages, for a whole trip or for part of it, cannot report the exact break-up of their total trip expenditure over the heads transport, food, accommodation, etc., but only the total expenditure incurred on the package component and the break-up of the remainder (non-package component). This imposes a constraint on the generation of estimates of the break-up of trip expenditure by its components.

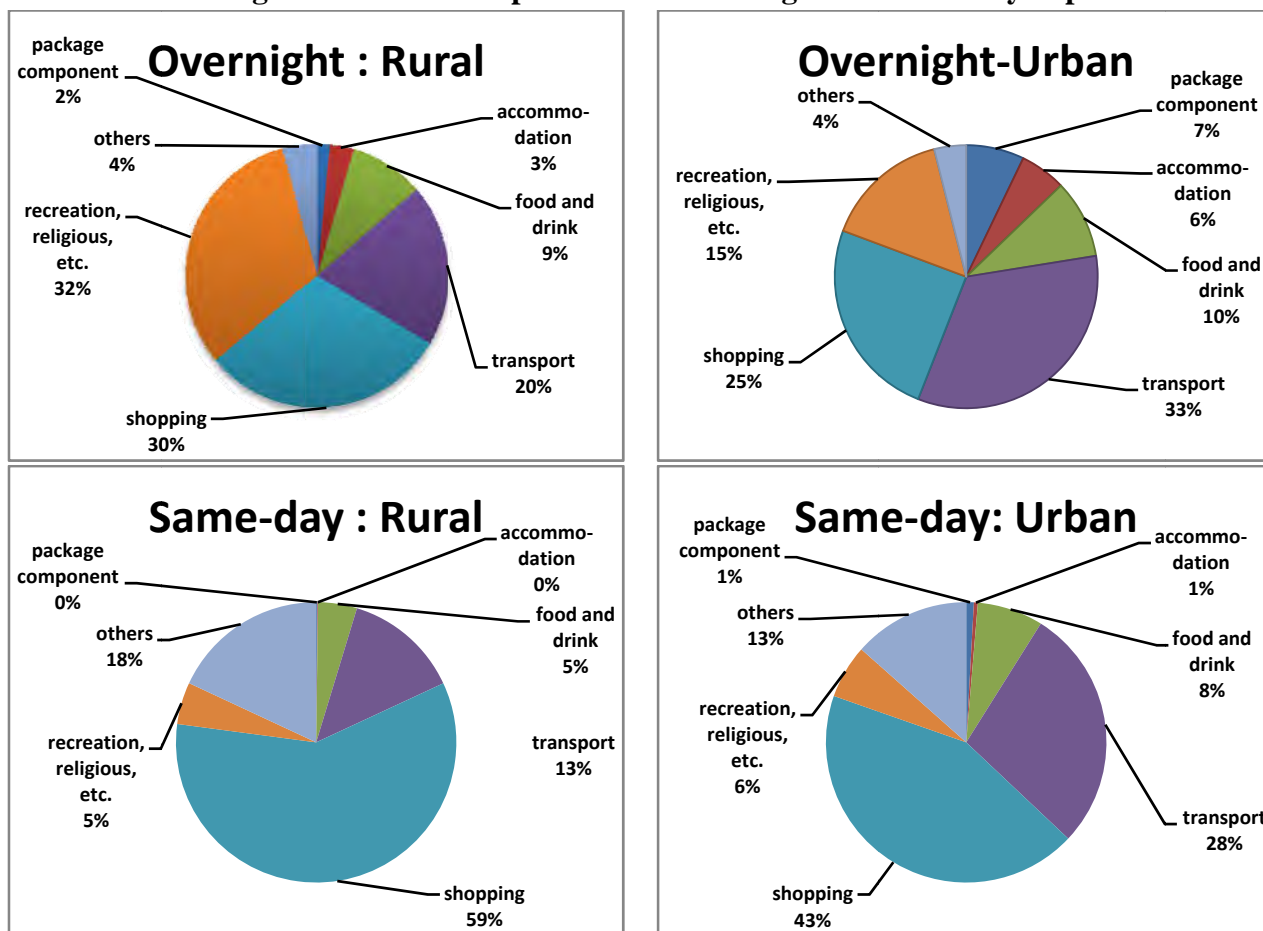

4.4.2 Statement 4.4 gives the percentage break-up of overnight and same-day trip expenditure by five broad heads – (1) *accommodation*, (2) *food and drink*, (3) *transport*, (4) *shopping* and (5) *recreation, religious, cultural, sporting and health-related activities* – and a residual category. (See also Fig. 4.1.) Apart from these, expenditure incurred as a package – the “package” component mentioned above – was made a separate category for the purpose of deriving the percentage break-up. For overnight trips, the share of the package component was 7% for the urban sector and about 1.5% for the rural sector. For same-day trips it was 0.9% for the urban sector and less than 0.2% for the rural sector.

---

<sup>3</sup> A trip with a package component need, not, however, be a *package trip* (Chapter Three, Section 3.6). A package trip is one in which a package is availed of for the major part of the trip. (See also Chapter Two, paragraph 2.6.5.6.1.)

Fig 4.1: Pattern of expenditure on overnight and same-day trips

Ref: Table 56 & 58 in Appendix A

4.4.3 For overnight trips, *transport* had the largest share in the urban sector – nearly 33%; in the rural sector the share of *transport* was 20%. The share of *shopping* was 30% in the rural sector and 25% in the urban sector. *Recreation, religious, cultural, sporting and health-related activities* had the largest share in the rural sector – nearly 32% – and a 15% share in the urban. Thus these three heads of expenditure accounted for 82% of overnight trip expenditure for the rural population and 74% for the urban.

4.4.4 In both sectors the share of *food and drink* in overnight trip expenditure was about 9-10%. The share of *accommodation* was about 3% in the rural sector and under 6% in the urban.

4.4.5 For same-day trips, *shopping* was by far the largest component of expenditure, accounting for 60% of trip expenditure for the rural population and 44% for the urban. The second largest component for the urban population was *transport*, which had a share of 29%. *Shopping* and *transport* together accounted for 73-74% of same-day trip expenditure for both sectors. The share of *food and drink* was about 8% in the urban sector and less than 5% in the rural sector.

## 4.5 Leading purpose and trip expenditure pattern for overnight trips

4.5.1 One may reasonably surmise that overnight trips with different leading purposes will not exhibit a uniform pattern of expenditure. To examine this possibility, the break-up of total expenditure has been shown separately in Statement 4.5 (R&U) for trips with different leading purposes, for both the rural and the urban sector.

4.5.2 **Rural:** For *social* trips – the most common variety – *shopping* expenditure formed 51% of total expenditure. It is notable that the share of *shopping* for social trips was higher than average; for trips of all other purposes except business and, of course, *shopping* trips (trips with leading purpose shopping), the share of shopping was lower than, or close to, the all-purposes average of 30%. The share of *accommodation* in expenditure on *social* trips was only 0.38% whereas for all other purposes (except *shopping* and *health and medical* purpose trips), it was 5% or more. The share of *food and drink* in *social* trips was also low (8%) compared to trips with other purposes except for *health and medical* purpose. The share of *transport*, however, was 27%, noticeably higher than the all-purposes average, which was 20%.

**Statement 4.4: Percentage break-up of expenditure on overnight and same-day trips by major group of items**

group of items	percentage share of group in total expenditure on			
	overnight trips		same-day trips	
	rural	urban	rural	urban
<b>package component</b>	1.52	7.15	0.15	0.89
<b>non-package component</b>				
accommodation	2.95	5.65	0.07	0.47
food and drink	9.15	9.66	4.57	7.77
transport	19.97	33.49	13.63	28.78
shopping	30.31	24.73	60.15	44.37
recreation, religious, cultural, sporting and health-related activities	31.94	15.39	4.93	6.32
others	4.15	3.92	18.41	13.77
<b>all</b>	100.00	100.00	100.00	100.00

Ref: Tables 56 & 58 in Appendix A

4.5.3 For *religious and pilgrimage* trips, the category *transport* commanded the largest share of expenditure (34%). *Shopping* took up 22% of expenditure and *food and drink*, about 17%. For *health and medical* purpose trips, expenditure on *recreation, religious, cultural, sporting and health-related activities* accounted for more than three-quarters of total expenditure, and the shares of the other categories are correspondingly low.

**Statement 4.5 : Percentage break-up of expenditure on overnight trips separately for trips with different leading purposes**

category of expenditure	business	holidaying, leisure and recreation	social	religious & pilgrimage	education & training	health & medical	shopping	other	all
<b>RURAL</b>

Ref: Table 56 in Appendix A

\*recreation, religious, cultural, sporting and health-related activities

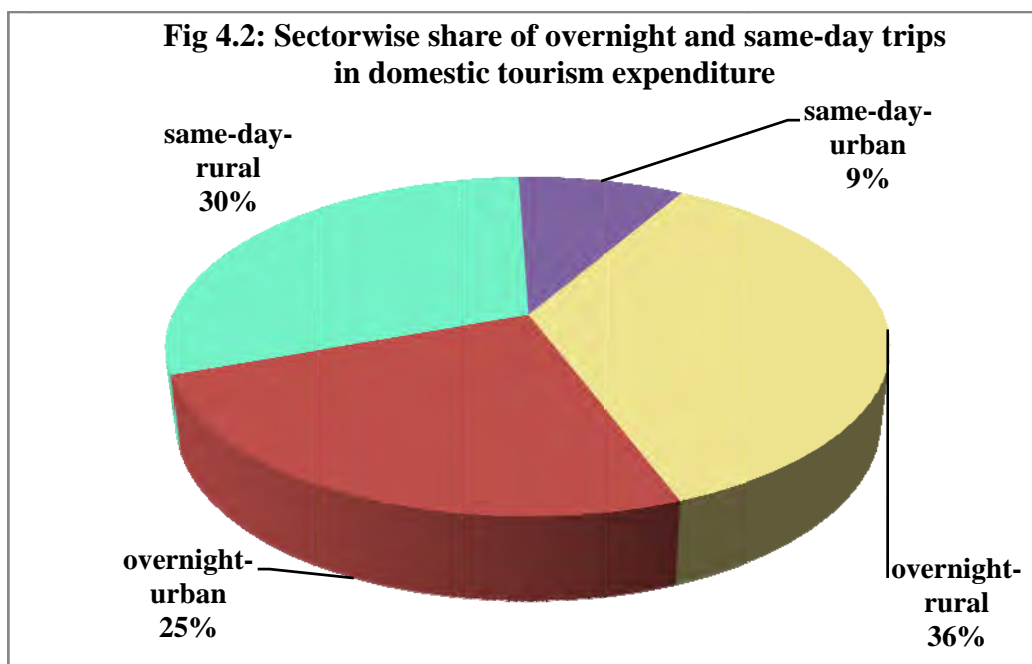

4.5.4 Although *food and drink* had an overall share of only 9%, and a share of 8% for *social* trips, its share in expenditure on trips made for *business, holidaying and religious* purposes was around 15-17% in each case.

4.5.5 **Urban:** In many respects the variation in expenditure pattern with leading purpose was, for the urban population, similar to that for the rural. In urban India, the package component of expenditure, however, was nearly 39% in trips for *holidaying, leisure and recreation* (compared to 15% in rural India), and also 5% in trips for *religious and pilgrimage* purposes.

4.5.6 It has been noted above (paragraph 4.4.2) that *transport* expenses formed the largest component of expenditure in urban India (33%) but only 20% in rural India. For *social* trips, and also for *religious and pilgrimage* purpose trips, *transport* took up 43-44% of total expenditure and was the largest component. For *religious* trips, the share of *food and drink* was 16% and that of *shopping* was 15%. For *business* trips, *shopping* expenditure was the largest component (40%).

4.5.7 The share of *accommodation* was, as in rural India, noticeably low for *social* trips (1.2%) but was 10-14% in *business* trips, trips for *religious and pilgrimage*, and trips for *holidaying, leisure, etc.* (For the last-named kind of trip, the share of *accommodation* was likely to be appreciably larger with part of the actual expenses on it getting subsumed in the package

component.) The share of *food and drink* was about 8% for *social* trips, 14% for *business* trips, and 10% (excluding the package component) for *holidaying, leisure and recreation*.

Ref: Table 56 & 58 in Appendix A

#### 4.6 Break-up of domestic tourism expenditure by kind of trip and sector

4.6.1 Fig 4.2 shows the shares of overnight and same-day trips in total domestic tourism expenditure, broken up further by sector (rural/urban). Overnight trips are seen to account for a total of 61% of the total expenditure on domestic tourism, 36% being incurred by rural households and 25% by urban households. The share of same-day trips was 39% – 30% incurred by the rural population and 9% by the urban. The total share of the rural sector in domestic tourism expenditure was thus 66% (slightly less than two-thirds) and that of the urban sector, 34%.

**Statement 4.6: RSE (%) of Average expenditure per overnight trip for each State**

State/UTs	Rural	Urban
Andhra Pradesh	5.45	28.13

# **Appendix B**

## **Sample Design and Estimation Procedure**

# Sample Design and Estimation Procedure

## 1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its sixty-fifth round from 1<sup>st</sup> July 2008 to 30<sup>th</sup> June 2009.

## 2. Outline of Survey Programme

**2.1 Subject coverage:** The subjects covered in the 65<sup>th</sup> round (July 2008 – June 2009) of NSS were ‘Domestic Tourism’, ‘Housing Condition’ and ‘Urban Slums’.

**2.2 Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remained inaccessible throughout the year. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units (FSUs) for central sample. For these two districts, the State sample was treated as Central sample.

**2.3 Period of survey and work programme:** The period of survey was of one year duration starting on 1<sup>st</sup> July 2008 and ending on 30<sup>th</sup> June 2009. The survey period of this round was divided into four sub-rounds of three months’ duration each as follows:

sub-round 1 :	July - September 2008
sub-round 2 :	October - December 2008
sub-round 3 :	January - March 2009
sub-round 4 :	April - June 2009

2.3.1 In each of these four sub-rounds, equal number of sample villages/ blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempt was made to survey each of the FSUs during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

**2.4 Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

Schedule 0.0	: list of households
Schedule 21.1	: domestic tourism
Schedule 1.2	: housing condition
Schedule 0.21	: particulars of slum

**2.5 Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. The following was the ratio of State sample size (number of first stage units) to the Central sample size for the participating States/ UTs.

Nagaland (U)	: triple
J & K , Manipur & Delhi	: double
Maharashtra (U)	: one and half
Gujarat	: less than equal
Remaining States/ UTs	: equal

### 3. Sample Design

**3.1 Outline of sample design:** A stratified multi-stage design was adopted for the 65<sup>th</sup> round survey. The first stage units (FSU) were the 2001 Census villages (*panchayat* wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. For towns with no UFS frame available (applicable to Leh and Kargil towns of J & K), each town was treated as an FSU. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups/ sub-blocks from each FSU.

**3.2 Sampling frame for first-stage units:** *For the rural sector*, the list of 2001 Census villages (*panchayat* wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available Urban Frame Survey (UFS) blocks was considered as the sampling frame. However, for Leh and Kargil towns of J & K, UFS frame was not available. Accordingly, Census 2001 served as the frame for these two towns (to be referred to as non-UFS towns).

### 3.3 First-stage stratification

**3.3.1 Rural sector:** All villages of a district formed a separate stratum.

**3.3.2 Urban sector:** In the urban sector, strata were formed within each NSS region on the basis of size class of towns as per Census 2001 town population. This departure was made in the stratification principle in order to facilitate generation of town-class wise estimates to satisfy the requirements of the user ministries. The stratum numbers and their composition (within each NSS region) are given below.

Stratum	Composition (within NSS region)
1	All towns with population < 50,000
2	All towns with population 50,000 – 99,999
3	All towns with population 1,00,000 – 4,99,999
4	All towns with population 5,00,000 – 9,99,999
5, 6, ....	Each million-plus city

3.3.3 The non-UFS towns of Leh and Kargil of J & K within the NSS region (region number '014') were grouped together to form a separate urban stratum.

**3.4 Sub-stratification:** There was no sub-stratification in the rural sector and for strata corresponding to non-UFS towns. However, for all other urban strata, each stratum was divided into two sub-strata as follows:

sub-stratum 1: all UFS blocks having area type 'slum area'

sub-stratum 2: remaining UFS blocks

**3.5 Total sample size (FSUs):** 12952 FSUs were allotted for the Central sample and 13996 FSUs for State sample at all-India level.

**3.6 Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a minimum sample allocation to each State/UT, and subject to resource availability in terms of number of field investigators.

**3.7 Allocation of State/UT level sample to rural and urban sectors:** The State/UT level sample was allocated between the two sectors in proportion to population as per *Census 2001* with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger States like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. At least 4 FSUs were allocated to each State/UT separately for rural and urban areas. Further, the State level allocations for both rural and urban sector were adjusted marginally in a few cases to ensure that each stratum got a minimum allocation of 4 FSUs.

**3.8 Allocation to strata/ sub-strata:** Within each sector of a State/UT, the sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to multiples of 4 with a minimum sample size of 4. Stratum-level sample size in the urban sector pertaining to strata belonging to UFS towns was further allocated to the 2 sub-strata in proportion to the number of UFS blocks in them with double weightage to sub-stratum 1, subject to a minimum allocation of 4 to each of the two sub-strata.

**3.9 Selection of FSUs:** Villages were arranged as per Census ordering and FSUs were selected by Circular Systematic Sampling with probability proportional to population from all rural strata. For urban strata × sub-strata (wherever applicable), the towns within the stratum were arranged in ascending order of population; then FSUs were selected by Circular Systematic Sampling with equal probability for UFS towns. Within each stratum/ sub-stratum, a multiple of 4 FSUs was selected. The sample was drawn in the form of two independent sub-samples and an equal numbers of sample FSUs was allocated to the four sub-rounds.

Since UFS frames were not available for Leh and Kargil towns of Jammu and Kashmir, a somewhat different approach was adopted for the survey in these two towns. Each of these two towns was treated as an FSU (instead of UFS blocks being considered as the FSUs for UFS towns). Both these towns were selected and repeated in each of the sub-rounds 1 to 4 of the sample list.

### 3.10 Selection of hamlet-groups/ sub-blocks

3.10.1 Large sample FSUs with approximate present population of 1200 or more were divided into a suitable number (say, D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector, by more or less equally dividing the present population of the FSU, as shown below.

approximate present population of the sample FSU	no. of hg's/sb's formed
less than 1200 (no hg's/sb's formed)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

3.10.2 For rural areas of Himachal Pradesh, Sikkim, hilly districts of Uttaranchal, Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh) and Kargil districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups to be formed was determined as follows:

approximate present population of the sample village	no. of hg's formed
less than 600 (no hg's)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

3.10.3 Wherever hamlet-groups/ sub-blocks were formed, two were selected from among them in the following manner – the hg/sb with the highest percentage share of population was always selected; one more hg/sb was selected from the remaining hg's/sb's by SRS. Listing and selection of the households was done independently in the two selected hamlet-groups/ sub-blocks.

3.10.4 Procedure for Leh and Kargil towns: Sub-blocks were formed in the usual way treating the entire town as one FSU. For the selection of two sub-blocks in any given town (FSU) of Leh or Kargil during sub-round 1, the sub-block having the highest percentage share in total present population of the FSU/town was selected with probability 1 and another one was selected randomly.

It was possible that the sub-block with the highest population and hence selected with probability 1 in a particular sub-round might not have the highest population in subsequent sub-rounds. So a different sub-block might be selected with probability 1 in a subsequent sub-round. Again, the second sub-block to be surveyed was, in subsequent sub-rounds, selected afresh with the help of random number tables. If the randomly selected sub-block happened to coincide with any of the selected sub-blocks of the previous sub-round(s), it was rejected and a fresh sub-block was again selected.

### 3.11 Second-stage stratification

3.11.1 Two cut-off points 'A' and 'B' (in Rs.), determined from NSS 61<sup>st</sup> round data for each NSS region for urban areas in such a way that the top 30% of the population had MPCE equal to or more than 'B' and the bottom 30% of the population had MPCE equal to or less than A, were used for second-stage stratification in the urban sector.

3.11.2 For Schedule 21.1, all the households listed in the selected FSU/ hamlet-group/ sub-block were stratified into five second-stage strata (SSS) as shown below.

---

**rural**

- |       |  |
|-------|--|
| SSS 1 | households having pucca dwelling structure and having at least one member, who performed at least one overnight trip during last 30 days             |
| SSS 2 | households not having pucca dwelling structure and having at least one member, who performed at least one overnight trip during last 30 days         |
| SSS 3 | remaining households having pucca dwelling structure and having at least one member who performed at least one same-day trip during last 30 days     |
| SSS 4 | remaining households not having pucca dwelling structure and having at least one member who performed at least one same-day trip during last 30 days |
| SSS5  | other households   |

---

**urban**

- |        |   |
|--------|---|
| SSS 1  | households with $MPCE \geq B$ and having at least one member, who performed at least one overnight trip during last 30 days         |
| SSS 2  | households with $MPCE < B$ and having at least one member who performed at least one overnight trip during last 30 days             |
| SSS 3  | remaining households with $MPCE \geq B$ and having at least one member who performed at least one same-day trip during last 30 days |
| SSS 4  | remaining households with $MPCE < B$ and having at least one member who performed at least one same-day trip during last 30 days    |
| SSS 5: | other households  |
-

### 3.12 Allocation of households to different second-stage strata

3.12.1 Numbers of households allotted for survey to different SSS's for Schedule 21.1 were as follows:

SSS	number of sample households allotted for survey	
	FSU's without hg/sb formation	FSU's with hg/sb formation (for each hg/sb)
SSS 1	4	2
SSS 2	2	1
SSS 3	2	1
SSS 4	2	1
SSS 5	2	1

### 3.13 Selection of households

3.13.1 From each SSS the sample households were selected by SRSWOR.

## 4. Estimation Procedure

### 4.1 Notations

s = subscript for s-th stratum

t = subscript for t-th sub-stratum (only for UFS towns of urban sector)

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU [village (*panchayat* ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb, j = 1, 2, 3, 4 or 5 for Sch. 21.1

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/ sb's formed in the sample FSU

$D^* = 0$  if  $D = 1$

= (D - 1) for FSUs with  $D > 1$

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural stratum (= sum of sizes for all the FSUs of a stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including zero cases but excluding casualty for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

$h$  = number of households surveyed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

$x, y$  = observed value of characteristics  $x, y$  under estimation

$\hat{X}, \hat{Y}$  = estimate of population total  $X, Y$  for the characteristics  $x, y$

In terms of the above symbols,

$y_{stmidjk}$  = observed value of the characteristic  $y$  for the  $k$ -th household in the  $j$ -th second stage stratum of the  $d$ -th hg/ sb ( $d = 1, 2$ ) of the  $i$ -th FSU belonging to the  $m$ -th sub-sample for the  $t$ -th sub-stratum of  $s$ -th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

#### 4.2 Formulae for Estimation of Aggregates for a particular sub-sample and stratum (for rural/non-UFS towns of urban i.e. Leh and Kargil) / sub-stratum (for UFS towns of urban) for Schedule 21.1:

##### 4.2.1 Rural:

(i) For  $j$ -th second stage stratum of a stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

##### 4.2.2 Urban:

(i) For  $j$ -th second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum ( $\hat{Y}_{st}$ ) will be obtained by adding sub-stratum level estimates ( $\hat{Y}_{st}$ ).

**Note:** N = 2 in the above formula in the case of NSS region '014' of J & K comprising two towns of Leh and Kargil.

### 4.3 Overall Estimate for Aggregates

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

### 4.4 Overall Estimate of Aggregates at State/UT/all-India level

4.4.1 The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

### 4.5 Estimates of Ratios

4.5.1 Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

### 4.6 Estimation of total number of trips/ visitor- trips /expenditure, etc.

#### 4.6.1 Number of overnight/same-day trips during last 365 days

Total number of overnight trips and same day trips during last 365 days are to be estimated by using the relevant information recorded against items 7.2 and 8.2 of block 3.

#### 4.6.2 Number of visitor-trips during last 365 days

Number of visitor-trips by different classifications are obtained from column (11) and (13) of block 4.

#### 4.6.3 Number of trips (overnight/same-day) classified by different categories for 365 days

- (a) Number of trips for 30 days by different categories such as purpose of the trip, type of trip, mode of travel, etc. is available from blocks 5.1 and 5.2. But this information is not available for 365 days by different categories. Therefore, to provide estimates for 365 days for these categories, the following assumption is made:

Assume that the joint distribution for the last 365 days for households/trips/visitor-trips, etc. classified by different categories is the same as the joint distribution obtained for last 30 days.

- (b) Under the above assumption, for the tables where estimates for 365 days are given, the distribution is obtained on the basis of information for last 30 days while marginal totals are based on information for last 365 days.
- (c) These marginal totals are obtained at appropriate level (e.g., State  $\times$  sector, State  $\times$  sector  $\times$  sex, etc.). The information necessary for deriving marginal totals is the (i) the estimated total number of trips/visitor-trips during last 365 days obtained from blocks 3/4 and (ii) marginal distribution of trips or visitor-trips during last 30 days obtained from blocks 5.1 or 5.2. The proportion of trips for a particular category (for 30 days) multiplied by the estimated total number of trips (for 365 days) is the estimated marginal total number of trips for that category for 365 days.

#### 4.6.4 Expenditure incurred

- (a) Information on total expenditure during last 30 days is recorded in block 6.1 for latest 3 overnight trips only and in block 6.2 for all same-day trips. However, this information is not available for 365 days in respect of overnight / same-day trips in blocks 6.1 and 6.2.

To obtain estimates of expenditure for all the overnight trips during last 30 days and also the expenditure during last 365 days for overnight/same-day trips, certain assumptions are made similar to 4.6.3 (a) above:

It is assumed that the average expenditure per trip based on last 3 overnight trips during last 30 days for any group of trips or visitor-trips remains invariant for the last 30 days. Also, average expenditure for last 30 days for (any group of trips  $\times$  particular category of expenditure) is assumed to be same for the last 365 days.

- (b) Under the above assumption,
- (i) average expenditure per overnight trip for a group/category of trips is obtained as the ratio of total estimated expenditure incurred on the group/category of overnight trips to the estimated number of overnight trips on the basis of the latest three trips during last 30 days for which the expenditure has been reported in block 6.1.
- (ii) average expenditure per same-day trip for a group/category of trips is obtained as the ratio of total estimated expenditure incurred on the group/category of same-day trips to the estimated number of same-day trips during last 30 days.

(c) Marginal totals of trips for last 365 days are obtained using the procedure explained in para 4.6.3.

4.6.5 Further explanatory notes on how the estimates of cell values and marginal totals are derived in various tables of the approved Tabulation Plan are given in paragraphs 6 & 7.

**4.7 Estimates of Error:** The estimated variances of the above estimates are as follows:

**4.7.1 For aggregate  $\hat{Y}$  :**

$$Var(\hat{Y}) = \sum_s Var(\hat{Y}_s) \text{ where } Var(\hat{Y}_s) \text{ is given by}$$

$$Var(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2 \text{ for rural stratum, } \hat{Y}_{s1} \text{ and } \hat{Y}_{s2} \text{ being the stratum estimates for sub-sample 1 and 2 respectively}$$

and

$$Var(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2 \text{ for urban stratum, where } \hat{Y}_{st1} \text{ and } \hat{Y}_{st2} \text{ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.$$

**4.7.2 For ratio  $\hat{R}$  :**

$$(i) \quad M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[ (\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right] \text{for rural}$$

and

$$(ii) \quad M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[ (\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right] \text{for urban,}$$

where  $\hat{Y}_{s1}$ ,  $\hat{Y}_{st1}$  and  $\hat{Y}_{s2}$ ,  $\hat{Y}_{st2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

#### 4.7.3 Estimates of Relative Standard Error (RSE)

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

### 5. Multipliers

The formulae for multipliers at stratum/sub-stratum level for a sub-sample are given below:

sub-stratum	formula for multipliers	
	hg / sb 1	hg / sb 2
rural	$\frac{Z_s}{n_{smj}} \times \frac{1}{z_{smi}} \times \frac{H_{smi1j}}{h_{smi1j}}$	$\frac{Z_s}{n_{smj}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$
Urban	$\frac{N_{st}}{n_{stmj}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{N_{st}}{n_{stmj}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$

j=1,2,3,4,5

- Note: (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.
- (ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and the detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic,  $D_{smi}^* = 1$  in the relevant multipliers and there is only one multiplier for the village.

## **6. An Explanatory Note on Preparation of Appendix Tables**

I. For tables 40-48, the estimates for 365 days marginal totals for rows & cols. are derived by distributing estimated total number of visitor-trips for 365 days (obtained from block-4) to the row/col. variable as per their distribution of 30 days estimates. Since the distribution pattern of row/column variables with respect to 30 days estimates may not be similar in rural and urban sectors, the rural & urban sectors marginal totals do not add up to marginal totals for combined sector.

II. Similarly for tables 50-57, the estimated total number of trips for 365 days, obtained from block-3, is distributed over the marginal variables as per their distribution of 30 days estimates to arrive at the estimates for marginal totals for 365 days. Hence the rural & urban sectors marginal totals do not add up to marginal totals for combined sector for the same reason as mentioned above.

III. For table 56, the item-wise expenditure for each leading purpose of overnight trips and also for column 'all' are derived by multiplying the average expenditure of the corresponding cell in table 57 with the total no. of estimated trips for 365 days for that leading purpose. So the expenditure for col. 'all' for a particular item does not match with the summation of expenditure over leading purposes for that item.

IV. For table 58, the estimated total expenditure for 'all' MPCE classes together corresponding to a particular item of expenditure in the rural & urban sectors marginal totals do not add up to marginal totals for combined sector for that particular item.

V. For all these tables, the estimated totals for (rural + urban) sector are calculated by adding the corresponding figures from rural and urban sectors respectively, except for the estimated totals corresponding to MPCE classes.

VI. The expenditure for column 'all' for a particular category of item in table 56 are obtained by adding the corresponding category of expenditure over different leading purposes.

VII. The average expenditure per overnight trip for (rural + urban) sector in table 57 is obtained from table 56 for (rural & urban) sector.

## **7. An Explanatory Note on Estimation of Cell Values and Marginal Totals**

### **A. For tables 1-39 and 49**

Estimates for 365 days are obtained from block 3, items 7.2 and 8.2. Distributions wherever applicable are based on 365 days estimates.

**B. For all other tables**

1. (a) Distribution is obtained for the households/trips/visitor-trips/expenditure, etc. on the basis of estimates of last 30 days.

(b) It is assumed that the joint distribution for the last 365 days for households/trips/visitor-trips/expenditure, etc. classified by different categories is the same as the joint distribution obtained for last 30 days.

(c) Under the above assumption, for the tables where estimates for 365 days are given, the distribution is that of the last 30 days while marginal totals are that of 365 days. These marginal totals are obtained at appropriate level (e.g., State  $\times$  sector, State  $\times$  sector  $\times$  sex, etc.).

2. For tables 40-48, estimates of visitor-trips for 365 days by different classifications are obtained from col (11) of block 4 for tables 40-44 and col (13) of block 4 for tables 45-48. Subsequent method of estimation is illustrated for table 40.

For table 40, the estimates of visitor-trips by activity status  $\times$  NCO at State  $\times$  sector  $\times$  sex level are used as marginal totals for the rows. Marginal totals for columns are obtained by using the distribution of column variables obtained from block 5.1 and the total number of visitor-trips obtained from block 4, column 11.

3. For tables 50-55, joint distribution is obtained for last 30 days at State  $\times$  sector level. Subsequent method of estimation is illustrated for table 50.

For table 50, to obtain the marginal totals representing 365 days' estimate for the leading purposes at State  $\times$  sector level, the marginal distribution by leading purposes using last 30 days' data is first obtained. This distribution is then applied to the estimated number of trips during last 365 days obtained from block 3. Marginal distribution of 30 days of column variables is used wherever necessary to obtain marginal column totals for 365 days.

4. For table 57, it is assumed that average expenditure per trip based on last 3 trips during last 30 days for any group of trips or visitor-trips remains invariant for the last 30 days. Also, average expenditure for last 30 days for (any group of trips  $\times$  particular category of expenditure) is assumed to be the same for the last 365 days.

[A trip in block 5.1 which is supposed to be reported but is not actually reported in block 6.1 is assumed to be present in block 6.1 with zero expenditure.]

- (i) Average expenditure per overnight trip for a cell is obtained as follows:

- (a) The trips in block 5.1 which are to be reported in block 6.1 are identified.

- (b) The estimated number of trips for a leading purpose is obtained using the information regarding leading purpose of the identified trips in block 5.1.
  - (c) The estimated total expenditure for a cell (leading purpose  $\times$  expenditure category) is obtained from block 6.1 classified by category of expenditure in block 6.1 and leading purposes given in block 5.1.
  - (d) Ratio of estimated expenditure to estimated number of trips obtained as per (b) and (c) gives the estimated average expenditure for each cell.
- (ii) To obtain the marginal totals for columns (estimated no of overnight trips by leading purpose for 365 days), the following procedure is used:
- (a) Estimated total no of overnight trips for last 365 days are obtained from block 3.
  - (b) The above estimated total number of overnight trips are distributed over the cells corresponding to the row 'estimated no of overnight trips' using the procedure given in (3) above. This agrees with marginal row totals of table 50.
- (iii) To obtain the marginal column totals for 'estimated number of visitor-trips' for 365 days, the following steps are involved:
- (a) The total number of visitor-trips for 365 days from block 4, column 11 for overnight trips are estimated.
  - (b) The distribution of visitor-trips by the leading purpose for overnight trips using the information on visitor-trips by leading purposes obtained from column (12), block 5.1, is found.
  - (c) Using this distribution and the estimate of total number of visitor-trips obtained as per (a) and (b), marginal totals are obtained.
5. For table 56, (i) estimated total expenditure for a cell (i.e. leading purpose  $\times$  expenditure category) = (estimated average expenditure for the cell)  $\times$  (corresponding marginal column totals for 'estimated no of overnight trips' for the leading purpose during last 365 days) is obtained from table 57.
6. (i) For table 59, average expenditure per same-day trip for a cell is obtained as follows:
- (a) The estimated number of same-day trips for 30 days by quintile class of MPCE using the information in blocks 3 (quintile class) and 5.2 (number of same-day trips) is obtained.
  - (b) The estimated expenditure for a cell (quintile class of MPCE  $\times$  expenditure category) from blocks 3 and 6.2 is obtained.
  - (c) Ratio of estimated expenditure to estimated number of trips obtained as per (a) and (b) gives the estimated average expenditure for each cell.

(ii) To obtain the marginal column totals for 'estimated number of same-day trips' by quintile classes for 365 days, the information in block 3, items 8.2 and 18 is used.

(iii) To obtain the marginal column totals for 'estimated number of visitor-trips' for 365 days, the following step is taken:

The total numbers of visitor-trips by quintile classes of MPCE are estimated using information from block 3, item 18 and block 4, column 13 for same-day trips.

7. For table 58, (i) estimated total expenditure for a cell (i.e. quintile class of MPCE × expenditure category) = (estimated average expenditure for the cell) × (corresponding marginal column totals for 'estimated no of same-day trips' for quintile class of MPCE during last 365 days) are obtained from table 59.

8. (i) For table 60, average expenditure per overnight trip for a cell (quintile class of MPCE × leading purpose) is obtained as follows:

- (a) The trips in block 5.1 which are to be reported in block 6.1 are identified.
- (b) The estimated number of trips for a leading purpose is obtained using the information regarding leading purpose of the identified trips in block 5.1.
- (c) The estimated total expenditure for a cell (quintile class of MPCE × leading purpose) is obtained from block 6.1 classified by category of expenditure in block 6.1 and leading purposes given in block 5.1 and MPCE information in block 3.
- (d) Ratio of estimated expenditure to estimated number of trips obtained as per (b) and (c) gives the estimated average expenditure for each cell.

(ii) A column with heading 'estimated no of overnight trips' is inserted giving the marginal row totals for leading purposes. To obtain the marginal totals for rows (estimated no of overnight trips by leading purpose for 365 days), following procedure is used:

- (a) Estimated total no of overnight trips for last 365 days are obtained from block 3.
- (b) The above estimated total number of overnight trips are distributed over the cells corresponding to the column 'estimated no of overnight trips' using the procedure given in (3) above. These agree with marginal row totals of table 50.

(iii) A row with heading 'estimated no of overnight trips' is inserted giving the marginal column totals for quintile classes. These marginal totals for columns (estimated no of overnight trips by quintile classes for 365 days) are obtained using the information from block 3.

(iv) The marginal total for columns (estimated number of households with at least one overnight trip during last 365 days) are obtained using information from block 3, item 18 where item 7.2 > 0.

Note: 1. Projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 for rural+urban combined and Table 9 provides projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 for urban.

3. Projected population as on 1<sup>st</sup> January 2009 has been derived using the formula,  $A = A_1 * \left[\left(\frac{A_2}{A_1}\right)^{1/12}\right]^{10}$ , where A1 is the population for 1<sup>st</sup> March 2008, A2 is the population for 1<sup>st</sup> March 2009 and A is the population for 1<sup>st</sup> January 2009.

4. Projected population as on 1<sup>st</sup> January 2009 has been derived for rural+urban and urban separately and the figure for rural has been derived by subtraction.

Note: 1. Projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 for rural+urban combined and Table 9 provides projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 for urban.

3. Projected population as on 1<sup>st</sup> January 2009 has been derived using the formula,  $A = A_1 * \left[\left(\frac{A_2}{A_1}\right)^{\frac{1}{12}}\right]^{10}$ , where A<sub>1</sub> is the population for 1<sup>st</sup> March 2008, A<sub>2</sub> is the population for 1<sup>st</sup> March 2009 and A is the population for 1<sup>st</sup> January 2009.

4. Projected population as on 1<sup>st</sup> January 2009 has been derived for rural+urban and urban separately and the figure for rural has been derived by subtraction.

Statement 1.1: Projected population (000) as on 1<sup>st</sup> March 2008, 1<sup>st</sup> March 2009 and 1<sup>st</sup> January 2009 for each State/UT

Note: 1. Projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 for rural+urban combined and Table 9 provides projected population as on 1<sup>st</sup> March 2008 and 1<sup>st</sup> March 2009 for urban.

3. Projected population as on 1<sup>st</sup> January 2009 has been derived using the formula,  $A = A_1 * \left[\left(\frac{A_2}{A_1}\right)^{1/12}\right]^{10}$ , where  $A_1$  is the population for 1<sup>st</sup> March 2008,  $A_2$  is the population for 1<sup>st</sup> March 2009 and  $A$  is the population for 1<sup>st</sup> January 2009.

4. Projected population as on 1<sup>st</sup> January 2009 has been derived for rural+urban and urban separately and the figure for rural has been derived by subtraction.
