Preface

The Household Consumer Expenditure Surveys of National Sample Survey (NSS) are the primary source of data on various indicators of level of living of different segments of the population at National and State levels. These are used for planning, policy formulation, decision support and as input for further statistical exercises by various Government organisations, academicians, researchers and scholars. NSS surveys on Household Consumer Expenditure with large sample size of households have been conducted quinquennially from 27th round (October 1972 - September 1973) onwards. The NSS 66th round carried out during July 2009- June 2010 was the eighth quinquennial round in the series, covering subjects of (i) Household Consumer Expenditure and (ii) Employment and Unemployment. Field work of this survey was carried out by the Field Operations Division (FOD) of National Sample Survey Office (NSSO) in which the central samples were covered. Most of the State Governments also participated in the survey on matching sample size basis.

Based on the central sample, the results of quinquennial surveys of Consumer Expenditure are brought out by NSSO in a number of reports. The NSSO released the *Key Indicators of Household Consumer Expenditure in India, 2009-10* in July 2011. Apart from this, seven detailed reports are planned to be released on varied aspects of household consumer expenditure based on NSS 66th round data. The present report '*Level and Pattern of Consumer Expenditure 2009-10*' is the first in the series of seven reports. It presents the estimates pertaining to various facets of household consumer expenditure at National and State levels. This report contains three Chapters and five Appendices. The main findings relating to the estimates given in this report are presented in Chapter Three. Since the report is voluminous, the Appendix Tables are given in a CD along with the report.

A feature of the 66th round is that the data on household consumption was collected with three reference periods viz. preceding i) 7 days, ii) 30 days and iii) 365 days for a specified set of items of the consumption basket. This enables estimation of MPCE with uniform reference period (30 days), mixed reference period (30 days and 365 days) and modified mixed reference period (7 days, 30 days and 365 days) and a comparison of the results with 61st round (2004-05) in respect of uniform reference period and mixed reference period is possible. The survey reveals that the all India average Monthly Per Capita Expenditure in Rural India is Rs.1054 and in Urban India it is Rs.1984. In terms of average per capita daily expenditure, it comes out to be about Rs.35 in Rural India and Rs.66 in Urban India. About 60% of the population live with these expenditures or less in Rural and Urban areas respectively.

As a maiden achievement, the NSSO brought out the key indicators of the Survey in about a year of completion of the Field work and released the unit level data for further analysis and research work by the economists, academia, scholars and all others who are interested in this subject. This report (No. 538) has also been drafted by the officers of SDRD within a reasonable time period. This has been possible because of the efforts made by the officials of different divisions of NSSO for meticulous planning and execution of various activities involved and the hard work done by the supporting officials and staff of NSSO. I am thankful to the National Statistical Commission (NSC) and Working Group of the 66th round for their valuable guidance at various stages of the survey. I specially thank Prof. K. Sundaram, Retd. Professor of Delhi School of Economics and Prof. D. Coondoo, Retd. Professor of Indian Statistical Institute who reviewed the draft report and provided valuable comments and suggestions for improvement.

(J. Dash)

Director General and Chief Executive Officer
NSSO

मुख्य बातें

यह प्रतिवेदन (रिपोर्ट) पूरे देश में फैले हुए 5263 शहरी ब्लॉक (नगरीय खण्डों) एवं 7428 ग्रामों से एकत्र किये गये सूचनाओं पर आधारित है। उपभोक्ता व्यय पर सूचना एकत्र करने के लिए दो भिन्न अनुसूचियों को प्रयोग में लाया गया, पहले में 100855 परिवारों से और दूसरे में 100794 परिवारों से सूचना संग्रह किया गया।

उपभोग का स्तर

- एमएमआरपी (आशोधित मिश्रित सन्दर्भ अवधि) विधि के अनुसार, 2009-10 में औसत एमपीसीई (प्रति व्यक्ति मासिक उपभोक्ता व्यय) ग्रामीण भारत में 1053.64 एवं शहरी भारत में 1984.46 अनुमानित था।
- 10% निर्धनतम ग्रामीण जनसंख्या का औसत एमपीसीई रु. 453 था। 10% निर्धनतम शहरी जनसंख्या का औसत एमपीसीई 599 था।
- एमपीसीई द्वारा बनाये गये स्तरों में ग्रामीण लोगों का उच्च 10% का औसत एमपीसीई रु. 2517 था जो कि निर्धनतम 10% का करीब 5.6 गुणा था। शहरी लोगों का उच्चतम 10% का औसत एमपीसीई रु. 5863 था जो कि निर्धनतम 10% का लगभग 9.8 गुणा था।
- प्रमुख राज्यों में केरल (रु. 1835) का सबसे अधिक ग्रामीण एमपीसीई था। इसके बाद पंजाब (रु. 1649) और हरियाणा (रु. 1510) था। अन्य सभी प्रमुख राज्यों का औसत एमपीसीई रु. 750 और रु. 1250 के बीच था।
- सबसे कम ग्रामीण औसत एमपीसीई बिहार और छत्तीसगढ़ का (करीब 780रु.) था, और उड़ीसा एवं झारखण्ड का भी कम ही (लगभग रु. 820) था और इसी तरह उत्तर प्रदेश एवं मध्य प्रदेश का भी (लगभग रु. 900) था।
- शहरी क्षेत्र में दो प्रमुख राज्यों महाराष्ट्र (रु.2437) और केरल (रु.2413) का सर्वोच्च एमपीसीई था। इसके पश्चात हरियाना का (रु.2321) था। शहरी एमपीसीई न्यूनतम बिहार का (रु. 1238) था।
- मध्यम स्तर का (मीडियन) एमपीसीई ग्रामीण भारत में रु. 895 एवं शहरी भारत में रु.1502 था।
- 1987-88 से 2009-10 तक 22 वर्षों की अवधि में समान सन्दर्भ अवधि विधि द्वारा मापा गया वास्तविक(रीयल) एमपीसीई में ग्रामीण भारत में केवल 19% अनुमानित वृद्धि पायी गयी लेकिन शहरी भारत में इसकी 42% की वृद्धि हुई। शहरी एमपीसीई में वास्तविक वृद्धि 1993-94 और 2009-10 के बीच 16 वर्षों की अवधि में लगभग 34% थी।
- मिश्रित संन्दर्भ अवधि द्वारा मापा गया वास्तविक एमपीसीई ग्रामीण भारत में 1993-94 से 2009-10 तक 16 वर्षों की अवधि के दौरान 19% बढ़ा और इसी अवधि में शहरी भारत में 37½% बढ़ा।

उपभोग का स्वरूप

- एमएमआरपी (आशोधित मिश्रित सन्दर्भ अवधि) एमपीसीई के अनुसार ग्रामीण परिवारों का 2009-10 के दौरान कुल में खाद्य का अनुमानित भाग औसत 75% था । इसमें 14% अनाज एवं उसके प्रतिस्थापक का, 8% से थोड़ा कम दूध एवं दूध से बनी वस्तुओं का, और 8% सब्जियों का भाग था । गैर-खाने वर्ग मदों में खाना बनाने के लिए ईंधन और रोशनी के लिए ईंधन का भाग 8% था । वस्त्र एवं जूतों का 6%, चिकित्सा खर्च का 5% से कुछ अधिक, यात्रा एवं शिक्षा प्रत्येक का 3½%, अन्य उपभोग सेवाओं का 4% और टिकाऊ उपभोग वस्तुओं का 3½% था ।
- औसत शहरी के लिए 44% से अधिक पारिवारिक उपभोग खाद्य पर था, जिसमें 8% अनाज एवं 7% दूध एवं दूध से बना पदार्थ शामिल था ।
- कुल उपभोक्ता व्यय मूल्यों में अधिक से अधिक खाद्य मद समूहों का भाग शहरी भारत की तुलना में ग्रामीण क्षेत्र में अधिक था । फल और प्रसंस्कृत आहार अपवाद है, शहरी भारत में अखाद्य मद समूह की भागीदारी सामान्यतः अधिक था । सबसे अधिक अन्तर अनाजों के मामले में (शहरी अंश-8%, ग्रामीण अंश-13.8%), किराया (शहरी 6%, ग्रामीण 0.5%) और शिक्षा (शहरी 8%, ग्रामीण 3.6%) के मामलों में था ।
- प्रमुख राज्यों के ग्रामीण क्षेत्रों में एमपीसीई में आहार का अंश विभिन्न स्तर पर रहा : केरल में 46% और पंजाब में 48% से आसाम में 64% और बिहार में 65% तक था । शहरी क्षेत्र में आहार का अंश केरल और महाराष्ट्र में 40-41% से झारखण्ड में 52% एवं बिहार और आसाम में 53% तक रहा ।
- ग्रामीण भारत में कुल व्यय में अनाज के अंश प्रमुख राज्यों में 7% (पंजाब एवं हरियाणा) से 21% तक (आसाम और बिहार) में रहा । शहरी भारत में इस अंश का विभिन्नता हरियाणा, पंजाब और केरल के लिए 6% से आसाम में 13% और बिहार में 15% तक था ।
- ग्रामीण भारत के निम्नतम् एमपीसीई वर्ग के लिए अनाज का बजट अंश 23-24% था लेकिन एमपीसीई के वृद्धि के साथ 7-8% तक (सर्वोच्च वर्ग में) गिरा । शहरी भारत में अनाज का अंश निम्नतम् 18-19% से सर्वोच्च वर्ग के लिए 3-4% तक गिरा ।
- ग्रामीण परिवार के उपभोक्ता व्यय में दूध एवं दूध के पदार्थों के बजट का भाग एमपीसीई के वृद्धि के साथ 3-4% (निम्नतम् वर्ग में) से 9% (द्वितीय उच्चतम् वर्ग में) तक बढ़ा । परंतु शहरी भारत में जनता के मध्य तृतीयांश के लिए दूध एवं दूध के पदार्थों का भाग सर्वोच्च वर्ग से अधिक था ।
- घरेलू उपभोक्ता व्यय में ईंधन एवं बिजली का भाग दोनों क्षेत्रों में निम्नतम् वर्ग के लिए करीब 10-11% था । एमपीसीई के बढ़ने के साथ यह गिरता रहा एवं सर्वोच्च वर्ग के लिए ग्रामीण भारत में 6% एवं शहरी भारत में 5% रहा ।

अनाज खपत की मात्रा

- ग्रामीण भारत में महीने में प्रति व्यक्ति औसतन अनाज की खपत 11.3 किलोग्राम थी एवं शहरी भारत में 9.4 किलोग्राम थी ।
- ग्रामीण भारत में, महीने में जनता के सबसे गरीब 10% भाग के लिए अनाज की औसत खपत 10.2 किलोग्राम थी । एमपीसीई के बढ़ते ही यह बढ़ते हुए देखा गया । पहले जल्दी ही (तीसरी श्रेणी के वर्ग के लिए) 11 किलोग्राम तक पहुंचा, एवं उसके बाद और भी धीरे धीरे बढ़ा । यह दो उच्चतम वर्गों के लिए 12 किलोग्राम के ऊपर था । नगरीय भारत में, प्रति व्यक्ति अनाज की खपत 9.5 किलोग्राम से करीब 9.7 किलोग्राम प्रतिमाह तक निम्न 5 श्रेणी के वर्गों के लिए बढ़ते हुए देखा गया, परन्तु फिर गिरा । अंततः जनसंख्या के सर्वोच्च वर्ग में 8.6 किलोग्राम तक पहुंचा ।
- 1993-94 से 2009-10 तक 16 वर्षों की अवधि में महीने में प्रति व्यक्ति अनुमानित अनाज का खपत (जिसमें खरीदे गये प्रसंस्कृत आहार में अनाज का हिसाब नहीं है) ग्रामीण भारत में 13.4 किलोग्राम से 11.35 किलोग्राम तक एवं नगरीय भारत में 10.6 किलोग्राम से 9.39 किलोग्राम तक गिरा । सभी मुख्य राज्यों में यह गिरावट सामान्य रूप से हुई ।

खपत में असमानता

- एमएमआरपी (आशोधित मिश्रित संदर्भ अवधि) प्रणाली से अनुमानित एमपीसीई के वितरण के लिए लॉरेंज अनुपात का आंकलन ग्रामीण भारत में 0.270 एवं नगरीय भारत में 0.362 था ।
- सामान्य संदर्भ अवधि विधि का प्रयोग करते पर वर्ष 2004-05 एवं वर्तमान में एमपीसीई वितरण के लॉरेंज अनुपातों में ग्रामीण क्षेत्रों में 0.297 से 0.291 तक मामूली कमी एवं नगरीय क्षेत्र में 0.373 से 0.381 तक थोड़ी वृद्धि परिलक्षित हुई ।

Highlights

The report is based on information collected during July 2009-June 2010 from 7428 villages and 5263 urban blocks spread over the entire country. Two different schedules were used to collect information on consumer expenditure, the first being canvassed in 100855 households and the second in 100794 households.

LEVEL OF CONSUMPTION

- Using the MMRP (Modified Mixed Reference Period) method of measurement of MPCE (Monthly Per Capita Consumer Expenditure), average MPCE in 2009-10 was estimated as Rs.1053.64 in rural India and Rs.1984.46 in urban India.
- The poorest 10% of India's rural population had an average MPCE of Rs.453. The poorest 10% of the urban population had an average MPCE of Rs.599.
- The top 10% of the rural population, ranked by MPCE, had an average MPCE of Rs.2517 – about 5.6 times that of the bottom 10%. The top 10% of the urban population had an average MPCE of Rs.5863 – about 9.8 times that of the bottom 10%.
- Among the major States, Kerala (Rs.1835) had the highest rural MPCE. It was followed by Punjab (Rs.1649) and Haryana (Rs.1510). In all other major States, average rural MPCE was between Rs.750 and Rs.1250.
- Average rural MPCE was lowest in Bihar and Chhattisgarh (around Rs.780), and also low in Orissa and Jharkhand (around Rs.820), as well as in Uttar Pradesh and Madhya Pradesh (around Rs.900).
- Maharashtra (Rs.2437) and Kerala (Rs.2413) were the two major States with the highest MPCE in the urban sector, followed by Haryana (Rs.2321). Urban MPCE was lowest in Bihar (Rs.1238).
- The median level of MPCE was Rs.895 in rural India and Rs.1502 in urban India.
- In the 22-year period from 1987-88 to 2009-10, real MPCE measured by the Uniform Reference Period method was estimated to have grown by only 19% in rural India, but by as much as 42% in urban India. The growth in real urban MPCE over the 16-year period between 1993-94 and 2009-10 was about 34%.
- Measured by the Mixed Reference Period method, real MPCE grew by about 19% in rural India during the 16-year-period from 1993-94 to 2009-10, and by as much as 37½% in urban India over the same period.

PATTERN OF CONSUMPTION

- Using the MMRP (Modified Mixed Reference Period) method of MPCE measurement, food was estimated to account for about 57% of the value of the average rural

Indian's household consumption during 2009-10. This included 14% for cereals and cereal substitutes, a little less than 8% for milk and milk products, and 8% on vegetables. Among non-food item categories, fuel for cooking and lighting accounted for about 8%, clothing and footwear for 6%, medical expenses for a little over 5%, conveyance and education for about 3½% each, other consumer services for 4%, and consumer durables for 3½%.

- For the average urban Indian, over 44% of the value of household consumption was accounted for by food, including 8% by cereals and 7% by milk and its products.
- The share of most of the food item groups in total consumption expenditure was higher in rural India than in urban India, fruits and processed food being exceptions. For non-food item groups, the share was usually higher in urban India. The most noticeable differences were in case of cereals (urban share: 8%, rural share: 13.8%), rent (urban: 6%, rural share: 0.5%) and education (urban: 8%, rural: 3.6%).
- In the major States, the share of food in rural MPCE varied from 46% for Kerala and 48% for Punjab to 64% in Assam and 65% in Bihar. In the urban sector it varied from 40-41% in Kerala and Maharashtra to 52% in Jharkhand and 53% in Bihar and Assam.
- The share of cereals in total expenditure in rural India varied across the major States from 7% in Punjab and Haryana to 21% in Assam and Bihar. In urban India, the share varied from 6% for Haryana, Punjab and Kerala to 13% in Assam and 15% in Bihar.
- The budget share of cereals was 23-24% for the bottom decile class of rural India but fell with rise in MPCE to about 7-8% for the top decile class. In urban India the share of cereals fell from 18-19% for the bottom decile class to 3-4% for the top decile class.
- The budget share of milk and milk products in rural household consumer expenditure was seen to rise with MPCE level from 3-4% in the bottom decile class to 9% in the ninth decile class. For urban India, however, the share was higher for the middle third of the population than for the highest decile classes.
- The share of fuel and light in household consumer expenditure was around 10-11% for the bottom decile class in both sectors. With rise in MPCE it was seen to fall to about 6% in the top decile class for rural India and 5% for urban India.

QUANTITY OF CEREAL CONSUMPTION

- Average cereal consumption per person per month was 11.3 kg in rural India and 9.4 kg in urban India.
- In rural India, average monthly per capita cereal consumption was around 10.2 kg for the poorest 10% of the population. With rise in MPCE it was seen to increase, quickly at first, to reach 11 kg in the third decile class, and then more slowly. It was above 12 kg for the top two decile classes. In urban India, per capita cereal consumption was seen to increase from under 9.5 kg to about 9.7 kg per month over the first five decile classes but then to fall, finally plunging to 8.6 kg for the top decile class of population.

- Over the 16-year period from 1993-94 to 2009-10, estimated monthly per capita cereal consumption (which does not include cereal content of purchased processed food) fell from 13.4 kg to 11.35 kg in rural India and from 10.6 kg to 9.39 kg in urban India. The fall was spread over all major States.

INEQUALITY IN CONSUMPTION LEVELS

- Using the MMRP (Modified Mixed Reference Period) method of MPCE measurement, the Lorenz ratio for the distribution of MPCE was estimated as 0.270 for rural India and 0.362 for urban India.
- Comparison of Lorenz ratios from the present survey with those obtained from the survey of 2004-05, using the Uniform Reference Period method of measurement of MPCE, showed a slight reduction from 0.297 to 0.291 in the rural sector and a slight increase from 0.373 to 0.381 in the urban sector of the country.

Chapter One

Introduction

1.1 Background

1.1.1 The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure surveys at regular intervals as part of its “rounds”, each round normally of a year’s duration. These surveys are conducted through interviews of a representative sample of households selected randomly through a scientific design and cover almost the entire geographical area of the country.

1.1.2 The household consumer expenditure survey (CES) is generally conducted as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES’s. The 66th round survey (July 2009 - June 2010) was the eighth such survey of this quinquennial series, the seventh having been conducted during the 61st round (July 2004 - June 2005). Key indicators on household consumption in India during 2009-10 based on this survey have already been released¹.

1.2 Objective of the survey

1.2.1 The NSS consumer expenditure survey aims at generating estimates of average household monthly per capita consumer expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, separately for the rural and urban sectors of the country, for States and Union Territories, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the respective domains of the population. The distribution of MPCE highlights the differences in level of living of the different segments of the population and is an effective tool to study the prevalence of poverty and inequality. These numbers enable the apex planning and decision-making process to allocate the nation’s resources among sectors, regions, and socio-economic groups, and assess the “inclusiveness” of economic growth.

1.2.2 Besides measuring the household consumption level and its pattern, the CES has another important use. To work out consumer price indices (CPIs) which measure the general rise in consumer prices, one needs to know not only the price rise for each commodity group but also the budget shares of different commodity groups (used as weights). The budget shares as revealed by the NSS CES are being used to prepare the weighing diagram for official of CPIs. More extensive use of NSS CES data is planned to have a weighing diagram that uses a finer commodity classification, to prepare CPIs separately for rural and urban and at sub-national level.

1.2.3 Apart from these major uses of the CES, the food (quantity) consumption data are used to study the level of nutrition of populations of different regions and disparities therein. By

¹ NSS KI (66/1.0): *Key Indicators of Household Consumer Expenditure in India, 2009-2010, July 2011*

providing data on consumption of particular commodities at different levels of MPCE, the survey enables the measurement of consumption elasticity or responsiveness of demand to change in total expenditure – an important parameter in the study of supply and demand.

1.3 Genesis of the CES

1.3.1 *The quinquennial series:* Beginning from the first round (1950-51) of the National Sample Survey (NSS), data on household consumer expenditure were collected in every round up to NSS 28th round (1973-74). After the NSS 26th round, the Governing Council of NSSO decided that the surveys on consumer expenditure and employment-unemployment situation might be undertaken together on a large scale once in every five years. Accordingly, "quinquennial" surveys on consumer expenditure and employment-unemployment surveys were conducted in the 27th, 32nd, 38th, 43rd, 50th, 55th, 61st and 66th rounds of NSS, at roughly 5-year intervals.

1.3.2 *The annual series:* In the mid-80's, the need for an annual series of data on consumer expenditure began to be felt by planners and research workers. The Governing Council therefore decided (i) that the quinquennial consumer expenditure-cum-employment surveys would be carried on as before, and (ii) that every other round of NSS, starting from the 42nd (1986-87), would include a smaller-scale consumer expenditure survey with 2 (increased to 4 from 1993 onwards) sample households per sample village/block with a slightly abridged schedule of enquiry. For two decades thereafter, every round of NSS included either a CES of the quinquennial series or a CES of the annual series. The last such thin sample CES was carried out in NSS 64th round (2007-08).

1.4 Reports of the 66th round CES

1.4.1 The results of NSS rounds are released in reports based on comprehensive tabulation of subject parameters and indicators in various cross-classifications generated from the Central sample² data. Corresponding to NSS 66th round quinquennial survey on household consumer expenditure, the results are planned for release in seven reports. The tentative titles of these reports are:

1. Level and Pattern of Consumer Expenditure, 2009-10
2. Household Consumption of Various Goods and Services in India, 2009-10
3. Public Distribution System and Other Sources of Household Consumption, 2009-10
4. Energy Sources of Indian Households for Cooking and Lighting, 2009-10
5. Nutritional Intake in India, 2009-10
6. Household Consumer Expenditure across Socio-Economic Groups, 2009-10
7. Perceived Adequacy of Food Consumption in Indian Households, 2009-10

²See paragraph 1.7.3.1.

1.5 Contents of this report

1.5.1 The present report is concerned with the level of consumer expenditure – as measured by MPCE – and consumption pattern – as revealed in the break-up of MPCE over different heads of expenditure. Results are provided separately for three different measures of MPCE (explained in Chapter Two). Following the present introductory chapter (Chapter One), Chapter Two outlines the conceptual framework of the consumer expenditure survey and the architecture of the key indicators from the 66th round CES. It also contains the basic definitions and procedures followed in the survey. The salient findings on level and pattern of consumer expenditure are presented in Chapter Three, mainly based on the MMRP measure of MPCE (see Section 2.3, Chapter Two), though, for trends, the URP and MRP measures are also referred to. This is followed by some statements generated from the detailed tables for purposes of ready reference, and certain statements showing trends in consumption pattern over the years. Appendix A (CD enclosed) gives the detailed tables generated from the survey data. Appendix B explains in detail the sample design and estimation procedure followed. In order to facilitate computation of the absolute figures of aggregated consumption in the population domain, the projected population at the mid-year reference 1st January 2010 based on the population projections by the Registrar-General of India are provided in Appendix C. (Note that the RG's projections pre-date the release of the *provisional* results of the 2011 Population Census.) Appendix D consists of the schedules of enquiry (Schedule 1.0, Type 1 and Type 2) that were canvassed in the surveyed households. Appendix E gives estimated relative standard errors of State-sectorwise estimates of MPCE.

1.5.2 The detailed State-sectorwise and all-India-sectorwise tables presented in Appendix A of this report relate to 2009-10. They give

A. Separately for $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$ ³,

- Deciles (upper limits of decile classes) (Rs.) of the distribution of population by MPCE
- Average number of male and female adults and children per 1000 households, and sex ratio of population, in each MPCE decile class
- Distribution of households by household size, separately for each MPCE decile class
- Per capita quantity and value of consumption of different cereals and pulses, separately for each MPCE decile class
- Average MPCE (Rs.) and its break-up by broad item group (14 groups of food items and 18 groups of non-food items), separately for each MPCE decile class
- Proportion of households having access to internet at home

B. Distribution of population by decile class of $MPCE_{MRP}$, separately for households in each decile class of $MPCE_{URP}$

1.5.3 All estimates presented in this report are provided for all-India and for the States and UTs. The estimates of MPCEs are expected to be reasonably robust at national level and for

³ These are the three different estimates of MPCE generated by the 66th round consumer expenditure survey. They are explained in detail in Chapter Two, Section 2.3.

larger States. While using the estimates for smaller States, it may be kept in mind that the sample for them may not be large enough for getting sufficiently reliable estimates.

1.6 Features of the survey: schedules of enquiry

1.6.1 The household consumer expenditure schedule (“Schedule 1.0”) used for the survey collected information on quantity⁴ and value of household consumption. To minimise recall errors, a very detailed item classification was, as usual, adopted to collect information, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods, and 89 other items. The schedule also collected some other particulars of each household member, such as age, sex and educational level.

1.6.2 The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used ‘last 365 days’ (only) for the infrequently purchased categories, ‘last 7 days’ for some categories of food items, as well as pan, tobacco and intoxicants, and ‘last 30 days’ for other food items, fuel, and the rest. This was in line with the recommendations of an Expert Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption⁵. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table T1.

Table T1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2

Category	Item groups	Reference period for	
		Schedule Type 1	Schedule Type 2
I	Clothing, bedding, footwear, education, medical (institutional), durable goods	‘Last 30 days’ and ‘Last 365 days’	Last 365 days
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days

⁴ For education, medical care, and some goods and services listed in the schedule as “miscellaneous goods and services”, no data on quantity of consumption are collected in the NSS CES’s.

⁵ See NSS Report no. 475; entitled “Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption”.

1.6.3 Schedule Type 1 and Schedule Type 2 were canvassed in two independent samples of matching size drawn from each stratum/sub-stratum⁶.

1.7 Features of the survey: scope and coverage

1.7.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. *However, although planned, no sample could actually be surveyed in the districts of Leh (Ladakh), Kargil and Poonch of Jammu & Kashmir by NSSO.*

1.7.2 *Population coverage:* The following rules were followed:

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Chapter Two, paragraph 2.4.1, for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

1.7.3.1 *Sample size: first-stage units:* As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a “State sample” was surveyed by State Government officials in addition to the “Central sample” surveyed by NSSO. For rural India, 7,524 villages formed the Central sample for this round. Of these, 7,428 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 5,284 blocks, of which 5,263 were surveyed. This document is based on the estimates obtained from the Central sample only.

1.7.3.2 *Sample size: second-stage units:* For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2. While selecting the households in each

⁶ See Appendix B. Note that there could be a very few cases where in the same household, both Type 1 and Type 2 schedules of Schedule 1.0 were canvassed due to some special situations encountered while actually conducting the survey in the field.

selected first-stage unit, the second-stage stratification of households is in-built in the sample design. The features of the sample design are explained in Appendix B.

Table T2: Number of villages/blocks surveyed and number of households surveyed for Schedule 1.0 Type 1 and Type 2: NSS 66th round, Central sample

State/UT	no. of fsu's (villages/blocks) surveyed		no. of sample households

1.7.3.3 Table T2 shows the numbers of villages and urban blocks surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed.

Chapter Two

Concepts and Definitions

2.1 Conceptual framework

2.1.1 **Reference period:** The consumption of any good or service by a household or person occurs in the form of a flow over time. The survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period.

2.1.2 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

2.1.2.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

2.1.2.2 For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption. However, for a few items of expenditure such as rent, telephone charges, consumer taxes and railway season tickets, expenditure during the month is recorded as the amount that was last paid divided by the number of months to which the payment related.

2.1.2.3 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests

during ceremonies or otherwise. Normally, transfers of food, fuel, clothing and footwear made by a household as charity, loan advance, etc. are not considered as consumption of that household, since consumption out of all transfer receipts of these items have to be included. However, meals prepared in a household and served to non-household members are an exception to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure.

2.1.2.4 All goods and services received as payment in kind or perquisites are included in the consumption of the recipient household as goods and services received in exchange of services, except for meals received from other households' kitchens.

2.1.2.5 To simplify data collection, consumption of food processed *in the home* from one "item" into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

2.1.3 **Value of consumption:** For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.2 Monthly per capita expenditure (MPCE)

2.2.1 Normally, the concept of per capita income – or per capita (overall) expenditure, if income data are not available – is used for comparison of average living standards between countries, between regions, and between social or occupational groups. For studies of poverty and inequality *within* populations, however, average income or average expenditure is not enough. One needs to assign a value that indicates level of living to *each individual*, or at least to each household, in a population in order to know the level of inequality in living standards of the population, or the proportion living in poverty.

2.2.2 The NSS concept of MPCE, therefore, is defined first at the household level (household monthly consumer expenditure ÷ household size). This measure serves as the indicator of the household's level of living.

2.2.3 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level.

2.3 The three estimates of average and distribution of MPCE obtained from the 66th round survey

2.3.1 From each sample household where Schedule Type 1 was canvassed, two measures of MPCE emerged. This was because for each such household, there were two sets of data for Category I items (see Table T1) – “last 30 days” data and “last 365 days” data – unlike items of Categories II and III, for which only “last 30 days” was available. Thus there were two ways of measuring household MPCE: one using “last 30 days” for all items, and the other using “last 365 days” data for Category I items and “last 30 days” for the rest. The first measure of MPCE is called MPCE_{URP} (Uniform Reference Period MPCE) and the second, MPCE_{MRP} (Mixed Reference Period MPCE). From data on MPCE_{URP} and MPCE_{MRP} (collected from households where Schedule Type 1 was canvassed), two alternative estimates of the distribution of MPCE and average MPCE can be built up.

2.3.2 From each sample household where Schedule Type 2 was canvassed, a single measure of MPCE emerged, as, for each item of consumption, data for only one reference period had been collected. Since the reference period system used for Schedule Type 2 was only a slight modification of the Mixed Reference Period (differing only in the reference period used for Category II items), this measure of MPCE was called the $\text{MPCE}_{\text{MMRP}}$ (Modified Mixed Reference Period MPCE). The estimates of the distribution of MPCE and average MPCE that can be built up from Schedule Type 2 data are therefore called the estimates of $\text{MPCE}_{\text{MMRP}}$.

2.3.3 In brief, the three MPCE measures may be defined as follows.

2.3.4 Uniform Reference Period MPCE (or MPCE_{URP}): This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of “last 30 days” (preceding the date of survey).

2.3.5 Mixed Reference Period MPCE (or MPCE_{MRP}) This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of “last 365 days”, and expenditure on all other items is recorded with a reference period of “last 30 days”.

2.3.6 Modified Mixed Reference Period MPCE (or MPCE_{MMRP}) This is the measure of MPCE obtained by the CES when household consumer expenditure on edible oil, egg, fish and meat, vegetables, fruits, spices, beverages, refreshments, processed food, pan, tobacco and intoxicants is recorded for a reference period of "last 7 days", and for all other items, the reference periods used are the same as in case of Mixed Reference Period MPCE (MPCE_{MRP}).

2.4 Other concepts and definitions

2.4.1 Household: A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

2.4.2 Household size: The size of a household is the total number of persons in the household.

2.4.3 Deciles and decile classes of MPCE: The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population lie, the second decile, the level below which 20% of the population lie, and so on. Thus the population can be divided into 10 "decile classes of MPCE" as follows: those with MPCE below the 1st decile of the MPCE distribution (the bottom 10% of the population ranked by MPCE), from the 1st decile to the 2nd decile (the next 10%), from the 2nd decile to the 3rd decile (the next 10%), and so on. Averages of other variables of interest, computed separately for the 10 decile classes, help to portray the variation of such variables with variation in MPCE. In line with usual NSS practice, decile classes of MPCE are formed separately for the rural and the urban sector, both for India as a whole and for the States.

2.4.4 Major States: This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Together, these States accounted for nearly 94.7% of India's population in 2001.

2.4.5 Categories of consumption items (in alphabetical order)

Beverages, refreshments, etc.: This stands for “beverages, refreshments and processed food”. It includes tea, coffee, mineral water, soft drinks, fruit juice (not prepared at home), soda water, other beverages such as cocoa, biscuits, cakes, pastries, pickles, sauce, jam, jelly, and other salted refreshments and sweets not prepared at home. Refreshments prepared at home are not included here. Instead, the ingredients of the refreshments (such as flour, sugar, milk, etc.) are accounted under “cereals”, “sugar”, etc. Food purchased in the form of cooked meals is also included in “processed food”.

Cereals: Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether.

Cereal substitutes: Cereals are usually a person's staple food in India. But sometimes, by choice or due to scarcity, a person may consume little or no cereal. The food requirement is partially or wholly met in such cases by consumption of food items which could be treated as substitutes for cereals. Tapioca, for example, is consumed in some parts of the country as a substitute for cereals. Similarly, jackfruit seed, *mahua*, etc. are also consumed as substitute for cereals. Potato or sweet potato consumed as substitutes for cereals are not, however, shown here. These are included in “vegetables”.

Clothing and bedding: This category includes bedding (pillows, quilts, mattresses, mosquito nets, etc.), as well as rugs, blankets, curtains, towels, mats, cloth for upholstery, etc. It excludes footwear and raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are accounted in “consumer services”. Consumption of an article of clothing is considered to take place when it is brought into first use. However, clothing purchased second-hand is considered as consumed as soon as it is purchased. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

Conveyance: This includes expenditure incurred on account of journeys undertaken and/or transportation of goods made by any means of conveyance. The expenditure is the actual fare paid except in case of railway season tickets, for which expenditure is calculated as the cost of the ticket divided by the number of months for which it is valid. Expenditure on journeys undertaken by household members as part of official tours is not considered as consumer expenditure of the household. But journeys to commute to and from place of work are included here. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

Durable goods: Items included here all have a lifetime of one year or more. However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that glassware, earthenware and plastic goods such as buckets are excluded from durable goods

and included in “other household consumables”. Consumption expenditure on durable goods includes both expenditure on purchase (both first-hand and second-hand) and expenditure on repair and construction of household durables. For land and residential building, only expenditure on repair and construction is included. Durable goods include furniture and fixtures, “entertainment” durables such as radios, TV, VCR/VCP/DVD players, tape recorders and CD players, cameras, musical instruments, jewellery and ornaments, crockery and utensils, cooking and other household appliances such as fans, air conditioners, air coolers, sewing machines used for household work, washing machines, stoves, pressure cookers, fridges, water purifiers, electric irons, heaters, toasters and ovens, household transport equipment including two-wheelers, four-wheelers and their parts, therapeutic appliances, clocks, watches, computers for household use, mobile phone handsets, and bathroom and sanitary equipment.

Edible oil: Edible oils used for toilet purpose by the household are not included here.

Education: This includes expenditure on goods purchased for the purpose of education, viz., books and journals (first-hand or second-hand), newspapers, stationery, educational CD, etc, and also magazines, novels and other fiction. It also includes fees paid to educational institutions (e.g., schools, colleges, universities, etc.) on account of tuition and other fees like game fees, library fees, etc., and payment to private tutors. Fees for shorthand and typing courses, fees for music, dancing and swimming lessons, and fees for training in nursing, physiotherapy, etc., are included. Expenditure on Internet other than telephone charges is also included. Occasional payments to the school fund made on account of charities, and “donations” generally, are not included here, unless they are charged by the educational institution as compulsory payments.

Entertainment: This includes expenditure on cinemas, theatres, *melas*, fairs and picnics, expenditure incurred on processing, developing, etc., of photographic film, charges paid for hiring of video cassette/VCD/DVD players, and charges for viewing a video show. Expenses incurred on subscription to dish antenna, cable TV facilities, etc. are also included. Club fees are included here.

Footwear: This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

Gram: This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, not included here, but in “other pulse products”.

Medical expenses: This includes expenditure on medicine of different types and on medical goods; also, payments made to doctor, nurse, etc., as professional fees and those made to hospital, nursing home, etc. for medical treatment, and expenditure incurred for clinical tests, including X-rays, ECG, pathological tests, etc. Expenditure on all family planning devices is included.

Medical: institutional and non-institutional expenditure: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (non-institutional). Medical institution here covers private as well as Government institutions such as hospitals and nursing homes.

Milk and milk products: Milk products include ghee, butter, curd, etc. Milk used in home preparation of sweetmeats, etc., is also accounted here. This category also includes those baby foods of which the principal constituent is milk. Further, milk (liquid) includes ice-cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included in this category.

Minor durable-type goods: These include spectacles, torches, locks, umbrellas, raincoats, gas lighters, etc. These are not included in “durable goods” but in “miscellaneous goods and services”.

Miscellaneous goods and services: This is a residual category covering all items *other than* food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, and durable goods. It includes, among other things, expenditure on education, medical care, entertainment, conveyance, rent, and consumer taxes and cesses. (Note, however, that in Schedule 1.0, collection, education and institutional medical care are separated out from the “miscellaneous goods and services” block to form a separate block.)

Other consumer services: This includes expenditure on domestic servants, cooks, attendants, sweepers, barbers and beauticians, laundry, ironing, tailors, priests, legal services, telephone charges, postal charges, grinding charges, and repair charges for non-durable goods. Apart from conveyance, it excludes the consumer services coming under “entertainment”.

Other household consumables: These include electric bulbs, tubelights, batteries, earthenware, glassware, plastic goods such as buckets, water bottles and feeding bottles, coir and rope, washing soap, washing soda, other washing requisites, incense, room fresheners, flowers, acid and insecticides.

Pan: This includes, *pan* (betel leaves), *supari*, lime, *katha*, other ingredients of “finished” *pan*, and *pan* purchased in finished form.

Rent: Rent includes house and garage rent, residential land rent and other consumer rent.

Chapter Three

Main findings on household consumer expenditure

3.1 A note on interpretation of the survey results

3.1.1 As has been made clear in the previous chapter, three different methods of measurement of Monthly Per Capita Expenditure (MPCE) at the household level were employed in the 66th round survey – the URP, MRP and MMRP methods. These have given rise to three different estimates of average MPCE and distribution of MPCE at State/UT and all-India level. A few words on the differences among these estimates are added here for their better understanding and interpretation.

3.1.2 Compared to the URP method, the MRP method of measurement of a household's MPCE averages out month-to month fluctuations in spending on clothing, education, durables, etc. The distribution of $MPCE_{MRP}$ therefore has fewer extreme values than the distribution of $MPCE_{URP}$. *One important consequence of this is that the estimated proportion of population with MPCE below any chosen cut-off point at the lower end of the MPCE range will be higher if the $MPCE_{URP}$ distribution is used than if the $MPCE_{MRP}$ distribution is used. However, there is no theoretical reason to expect average MPCE computed by the MRP method to be higher or lower than average MPCE computed by the URP method.*

3.1.3 *For all item groups other than clothing and bedding, footwear, education, institutional medical care, and durables, the URP and MRP estimates of per capita consumption for any State/UT or all-India are identical, because they are based on the same data (collected from the same households). However, estimates of share of food (or any other item group) in total consumption differ, because of the difference in the estimate of overall (all-item) MPCE.*

3.1.4 When estimates are given separately for each decile class of MPCE, differences between URP and MRP estimates is expected. Consider an item group such as cereals. For any State/UT or all-India, the URP and MRP estimates of per capita cereal consumption of the entire population are identical, because they are based on the same data. But consider the estimates for, say, the bottom decile class. The set of sample households forming the bottom decile class when MPCE is computed by the URP method is different from the set of sample households forming the bottom decile class when MPCE is computed by the MRP method. *Thus, for any region, the decile-classwise estimates for any item group by the URP method will in general differ from the corresponding estimates by the MRP method, because the set of households in the corresponding decile classes are not expected to be identical.*

3.1.5 In 2002 an Expert Group that had been formed for the purpose of suggesting a suitable reference period for each item of consumption recommended, on the basis of a specially designed pilot survey, that for all food items other than cereals, milk and milk products, sugar and salt, and for pan, tobacco and intoxicants, a reference period of "last 7 days" be used, as it produced better reporting of consumption than "last 30 days". This led to the evolving of the reference period structure used in Schedule Type 2. It is expected to be less prone to

(downward) reporting biases due to recall error that are suspected to be present in recording of a household's consumption of these items by the usual (30-day recall period) method. It gives somewhat higher estimates of per capita consumption for the item groups for which the 7-day reference period is used, and hence for the food group as a whole as well as of household MPCE (all items) itself. The MMRP estimates are expected to be closer to the true value of MPCE for the population of the State/UT than the estimates by the MRP method.⁷

3.1.6 For non-food items, and for cereals, milk, sugar and salt, the differences in MRP and MMRP estimates of per capita consumption for any State/UT or all-India are differences due to sampling fluctuations, because the method of data collection is in both cases the same. Estimates of share of non-food (or any other item group) in total consumption differ for this reason and also because of the difference in the estimate of overall (all-item) MPCE.

3.1.7 The discussion in this chapter will be focussed primarily on the MMRP estimates as it uses the reference periods recommended by the Expert Group on Non-Sampling Errors after suitable experimentation,. However, it is important to note that because of the different reference period system followed by the MMRP method, the magnitudes of the MMRP estimates are not comparable with the estimates from earlier rounds of NSS. To study changes in the level and pattern of consumption over time, it is the URP and MRP estimates that have to be used, because available estimates from past surveys of NSS are based on either the URP or the MRP method. Accordingly, the URP and MRP estimates from the 66th round survey are also provided in this chapter for studying the trend.

3.1.8 Besides the average MPCE, the survey results also provide estimates of various parameters separately for households in different decile classes of MPCE. Important among

⁷ See NSS Report No. 475: *Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption*.

these are the absolute and percentage break-up of MPCE over categories of consumption items, and quantity and value of per capita consumption of different cereals. The first decile class of MPCE comprises the bottom 10 percent of population ranked by MPCE and the top (10th) decile class comprises the top 10 percent of population. These decile classes for rural and urban domains are separately arrived at for MPCE_{URP}, MPCE_{MRP} and MPCE_{MMRP}. Similar State-specific decile classes are also derived and Statewise results are given for these classes in the detailed tables. The rural and urban MPCE distributions can themselves be depicted through the 9 deciles representing the 10%, 20%, ..., 90% points of the distribution; this is done for all-India in Fig.1.

3.1.9 The discussion in this chapter covers:

- (a) average MPCE_{MMRP}: States and all-India
- (b) median and deciles of the distribution of population by MPCE_{MMRP}
- (c) relationship between MPCE and household size
- (d) trends in MPCE_{URP} and MPCE_{MRP}
- (e) shares of various food and non-food groups in total expenditure (MMRP)
- (f) trends in proportions of households consuming items of different categories
- (g) inter-State variation in cereal and non-cereal food consumption expenditure
- (h) change in consumption pattern with increase in consumption level
- (i) quantity of cereals consumed per person: variation across MPCE levels and States
- (j) trends in quantity of cereals consumed per person
- (k) inequality in distribution of MPCE: all-India and States
- (l) findings on households' access to internet at home

3.2 Average MPCE_{MMRP}: States and all-India

3.2.1 Average MPCE in 2009-10 was estimated as Rs.1053.64 in rural India and Rs.1984.46 in urban India (Table T3). Thus the per capita expenditure level of the urban population – in nominal terms, and ignoring rural-urban differences in price levels, if any – was on the average about 88% higher than that of the rural population.

Table T3: Average MPCE_{MMRP} across decile classes of MPCE_{MMRP}, all-India

rural India			urban India

all classes	-	1053.64	all classes	-	1984.46

3.2.2 The poorest 10% of India's rural population had an average MPCE of Rs.453. The poorest 10% of the urban population had an average MPCE of Rs.599.

3.2.3 The top 10% of the rural population, ranked by MPCE, had an average MPCE of Rs.2517 – about 5.6 times that of the bottom 10%. The top 10% of the urban population had an average MPCE of Rs.5863 – about 9.8 times that of the bottom 10%.

3.2.4 Table T4 shows average MPCE_{MMRP} in rural and urban sectors of the major States of India. Among the major States, Kerala (Rs.1835) had the highest rural MPCE. It was followed by Punjab (Rs.1649) and Haryana (Rs.1510). In all other major States, average rural MPCE was between Rs.750 and Rs.1250.

3.2.5 Average rural MPCE was lowest in Bihar and Chhattisgarh (around Rs.780), and also low in Orissa and Jharkhand (around Rs.820), as well as in Uttar Pradesh and Madhya Pradesh (around Rs.900).

3.2.6 Maharashtra (Rs.2437) and Kerala (Rs.2413) were the two major States with the highest MPCE in the urban sector, followed by Haryana (Rs.2321). The other major States with average urban MPCE higher than the all-India average were Andhra Pradesh (Rs.2238), Punjab (Rs.2109) and Karnataka (Rs.2053).

3.2.7 Urban MPCE was lowest in Bihar (Rs.1238). No other major State had urban MPCE below Rs.1500. Orissa, Uttar Pradesh and Jharkhand all had average MPCE between Rs.1545 and Rs.1585. In Chhattisgarh, Rajasthan and Madhya Pradesh, average MPCE was between Rs.1645 and Rs.1670.

Table T4: Average rural and urban MPCE and average household size in 2009-10: major States

all-India	1054	1984	4.7	4.1

Map of rural and urban India showing State/UT-level average MPCE

3.2.8 While average urban MPCE was higher than average rural MPCE across the States, the urban-rural difference varied widely over States. Average urban MPCE was only 28% higher than average rural MPCE in Punjab, only 31% higher than average rural MPCE in Kerala, and only 41% higher in Rajasthan. In Maharashtra and Chhattisgarh, on the other hand, average urban MPCE was around 110% higher than average rural MPCE. In West Bengal and Karnataka, too, per capita expenditure in the urban sector was more than double that in the rural.

3.3 Median and deciles of the MPCE_{MMRP} distribution

3.3.1 Table T5 (R & U) shows the first to ninth deciles (including the median, which is the 5th decile) of the rural and urban MPCE (URP, MRP and MMRP) distributions in India and its States. Estimated deciles for all States and UTs are given in Table 2 of Appendix A.

3.3.2 The median level of rural MPCE_{MMRP} was Rs.895 – half the rural population belonged to households with MPCE below this level (Table T5C-R). In urban India the median level of MPCE_{MMRP} was Rs.1502 – half the urban population had MPCE below this level (Table T5C-U).

3.3.3 Roughly 64% of the rural population of India had MPCE below the rural average of Rs.1053.64 and 66.5% of the urban population had MPCE below the urban average of Rs.1984.46.

3.3.4 Nearly 40% of the rural population of India had MPCE below Rs.800 and about 60% had MPCE below Rs.1000. About 10% had MPCE above Rs.1650.

3.3.5 About 30% of the urban population of India had MPCE below Rs.1100, over 70% had MPCE below Rs.2100, and 20% had MPCE above Rs.2600.

3.3.6 In Jharkhand, Chhattisgarh and Bihar, less than 50% of the rural population had MPCE above Rs.710. More than 70% of the rural population of Jharkhand and Orissa had MPCE below Rs.900, the percentage being still higher in Chhattisgarh and Bihar.

3.3.7 The percentage of rural population with MPCE above Rs.1000 exceeded 70% in Haryana and Punjab, while in Kerala 80% of the rural population had MPCE exceeding Rs.977.

3.3.8 Nearly 30% of the urban population of Jharkhand and over 40% of the urban population of Bihar had MPCE below Rs.850, compared to about 10% in Punjab and Haryana, and less than 10% in Maharashtra and Andhra Pradesh.

3.4 MPCE and household size

3.4.1 Table 1 of Appendix A gives estimates of adult and child (under 15) population in rural and urban India by sex and decile class of MPCE. In Figures 2R and 2U, the distance between the upper and the lower lines shows the average number of adults per household (= average household size minus average number of children) across MPCE decile classes.

3.4.2 In both rural and urban areas, the average number of children declines steadily as MPCE level rises. Richer households, on the average, have fewer under-15 members. On the other hand, the average number of adults per household does not vary substantially with variation in MPCE in either sector. As a result the graph of average household size with MPCE runs more or less parallel to that of the average number of children, and thus falls as MPCE level rises.

children: persons aged 14 or less

3.4.3 A consequence of the difference in household size between poor and rich households is that for any characteristic which is associated, positively or negatively, with level of living, the percentages of *households* possessing the characteristic, and the percentage of *persons* possessing the characteristic, tend to differ appreciably. For example, the percentage of *population* in households using solid fuel for cooking would be higher than the percentage of such *households*, because the use of solid fuel is relatively rare among richer households but very common among the poorer households, which are, on the average, larger.

Table T5A-R: First to ninth deciles of distribution of MPCE_{URP} in the rural sector: States and all-India

The kth decile is the level of MPCE below which 10k% of the urban population lies; k=1 to 9. The deciles may also be called the 10th, 20th, ..., 90th percentiles.

3.4.4 State-level averages of household size are shown in Table T4.

3.4.5 Statements 6 (R&U) and Statements 7 (R&U) on pages 68-71 give the proportion and average $MPCE_{MMRP}$ of rural and urban households by size in each State/UT. Separate distributions of household size for each decile class of population are given in Table 3 of Appendix A for $MPCE_{URP}$, $MPCE_{MRP}$ and $MPCE_{MMRP}$.

3.5 Trends in level of consumption in monetary and real terms

3.5.1 Trends from $MPCE_{URP}$ estimates

3.5.1.1 Table T6 below shows estimates of all-India average $MPCE_{URP}$ from four quinquennial surveys of consumer expenditure including the 66th round survey. (URP estimates cannot be obtained from the 55th round quinquennial survey.) For rural India, real MPCE (measured using a price deflator with 1987-88 as base) is seen to have grown from Rs.158.10 in 1987-88 to Rs.187.79 in 2009-10 – an increase of only 19% over 22 years. In urban India there has been a substantially higher growth in real MPCE (obtained using a similar deflator with base 1987-88) – from Rs.249.92 in 1987-88 to Rs.355.03 in 2009-10 – an increase of 42% in the 22 year-period since 1987-88. The growth in urban MPCE over the 16-year period since 1993-94 has been about 34%.

Table T6: Growth in $MPCE_{URP}$ at current and constant prices since 1987-88, all-India

3.5.2 Trends from $MPCE_{MRP}$ estimates

3.5.2.1 While Table T6 above gives estimates obtained by the URP method, a corresponding table of estimates of MPCE obtained by the MRP method at current and constant prices is shown below (Table T7). For 1987-88, MRP estimates are not available. In terms of the MRP estimates, MPCE in rural India has grown from Rs.162.56 in 1993-94 to Rs.192.93 in 2009-

10 – that is, by about 19% in 16 years⁸. Urban MPCE has grown from Rs.268.38 in 1993-94 to Rs.368.99 in 2009-10 – a growth of 37½% over the 16-year period since 1993-94.

Table T7: Growth in MPCE_{MRP} at current and constant prices since 1993-94, all-India

3.6 Comparative picture of URP, MRP and MMRP estimates of MPCE: major States

3.6.1 The three estimates of MPCE for rural and urban sectors of the major States are shown in Table T8 for purposes of comparison. Fig. 3 shows all-India rural and urban MPCE according to the three different reference period systems.

⁸ Over the same period, the growth of rural MPCE computed using the URP estimates (Table T6) comes to about 17½%.

Table T8: Differences in average MPCE obtained using different reference period systems, by State and sector

State	Rural			Urban				
	Average MPCE (Rs.)		% difference from MRP of	Average MPCE (Rs.)		% difference from MRP of		
	URP	MRP	MMRP	URP	MMRP	URP	MMRP	URP
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)

Kerala	1851	1763	1835	5.0	4.1	2663	2267	2413
Madhya Pradesh	797	803	903	-0.8	12.5	1469	1530	1666
Maharashtra	1011	1048	1153	-3.6	10.0	2232	2251	2437
Orissa	683	716	818	-4.6	14.4	1425	1469	1548
Punjab	1480	1566	1649	-5.5	5.3	1993	2072	2109
Rajasthan	1004	1035	1179	-3.0	13.9	1670	1577	1663
Tamil Nadu	968	1017	1160	-4.8	14.0	1679	1795	1948
Uttar Pradesh	829	832	899	-0.4	8.0	1365	1512	1574
West Bengal	855	858	952	-0.3	11.0	1736	1801	1965
All-India	928	953	1054	-2.7	10.6	1786	1856	1984

3.6.2 For each major state, the difference of (average) $MPCE_{URP}$ and $MPCE_{MMRP}$ from $MPCE_{MRP}$ are shown as percentage of $MPCE_{MRP}$ in columns (5) and (6) for the rural sector and in columns (10) and (11) for the urban sector.

3.6.3 All-India $MPCE_{URP}$ is 2.7% less than $MPCE_{MRP}$ for the rural sector, and 3.8% less than $MPCE_{MRP}$ for the rural sector.

3.6.4 At all-India level, $MPCE_{MMRP}$ exceeds $MPCE_{MRP}$ by 10.6% for the rural sector and by 6.9% for the urban sector.

3.6.5 The upward estimation of MPCE by the MMRP method compared to the MRP method is observed to hold across the major States. On the other hand, the MRP method gives higher estimates than the URP method in the majority of States, but there are one or two instances where the URP estimate appreciably exceeds the MRP estimate.⁹

3.7 Shares of various food and non-food groups in total expenditure

3.7.1 Table T9 gives the absolute and percentage break-up of all-India rural and urban MPCE in 2009-10 into 9 broad groups of food items and 11 broad groups of non-food items. A somewhat more detailed break-up, though not in percentage terms, using 14 food groups

⁹ It may be noted that purchase of expensive durable goods during the preceding 30 days has a considerably larger effect on the URP measure of MPCE for a household than on the MRP measure, as the latter takes into consideration the monthly average of such expenditures over a 12-month period.

and 14 non-food groups, is available for the major States in Statements 4 and 5 on pages 56-67, and for all States and UTs, *separately for each decile class*, in Table 6 of Appendix A.

3.7.2 Table T9 shows that food accounted for about 57% of the value of the average *rural* Indian's household consumption during 2009-10. This included 14% for cereals and cereal substitutes, a little less than 8% for milk and milk products, and 8% on vegetables. Among non-food item categories, fuel for cooking and lighting accounted for about 8%, clothing and footwear for 6%, medical expenses for a little over 5%, conveyance and education for about 3½% each, other consumer services for 4%, and consumer durables for 3½%.

3.7.3 For the average urban Indian, over 44% of the value of household consumption was accounted for by food, including 8% by cereals and 7% by milk and its products.

3.7.4 While the share of most of the food item groups in total consumption expenditure was higher in rural India than in urban India, fruits and processed food were exceptions. For non-food item groups, the share was usually higher in urban India. The most noticeable differences were in case of cereals (urban share: 8%, rural share: 13.8%), rent (urban: 6%, rural share: 0.5%) and education (urban: 8%, rural: 3.6%).

Table T9: Absolute and percentage break-up of MPCE_{MMRP} by item group in 2009-10: all-India, rural and urban

item group	monthly per capita exp. (Rs.)		percentage to total MPCE

all items	1054	1984	100	100

*includes gram #includes purchased cooked meals \$excludes tailoring charges

3.7.5 While drawing these conclusions from Table T9, the following aspects would need to be taken note of:

3.7.5.1 All averages are computed taking the *entire* estimated population in the denominator. This fact may be borne in mind, specially, for those items showing very low average expenditure, like ‘rent’ and ‘taxes and cesses’ in rural India. The actual number of consuming persons in the population is not considered here for any of the item groups. For some item groups such as cereals, consuming persons would mean nearly the entire population; for other items, such as tobacco, it would obviously be much smaller.

3.7.5.2 “Expenditure” on food includes the value of self-consumed home produce, calculated at ex farm prices. It also includes the value of food collected free, for example, from forests, imputed at prevailing local retail prices. “Expenditure” on fuel, likewise, includes the value of home-grown firewood, calculated at ex farm prices, and the value of firewood and other fuel collected free, imputed at local retail prices.

3.7.5.3 “Processed food” refers to purchased food items such as jam, pickles, etc., the quantities and values of the individual ingredients of which are not known well enough to be reported against the detailed items listed in the consumer expenditure schedule. All food processed at home is accounted against the ingredients. For example, a sweet prepared at home and consumed is accounted in the household’s (and the concerned State/UT’s) consumption of cereals, sugar, milk, etc., but not in its consumption of processed food.

3.7.5.4 Spending on tailor-made clothing does not include tailoring charges, which are included in “consumer services”.

3.7.5.5 “Education” includes expenditure on newspapers and periodicals, and on books of all kinds including fiction.

3.8 Proportions of households reporting specific items

3.8.1 For every group of consumption items, there are some households which report zero consumption during the reference period. Based on the numbers of such households, the proportion of households with non-zero consumption of the item group during the reference period may be estimated. Table 6 (R and U) in Appendix A gives, inter alia, for each item group, the number of reporting households in the sample and the estimated proportion of households in the population with non-zero consumption of the item group during the reference period. For a few selected item groups, these estimates (URP) are shown in Table T10,¹⁰ along with the corresponding estimates for 2004-05.

¹⁰ Note that consumption of durable goods is taken to mean any payment made for durable goods during the reference period, and the same applies to consumption of education and medical care. Also, consumption of clothing and footwear is understood to mean the use of an article of clothing and footwear for the first time.

**Fig 4: Break-up of average rural and urban MPCE, 2009-10
all-India**

3.8.2 Thus Table T10 tell us, among other things, that

- the proportion of households in which *pan* (or its ingredients) was consumed during a 30-day period fell from 31% to 25% in rural India and from 21% to 15% in urban India between 2004-05 and 2009-10.
- during the same period, the proportion of households in which tobacco was consumed during a 30-day period fell from 63% to 59% in rural India and from 39% to 35% in urban India.
- the proportion of households in which consumption of egg, fish or meat took place increased by more than 3 percentage points in rural India to 62% but remained at roughly the same level of about 57% in urban India between 2004-05 and 2009-10.
- entertainment expenditure was reported by 35% of rural households in 2009-10 compared to 23% in 2004-05 and by 68% of urban households compared to 56% in 2004-05.
- the proportion of households reporting rent expenditure increased by 2 percentage points in both sectors to reach 7% for rural India and 37.5% in urban India.

3.8.3 As mentioned in paragraph 3.7.5.1, estimates of per capita consumption are computed taking the entire population in the denominator. In case of items or item groups such as “egg, fish & meat”, “rent”, or “tobacco”, on which a large section of households incur no expenditure, it is also of interest to work out the average expenditure of households which are known to have incurred some expenditure on the item group.

Table T10: Estimated percentages of households consuming selected items during last 30 days: all-India, rural and urban, 2004-05 and 2009-10

item group	percentage of households with non-zero consumption during last 30 days			
	rural		urban	
	2004-05	2009-10	2004-05	2009-10
(1)	(2)	(3)	(4)	(5)
cereals	98.6	98.5	95.1	93.4
milk & milk products	74.9	79.7	88.2	88.0
egg, fish & meat	58.5	61.9	57.7	56.5
vegetables	98.5	98.4	94.8	93.2
fruits (fresh)	73.4	72.9	86.8	85.8
fruits (dry)	27.4	30.0	43.0	43.2
<i>pan</i>	31.2	24.9	21.0	15.0
tobacco	62.7	59.2	38.7	35.1
intoxicants	16.3	16.5	10.3	9.5
clothing and bedding	33.9	45.5	32.8	43.8
footwear	18.9	29.1	19.3	27.5
entertainment	23.4	35.2	55.8	67.9
conveyance	74.3	80.4	82.9	87.3
rent	5.0	7.1	35.7	37.5
education	40.2	44.8	57.3	58.3
medical (non-inst.)	61.4	67.8	62.9	65.2
medical (institutional)	1.4	1.8	1.5	2.6
durable goods	24.8	35.1	25.6	30.8

3.8.4 In Table T11, which looks at only a few selected item groups, columns (2) and (3) give estimates of average consumption per household, which are computed according to the usual procedure. Thus households reporting zero consumption of an item group are included in the calculation of the average. In columns (4) and (5) of Table T11, estimates of *consumption per consuming household* are presented; that is, only households reporting positive consumption are included in computing the average. In each row of Table T11, the figures of consumption per household and *consumption per consuming household* differ by a factor which is equal to the relevant *percentage of consuming households in Table T10*.

3.8.5 Thus Table T11 tells us, for instance, that

- rural households which consumed eggs, fish or meat at least once during the last 30 days spent, on an average, Rs.244 on the “egg, fish and meat” group, and urban households, on an average, Rs.352;
- for rural households in which tobacco was consumed during the last 30 days, the average expenditure on tobacco was Rs.85, while for urban households it was Rs.131;
- urban households reporting expenditure on rent during the last 30 days spent on an average Rs.1301 on rent during the last 30 days.¹¹

Table T11: Consumption per household and per consuming household for selected item groups, all-India

item group	average value of consumption (Rs.) during 30 days			
	per household*		per household reporting consumption in last 30 days	
	R	U	R	U
(1)	(2)	(3)	(4)	(5)

tobacco	50	46	85	131
intoxicants	32	33	193	345
rent	22	488	316	1301

*average over all households in the population including those reporting zero consumption

3.9 Inter-State variation in food, cereal and non-cereal food expenditure

3.9.1 Details of inter-State differences in consumption pattern are available for the major States in Statements 4 and 5 (pages 56-67) and for all States/UTs, *separately for each MPCE decile class*, in Table 6 (R & U) of Appendix A. Table T12 shows percentage share of cereals and of food as a whole in total expenditure for the major States. Generally, States with a higher-than-average share of cereals in total expenditure were also States with a higher-than-average food share.

¹¹ Note that three major components of expenditure on rent, namely, house rent, garage rent and residential land rent, are recorded in the consumer expenditure schedule as the amount last paid as rent divided by the number of months to which the payment related, and not as the actual expenditure incurred on rent during the last 30 days. (See Appendix C, Schedule 1.0, Block 10, items 520 and 522.) As a result, all households that pay such rent regularly are expected to show positive expenditure on rent even if expenditure during last 30 days was zero.

Table T12: Percentage shares of cereals and all food in total consumer expenditure (MMRP) in 2009-10: major States, rural and urban

State	rural		urban	
	% share of cereals in total exp.	% share of food in total exp.	% share of cereals in total exp.	% share of food in total exp.
(1)	(3)	(4)	(6)	(7)
Andhra Pradesh	14	58	10	45
Assam	21	64	13	53
Bihar	21	65	15	53
Chhattisgarh	15	58	10	44
Gujarat	11	58	8	46
Haryana	7	54	6	43
Jharkhand	19	61	12	52
Karnataka	12	57	9	42
Kerala	8	46	6	40
Madhya Pradesh	14	56	8	42
Maharashtra	12	54	7	41
Orissa	19	62	12	48
Punjab	7	48	6	44
Rajasthan	12	55	8	48
Tamil Nadu	9	55	8	45
Uttar Pradesh	15	58	9	46
West Bengal	18	63	9	46
India	14	57	8	44

3.9.2 The share of food in total consumption expenditure of rural households varied from 46% for Kerala and 48% for Punjab to over 60% in Bihar (65%), Assam (64%), West Bengal (63%), Orissa (62%) and Jharkhand (61%).

3.9.3 The share of food in consumption expenditure of urban sector households varied – only from 40-41% in Kerala and Maharashtra to 52% in Jharkhand and 53% in Bihar and Assam.

3.9.4 At State level, the share of cereals in total expenditure in rural India varied from 7% in Punjab and Haryana to 21% in Assam and Bihar. In urban India, the share varied less, from 6% for Haryana, Punjab and Kerala to 13% in Assam and 15% in Bihar.

3.9.5 Table T13 highlights some other aspects of inter-State variation in food consumption pattern, to the extent reflected in monthly per capita consumer expenditure: specifically, expenditure on milk & milk products, egg, fish & meat, vegetables, and fruits.

3.9.6 Table T13 shows, among other things, that

- Inter-State variation in per capita expenditure is noticeably high for both milk-and-milk-products and egg-fish-and-meat, and low for vegetables.
- Except in case of vegetables, inter-State variation in consumption expenditure on these groups of food items is more pronounced for the rural sector of the country than for the urban.

- For fruits, per capita expenditure appears to be strongly correlated with overall MPCE levels, especially in the rural sector, with the lowest-rural-MPCE States of Bihar, Chhattisgarh, Orissa and Jharkhand registering the lowest figures of rural fruit consumption.
- As regards egg, fish and meat, the traditional inter-regional variation in consumption remains, with Kerala, Assam and West Bengal having the highest per capita expenditures, and Haryana, Punjab, Rajasthan, Gujarat and Uttar Pradesh the lowest.
- In case of milk and milk products, 4 of the 17 major States have a rural population with per capita expenditure markedly higher than the national rural average: rural Haryana (nearly 4 times the national average), rural Punjab (more than 3 times the national average), and rural Rajasthan and Gujarat (one and a half times to over twice the national average). Rural Uttar Pradesh and Madhya Pradesh have per capita expenditures close to the all-India average. In all the other 11 major States, the per capita expenditure of the rural population on milk and milk products is appreciably less than the national average.

Table T13: Average consumer expenditure (MMRP) per person on selected food groups in 2009-10: major States, rural and urban

3.10 Trends in pattern of consumption

3.10.1 Although the present report is focused on MMRP-based results, temporal trends in consumption pattern are examined in this section on the basis of URP-based estimates as MMRP estimates are not available for the earlier quinquennial surveys.

3.10.2 Table T14 shows changes in percentage composition of MPCE_{URP} (or in aggregate consumer expenditure) as shown by the 5 quinquennial surveys beginning with 1987-88. The share of food is seen to have declined by about 10 percentage points to 53.6% in the rural

sector and by about 16 percentage points to 40.7% in the urban sector over a 22-year period. Since the last quinquennial survey (held 5 years previously), the share of food has fallen by about 1½ percentage points in rural India and nearly 2 percentage points in urban India.

3.10.3 Cereals have registered the largest decline in share among all the item groups – from 26.3% to 15.6% in rural India and from 15% to 9% in urban India. In the urban sector, practically all the food groups have suffered a decline in share. For the rural sector, “beverages, etc.” show a distinct rise in share, while pulses, edible oil, sugar, and “salt and spices” show a fall, and for other groups, the evidence is not very conclusive.

3.10.4 Pan, tobacco and intoxicants exhibit a distinct downward trend, especially in urban areas, while fuel and light appear to show an increase in share in the last decade, especially in urban India, clothing and bedding show an overall fall, and the share of durable goods appears to be picking up. The greatest gainer in share of expenditure is clearly the “miscellaneous goods and services” category (including education and medical care). The share of this group has soared (growing by around 70% of its level in 1987-88) from 14.5% to 24% in rural India and from 23.2% to 37.8% in urban India.

Table T14: Trends in percentage composition of consumer expenditure since 1987-88

item group	rural					urban

*URP estimates shown except for 1999-2000, for which only MRP estimates are available.

3.10.5 The details of consumption by item group of food and non-food are given in Tables 6A, 6B and 6C of Appendix A for URP, MRP and MMRP respectively. Note that in these tables, estimates are given separately for each MPCE decile class of households formed in each sector of each State/UT. Apart from this, Statement 4 (R&U) on pages 56-61 gives the absolute break-up of $MPCE_{MMRP}$ for each major State (but not by decile class) and Statement 5 (R&U) on pages 62-67 gives the percentage break-up.

3.11 Change in consumption pattern with rise in MPCE level: all-India

3.11.1 So far the discussion on consumption pattern (shares of different commodity groups in total consumption) has been restricted to that of the entire population of the rural or urban sector of the country or a State. Variation in consumption pattern across households at different MPCE levels (different standards of living), nevertheless, is much more striking than inter-State variation in consumption pattern. A household in the top MPCE decile class in *any* State of India has a consumption pattern very different from that of a low-MPCE household in any State.

3.11.2 To simplify the study of inter-State variation in consumption pattern, one averages over households at different MPCE levels and loses sight of the variation due to MPCE level itself. In this section, it is the variation due to MPCE level that is highlighted. To make the depiction easier, inter-State variation is ignored here and only the all-India estimates are discussed.

3.11.3 For each of 13 item groups, the change in share of the item group in total consumption across 10 population classes – the lowest MPCE decile class to the highest – is shown graphically in Figures 5.1 to 5.13, separately for rural and urban India. The shares have been worked out from Table 6C (rural and urban) for all-India in Appendix A.

Cereals (including cereal substitutes): Figure 5.1 shows the budget share of cereals to decline steadily as MPCE level increases, from 23-24% for the bottom decile class of rural India to about 7-8% for the top decile class, and from 18-19% for the bottom decile class of urban India to 3-4% for the top decile class.

Pulses and pulse products: The share of pulses in total consumer expenditure in the bottom decile class is about 4% for both rural and urban India. The share then falls (Figure 5.2) as one moves to the higher classes, the fall being noticeably steeper for urban India.

Milk and milk products: That milk and its products are a luxury for the greater part of the rural population is shown by the steady rise in the share of rural consumer expenditure going to this item group with MPCE level from 3-4% in the bottom decile class to 9% in the ninth decile class. For urban India, however, the share of milk and milk products flattens out at a little over 8% for the middle third of the population and then falls as MPCE increases further, the fall gaining momentum as the top decile class is reached.

Edible oil: The share of this group behaves in much the same way as the pulses group. The rural and urban graphs start at about 4-5% and then begin to fall, and the fall is a little steeper for the urban sector.

Vegetables: The share of this group behaves similarly to the cereals group, declining steadily for both sectors so that the rural and urban graphs run more or less parallel, and the rural graph stays above the urban throughout.

Beverages, refreshments and processed food: The share of this group rises with MPCE level but by only about 1 percentage point up to the eighth decile class, after which it grows at a faster rate.¹²

Fig 5.1

Fig 5.2

Fig 5.3

Fig 5.4

¹² This item group includes the cooked meals purchased by a household for its own consumption or that of guests. Households which served purchased meals to a large number of guests (say, at a ceremony or a party) during the last 30 days (and were placed in the top decile class as a consequence) would have a very large share of their MPCE going to this item group, in contrast to the general tendency for the share in MPCE of nearly every food group to fall as MPCE increases.

Fig 5.5**Fig 5.6****Fig 5.7****Fig 5.8****Fig 5.9****Fig 5.10**

Fig 5.11**Fig 5.12****Fig 5.13**

Fuel and light: The share of this category is around 10-11% for the bottom decile class in both sectors. As MPCE rises, it falls, very gradually at first, to about 6% in the top decile class for rural India and 5% for urban India.

Clothing and footwear: From about 7% for the bottom decile class for both sectors, the share of this group falls as MPCE rises, but much more slowly than any of the food groups, and remaining about 5% even in the highest decile class. Thus consumption of this group seems to be the least elastic with respect to overall expenditure among all the groups considered here.

Education: In rural India the share of education remains below 3½% up to the ninth decile class and then doubles. The urban share rises faster than the rural, to reach nearly 13% in the top decile class.

Medical care: The share of medical expenditure in the budget starts (bottom decile class) at under 3% for rural India but rises faster than the share does for urban India and is noticeably

higher in the top three decile classes than the urban share, which crosses 6% only at the top decile class. Medical expenditure, being contingency-based, does not increase very smoothly with MPCE, as the fluctuations in the graphs show.

Conveyance, other consumer services: These groups have a rising share of expenditure as MPCE rises, and the rate of increase is steeper for urban India.

Durable goods: The share of durables in total expenditure starts (bottom decile class) at less than 1.5% for urban India. In rural India the share for the bottom decile is higher¹³ (nearly 2%). The shares then increase for both sectors to over 7% for the top decile class. For the rural sector the share remains under 3% up to the ninth decile class.

3.12 Quantity of cereals consumed per person: all-India and States

3.12.1 At all-India level, the variation of per capita consumption (in both quantity and value terms) with MPCE class of not only the cereal group as a whole but also for the separate categories “rice” (including rice products), “wheat” (including wheat products), etc., is shown in Table 4 (R&U) and Table 5 (R&U) of Appendix A.

3.12.2 The behaviour of cereal consumption as $MPCE_{MMRP}$ increases is shown for all-India in Fig 6. Numbers 1 to 10 are used to denote the $MPCE_{MMRP}$ decile classes.

3.12.3 In rural India, average monthly per capita cereal consumption was around 10.2 kg for the poorest 10% of the population. It is seen to increase with every decile class, quickly at

¹³ Rural households tend to spend a greater portion of their budget on repairs of dwelling unit, which is included in expenditure on durable goods.

first, to reach 11 kg in the third decile class, and then more slowly. It was above 12 kg for the top 2 decile classes.

3.12.4 In urban India, per capita cereal consumption increases from under 9.5 kg to about 9.7 kg per month over the first 5 decile classes but then starts to fall. In the eighth decile class it falls below its level in the first decile class and then falls further, finally plunging to 8.6 kg for the top decile class of population.

3.12.5 Table T15 gives monthly per capita consumption of cereals in kilograms in the major States and the country as a whole, and the percentage shares of rice, wheat and the remaining cereals in total cereal consumption. (See Statements 8 (R&U) and 9 (R&U) on pages 72-75) Further details of Statewise break-up of average cereal consumption per person, *separately for each MPCE decile class*, are available in Tables 4 (R&U) and 5 (R&U) of Appendix A.

3.12.6 Average cereal consumption per person per month (taking persons of all ages including infants in the calculation) was 11.3 kg in rural India and 9.4 kg in urban India. From this it would appear that the average urban Indian's monthly cereal intake was about 2 kg less than that of the average rural Indian. But, as will be discussed later (paragraph 3.13.5), the cereal content of purchased processed food gets left out of the estimate of cereal consumption. Since the urban population consumes processed food to a greater extent than the rural, the difference in cereal consumption between the two may be less than it appears.

Table T15: Quantity of cereals consumed per person per month and percentage shares of rice and wheat in cereal consumption in 2009-10, major States

State	rural				urban			
	monthly per capita qty. of cereals consumed (kg)	% in total quantity of cereal consumed of			monthly per capita qty. of cereals consumed (kg)	% in total quantity of cereal consumed of		
		rice	wheat	other cereals		rice	wheat	other cereals
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Andhra Pradesh	11.5	93	3	4	10.1	88	10	2
Assam	12.9	96	4	0	11.8	89	11	0
Bihar	12.2	52	45	2	12.0	50	49	1
Chhattisgarh	12.1	92	7	1	10.7	73	27	0
Gujarat	9.2	19	46	36	8.2	25	66	9
Haryana	9.8	7	91	2	8.9	12	88	1
Jharkhand	11.8	73	26	1	11.3	55	44	0
Karnataka	10.0	56	11	33	9.2	60	19	21
Kerala	8.7	88	12	0	8.1	85	15	0
Madhya Pradesh	11.3	19	72	9	9.4	20	79	1
Maharashtra	10.2	32	42	27	8.3	36	54	11
Orissa	13.9	95	5	1	12.4	84	16	0
Punjab	9.3	9	90	1	8.6	13	86	1
Rajasthan	11.8	2	73	25	10.0	5	91	5
Tamil Nadu	10.0	92	6	2	9.3	90	10	1
Uttar Pradesh	12.0	36	64	1	10.1	28	72	1
West Bengal	11.4	90	10	0	9.4	77	23	0
India	11.3	54	38	8	9.4	50	46	4

3.12.7 Rice and wheat together accounted for as much as 96% of all cereal consumption in urban areas, and for 92% in rural areas. In rural India, the share of cereals other than rice and wheat was 4% or less in all major States except Gujarat (36%), Karnataka (33%), Maharashtra (27%), Rajasthan (25%), and Madhya Pradesh (9%). In urban India cereals other than rice and wheat accounted for 5% or less of total cereal consumption in all but 3 major States – Karnataka (21%), Maharashtra (11%) and Gujarat (9%).

3.13 Trends in quantity of cereals consumed per person: all-India and States

3.13.1 It has been noted in the literature on consumption that the per capita cereal consumption of the Indian population has been declining in both rural and urban areas over the past two or three decades.

3.13.2 To examine the decline, Table T16 gives per capita quantity of cereal consumption per month in 15 major States as estimated from the 50th (1993-94), 55th (1999-2000), 61st

(2004-05) and 66th rounds of NSS. It shows that the decline is spread over all the major States and affects both rural and urban sectors to a similar extent.

3.13.3 The question is: Was the fall in consumption of cereals confined to the richer strata of the population? Table T17 shows that the bottom decile in the urban sector (bottom 10% of population ranked by MPCE) experienced a rise in cereal consumption between 1993-94 and 2004-05, followed by a fall in 2004-05 below its level of consumption in 1993-94. For all other sections of the population, however, the fall is unbroken and unmistakable.

Table T17: Changes in per capita cereal consumption in quantity terms since 1993-94 in different MPCE fractile classes: all-India, rural and urban

2009-10	9.52	9.45	9.35	9.23	8.57

3.13.4 The overall fall in cereal consumption appears to be a phenomenon similar to the slowing down of increase in cereal consumption as MPCE increases (in urban areas, there actually occurs a fall in per capita cereal consumption after MPCE increases beyond a certain level, as a comparison over columns of Table T17 will show). Just as improvement in economic condition does not increase cereal consumption beyond a certain point, so, with economic development and diversification of the consumption basket over time, the choice appears to be in favour of a reduction of cereal consumption and an increase in consumption

of other items such as the “beverages, refreshments and processed food” group. Among the partial explanations that may be put forward for the decline in cereal consumption are:

- (a) Eating out has increased. (Cereal content of meals taken outside at own cost or at public cost is hardly known.)
- (b) Calorie needs may be declining because labour-saving devices are becoming increasingly available in the household, in the workplace, and in transportation.

3.13.5 It is important to remember in this context that cooked meals purchased from the market, and preparations containing both cereal and non-cereal items similarly purchased, are all accounted by convention in the “beverages, refreshments and processed food” group. The cereal content of such consumption, unfortunately, cannot be separated out and added to the estimate of cereal consumption to ascertain whether per capita consumption of cereals is in fact falling or not, nor the true extent of the fall measured with accuracy.

3.14 Inequality in distribution of MPCE: all-India and States

3.14.1 *Trends in inequality:* For all-India, Lorenz ratios for 2004-05 were computed for the distribution of $\text{MPCE}_{\text{URP}}^{14}$. Comparison with the URP Lorenz ratios for the present survey (shown in Statement 1) show a slight reduction from 0.297 to 0.291 in the *rural* sector and a slight increase from 0.373 to 0.381 in the *urban* sector of the country.

3.14.2 Statement 12 (page 80) gives the share of each all-India rural and urban decile class in total consumer expenditure, as measured by the three methods URP, MRP and MMRP. Lorenz curves for the distribution based on MRP data are shown on page 50.

3.14.3 *Within-State inequality:* Lorenz ratios of the distributions of MPCE_{URP} , MPCE_{MRP} and $\text{MPCE}_{\text{MMRP}}$ have been computed for the rural and urban sectors of each State/UT and appear in Statement 1 on page 51. Table T18 on the next page shows Lorenz ratios (LRs) of the rural and urban $\text{MPCE}_{\text{MMRP}}$ distributions for selected States. For purposes of comparison of inequality with level of living, the rank of the State (among the 27 States listed) by sectoral average $\text{MPCE}_{\text{MMRP}}$ is shown alongside.

3.14.4 The State-sector-level LRs range from 0.20 to 0.39 in the urban sector and from 0.16 to 0.32 for all but one State in the rural sector.

3.14.5 The lowest five Lorenz ratios in the rural sector are those of the North-Eastern States Manipur, Nagaland, Meghalaya, Mizoram and Tripura. The lowest four LRs in the urban sector are those of Manipur, Mizoram, Meghalaya and Nagaland.

3.14.6 Among the 27 states, the top 6 States ranked by MPCE in the rural sector are among the 7 States with the highest levels of inequality (highest LRs). For the urban sector, the top 9 States ranked by MPCE are among the 14 States with the highest levels of inequality.

¹⁴ See NSS Report No.508: *Level and Pattern of Consumer Expenditure*, 2004-05, p.45.

Table T18: Lorenz ratio of State-level MPCE_{MMRP} distribution and rank of State by average MPCE_{MMRP}*

Rural sector			Urban sector		
State	Lorenz ratio of MPCE _{MMRP} distn.	Rank by average MPCE _{MMRP} (highest=1)	State	Lorenz ratio of MPCE _{MMRP} distn.	Rank by average MPCE _{MMRP} (highest=1)

*All States in which Sch. Type 2 was canvassed in at least 300 rural (urban) households have been included in this table. Estimates for the remaining States and UTs are given in Statement 1.

3.14.7 Impact of choice of reference period on inequality measure: For both rural and urban India, the estimated URP distribution of MPCE has the highest Lorenz ratio, followed by the MRP distribution, and then by the MMRP distribution. (See also Statement 1, p.47.)

Table T19: Lorenz ratios of URP, MRP and MMRP distributions of MPCE, all-India

sector	Lorenz ratio of distribution of MPCE		
	URP	MRP	MMRP
(1)	(2)	(3)	(4)
rural	0.291	0.276	0.270
urban	0.381	0.371	0.362

3.15 Access to internet at home

3.15.1 “Whether the household has access to internet at home” was a special item of information collected through Sch.1.0 for the first time in the present survey. The results are shown, separately for Sch. Types 1 and 2, in Table 7 of Appendix A. Table T20 shows the simple average of the estimates from the two schedule types of proportion of households with access to internet at home.

Table T20: Per 1000 no. of households with access to internet at home, 2009-10

State/UT (1)	per 1000 no. of hhs with internet access at home	
	Rural (2)	Urban (3)
Andhra Pradesh	3.0	54.0
Arunachal Pradesh	19.0	25.5
Assam	1.0	72.5
Bihar	2.0	22.0
Chhattisgarh	1.5	32.0
Delhi	0.0	89.5
Goa	50.5	46.5
Gujarat	3.0	36.0
Haryana	9.5	81.5
Himachal Pradesh	16.0	95.0
Jammu & Kashmir	6.0	47.0
Jharkhand	0.5	50.5
Karnataka	1.5	54.5
Kerala	34.0	95.0
Madhya Pradesh	0.5	58.0
Maharashtra	2.0	104.0
Manipur	4.5	30.5
Meghalaya	2.5	33.5
Mizoram	4.0	50.5
Nagaland	5.0	22.0
Orissa	2.0	38.5
Punjab	6.5	68.0
Rajasthan	1.0	35.0
Sikkim	9.5	30.5
Tamil Nadu	2.0	48.0
Tripura	0.0	15.5
Uttar Pradesh	3.0	33.5
Uttarakhand	3.0	68.0
West Bengal	1.0	68.0
A & N Islands	4.5	50.0
Chandigarh	0.0	160.0
Dadra & N. Haveli	1.0	28.0
Daman & Diu	29.0	96.5
Lakshadweep	6.5	18.0
Puduchery	200.5	206.0
all-India	3.5	59.5

3.15.2 At the all-India level only about 0.4 percent of rural households had access to internet at home compared to about 6 percent of urban households. Among the larger States, Kerala

had by far the highest proportion of households with internet access in the rural sector (about 3 percent), followed by Himachal Pradesh (about 2 percent). In the urban sector Maharashtra (about 10 percent) reported the highest percentage among the larger States, followed closely by Kerala and Himachal Pradesh, and Haryana. While States like Goa and Arunachal Pradesh (rural) and Chandigarh (urban) clearly had greater internet access compared to most major States, larger sample sizes would be necessary in order to estimate the percentages of households with internet access in these small states and UTs with reasonable accuracy.

Fig. 7: Lorenz Curve for Consumer Expenditure (MRP), 2009-10

Appendix B

Sample Design and Estimation Procedure

Sample Design and Estimation Procedure

1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its sixty-sixth round from 1st July 2009 to 30th June 2010.

2. Outline of survey programme

2.1 **Subject coverage:** The 66th round (July 2009-June 2010) of NSS was for the survey on 'Household Consumer Expenditure' and 'Employment and Unemployment' and it was the eighth quinquennial survey in the series, the last one having been conducted in the 61st round (2004-2005) of NSS.

2.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units (FSUs) for the 'Central sample'. For these two districts, sample FSUs drawn as 'State sample' were treated as Central sample. However, no first-stage unit was surveyed in Leh, Kargil and Punch districts of J&K due to various reasons.

2.3 **Period of survey and work programme:** The period of survey was of one year duration starting on 1st July 2009 and ending on 30th June 2010. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

- sub-round 1 : July - September 2009
- sub-round 2 : October - December 2009
- sub-round 3 : January - March 2010
- sub-round 4 : April - June 2010

In each of these four sub-rounds equal numbers of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

2.4 **Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

- Schedule 0.0 : list of households
- Schedule 1.0 : consumer expenditure
- Schedule 10 : employment and unemployment

Two variants of Schedule 1.0, called Schedule Type 1 and Schedule Type 2, were canvassed in this round. Schedule Type 1 was similar to Schedule 1.0 of NSS 61st round. Compared to

Schedule Type 1, Schedule Type 2 had a different reference period (7 days) for some items of food, pan, tobacco and intoxicants.

2.5 Participation of States: In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. The scale of the survey conducted by a State/UT relative to the Central sample survey in the State/UT was as follows:

Nagaland (Urban)	: triple
J&K, Manipur, Delhi & Uttar Pradesh	: double
Maharashtra (Urban) & Kerala	: one and half
Gujarat	: less than equal
Remaining States/UTs	: equal

3. Sample design

3.1 Outline of sample design: A stratified multi-stage design was adopted for the 66th round survey. The first stage units (FSUs) were the 2001 Census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/sub-blocks (sbs) from each rural/urban FSU.

3.2 Sampling frame for first stage units: *For the rural sector*, the list of 2001 Census villages (henceforth the term ‘village’ will mean Panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available UFS blocks was considered as the sampling frame. For non-UFS towns, the frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame).

3.3 Stratification: Within each district of a State/UT, generally speaking, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, within the urban areas of a district, wherever there were one or more towns with population 10 lakhs or more as per Census 2001 in a district, each of these formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

3.4 Sub-stratification: Each rural stratum was divided into 2 sub-strata as follows:

sub-stratum 1: all villages with proportion of child workers (p) $> 2P$ (where P is the average proportion of child workers for the State/UT as per Census 2001)

sub-stratum 2: remaining villages

3.5 Total sample size (FSUs): At all-India level, 12784 FSUs were allocated to the Central sample and 15132 FSUs to the State sample. Further, the data of 24 State sample FSUs of Leh and Kargil districts of J&K surveyed by DES, J&K, were included in the Central sample.

3.6 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a

minimum sample allocation to each State/UT, and subject to resource availability in terms of field investigators.

3.7 Allocation of State/UT level sample to rural and urban sectors: State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with double weightage to urban sector, subject to the restriction that the urban sample size for bigger States like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each State/UT separately for rural and urban areas. Further, the State-level allocations for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum/sub-stratum got a minimum allocation of 4 FSUs.

3.8 Allocation to strata/sub-strata: Within each sector of a State/UT, the sample size was allocated to different strata/sub-strata in proportion to population as per Census 2001. Allocations at stratum/sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal-sized samples were allocated to the four sub-rounds.

3.9 Selection of FSUs: For the rural sector, from each stratum/sub-stratum, the required numbers of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For the urban sector, FSUs were selected from each stratum using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

3.10 Formation and selection of hamlet-groups/sub-blocks

3.10.1 Criterion for hamlet-group/sub-block formation: Selected FSUs with approximate population 1200 or more were divided into a suitable number of geographically compact ‘hamlet-groups’ (having more or less equal population) in the rural sector and ‘sub-blocks’ in the urban sector as shown below.

approximate present population of the sample FSU	no. of hg's/sb's formed
less than 1200 (no hg/sb formation)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for four districts –Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approximate present population of the sample village	no. of hg's formed
less than 600 (no hg formation)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	

3.10.2 Selection of hamlet-groups/sub-blocks: Hamlet-groups (hg)/sub-blocks (sb) were selected from FSUs where hamlet-groups/sub-blocks were formed, two in the following manner. The hg/sb with maximum percentage share of population was always selected and termed hg/sb 1; one more hg/sb was selected from the remaining hg's/sb's by simple random sampling (SRS) and termed hg/sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

4. Listing of households

4.1 Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those found through local enquires to be temporarily locked). The hamlet-group/sub-block with sample hg/sb number 1 was considered for listing first, followed by sample hg/sb number 2.

5. Formation of second stage strata and allocation of sample households

5.1 Two cut-off points 'A' and 'B' (in Rs.) were determined from NSS 61st round data for each NSS region for urban areas in such a way that the top 10% of the population had MPCE more than B and the bottom 30% of the population had MPCE less than A.

5.2: For Schedule 1.0, households listed in the selected FSU/hamlet-group/sub-block were stratified into three second stage strata (SSS). Composition of the SSS and number of households to be surveyed from different SSSs for each of the two schedule types was as follows:

SSS	composition of SSS	number of households surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
Rural			
SSS 1	relatively affluent households	2	1
SSS 2	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3	other households	2	1
Urban			
SSS 1	households having MPCE of top 10% of urban population ($MPCE > B$)	2	1
SSS 2	households having MPCE of middle 60% of urban population ($A \leq MPCE \leq B$)	4	2
SSS 3	households having MPCE of bottom 30% of urban population ($MPCE < A$)	2	1

5.3 Thus, for each schedule type, a total of 8 households were selected for survey from each FSU – 4 from each selected hamlet-group/sub-block in FSUs where hg/sb's were formed.

6. Selection of households

6.1 From each SSS the sample households for each of the schedules were selected by SRSWOR. If a household was selected for Schedule 1.0 (Type 1), it was not allowed to be selected for Schedule 1.0 (Type 2) or Schedule 10. Similarly, if a household was not selected for Schedule 1.0 (Type 1) but selected for Schedule 1.0 (Type 2) it was not allowed to be selected for Schedule 10. If a household got selected for more than one schedule, only one schedule was canvassed in that household in the priority order of Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 and in that case the household was replaced by selecting another household for the other schedule.

6.2 However, at least one household was to be surveyed from each SSS for each of the three schedules of enquiry. To adhere to this restriction, the condition of not canvassing more than one schedule in the same household was waived in the extreme cases where there was an insufficient number of households in the frame of a particular second stage stratum.

7. Estimation procedure

7.1 Notations:

s = subscript for stratum

t = subscript for sub-stratum (only for rural sector)

m = subscript for sub-sample ($m = 1, 2$)

i = subscript for FSU [village (panchayat ward)/ block/ non-UFS town]

d = subscript for a hamlet-group/sub-block ($d = 1, 2$)

j = subscript for second stage stratum in an FSU/ hg/sb [$j = 1, 2$ or 3]

k = subscript for sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample FSU

$D^* = 0$ if $D = 1$

= $(D - 1)$ for FSUs with $D > 1$

N = total number of FSUs in any urban stratum

Z = total size of a rural stratum/sub-stratum (= sum of sizes for all the FSUs of a stratum/sub-stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and stratum/sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X}, \hat{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k^{th} household in the j^{th} second stage stratum of the d^{th} hg/sb ($d = 1, 2$) of the i^{th} FSU belonging to the m^{th} sub-sample for the t^{th} sub-stratum of s^{th} stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum (for urban)/ sub-stratum (for rural)

7.2.1 Rural

(i) For j^{th} second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) will be obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

7.2.2 Urban

(i) For j^{th} second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Note: $N = 1$ in the above formula in the case of Leh and Kargil districts of J&K.

7.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples was obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

7.4 Overall estimate of aggregates at State/UT/all-India level

The overall estimate \hat{Y} at the State/UT/all-India level was obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/UT/all-India.

7.5 Estimates of ratios

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/UT/all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) was obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

7.6 Estimates of error

The estimated variances of the above estimates were as follows:

7.6.1 For aggregate \hat{Y}

$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$ where $V\hat{a}r(\hat{Y}_s)$ is given by

$Var(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$ for rural stratum, where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't',

and

$Var(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$ for urban stratum, \hat{Y}_{s1} and \hat{Y}_{s2} being the stratum estimates for sub-sample 1 and 2 respectively.

7.6.2 For ratio \hat{R} :

$$MSE(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for rural and

$$MSE(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[(\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for urban.

7.6.3 Estimates of Relative Standard Error (RSE):

$$RSE(\hat{Y}) = \frac{\sqrt{Var(\hat{Y})}}{\hat{Y}} \times 100$$

$$RSE(\hat{R}) = \frac{\sqrt{MSE(\hat{R})}}{\hat{R}} \times 100$$

8. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below for Schedule 1.0:

sector	formula for multipliers	
	hg /sb 1	hg /sb 2
rural	$\frac{Z_{st}}{n_{smj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{smj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}},$	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$

(j = 1, 2, 3)

- Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, indicator variable was used.
- (ii) Multipliers were computed on the basis of information available in the listing schedule irrespective of any misclassification observed between listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic, $D_{smi}^* = 0$ in the relevant multipliers and there was only one multiplier for the village (see paragraph 7.2.1.1).

Appendix C

Population Projections

Table C1: Projected population (000) as on 1st March 2009, 1st March 2010 and 1st January 2010 for each State/U.T

Note: 1. Projected population as on 1st March 2009 and 1st March 2010 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1st March 2009 and 1st March 2010 for rural+urban combined and Table 9 provides projected population as on 1st March 2009 and 1st March 2010 for urban.

3. Projected population as on 1st January 2010 has been derived using the formula, $A = A_1 \times \left[\left(A_2 / A_1 \right)^{1/12} \right]^{10}$, where A_1 is the population for 1st March 2009, A_2 is the population for 1st March 2010 and A is the population for 1st January 2010.

4. Projected population as on 1st January 2010 has been derived for the rural+urban and urban separately and that for rural has been derived by subtracting these two.
