

# Note on Sample Design and Estimation Procedure of NSS 75<sup>th</sup> Round

## 1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, started its seventy fifth round from 1<sup>st</sup> July 2017. The survey will continue up to 30<sup>th</sup> June 2018.

1.2 **Subject Coverage:** NSS 75<sup>th</sup> round covers the subjects ‘Household Consumer Expenditure’, ‘Household Social Consumption: Health’ and ‘Household Social Consumption: Education’.

## 2. Outline of Survey Programme

2.1 **Geographical coverage:** The survey covers whole of the Indian Union *except the* villages in Andaman and Nicobar Islands which are difficult to access.

2.2 **Period of survey and work programme:** The survey period of the round is divided into four sub-rounds of three months’ duration each as follows:

sub-round 1 :	July - September 2017
sub-round 2 :	October - December 2017
sub-round 3 :	January - March 2018
sub-round 4 :	April - June 2018

In each of these four sub-rounds equal number of sample villages/ blocks (FSUs) is allotted for survey with a view to ensure uniform spread of sample FSUs over the entire survey period. *Because of the arduous field conditions, this restriction is not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, Ladakh region (Leh and Kargil districts) of Jammu & Kashmir and rural areas of Arunachal Pradesh and Nagaland.*

2.3 **Schedules of enquiry:** During this round, the following schedules of enquiry are canvassed:

Schedule 0.0 :	List of Households
Schedule 1.0 :	Household Consumer Expenditure
Schedule 25.0 :	Household Social Consumption: Health
Schedule 25.2 :	Household Social Consumption: Education

2.4 **Participation of States:** All the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. Following is the matching pattern of the participating States/ UTs.

State/UT	Extent of matching
Nagaland (U)	triple
Andhra Pradesh, Manipur, Telangana, Chhattisgarh	double
Gujarat, Maharashtra (U)	one and half
Remaining States/ UTs	equal

### 3. Sample Design

**3.1 Outline of sample design:** A stratified multi-stage design has been adopted for the 75<sup>th</sup> round survey. The first stage units (FSU) are the Census villages (Panchayat wards for Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. The ultimate stage units (USU) are households in both the sectors. In the case of large FSUs, one intermediate stage of sampling is the selection of two hamlet-groups (hgs)/ sub-blocks (sbs) from each rural/ urban FSU.

**3.2 Sampling Frame for First Stage Units:** For the rural sector, the list of 2011 Population Census villages constitutes the sampling frame. However, for Kerala, the latest available updated list of Panchayat wards constitutes the sampling frame. For the urban sector, the latest available list of UFS blocks has been considered as the sampling frame.

#### 3.3 Stratification:

- (a) Each district is a stratum. Within each district of a State/UT, generally speaking, two basic strata have been formed: (i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. However, within the urban areas of a district, if there are one or more towns with population one million or more as per Census 2011, each of them formed as a separate basic stratum and the remaining urban areas of the district have been considered as another basic stratum.
- (b) In the case of rural sectors of Nagaland another special stratum has been formed within the State consisting of all the villages which are difficult to access.

#### 3.4 Sub-stratification:

**3.4.1 Rural sector:** If 'r' be the sample size allocated for a rural stratum, 'r/4' sub-strata are formed in that stratum. The villages within a stratum (district) as per frame are first arranged in ascending order of population. Then sub-strata 1 to 'r/4' have been demarcated in such a way that each sub-stratum comprises a group of villages of the arranged frame and has more or less equal population.

**3.4.2 Urban sector:** Each urban stratum has been divided into two parts – 'Affluent part' consisting of UFS blocks identified as 'Affluent Area' and 'Non-Affluent part' consisting of the remaining UFS blocks within the stratum. Sample allocation of a stratum is then allocated to Affluent and Non-Affluent parts in proportion to total number of households in the UFS blocks with double weightage to Affluent part subject to a maximum of 8 FSUs in 'Affluent part' of any stratum. If 'u' be the

sample size allocated for an urban stratum consisting of both affluent area UFS Blocks and non-affluent area UFS Blocks. 'u/4' sub-strata are formed within each stratum. Out of these 'u/4' sub-strata, the first two sub-strata '01' and '02' are earmarked for those UFS blocks which are identified as 'Affluent Area' and the remaining sub-strata, '03', '04',..... and so on, are assigned to the non-affluent UFS blocks. If any stratum does not have any Affluent Area UFS block then also the sub-stratum number starts from '03' for that stratum. For all strata, if  $u/4 > 1$ , implying formation of 2 or more sub-strata, all the UFS blocks within the stratum are first arranged in ascending order of total number of households in the UFS Blocks as per the latest UFS phase. Then sub-strata 1 to 'u/4' are demarcated in such a way that each sub-stratum has more or less equal number of households. This procedure has been done separately for Affluent-part and Non-Affluent part of the stratum (if two sub-strata are required to be formed in the Affluent part).

The following three cases arise while doing the sub-stratification:

- i) If there is no 'Affluent Area' UFS block in the stratum, all the UFS blocks are divided into 'u/4' sub-strata and numbered as '03', '04', ....., '(u/4)+2'.
- ii) If only one sub-stratum is formed with the 'Affluent Area' UFS blocks, then all the remaining non-affluent blocks are divided into '(u-4)/4' sub-strata and numbered as '03', '04', ....., '(u/4)+1'.
- iii) If two sub-strata are formed with the 'Affluent Area' blocks, then all the remaining non-affluent UFS blocks are divided into '(u-8)/4' sub-strata and numbered as '03', '04', ....., 'u/4'.

**3.5 Total sample size (FSUs):** 14300 FSUs have been allocated for the central sample at all-India level. For the state sample, there are 16492 FSUs allocated for all-India. State wise allocation of sample FSUs is given in **Table 1**.

**3.6 Allocation of total sample to States and UTs:** The total number of sample FSUs has been allocated to the States and UTs in proportion to population as per Census 2011 subject to a minimum sample allocation to each State/UT.

**3.7 Allocation of State/ UT level sample to rural and urban sectors:** State/ UT level sample size has been allocated between two sectors in proportion to population as per Census 2011 with 1.5 weightage to urban sector depending on population share. A minimum of 16 FSUs (minimum 8 each for rural and urban sector separately) have been allocated to each State/ UT.

**3.8 Allocation to strata:** Within each sector of a State/ UT, the respective sample size has been allocated to the different strata in proportion to the population as per Census 2011. Stratum level allocation has been adjusted to multiples of 4 with a minimum sample size of 4.

For special stratum formed in rural areas of Nagaland as discussed in para 3.3 (b), 12 FSUs have been allocated.

**3.9 Allocation to sub-strata:** Allocation for each sub-stratum has been made as 4 in both rural and urban sectors.

### 3.10 Selection of FSUs:

3.10.1 For the rural sector, from each stratum/sub-stratum, required number of sample villages has been selected by Probability Proportional to Size With Replacement (PPSWR), size being the population of the village as per Census 2011.

3.10.2 For the urban sector, from each stratum/sub-stratum, FSUs have been selected by Probability Proportional to Size With Replacement (PPSWR), size being the number of households of the UFS Block.

Both rural and urban samples are drawn in the form of two independent sub-samples.

### 3.11 Selection of hamlet-groups/ sub-blocks - important steps

3.11.1 **Criterion for hamlet-group/ sub-block formation:** After identification of the boundaries of the FSU, it is to be determined whether listing is to be done in the whole sample FSU or not. In case the approximate present population of the selected FSU is found to be 1200 or more, it is divided into a suitable number (say, D) of ‘hamlet-groups’ in the rural sector and ‘sub-blocks’ in the urban sector by more or less equalising the population as stated below.

approximate present population of the sample FSU	no. of hgs/sbs formed
less than 1200 (no hamlet-group/sub-block)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	-

For rural areas of Himachal Pradesh, Sikkim, Andaman & Nicobar Islands, Uttarakhand (except four districts Dehradun, Nainital, Hardwar and Udham Singh Nagar), Punch, Rajouri, Udhampur, Reasi, Doda, Kishtwar, Ramban, Ladakh region (Leh and Kargil districts) of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups to be formed as follows:

approximate present population of the sample village	no. of hgs formed
less than 600 (no hamlet-group)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
1500 to 1799	6
.....and so on	-

**3.11.2 Formation and selection of hamlet-groups/ sub-blocks:** In case hamlet-groups/ sub-blocks are to be formed in the sample FSU, the same should be done by more or less equalising population. Note that while doing so, it is to be ensured that the hamlet-groups/ sub-blocks formed are clearly identifiable in terms of physical landmarks.

Two hamlet-groups (hg)/ sub-blocks (sb) are to be selected from a large FSU wherever hamlet-groups/ sub-blocks have been formed in the following manner – one hg/ sb with maximum percentage share of population will always be selected and termed as hg/ sb 1; one more hg/ sb will be selected from the remaining hgs/ sbs by simple random sampling (SRS) and termed as hg/ sb 2. Listing and selection of the households are being done independently in the two selected hamlet-groups/ sub-blocks. The FSUs without hg/ sb formation will be treated as sample hg/ sb number 1.

**3.12 Listing of households:** Having determined the hamlet-groups/ sub-blocks, i.e. area(s) to be considered for listing, the next step is to list all the households. The hamlet-group/ sub-block with hg/sb number 1 will be considered for listing first, to be followed by the listing of households of the hg/sb number 2.

### 3.13 Formation of second stage strata (SSS) and allocation of households in different SSS:

**3.13.1 Schedule 1.0:** Two cut-off points ‘A’ and ‘B’ (in Rs.) have been determined from household’s usual monthly consumer expenditure collected in Schedule 21.1: Domestic Tourism Expenditure of NSS 72<sup>nd</sup> round (July 2014 – June 2015) data (with proper adjustments using price indices) for each NSS region for both rural and urban areas separately, in such a way that top 10% of the population have MPCE more than ‘B’ and bottom 30% of the population have MPCE less than A. Composition of the SSS and number of households to be surveyed from different SSS, *for both rural and urban sectors*, are as follows:

SSS	composition of SSS	number of households to be surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
<b>Schedule 1.0</b>			
SSS 1	households having MPCE of top 10% of population (MPCE > B)	2	1
SSS 2	households having MPCE of middle 60% of population ( $A \leq MPCE \leq B$ )	4	2
SSS 3	households having MPCE of bottom 30% of population (MPCE < A)	2	1

3.13.2 **Schedules 25.0 & 25.2:** Composition of the SSS and number of households to be surveyed for different SSS for Schedules 25.0 and 25.2 are as follows:

SSS	composition of SSS	number of households to be surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
<b>Schedule 25.0</b>			
SSS 1	households having at least one child of age less than 1 year	2	1
SSS 2	from the remaining, households with at least one member (including deceased former member) hospitalised during last 365 days	4	2
SSS 3	other households	2	1
<b>Schedule 25.2</b>			
SSS 1	households with at least one student* having disability (possessing a certificate of disability)	2	1
SSS 2	from the remaining, households with at least one student* receiving technical/professional education	2	1
SSS 3	from the remaining, households having at least one student* receiving general education	2	1
SSS 4	other households	2	1

\*persons aged 3 – 35 years and currently attending education will be considered as students

3.13.3 **Selection of households:** From each SSS, the sample households for each of the schedules are selected by SRSWOR.

## 4. Estimation Procedure

### 4.1 Notations:

$s$  = subscript for  $s$ -th stratum

$t$  = subscript for  $t$ -th sub-stratum

$m$  = subscript for sub-sample ( $m = 1, 2$ )

$i$  = subscript for  $i$ -th FSU [village (panchayat ward)/ block]

$d$  = subscript for a hamlet-group/ sub-block ( $d = 1, 2$ )

$j$  = subscript for  $j$ -th second stage stratum in an FSU/hg/sb

$k$  = subscript for  $k$ -th sample household within an FSU/ hg/sb

$D$  = total number of hg's/ sb's formed in the sample FSU

$D^* = 0$  if  $D = 1$

$= (D - 1)$  for FSUs with  $D > 1$

$Z$  = total size of a sub-stratum (sum of sizes for all the FSUs of a sub-stratum)

$z$  = size of sample FSU used for selection.

$n$  = number of sample FSUs surveyed including 'uninhabited' and 'zero cases' but excluding casualty for a particular sub-sample and sub-stratum.

$H$  = total number of households listed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

$h$  = number of households surveyed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

$x, y$  = observed value of characteristics  $x, y$  under estimation

$\hat{X}, \hat{Y}$  = estimate of population total  $X, Y$  for the characteristics  $x, y$

Under the above symbols,

$y_{stmidjk}$  = observed value of the characteristic  $y$  for the  $k$ -th household of the  $j$ -th second stage stratum of the  $d$ -th hg/sb of the  $i$ -th FSU belonging to the  $m$ -th sub-sample for the  $t$ -th sub-stratum of  $s$ -th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

**4.2 Formulae for Estimation of Aggregates for a particular sub-sample and stratum × sub-stratum:**

**4.2.1 Schedule 0.0:**

**4.2.1.1 Rural/Urban:**

(i) For estimating the number of households in a stratum × sub-stratum possessing a characteristic:

$$\hat{Y} = \frac{Z}{n} \sum_{i=1}^n \frac{1}{z_i} [y_{i1} + D_i^* \times y_{i2}]$$

where  $y_{i1}$ ,  $y_{i2}$  are the total number of households possessing the characteristic  $y$  in hg's 1 & 2 of the  $i$ -th FSU respectively.

(ii) For estimating the number of villages in a stratum × sub-stratum possessing a characteristic:

$$\hat{Y} = \frac{Z}{n} \sum_{i=1}^n \frac{1}{z_i} y_i$$

where  $y_i$  is taken as 1 for sample villages possessing the characteristic and 0 otherwise.

**4.2.2 Schedules 1.0, 25.0, 25.2:**

**4.2.2.1 Rural/ Urban:**

(i) For  $j$ -th second-stage stratum of a stratum × sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

#### 4.3 Overall Estimate for Aggregates for a sub-stratum:

Overall estimate for aggregates for a sub-stratum ( $\hat{Y}_{st}$ ) based on two sub-samples in a sub-stratum is obtained as:

$$\hat{Y}_{st} = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{stm}$$

#### 4.4 Overall Estimate for Aggregates for a stratum:

Overall estimate for a stratum ( $\hat{Y}_s$ ) will be obtained as

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

#### 4.5 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

#### 4.6 Estimates of Ratios:

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) will be obtained as  $\hat{R} = \frac{\hat{Y}}{\hat{X}}$ .

4.7 **Estimates of Error:** The estimated variances of the above estimates will be as follows:

##### 4.7.1 For aggregate $\hat{Y}$ :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s) = \sum_s \sum_t V\hat{a}r(\hat{Y}_{st}) \text{ where } V\hat{a}r(\hat{Y}_{st}) \text{ is given by}$$

$V\hat{a}r(\hat{Y}_{st}) = \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$ , where  $\hat{Y}_{st1}$  and  $\hat{Y}_{st2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

##### 4.7.2 For ratio $\hat{R}$ :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[ (\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

### 4.7.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

## 5. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below:

sch type	sector	formula for multipliers	
		hg / sb 1	hg / sb 2
0.0	rural/urban	$\frac{Z_{st}}{n_{stm}} \times \frac{1}{z_{stmi}}$	$\frac{Z_{st}}{n_{stm}} \times \frac{1}{z_{stmi}} \times D_{stmi}^*$
1.0, 25.0, 25.2	rural/urban	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
	j = 1, 2, 3 for each of the Schedules 1.0 and 25.0 j = 1, 2, 3, 4 for Schedule 25.2		

### Note:

- (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable may be used.
- (ii) Multipliers have to be computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic, take  $D_{stmi}^* = 0$  in the relevant multipliers and there will be only one multiplier for the village.

## 6. Treatment for zero cases, casualty cases etc.:

6.1 While counting the number of FSUs surveyed ( $n_{stm}$  or  $n_{stmj}$ ) in a stratum/sub-stratum, all the FSUs with survey codes 1 to 6 in schedule 0.0 will be considered. In addition, if no household is available in the frame then also that FSU will be treated as surveyed. However, household of a particular schedule type are available in the frame of the FSU but none of these could be surveyed then that FSU has to be treated as casualty and it will not be treated as surveyed in respect of that schedule.

6.2 *Casualty cases*: FSUs with survey code 7 as per schedule 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualty for a particular schedule type and a particular *second stage stratum* as given in the following para:

6.2.1 FSUs with survey codes 1 or 4 as per schedule 0.0 having number of households in the frame of j-th second stage stratum greater than 0 but number of households surveyed according to data file, considering both hg/sb together, as nil (i.e.  $H_{i1j} + H_{i2j} > 0$  but  $h_{i1j} + h_{i2j} = 0$ ) will be taken as casualties for j-th second stage stratum.

*All the FSUs with survey codes 1 to 6 as per schedule 0.0 minus the number of casualties as identified above will be taken as the number of surveyed FSUs ( $n_{stmj}$ ) for that (stratum/sub-stratum)  $\times$  (second stage stratum).*

When casualty for j-th second stage stratum occurs for a particular hg/sb but not for the other hg/sb, the FSU will not be treated as casualty but some adjustments in the value of H for the other hg/sb will be done as follows:

- (i) Suppose for hg/sb 1,  $H_{i1j} > 0$  but  $h_{i1j} = 0$  while for hg/sb 2,  $H_{i2j} > 0$  and  $h_{i2j} > 0$ . In that case  $D_i^* \times H_{i2j}$  will be replaced by  $(H_{i1j} + D_i^* \times H_{i2j})$  in the formula for multiplier of hg/sb 2.
- (ii) Suppose for hg/sb 1,  $H_{i1j} > 0$  and  $h_{i1j} > 0$  while for hg/sb 2,  $H_{i2j} > 0$  but  $h_{i2j} = 0$ . In that case  $H_{i1j}$  will be replaced by  $(H_{i1j} + D_i^* \times H_{i2j})$  in the formula for multiplier of hg/sb 1.

It may be noted that  $n_{stm}$  or  $n_{stmj}$  would be same for hg/sb 1 & 2 of an FSU.

## 7. Treatment in cases of void second-stage strata/sub-strata /strata at FSU or household level

7.1 A stratum/sub-stratum may be void because of the casualty of all the FSUs belonging to the stratum/sub-stratum. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then estimate for the void stratum/sub-stratum may be replaced with the estimate as obtained from the other sub-sample for the same stratum/sub-stratum.

7.2 When a stratum/sub-stratum is void in both the sub-samples, the following procedure is recommended:

*Case(I): Stratum/Sub-stratum void cases at FSU levels (i.e. all FSUs having survey code 7):*

- (i) If a rural/urban sub-stratum is void then it may be merged with the other sub-stratum of the stratum.
- (ii) If a rural/urban stratum (district) is void due to all FSUs being casualty, it may be excluded from the coverage of the survey. The state level estimates will be based on the estimates of districts for which estimates are available and remarks to that effect may be added in appropriate places.

*Case (II): Stratum/Sub-stratum void case at second stage stratum level (i.e. all the FSUs were casualties for a particular second stage stratum):*

An FSU may be a casualty for a particular *second stage stratum* although survey code was not 7. If all the FSUs of a stratum/sub-stratum become casualties in this manner for a particular *second stage stratum*, the stratum/sub-stratum will become void. In such cases, the void second stage stratum will be merged with the nearby second stage stratum within the FSU.

**8. Reference to the values of  $Z_{st}$ ,  $n_{st}$ ,  $z_{sti}$ ,  $D_{sti}$ ,  $D^*_{sti}$ ,  $D_{si}$ ,  $D^*_{si}$ ,  $H_{sti1}$ ,  $h_{sti1}$ ,  $H_{sti2}$ ,  $h_{sti2}$ :**

- (a) Values of  $Z_{st}$  and allotted  $n_{st}$  for the whole round are given in Table 2 for rural sector and in Table 3 for urban sector.
- (b) Surveyed number of FSUs ( $n_{st}$ ) should not be taken from the tables. The values of  $n_{stm}$  for each sub-sample are to be obtained following the guidelines given in para 6 above. It includes uninhibited and zero cases but excludes casualty cases.
- (c) The value of  $z_{sti}$  is to be taken from the column of sample list under the heading “frame population” for rural samples and ‘block size’ i.e. total number of households in each UFS block for urban samples.
- (d) Value of  $D_{sti}$  is to be taken from item 16 of block 1, Sch 0.0.  $D^*_{sti}$  is to be calculated from the value of  $D_{sti}$ .
- (e) Values of  $H_{sti1j}$ ,  $H_{sti2j}$  are to be taken from column (5), block 6 of Sch 0.0 for respective hg/sb and second stage stratum.
- (f) The value of  $h_{sti1j}$  and  $h_{sti2j}$  should not be taken from column (9), block 6 of Sch.0.0. The figures should be obtained by counting the number of households in the data file excluding the casualty households.

\*\*\*\*\*

**Table 1: allocation of sample villages and blocks for NSS 75<sup>th</sup> round**

State/UT	number of sample villages/blocks					
	central sample			state sample		
	total	rural	urban	total	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
