PREFACE

The Annual Survey of Industries (ASI) provides information on important characteristics for objectively evaluating the industrial scenario of India. It helps planners and policy makers in framing policies for faster industrial development and also removing regional imbalances. To meet the challenges of liberalization and global competition, there is urgent requirement of release of timely, relevant and reliable industrial statistics. Timely release of survey results of ASI meets the requirements of Central/State Governments, research scholars and other stakeholders in the industrial development, both at domestic and international levels.

Industrial units registered under Sections 2m (i) and 2m (ii) of the Factories Act, 1948 and Bidi and Cigar establishments registered under the Bidi and Cigar Workers (Conditions of Employment) Act, 1966 are covered under ASI. The survey is carried out in the entire country. National Industrial Classification 2008 is being used for classification of the industrial establishments by industrial activities. All the industrial units are covered in two sectors: Census and Sample. In the census sector, the data from all the units employing 100 or more workers are collected. In sample sector, the data are collected by drawing a representative sample from all the units having less than 100 workers in such a manner that each industrial group is represented in each state.

The Field Operations Division of the National Sample Survey Office (NSSO) carries out the fieldwork for collection of data. For ASI 2009-10, the survey was carried out during the year 2010-11. The Industrial Statistics Wing (ISW), Kolkata of the Central Statistics Office (CSO) prepares the entire plan of the survey including data processing, validation, tabulation of ASI results and data dissemination. Computer Centre of the Ministry also disseminates the unit level data to the users and uploads the results of the survey in the website of the Ministry.

The ASI 2009-10 publication contains detailed results of factory sector in two volumes reflecting important economic characteristics at 2/3-digit level of industrial classification by States/Union Territories and 4-digit level of industrial classification at all India level. The Volume-I presents data relating to capital, employment and emoluments and several economic parameters relevant to industrial sector which, among others, include (i) number of factories; (ii) fixed/working capital; (iii) total inputs; (iv) total output; (v) depreciation; (vi) net value added etc. as well as summary of findings based on ASI 2009-10 results for easy comprehension. During the year 2009-10, Gross Value Added and Output have registered a growth rate of 14.05% and 14.06%, respectively over the previous year, i.e., 2008-2009. **From ASI 2009-10, the Volume-I will be published in e-media only.** The Volume-II of the publication provides details on material consumed and ex-factory value of products and by-products both at all India level as well as at the level of State/UTs. This volume is being published in e-media.

I record my appreciation for all the officers and staff members of NSSO (Field Operations Division), CSO (IS Wing and Economic Statistics Division) for their dedicated work in bringing out this publication.

We are striving to improve both content and presentation of the report and, therefore, welcome suggestions from all users of the results of the survey.

ANNUAL SURVEY OF INDUSTRIES: 2009-10

1.1 Scope and Coverage

1.1.1 The Annual Survey of Industries (ASI) has been conducted since 1959 under the authority of the Collection of Statistics Act, 1953. In accordance with the provisions of the Collection of Statistics (Central) Rules, 1959 framed under the Act, it had been designed to obtain comprehensive and detailed data with the objectives of estimating the contribution of manufacturing industries as a whole to the national income by type of industry, systematic study of the structure of the industry by type of industry, occasional analysis of the various factors influencing industries in the country to facilitate the construction of comprehensive, factual and systematic bases for formulation of policy. A copy of the above Act and the Rules made there under is given in *Annexure – I*.

1.1.2 Coverage of the Annual Survey of Industries extends to the entire Factory Sector comprising industrial units (called factories) registered under the Sections 2(m)(i) and 2(m)(ii) of the Factories Act, 1948, wherein a 'Factory', which is the primary statistical unit of enumeration for the ASI, is defined as:

'Any premises' including the precincts thereof: -

(i) Wherein ten or more workers are working or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on with the aid of power or is ordinarily so carried on, or,

(ii) Wherein twenty or more workers are working or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on without the aid of power or is ordinarily so carried on, but does not include a mine subject to the operation of the Mines Act, 1952, or a railway running shed.

The 'manufacturing process' referred to above has been defined [vide Section 2(k)] in the Factories Act, 1948 as:

'Any process' for:

(i) making, altering, ornamenting, finishing, packing, oiling, washing, cleaning, breaking up, demolishing or otherwise treating or adapting any article or substance with a view to its use, sale, transport, delivery or disposal; or,

(ii) pumping oil, water or sewage ; or,

(iii) generating , transforming or transmitting power; or,

(iv) composing types for printing by letter press, lithography, photogravure or other similar process or book binding; or,

(v) constructing, reconstructing, repairing, refitting, finishing or breaking up ships or vessels; or,

(vi) preserving or storing any article in cold storage.

1.1.3 In addition to Sections 2(m)(i) & 2(m)(ii) of the Factories Act, 1948, bidi & cigar units, employing 10 or more workers with the aid of power and 20 or more workers without the aid of power and registered under the Bidi & Cigar Workers (Conditions of Employment) Act, 1966 are also covered in ASI.

1.1.4 Although the scope of the ASI was extended to all registered manufacturing establishments in the country, establishments under the control of the Defence Ministry, oil storage and distribution units, restaurants and cafes and technical training institutions not producing anything for sale or exchange were kept outside the coverage of the ASI. The Collection of Statistics Act, 1953, being not applicable to Jammu & Kashmir, factories in that state used to be covered under ASI on a voluntary basis till a similar State Act, called the Jammu & Kashmir Collection of Statistics Act, 1961 was enacted and the Collection of Statistics Rules, 1964 was framed thereunder making thereby the collection of statistics under the ASI also statutory in that state. The geographical coverage of the Annual Survey of Industries, 2009-2010 has been extended to the entire country.

1.2 Unit of Enumeration

1.2.1 The primary unit of enumeration in the survey is a factory in the case of manufacturing industries, a workshop in the case of repair services, an undertaking or a licensee in the case of electricity, gas and water supply undertakings and an establishment in the case of bidi and cigar industries. The owner of two or more establishments located in the same state and pertaining to the same industry group and belonging to census scheme only is, however, permitted to furnish a single consolidated return, termed as 'Joint Return'. Such consolidated returns are a common feature in the case of bidi and cigar establishments, electricity and certain public sector undertakings.

1.3 ASI Frame

1.3.1 The ASI frame is based on the lists of registered factory / units maintained by the Chief Inspector of Factories (CIF) in each state and those maintained by registration authorities in respect of bidi and cigar establishments and electricity undertakings. The frame is being revised and updated periodically by the Regional Offices of the Field Operations Division of NSSO in consultation with the Chief Inspector of Factories in the state. At the time of revision, the names of the de-registered factories are removed from the ASI frame and those of the newly registered factories are added. In updation, only new registrations are added to the existing frame. In spite of regular updating of the frame, quite a number of small-sized factories selected for the survey are found to be non-existing in the field and are termed as deleted factories. However, such factories are not taken into consideration for the purpose of tabulation and analysis in this report.

1.3.2 All electricity undertakings other than captive units as well as all departmental undertakings such as Railway workshops, etc. have been kept outside the purview of ASI from 1999-2000.

1.4 Reference Period

1.4.1 Reference period for ASI 2009-2010 was the accounting year of the factory, ending on any day during the fiscal year 2009-2010. Thus in ASI 2009-2010, data collected from respective establishment relate to their accounting year ended on any day between 1st April 2009 and 31st March 2010. Survey was conducted in the year 2010-2011 (October 2010 to April 2011).

1.5 Sample Design and Sample Allocation

1.5.1 As per the decision taken by the Standing Committee on Industrial Statistics (SCIS), a new sampling design has been adopted since ASI 2007-08. Accordingly, for ASI 2009-2010, the Census Sector has been defined as follows:

- a) All industrial units belonging to the six less industrially developed states/ UT's viz. Manipur, Meghalaya, Nagaland, Sikkim, Tripura and Andaman & Nicobar Islands.
- b) For the rest of the twenty-six states/ UT's., (i) units having 100 or more workers, and (ii) all factories covered under Joint Returns.

1.5.2 Strata (State by 4-digit of NIC-08) having less than or equal to four units after selecting the Census Sector units as defined above are also selected as census sector.

1.5.3 From the remaining frame, samples are drawn considering a uniform sampling fraction of 19% for the states within a State X 4-digit NIC with a minimum of 4 units evenly distributed in two sub-samples.

1.6 Estimation Procedure

1.6.1 The sample design and procedures for estimation of the characteristics are shown in *Annexure-II* along with the number of units surveyed in ASI 2009-10 separately for the census sector and sample sector of each state and UT. The different concepts and definitions used in ASI survey are given in *Annexure-III*.

1.6.2 For some selected units, it is found during the survey that the unit existed in the given location and had engaged some employees during the reference period, but could not initiate production or did not produce anything during the reference period due to various reasons, and can take up production any moment once the problems are sorted out. These units, for the purpose of the survey, are considered as *closed units* and similarly placed with other surveyed units in respect of all parameters, such as, assets, employment, etc. There are some other units which existed in the given location, but did not engage any employee during the reference period, and also, did not initiate production or produce anything during the reference period. These units, for the purpose of ASI, are considered as *non-operative units* and termed as NOP cases, during the reference period. Moreover, as a matter of practice, these units are maintained in the frame for consecutive three years and are meant for selection for survey with the consideration that these units might start production any time employing some workers. In case, however, any such unit is found to be *non-operative* for consecutive three years, it is assumed to be dead and marked deleted from the frame and thus, from the survey. Important to note that in providing the estimated number of units (factories) for the reference period, these units are not included.

Whereas other variables like their assets, output, etc. of the NOP units are included in the usual manner in estimating the parameters presented in this report.

1.6.3 The results presented in the publications are based on the central sample data collected by the FOD, NSSO and processed by the CSO (IS Wing). Moreover, all the estimated value figures given in this publication are reported in current prices. The value figures are generally rounded off to thousand rupees or lakhs of rupees. All India figures are rounded off separately and may not tally with the sum of State/UT's figures. Similarly, all-Industry figures may not tally with the sum of individual industry figures. Also the industry-wise totals at lower level may not tally with the next higher level due to necessary merging at different levels.

1.7 Schedule of Enquiry

1.7.1 The schedule for ASI 2009-2010 has two parts. Part-I which is processed at the CSO (IS Wing), Kolkata, aims to collect data on assets and liabilities, employment and labour cost, receipts, expenses, input items – indigenous and imported, products and by-products, distributive expenses etc. Part-II, processed by the Labour Bureau, aims to collect data on different aspects of labour statistics, namely, working days, mandays worked, absenteeism, labour turnover, man-hours worked, earning and social security benefits. A copy of the Part-I of ASI 2009-2010 schedule is given as *Annexure –IV*.

1.8 Classification of Industries

1.8.1 The NIC-1970 was followed to classify economic activities of the factories from ASI 1973-74 to ASI 1988-89. NIC- 1987 had then been introduced and followed till ASI 1997-98. NIC-1998 was then followed from ASI 1998-99 to ASI 2003-04. From ASI 2004-05, the new series of classification, i.e., NIC-2004 has been introduced and the same has been used till ASI 2007-08. From ASI 2008-09, NIC- 2008 has been introduced. It classifies all the factories in the ASI frame in their appropriate industry groups on the basis of the principal product manufactured. This way a unit gets classified in one and only one industry group even though it might be manufacturing products belonging to different industries. The estimates for different aggregates presented in this report at two or three or four digit level of industry correspond to the NIC-2008 classification.

1.9 Publications and Limitations

1.9.1 For ASI 2009-2010, the results are released at 4-digit level of NIC-2008 by All-India and at 2/3-digit level of NIC-2008 by states /UT's. The list of 3/4-digit level of NIC-2008 codes along with descriptions is given in *Annexure-V*. While Volume-I contains tables related to capitals and value added, employment and labour cost, fuels consumed etc., Volume-II contains NIC by state-wise materials consumed as well as products & by-products generated by the factories. These input/output items are classified as per Annual Survey of Industries Commodity Classification (ASICC), 2009.

1.9.2 The Collection of Statistics Act prohibits disclosure of data relating to individual factories. Therefore, if the number of factories under any industry (3-digit level of NIC-2008) in a state is less than three, the data have been combined to a similar industry in order to conceal the identity of all such units belonging to the concerned stratum. Similarly, if number of units under

any 4-digit level of NIC at All-India level is less than three, the industry has been merged to a similar industry under the same broad industry group. A list of such merged industries is given in *Annexure –VI*.

1.9.3 All the estimates, especially for quantity and value figures for any particular item consumed and produced, are subject to Statistical Error as these are estimated on the basis of a selected sample. The consumptions and productions are not estimated separately for those items for which the number of observations is insufficient. They have been reported under 'others' as the estimates for those items may not be proper.

1.9.4 As per tabulation policy it has been decided to publish the detailed information corresponding to industry codes 01 to 33, 38 and 58 following NIC-2008. For all other industry codes the units have been clubbed and shown under a common industry '**Other**' in different tables.

1.9.5 Another important point may also be noted that the rates and ratios of some parameters presented in this report at the disaggregate level, particularly for the smaller states and UTs cross classified by 2/3/4-digit level of activity classification, are subject to the limitation of small sample and thus, the user may cautiously interpret the changes of these parameters over time.

Section 2

Main Findings

2.1 Introduction

2.1.1 The fieldwork for Annual Survey of Industries (ASI): 2009-10 was carried out during 2010-11. The survey covered entire country. Three broad sectors of economic activity viz. Manufacturing; Electricity, Gas & Water Supply; and Other Activities including cotton ginning, cleaning & bailing, extract of salt and some repair services were under the coverage. This volume contains main findings of ASI 2009-10 and certain key tables based on the survey.

2.2 Sample Size

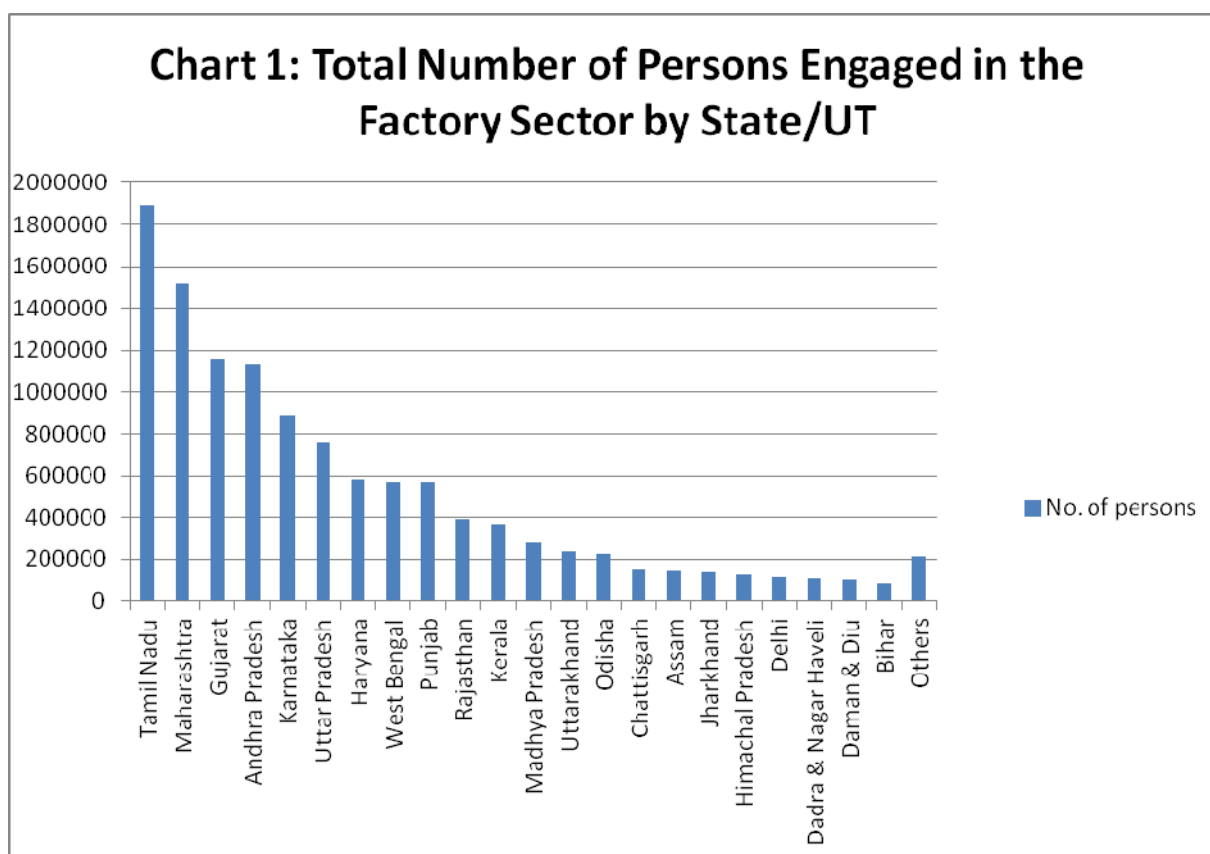

2.2.1 From the frame of 208,416 factories considering all the States/UTs under the coverage, 61,080 factories were selected for the survey. However, 58,150 factories were ultimately surveyed. State/UT wise details of number of factories in the frame, number of factories selected and number of factories surveyed are given in **Statement 0**.

2.3 Main Findings

2.3.1 Aggregates for Key Characteristics by State/UT

2.3.1.1 **Statement 2.1a** gives estimates of aggregates for some key characteristics by State/UT for all economic activities taken together while **Statement 2.1b** presents the same for the manufacturing sector only, which had a share of about 93.9% in total number of estimated factories found to be operating in the country and a share of about 95.4% in the aggregate Net Value Added (NVA) by such factories. Considering all economic activities, estimated total number of factories in operation as per ASI 2009-10 was 158,877 which engaged about 117.92 lakh persons. Total value of output was worth Rs. 37.33 lakh crores and total Gross Value Added (GVA) was worth Rs. 6.97 lakh crores. So far as manufacturing sector is concerned, an estimated number of 149,130 factories were under operation in this sector. The sector engaged nearly 114.09 lakh persons and it had contributed worth Rs. 35.66 lakh crores of output to the Indian economy and Rs. 6.60 lakh crores as GVA.

2.3.2 In each of the above two statements, States/UTs have been arranged in descending order of their percentage share in aggregate GVA. **Chart 1** shows graphically the relative position of various States/UTs as per total persons engaged in the factories. The top five States were Tamil Nadu, Maharashtra, Gujarat, Andhra Pradesh and Karnataka respectively engaging about 18.9 lakh, 15.1 lakh, 11.6 lakh, 11.3 lakh and 8.9 lakh persons. These five States together had engaged more than half (55.8%) of total manpower engaged by the factory sector of the country. The same five States were also the major ones in terms of their percentage shares in aggregate GVA (see **Statement 2.1a**) – although their relative positions were different. Maharashtra topped in terms of its percentage share (19.4%) in aggregate GVA, which was followed by Gujarat (15.5%), Tamil Nadu (10.3%), Andhra Pradesh (7.1%), and Karnataka (6.2%).

2.4 Aggregates for Key Characteristics by NIC 2-Digit

2.4.1 Out of 28 industries in terms of National Industrial Classification (NIC) 2-digit codes under the coverage of the survey, major employment providing industries were Food Products (12%), Textiles (12%), Basic Metals (8%), Wearing Apparel (7%), Other Non-Metallic Mineral Products (7%), Motor Vehicles, Trailers & Semi-Trailers (5%), Chemicals & Chemical Products (5%), Machinery & Equipment Not Elsewhere Classified (5%), Fabricated Metal Products Except Machinery & Equipment (5%), Rubber & Plastic Products (4%), Electrical Equipment (4%), and Tobacco Products (3%) where figures within brackets denote percentage share of the manufacturing industry in total number of persons engaged by the factory sector (see **Statement 2.2 & Chart 2**).

2.4.2 Top six industries in terms of their percentage share in aggregate GVA were Basic Metals, Coke and Refined Petroleum Products, Chemicals and Chemical Products, Other Non-Metallic Mineral Products, Machinery and Equipment Not Elsewhere Classified, and Food Products. They respectively had share of about 13.0%, 10.1%, 9.2%, 6.6%, 6.4% and 6.2% in aggregate GVA (Statement 2.2). **Chart 3** shows relative position of top 10 industries in respect of their percentage shares in aggregate GVA.

Chart 2: Percentage Share of Major Industries in Total Number of Persons Engaged in the Factory Sector

Chart 3: Percentage Share of Major Industries in Aggregate GVA by the Factory Sector

2.5 Structural Ratios by State/UT and NIC 2-Digit

2.5.1 **Statement 2.3a** gives some structural ratios by State/UT for all activities/sectors taken together while **Statement 2.3b** gives the same in respect of manufacturing sector only. For all activities together, average values of gross output per factory, NVA per factory, number of employees per factory and wages per worker were Rs. 2,350 lakh, Rs. 373 lakh, 74 and Rs. 75,281 respectively. Similar values in respect of manufacturing sector were little higher and the same being Rs. 2,391 lakh, Rs. 379 lakh, 77 and Rs. 75,634 respectively. Structural ratios by NIC 2-digit are given in **Statement 2.4**. For each of the above four structural ratios, minimum value and maximum value along with the names of corresponding State/UT/Industry and also the average values are summarized below **Statement A** below:

Statement A: Selected structural ratios: Their minimum, maximum and average values

2.6 Selected Characteristics by Employment Range of the Factory

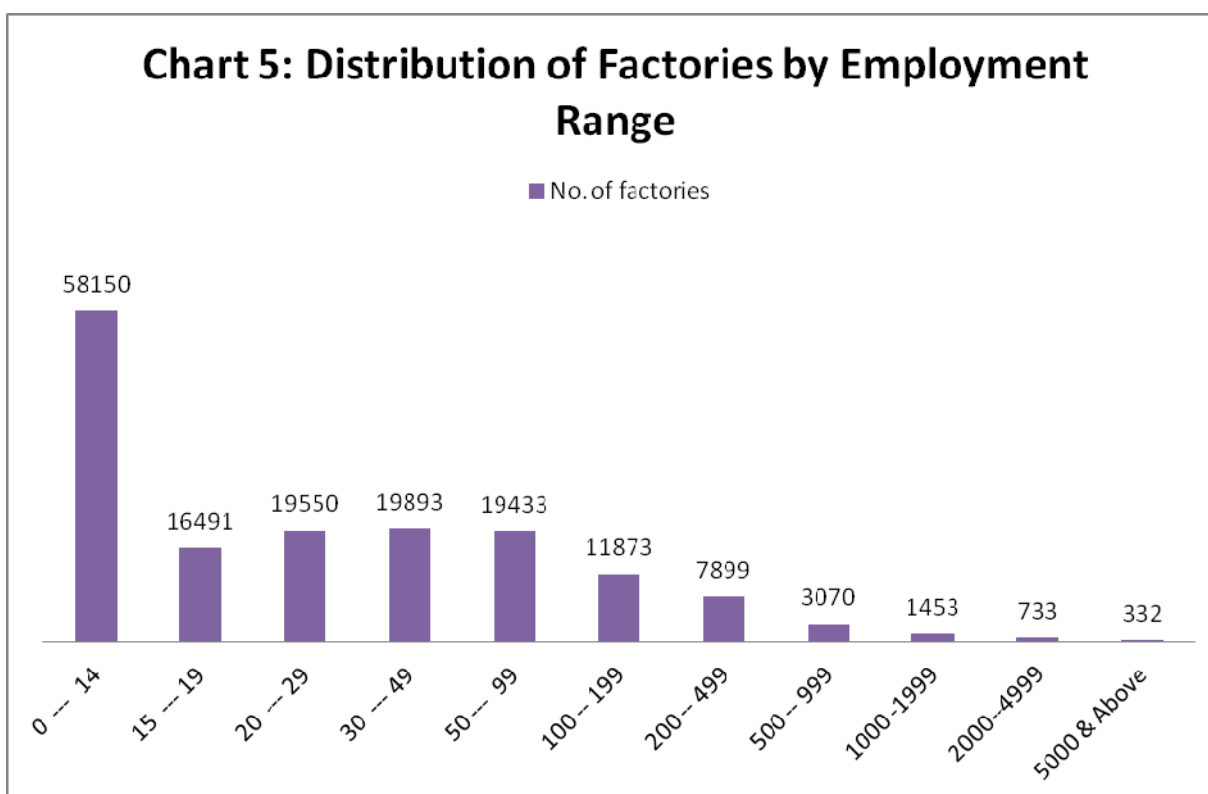

2.6.1 It would be of interest to study the relative contributions of various employment size classes of the factories with regard to some selected characteristics. These have been presented in Statements **2.5a, 2.5b, 2.6a and 2.6b**. The former two statements (say, first set) deal with all activities/sectors taken together while the latter two (set two) deals with the factories belonging to the manufacturing sector only. Under each set, the first statement presents the aggregate values of the characteristics for each employment range, the second statement gives percentage share of a given employment range in total value of the aggregate for each characteristic. For all activities taken together, from Statement 2.5b it may be seen that more than one-thirds (36.6%) of the factories had employed 14 or less persons although their share in aggregate GVA was very nominal (1.9%). On the contrary, there were some factories with employment of 5,000 and above (0.2% of total number of factories) with a substantial share (13.9%) in aggregate GVA. Findings in respect of a few broad employment ranges of factories are summarized in **Statement B. Chart 4** depicts percentage distribution of factories by seven employment ranges while **Chart 5** shows distribution of total number of factories by more detailed (eleven in number) employment ranges.

Statement B: Percentage shares of a few broad employment ranges of factories in overall aggregate for three selected characteristics

Employment Range	All sectors/activities combined			Manufacturing sector only		
	Number of factories	Total persons engaged	Aggregate GVA	Number of factories	Total persons engaged	Aggregate GVA

Chart 4: Percentage Distribution of Factories by Employment Range

2.7 State/UT wise distribution of factories by size of employment

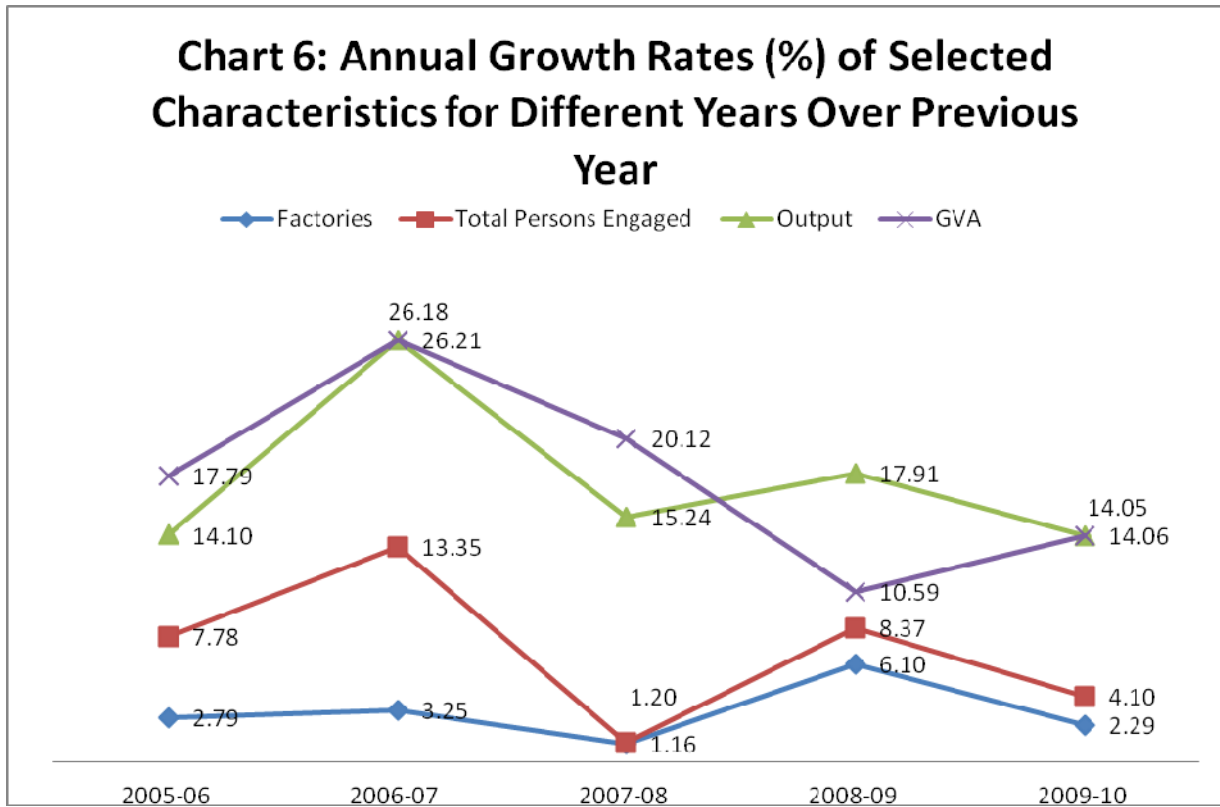

2.7.1 **Statement 2.7a** presents distribution of state-wise total number of factories by size classes of employment for manufacturing sector. The corresponding percentage distribution is given in **Statement 2.7b**. **Statements 2.8a** and **2.8b** are the corresponding statements for all activities/sectors taken together. Considering the entire factory sector (see Statement 2.8b), as high as 59.3% of the factories had engaged less than 30 persons while 1.6% of the factories had engaged at least 1000 workers.

2.7.2 At the national level, more than one-thirds (36.6%) of the factories engaged 14 or less number of persons. In this lowest size class of employment, Sikkim had the least proportion of factories (15.2%) whereas Nagaland had the highest proportion (61.1%) of factories. 2.8 Observed growths for the last five years

2.8.1 Observed annual growth rates of selected characteristics for the last five years i.e. 2005-06 to 2009-10 over the corresponding previous year for the entire factory sector are given in **Statement 2.9a**. The corresponding growth rates for manufacturing sector are indicated in **Statement 2.9b**. As may be seen from Statement 2.9a, during 2009-10, total number of factories grew by 2.3% with the resulting increase in growth rates of 4.1% in total number of persons engaged, 14.1% in total value of output, and

14.1% in aggregate GVA. **Chart 6** below depicts the annual growth rates in total number of factories, total number of persons engaged, total value of output and aggregate GVA for the entire factory sector.

SAMPLE DESIGN AND ESTIMATION PROCEDURE

1. As stated in Section 1 of this publication, FOD, NSSO collects the data for central sample units, and the data so collected are validated, processed, tabulated and published by the CSO (IS Wing). For selection of central sample units, all the factories in the frame are divided into two categories, viz., Census Sector and Sample Sector.

2. **Census Sector:** Census Sector consists of the following units:

a) All industrial units belonging to the six less industrially developed states/ UT's viz. Manipur, Meghalaya, Nagaland, Sikkim, Tripura and Andaman & Nicobar Islands.

b) For the rest of the twenty-six states/ UT's., (i) units having 100 or more workers, and (ii) all factories covered under Joint Returns.

c) After excluding the Census Sector units as defined above, all units belonging to the strata (*State by 4-digit of NIC-08*) having less than or equal to 4 units are also considered as Census Sector units.

3. **Sample Sector:** From the remaining units excluding those of Census Sector, called the sample sector, samples are drawn circular systematically considering sampling fraction of 19% within each stratum (*State X 4-digit NIC*) for all the states. An even number of units with a minimum of 4 are selected and evenly distributed in two sub-samples. The sectors considered here are Biri, Manufacturing and Electricity.

4. **Estimation Procedure**

4.1 **Notations:**

i = subscript for i -th state

s = subscript for s -th stratum in the i -th state

m = subscript for sub-sample ($m = 1, 2$)

k = subscript for k -th sample enterprise under a particular stratum

E = total number of factory **in the sample sector** in a stratum

e = number of factories surveyed out of total number of factory **in the sample sector** in a stratum

x, y = observed value of characteristics x, y under estimation

\hat{X}, \hat{Y} = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

Y_{ismk} = observed value of the characteristic y for the k -th enterprise belonging to the m -th sub-sample for the s -th stratum in the i -th state.

(a) Formulae for estimation of aggregates for a state based on central sample:

Estimation formula for any characteristics of the enterprise **for the sample sector** of the i-th state is:

$$\hat{Y}'_i = \sum_{s=1} \left[\frac{E_{is}}{e_{is}} \left[\sum_{k=1}^{e_{is1}} y_{is1k} + \sum_{k=1}^{e_{is2}} y_{is2k} \right] \right] \dots\dots\dots (1)$$

The formula for corresponding sub-sample wise estimates **for the sample sector** of the i-th state is:

$$\hat{Y}'_{im} = \sum_{s=1} \left[\frac{E_{is}}{e_{ism}} \sum_{k=1}^{e_{ism}} y_{ismk} \right], m=1,2. \dots\dots\dots (1.1)$$

If \hat{Y}''_i be the corresponding estimate for that characteristic of the enterprise **for the census sector** of the i-th state, then the estimate for that characteristic of the enterprise for the i-th state **as a whole** is given by:

$$\hat{Y}_i = \hat{Y}'_i + \hat{Y}''_i \dots\dots\dots (2)$$

The estimate of the characteristic of the enterprise for all-India will be:

$$\hat{Y} = \sum_i \hat{Y}_i \dots\dots\dots (3)$$

4.2 Estimates of Ratios:

Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics y and x, respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

4.3 Estimates of Error for Aggregate \hat{Y} : The variance is to be obtained for the sample sector units only. The estimated variances of the estimates at state level will be as follows:

$$V\hat{a}r(\hat{Y}_i) = \sum_s V\hat{a}r(\hat{Y}_{is}) \dots\dots\dots (4)$$

where $V\hat{a}r(\hat{Y}_{is})$ is given as below:

$$V\hat{a}r(\hat{Y}_{is}) = \left\{ (\hat{Y}_{is1} - \hat{Y}_{is2}) / 2 \right\}^2 \dots\dots\dots (5)$$

For all-India, the estimated variances of the estimates will be as follows:

$$V\hat{a}r(\hat{Y}) = \sum_i V\hat{a}r(\hat{Y}_i) \dots\dots\dots (6)$$

4.4 **For ratio \hat{R} :**

For \hat{R} at all-India,

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} [\hat{V}(\hat{Y}) - 2\hat{R}Co\hat{v}(\hat{X}, \hat{Y}) + \hat{R}^2\hat{V}(\hat{X})] \dots\dots\dots (7)$$

For \hat{R} at state level,

$$M\hat{S}E(\hat{R}_i) = \frac{1}{(\hat{X}_i)^2} [\hat{V}(\hat{Y}_i) - 2\hat{R}_iCo\hat{v}(\hat{X}_i, \hat{Y}_i) + \hat{R}_i^2\hat{V}(\hat{X}_i)] \dots\dots (8)$$

4.5 **Estimates of RSE:**

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100 \dots\dots\dots (9)$$

$$M\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100 \dots\dots\dots (10)$$

4.6 **Multipliers for enterprises:**

The formulae for multipliers for a stratum are given below:

formula for sub-sample wise multiplier	formula for combined sample multiplier
$\frac{E_{is}}{e_{ism}}, i= 1 \text{ or } 2.$	$\frac{E_{is}}{e_{is}}$

4.7 **Treatment for surveyed cases and casualty cases:**

4.7.1 While counting the number of units surveyed (e_{ism}) in the m-th sub-sample of a stratum, all the units with survey codes 1 to 15 in Item 12, Block A will be considered.

4.7.2 *Casualty cases:* Units with survey codes 7-10 and 15 as per Item 12, Block A are treated as casualties.

4.8 **Treatment in cases of void strata:**

4.8.1 A stratum may be void because of the casualty of all the units belonging to the stratum. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then estimate for the void stratum may be replaced with the estimate as obtained from the other sub-sample for the same stratum.

4.8.2 When a stratum is void in both the sub-samples, the following procedure is recommended:

Case (I): Census sector is void, but sample sector is not void:

i) Information in respect of all the characteristics may be borrowed from the previous year, if available, for the census sector units belonging to that stratum. In case the information is available for some, then an adjustment factor is to be obtained for the census sector units for which information is not available. For example, if information is available for n units out of N in the census sector in a particular stratum, then the appropriate adjustment factor would be (N/n) .

Case (II): Sample sector is void, but Census sector is not void:

ii) The estimated figures in respect of all the characteristics obtained for the census sector may be assumed to hold good for each of the units in the sample sector and accordingly, the estimate for the sample sector may be obtained. For example, if there are n units in the sample sector in a particular stratum, then the estimated figure per census units (i.e., average figures) for a characteristic will be multiplied by n to obtain the estimate for the sample sector in that stratum.

Case (III): Both the Sample sector and Census sector are void:

iii) The stratum may be merged with the nearest stratum looking into the description of the 4-digit NIC activity, or else it could be merged with the 4-digit NIC activity 'others' within that 4-digit NIC group.

Concepts, Definitions and Procedures

Important concepts and definitions used in ASI are explained below.

1. A number of accounting, economic and other terms related to the factories are used in conduct of Annual Survey of Industries. For proper assessment and interpretation of ASI data, those are given below.

2. **Accounting Year:** For the purpose of ASI, the accounting year is the period on which the factory closes its books of account. With the enactment of Income Tax Act, by and large, the accounting year of all factories is from April to March.

3. **Reference Period:** It corresponds to the financial year. For example, for ASI 2009-2010 the reference period is the financial year commencing from 1st April 2009 and ending on 31st March 2010 or the accounting year of the factory ending on any date between 1.4.09 to 31.3.10.

4. **Survey Period:** Survey period is a period during which work of any Annual Survey of Industries is undertaken. Since ASI 1978-79 the survey period has been fixed from 1st July to 30th June of the next year. From ASI 1998-99 the survey period has been changed from 12 months to 4 months i.e. from Nov'99 to Feb'2000. The survey period for ASI 99-00 has been again changed from October to March. The survey period for ASI 2009-2010 is from Sept. 2010 to April, 2011.

5. **Factory (as per the Factory Act 1948):** Factory is one, which is registered under Sections 2m(i) and 2m(ii) of the Factories Act, 1948. The Sections 2m(i) and 2m(ii) refer to any premises including the precinct thereof (i) wherein ten or more workers are working, or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on with the aid of power, or is ordinarily so carried on, or (ii) wherein twenty or more workers are working, or were working on any day of the preceding twelve months and in any part of which a manufacturing process is being carried on without the aid of power, or is ordinarily so carried on. Closed factories with fixed assets on site are also considered as registered factories till they are de-registered and removed from the live-register maintained by the Chief Inspector of Factories (CIF) in the State.

6. **Manufacturing Process:** This is as per Section 2(k) of the Factories Act, 1948, and briefly mentioned in Section 1.

7. **Gross Value of Plant and Machinery:** Gross value of plant and machinery represents the total original (un-depreciated) value of installed plant and machinery as at the end of the accounting year. It includes the book value of own constructed plant and machinery, if installed, and the approximate value of rented-in plant and machinery as at the time of renting in but excludes the value of rented-out plant and machinery. Total value of all the plant and machinery acquired on hire-purchase basis is also included. Thus it represents the gross value of plant and machinery engaged in production process.

8. **Fixed Capital:** Fixed Capital represents the depreciated value of fixed assets owned by the factory as on the closing day of the accounting year. Fixed assets are those, which have normal productive life of more than one year. Fixed capital covers all type of assets, new or used or own constructed, deployed for productions, transportation, living or recreational facilities, hospitals, schools, etc. for factory personnel. It would include land, building, plant and machinery, transport equipment etc. It includes the fixed assets of the head office allocable to the factory and also the full value of assets taken on hire-purchase basis (Whether fully paid or not) excluding interest element. It excludes intangible assets and assets solely used for post-manufacturing activities such as, sale, storage, distribution, etc.

9. **Depreciation:** Depreciation is consumption of fixed capital by the factory due to wear and tear and obsolescence during the accounting year and is taken as provided by the factory owner, or if not provided by the factory this is estimated on the basis of cost of installation and working life of the fixed assets.

10. **Finished Goods:** Finished Goods are those, which are manufactured by the factory for sale. Finished goods should conform to a prescribed standard.

11. **Physical Working Capital:** This is defined to include all physical inventories owned, held or controlled by the factory as on the closing day of the accounting year such as the materials, fuels and lubricants, stores, etc. that enter into products manufactured by the factory itself or supplied by the factory to others for processing. Physical working capital also includes the value of stock of materials, fuels and stores etc. purchased expressly for re-sale, semi-finished goods and goods-in-process on account of others and goods made by the factory which are ready for sale at the end of the accounting year. However, it does not include the stock of the materials, fuels, stores, etc. supplied by others to the factory for processing. Finished goods processed by others from raw materials supplied by the factory and held by them are included and finished goods processed by the factory from raw materials supplied by others, are excluded.

12. **Working Capital:** Working Capital is the sum total of the physical working capital as already defined above and the cash deposits in hand and at bank, land, the net balance of amounts receivable over amounts payable at the end of the accounting year. Amounts receivable include value of credit items on revenue account, such as sums due to the factory for goods sold, amounts advanced in connection with normal factory work, bills of exchange payable to the factory, payments made in advance such as for fire insurance, telephone charges, rates and taxes, call deposits and security deposits having a normal life of less than one year, etc. It excludes unused overdraft facility, fixed deposits irrespective of duration, advances for acquisition of fixed assets, long-term loans including interest thereon and investment.

13. **Invested Capital:** Invested capital is the total of fixed capital and physical working capital.

14. **Productive Capital:** This is the total of fixed capital and working capital.

15. **Outstanding Loans:** Outstanding loans represent all loans, whether short-term or long-term, whether interest bearing or not, outstanding according to the books of the factory as on the closing day of accounting year.

16. **Contract Worker:** All persons who are not employed directly by an employer but through the third agency, i.e. contractor, are termed as contract workers. Those workers may be employed with or without the knowledge of the principal employer.

17. **Employees:** Employees relate to all persons engaged by the factory whether for wages or not, in work connected directly or indirectly with the manufacturing process and include all administrative, technical and clerical staff as also labour in production of capital assets for factory's own use. This is inclusive of persons holding position of supervision or management or engaged in administrative office, store-keeping section and welfare section, watch and ward staff, sales department as also those engaged in the purchase of raw materials etc. and production of fixed assets for the factory. It also includes all working proprietors and their family members who are actively engaged in the work of the factory even without any pay and the unpaid members of the co-operative societies who work in or for the factory in any direct and productive capacity. Persons in the head office connected with the manufacturing activity of the factory are also included in this item.

18. **Labour Turnover:** Labour turnover measures the extent of change in the working force due to accession and separation during a given period. The term 'accession' was defined as the total number of workers added to employment during the period, whether new or re-employed or transferred from other establishments or units under the same management. Inter-departmental transfers within the same establishment are, however ignored. The term 'separation' implies termination of employment at the instance of worker or employers. It includes termination of services due to death or retirement. As in the case of accession, transfers to other establishments are included but transfers within the same establishment are ignored. Retrenchment as a result of rationalisation or modernisation or any other cause, is also treated as separation.

19. **Wages:** Wages are defined to include all remuneration capable of being expressed in monetary terms and also payable/paid more or less regularly in each pay period to workers (defined above) as compensation for work done during the accounting year. It **includes:**

(i) Direct wages and salary (i.e. basic wages/salaries, payment of overtime, dearness, compensatory, house rent and other allowances);

(ii) Remuneration for period not worked (i.e. basic wages), salaries and allowances payable for leave period, paid holidays, lay-off payments and compensation for unemployment (if not paid from source other than employers);

(iii) Bonus and ex-gratia payment paid both at regular and less frequent intervals (i.e., incentive bonuses and good attendance bonuses, production bonuses, profit sharing bonuses, festival or yearend bonuses etc.).

It **excludes** layoff payments and compensation for employment except where such payments are for this purpose, i.e., payments not made by the employer. It **excludes** employer's contribution to old age benefits and other social security charges, direct expenditure on maternity benefits and creches and other group benefit in kind and travelling and other expenditure incurred for business purposes and reimbursed by the employer. The wages are expressed in terms of gross value, i.e., before deductions for fines, damages, taxes, provident fund, employee's state insurance contribution etc. Benefits in kind (perquisites) of individual nature are only **included**.

20. Bonus: Profit sharing bonus, festival bonus, year-end bonus, and all other bonuses and ex-gratia payments paid at less frequent intervals are covered by this term.

21. Workmen and Staff Welfare Expenses: These include expenditure incurred by the employer on the maternity benefits and crèches and other benefits such as supply of food, beverages, tobacco, clothing and group lodging at concessional rates and educational, cultural and recreational facilities and services and grants to trade unions and cooperative stores meant for employees. All group benefits are included.

22. Emoluments: These are defined in the same way as wages but paid to all employees plus imputed value of benefits in kind i.e. the net cost to the employers on those goods and services provided to employees free of charge or at markedly reduced cost which are clearly and primarily of benefit to the employees as consumers. It includes profit sharing, festival and other bonuses and ex-gratia payments paid at less frequent intervals (i.e. other than bonus paid more or less regularly for each period). Benefits in kind include supplies or services rendered such as housing, medical, education and recreation facilities. Personal insurance, income tax, house rent allowance, conveyance etc. for payment by the factory also is included in the emoluments.

23. Supplements to Emoluments: These include: (i) employer's contribution to old age benefits, i.e., provident fund, pension, gratuity, etc.; (ii) employer's contribution towards other social security charges such as Employees' State Insurance, compensation for work injuries, occupational diseases, maternity benefits, retrenchment and lay-off benefits etc.; and (iii) group benefits like direct expenditure on maternity, creches, canteen facilities, educational, cultural and recreational facilities and grant to trade unions, co-operative stores etc. meant for employees.

24. Compensation of Employees: Compensation of employees is the total of emoluments and supplement to emoluments.

25. Mandays Worked: These are obtained by summing up the number of mandays worked by persons working in each shift over all the shifts on all days, i.e. both manufacturing and non-manufacturing days. This figure excludes persons who are paid but remain on leave, strike, etc.

26. Mandays Paid For: The number of mandays paid for is arrived at by summing up the number of employees paid for in each shift. This also includes mandays on weekly schedule holidays if paid for and those absences with pay as also mandays lost through lay off/ strike for which compensation was payable.

27. **Working Day:** Working day means the days on which a manufacturing process and/or repair or maintenance work was carried on.

28. **Non-working Day:** Apart from manufacturing day and repair and maintenance days there may be some non-working days. Non working days are those days on which the workers give their attendance but due to non-availability of raw materials power etc. no effective work is done. As the workers are paid for these days such days are also taken into account for the purpose of labour statistics.

29. **Basic Materials:** Basic materials are the materials which are important and of key nature to the industry on which the manufacturing process is based, viz. metal for machine, leather for shoe. Such material is not lost through the process of production but only changes its forms.

30. **Consumable Stores:** All such materials which assist the manufacturing process and lose their identity without entering the products are called consumable stores, e.g., cotton waste.

31. **Fuel Consumed:** Fuel Consumed represent total purchase value of all items of fuels, lubricants, electricity, water (purchased to make steam) etc. consumed by the factory during the accounting year except those which directly enter into products as materials consumed. It excludes that part of fuels, which is produced and consumed by the factory in manufacture i.e., all intermediate products and also fuels consumed by employees as part of amenities. It includes quantities acquired and consumed from allied concerns, their book value being taken as their purchase value and also the quantities consumed in production of machinery or other capital items for factory's own use.

32. **Materials Consumed:** Materials consumed represent the total delivered value of all items of raw materials, components, chemicals, packing materials and stores which actually entered into the production process of the factory during the accounting year. It also includes the cost of all the materials used in the production of fixed assets, including construction work for factory's own use. Components and accessories fitted as purchased with the finished product during the accounting year are also to be included. It excludes intermediate products. Intermediate products in the above context mean all those products which are produced by the factory and consumed for further manufacturing process.

33. **Total Input:** This comprises gross value of fuel materials etc. consumed (as defined above) and also other inputs viz. (a) cost of non-industrial services received from others (b) cost of materials consumed for repair and maintenance of factory's fixed assets including cost of work done by others to the factory's fixed assets (c) cost of contract and commission work done by others on materials supplied by the factory (d) cost of office supplies and products reported for sale during last year & used for further manufacture during the accounting year.

34. **Intermediate Product:** Intermediate Product is a product which is obtained during a manufacturing process, which may or may not be saleable and is not the intended final product.

35. **Net Value of Semi-Finished Goods:** It represents the excess/deficit of value of semi-finished goods and/or goods-in-process at the end of the accounting year over that at the beginning of year.

36. **Products:** These are defined to include the ex-factory value (i.e. exclusive of taxes, duties etc. on sale and inclusive of subsidies etc., if any) of all products and by-products, excluding intermediate products, that have been completed during the accounting year for sale whether actually sold during the accounting year or entered into books. Also include fixed assets produced by the factory for its own use.

37. **Gross Output:** Gross output is defined to include the ex-factory value, (i.e., exclusive of taxes, duties, etc. on sale and inclusive of subsidies etc., if any) of products and by-products manufactured during the accounting year, and the net value of the semi-finished goods, work-in-process, (represents the excess/deficit of value of semi-finished goods or work-in-process at the end of the accounting year over that of the beginning of the year plus net balance of semi-finished fixed assets on factory's capital account) and also the receipts for industrial and non-industrial services rendered to others, value of semi-finished goods of last year sold in the current year, sale value of goods sold in the same condition as purchased and value of electricity generated and sold. Value of gross output and total output has been used in the text interchangeable to mean the same thing.

38. **Industrial Services:** Any services taken or rendered from one to another unit resulting in increase in the value of material during the manufacturing process are industrial services.

39. **Non-Industrial Services:** All such services which do not have a direct bearing on the manufacturing process but are needed by any manufacturing unit are called non-industrial services, say, transport.

40. **Net Value Added:** This is the increment to the value of goods and services that is contributed by the factory and is obtained by deducting the value of total inputs and depreciation from gross value of output.

PREFACE

The Central Statistical Organisation of the Ministry of Statistics and Programme Implementation being nodal statistical authority is vested with the responsibility of setting up standards for collection, compilation and dissemination of statistical data. The official statistical data are required to be collected and presented according to classification designed to facilitate their use for national economic policy and for international comparison. Comparability of statistics available from various sources, on different aspects of the economy, and usability of such data for economic analysis are prerequisite for standardization of a system of classification.

2. The Central Statistical Organisation (CSO), which is responsible for coordination of statistical activities in the country as well as for evolving and maintaining statistical standards took up the task of evolving a standard industrial classification as early as in 1960 and evolved a Standard Industrial Classification (SIC) in 1962. To take care of the significant changes in the organization and structure of industries, the necessity to revise the industrial classification has been felt from time to time. With this objective, the CSO revised SIC 1962 in 1970 (NIC-70), NIC-1970 in 1987 (NIC-87) and NIC-87 in 1998 (NIC-98). It is during 1998, 4-digit of ISIC-3 was folded in toto in NIC-1998 and these 4-digits were extended up to 5-digits based on national needs. After release of the United Nations International Standard Industrial Classification (ISIC) - 2002 Rev. 3.1, NIC-1998 was updated keeping consistent with ISIC Rev 3.1 and the updated version, namely NIC-2004 was adopted.

3. The United National Statistical Commission considered the draft ISIC revision-4 during the 38th session of UNSC for adoption by all the member countries in the year 2008. The SCIS of the Ministry set up an expert committee under the Chairmanship of Dr. S.K. Nath, DG (CSO) on 20.07.2007. Three meetings of the Steering Committee were held on 26.11.2007, 13.5.2008, 05.09.2008 respectively and in the 3rd meeting the draft NIC 2008 was approved by the Committee CSO (IS Wing), Kolkata accomplished this task of revision NIC-2004 consistent with draft ISIC Revision-4 under the leadership of Shri P.C. Sarker, DDG.

4. I would like to place on record my appreciation for the efforts made by the officers of CSO (IS Wing) namely Shri Debasish Sarkar, Director, Shri G. Punjabi, Joint Director and Shri Soumya Chakraborty, Dy. Director, Shri Jhulan Kar, DDG, FOD (EZ). Smt. Mita Roy Chowdhary, DDG, DPD, Shri Atanushasan Basu, Director, SDRD deserve especial thanks for going into the details of the draft and making necessary changes. Shri Vijay Kumar, ADG of Economic Statistics Division of CSO was responsible for monitoring the entire work.

5. Improvement of classification and their updation is an on going task and I would urge the users to follow NIC-2008 extensively and send comments/observations based on the experience of use, which would go a long way to improve the future classification.

Part-I
Introduction

Introduction

1. A statistical system must be capable of measuring the contribution of all the economic activities towards the national wealth and be responsive to the needs of the planners to critically evaluate the steps necessary for planned development. Such measurements should also provide comparable estimates over time between regions and allow for corrective steps to achieve the goal of maximum benefit to the entire society. The official statistical data have to be collected and presented according to classifications designed to facilitate their use for national economic policy and for international comparison.

2. The National Industrial Classification (NIC) is an essential Statistical Standard for developing and maintaining comparable data base according to economic activities. Such classifications are frequently used in classifying the economically active population, statistics of industrial production and distribution, the different fields of labour statistics and other economic data such as national income. Comparability of statistics available from various sources, on different aspects of the economy, and usability of such data for economic analysis, are prerequisite for standardization of a system of classification.

International Scenario

3. The issue of standardization of industrial classification at the international level was deliberated in the First International Conference of Labour Statisticians (ICLS) as early as 1923, wherein International Labour Organisation (ILO) prepared a report summarizing the classifications in use in different countries and enunciating the principles concerning industrial classification. It recommended the classification of economic activity under three broad categories viz.,

- (I) primary production (agriculture and mining);
- (II) secondary production (manufacturing and construction) ; and
- (III) services (transport, commerce, administration, etc.)

4. The matter received further consideration at the Second (1925) and Third (1926) Conferences as a result of which a provisional list of the principal branches of economic activity was prepared mainly to help compilation of labour statistics in a comparable manner. The Committee of Statistical Experts of the League of Nations to whom the whole question was subsequently referred recommended in 1938 two lists of industrial groups – a minimum list and a more detailed list – for classification of the gainfully occupied population.

5. The Statistical Commission of the United Nations took up the question afresh and recommended an International Standard Industrial Classification (ISIC) of all Economic Activities. The classification was approved by the Economic and Social Council of the United Nations in 1948 for adoption by the various countries as a framework for rearranging national classifications to facilitate international comparability.

6. The ISIC was used both nationally and internationally in classifying activities according to the kind of economic activity in various fields. A number of countries had utilized ISIC, as

the basis for devising their own industrial activity classification. Substantial comparability had been attained between the Industrial Classifications of such countries and ISIC by ensuring, as far as practicable, that the categories at the detailed level of classification in the national schemes fitted into only one category of ISIC. The United Nations, the International Labour Organisation, the Food and Agriculture Organisation and other international bodies utilized ISIC in publishing and analyzing their statistical data.

7. The experience gained over time in the use of ISIC, revealed the need for periodic review of the structure and definition, of its categories and the underlying principles. Changes take place in the organization of economic activities and new types of economic activities become important. Continuing experience in the use of ISIC reveals aspects, which should be amplified, clarified or improved in other ways. The U.N. Statistical Commission, therefore, undertook a review and revision of ISIC in 1956, 1965 and again in 1979 leading to ISIC-1958 (Rev.1), ISIC – 1968(Rev.2), ISIC – 1990 (Rev.3) and ISIC-2002 Rev 3.1 systems. In each instance the Commission emphasized the need to maintain as much comparability between the revised and preceding versions of ISIC as was possible, while introducing the alterations, modifications and other improvements.

International Standard Industrial Classification (ISIC) Rev.4

8. There was a lot of change in the economic structure in many countries of the world. New technologies have emerged; new divisions of labour between organizations have created new types of activities and new forms of industries since the publication of ISIC Rev.3 in 1990 and its update ISIC 3.1 in 2002, at an unprecedented rate. In response to the growing demands of providers and users of data, the Expert Group on International Economic and Social Classifications, recommended revision of ISIC 3.1 be undertaken to better reflect changed structures and analytical requirements.

9. In this update to ISIC, Rev.4, the structure of the classification and the boundaries of its building blocks undergone lot of changes in respect of certain industries. Attention has been paid to providing explanatory notes in extended detail, allowing for more accurate interpretation of the content and boundaries of individual classes. New activities that have emerged over the previous 10 years are reflected in the new explanatory notes, allowing for easier, and more consistent and thus less ambiguous application of ISIC.

10. The definition of alternate aggregations including that of Informal Sector, for analytical use has been reviewed and updated. While some of the aggregations previously published in the ISIC manual have now been replaced by defined aggregations in other specialized frameworks, new needs for aggregations have emerged. The creation of an “Information sector” was requested by many countries in order to better reflect its importance for national economic activities related to the production and dissemination of information, as well as the interest of analysts in this evolving area. In order to minimize the impact of the creation of this new category, following requests by most countries to preserve the existing structure of ISIC while reflecting change of the economic reality, it was decided to create the information sector in an alternate structure. Experiences with the implementation and use of this alternate structure will be evaluated for inclusion in the regular structure of the classification in future revisions. The definition of an alternate aggregation for the informal sector is in pursuance of the need experienced by many countries to have an internationally agreed definition for data collection and analysis in this area, which is extremely important for a large number of countries.

Indian Scenario

11. In India, industrial classifications have for long been in use in the population census, industrial surveys, labour statistics, national income estimates, etc. However, a wide variety of industrial classifications were used by the various organizations entrusted with the task of collection of statistical data in various censuses, surveys etc. and the need to evolve a common industrial classification which could be used by different agencies became extremely urgent. While attempts were made in the past in several cases to bring them in line with the framework of the ISIC, these had produced different versions of different details depending on the nature of the respective needs.

12. The Central Statistical Organisation (CSO), which is responsible for setting up of statistical standards, took up the task of evolving a national industrial classification in early 1960 and invited suggestions from various concerned agencies of the Government of India such as Registrar General; Economic Advisers to the Ministries of Finance, Food & Agriculture, Commerce and Industry; Indian Bureau of Mines; National Employment Service; Labour Bureau; Planning Commission; National Sample Survey and Indian Statistical Institute etc. Taking into account the suggestions received and keeping in view the requirements, the CSO drew up a draft National Industrial Classification called Standard Industrial Classification (SIC), which was subsequently finalized and released in 1962. The SIC was 4-digit classification and consisted of 9 divisions, 55 major groups, 284 groups and 753 sub-groups. It followed the ISIC Rev.1 in its entirety at the division (1-digit) level with slight deviations at the major group (2-digit) level. At the group (3-digit) level, SIC retains all the groups of the ISIC and provides some more groups to give due recognition to the special features of the Indian economy. While the ISIC stops at the group level, the SIC attempts a lower level of classification in terms of sub-groups (4-digit) level so as to meet the national requirements adequately. The totals for the ISIC groups can be provided by suitable combination wherever necessary of two or more SIC groups / sub-groups.

13. Significant changes in the organisation and structure of the industries necessitated the revision of SIC 1962. The revised classification called National Industrial Classification (NIC) was completed in 1970 taking into account the principles enunciated in the International Standard Industrial Classification 1968 Rev.2. In the National Industrial Classification 1970 or NIC-1970, all the 3-digit categories were matched or made equivalent to, all the International Classification categories upto 4-digit level i.e. 4-digit classification of ISIC were encompassed in NIC 3-digits structure. There was one-to-one correspondence at 1 and 2 digit levels. The 4-digit level of NIC 1970 was primarily meant to meet the national requirements of various user organizations. To accommodate coverage at 3-digit level, the NIC 1970 had a special code structure stating with '0' instead of '1' as was in ISIC 1968, which gave a provision of allowing for an extra class at each level of classification in NIC. Two Divisions viz. 2&3 had been given to Manufacture instead of one in ISIC 1968. Two additional Divisions incorporated in NIC were *Division 'X', for Activities not Adequately Defined* and *Division 'Y' for Personal and Repair Services*.

14. The NIC 1970 while accepting the major features of ISIC-68, departed from the latter in regard to certain aspects. For example, "restaurants and hotels" was shifted from "services" to "trade" and a new first digit classification was formed by clubbing Banking, Insurance, Real Estate and Business Services. Moreover, in ISIC 1968 attempt had been made to classify enterprises in addition to establishments up to fourth digit of the classification. In NIC 1970 on

the other hand it was not found necessary to extend beyond the third digit level for classification of enterprise type units. The fourth digit extension in NIC 1970 was made for a different reason altogether, namely, the need for more details in classifying establishments. Another differential feature in the NIC 1970 was the possibility of inclusion of Repair Services under manufacturing instead of Household and Personal Services as was in ISIC. In fact, an option was provided in NIC 1970 to include Repair Services either in division 3 (manufacturing) or under division 9 according to convenience and requirement of users.

15. The first three levels (i.e. one-digit, two-digit and three-digit) of NIC 1970 witnessed expansion, whereas at the ultimate digit level there was a compression of categories. The NIC 1970 consists of 9 Divisions with 2 special Divisions X & Y; 64 Major groups; 383 Groups and 590 Sub-groups as compared to 9 Divisions, 55 Major Groups, 284 Groups and 753 Sub-groups of SIC-62.

16. There were significant changes in the structure of organization of industries resulting, inter alia, in substantial diversification and / or changes in the product-mix of the establishments as also in the technologies of operation during the period 1970 to 1987. In view of this, revision of NIC 1970 was included as one of the components of the CSO Plan Scheme on “Standardization of Classifications”. To implement the above plan scheme a Steering Committee under the Chairmanship of the then Director General, Central Statistical Organisation was constituted.

National Industrial Classification 1987

17. The CSO finalized in 1987 the revision of the NIC 1970 within the ambit of ISIC 1968 Rev.2, as there had been no corresponding revision in industrial classification in the international scenario. At the one digit level there had not been any major changes in the NIC 1987 as compared to the NIC 1970 and the economy remained divided into 9 sections and the special section X “Activities not Adequately Defined”. The activities relating to Repair Services, which were provided for in two places viz. Division Y and 9 (major group 97) of NIC 1970, had been placed only at Division 97 of NIC 1987, thereby dropping the special Division Y in the revised NIC. At the two digit level there had been an expansion of 8 divisions bringing it to 72 divisions as against 64 in NIC 1970. Of the eight additional two digit codes, three were in Mining and Quarrying Section, with one each in Manufacturing (Repair of Capital goods) and Electricity (Generation of non-conventional energy) Sections and the remaining three in the Section relating to Finance, Insurance, Real Estate and Business Services. Similarly, the three digit level categories were also increased to meet the requirement of more detailed activities, which had become important in the intervening period. Finally, in order to differentiate the scale and / or technologies of operation and also to take into account the product specialization, four digit classification appeared through out in NIC-1987; unlike in case of NIC-1970 where four digit classification was developed only for the sections dealing with mining and manufacturing. There was an expansion at the 3-digit level making a total of 461 as compared to 383 in NIC 1970. The number of four digit level categories in NIC 1987 was 918 as against 590 in NIC 1970.

18. With the advent of ISIC Rev.3 in 1990, at the international panorama to enfold the changes in the organization of economic activities on account of technological evolution and to capture the emergence of new activities especially in the services sector, since the last classification, it was exigent to review and revise NIC 1987.

National Industrial Classification – 1998

19. To accomplish the task of revising the NIC – 1987 consistent with the ISIC Rev.3, the CSO constituted a Steering Committee in November 1997, under the Chairmanship of Director General, CSO with the following terms of reference:

- (i) To examine ISIC Rev.3 to accommodate new activities, which need separate specifications.
- (ii) To examine the feedback material from the user organizations.
- (iii) To consider and finalise the draft chapters of classification.
- (iv) To prepare Concordance Tables between the revised and existing versions of the NIC as also between revised NIC and the ISIC.
- (v) To revise the Common Product Nomenclature (CPN) 1988, based on the revised NIC.

20. The Steering Committee had representatives from the various Central Ministries / Departments, Registrar General of India, State Governments, Reserve Bank of India and Federation of Indian Chambers of Commerce & Industry etc.

21. The Steering Committee, after having considered the issues involved in the revision of NIC 1987 decided on the broad framework for undertaking the revision. The following two principles were laid down by the Committee: -

- (a) To follow ISIC-1990 codes (alongwith nomenclature) in toto and extend them to 5-digit coding system in order to accommodate all NIC 1987 codes and also to meet national requirements to cover or delete emerging / obsolete activities.
- (b) Every 4/5 digit category of the NIC may be so structured that one or more sub-heading(s) of the HS (applicable only to transportable goods) can be assigned as a whole to only one such category in the NIC to the extent possible.

22. The Committee constituted five subject specific sub-groups to cover all sectors of the economy viz. (a) agriculture and allied activities (b) mining and quarrying (c) manufacturing (d) financial, insurance, real estate and business services (e) services sector (except financial services). Recognizing the experience gained by the user organizations in identification of new / emerging activities, the committee also decided to involve them in the subject specific sub-groups to undertake the revision of economic activities.

Salient Features of NIC-1998

23. The NIC-1998 is a classification of economic activities undertaken by the economic units. It does not draw the distinction according to the kind of ownership, type of legal organisation, type of technology and scale / mode of operation. This is because such criteria do not relate to the characteristics of the economic activity. Economic units engaged in the same or similar kind of economic activity are classified in the same category of the NIC, regardless of whether they are incorporated enterprises, individual proprietors or government, and whether or not the parent enterprise consists of more than one establishment. Similarly, manufacturing units are classified according to the principal kind of economic activity in which they engage, whether the work is performed by power-driven machinery or by hand, or whether it is done in a factory or in a household.

24. The NIC 1998 has followed the principles of ISIC Rev.3 and unlike in NIC 1987, the scale of operation / technology has not been used as a criteria for classifying certain activities in the manufacturing sector. To meet the national requirements at the 5-digit level, efforts have been to restrict categories in such a manner that the resultant activity does not become a product classification.

25. One of the significant features of the NIC 1998 is that apart from being identical with the ISIC Rev.3 in structure upto the 4-digit level, the appropriate four-digit categories of NIC-1987 and the national requirements have been incorporated at the five-digit level. For meeting the requirements of user organizations relating to disaggregated statistics the use of the additional information on type of organisation code alongwith NIC in identifying the frame and collection of data therefrom can be made.

26. Both the NIC-1970 and NIC-1987 had an entirely hierarchical system of categories arranged on a decimal coding system with four levels, which was similar to that of ISIC Rev.2. The coding structure of NIC-1998 is no longer the earlier 1+1+1+1 hierarchical system; it is now a 2+1+1+1 system identifying 99 categories at the 2-digit level of the classification. Further, at the primary level NIC-98 as in ISIC Rev. 3, makes use of the so-called concept of 'tabulation categories', which makes it possible to identify more than 9 broad categories of the economy. The new NIC has 17 such tabulation categories, 'A' through 'Q'. The new tabulation categories can easily be converted into one-digit major divisions of NIC 1987. This conversion can be done as follows:

27. New Sections A+B=0 (Old Div.); C=1, D=2 & 3; E=4; F=5; G=H=6; I=7; J+K=8; L to Q=9. The main exception is Research and Development activities, which have been now transferred from Section 9 (Community, Social and Personal Services) to the new section K (Real Estate, Renting and Business Activities).

28. The total number of tabulation categories in NIC-98 is 17. Each tabulation category consists of one or more Divisions, which are 60 in total. In turn, each Division has a provision for a maximum of 9 groups. There are a total of 159 Groups in the revised NIC. These Groups are further sub-divided into 292 Classes. The ultimate category at the 5-digit level is termed as Sub-class which is carved, mainly to meet the national requirements and to accommodate appropriate 4-digit categories of NIC 1987. The number of such sub-classes is 1021.

29. A new group growing of crops combined with farming of animals (mixed farming) has been introduced in Section-A relating to Agriculture, Hunting and Forestry. This kind of mixed farming occurs very often and creates considerable problems in classifying such units. Since the primary activity of the unit can easily change over the years, statistical time series would get disturbed. The creation of new group may prevent such inconveniences.

30. In the manufacturing Sections, the main changes introduced involve a much greater detail of classification. One new division has been created, in the manufacturing section i.e., division 37 Recycling, which is meant to include the transformation of unusable waste and scrap into usable waste and scrap by means of an industrial process. On the other hand, there has been compression of categories in the mining Section.

31. In the Construction Section a break down has been introduced according to broad categories carried out by general or special trade contractors engaged in construction of

buildings or civil engineering works. Also 'Site preparation' (class 4510) and 'Renting of construction or demolition equipment with operator' (class 4550) have been included.

32. In Section G relating to 'Wholesale and retail trade; repair of motor vehicles, motor cycles and personal and household goods', a separate division (50) for all activities related to motor vehicles and motorcycles and retail sale of automotive fuel has been introduced. This has been done because many of activities included there are often carried out in the same units, although in different combinations. A separate division (51) included all other wholesale, which is further sub-divided according to the goods sold. A separate group (511) within this division refers to all wholesale on a fee or contract basis (commission sales etc.). Another division (52) including other retail sale and repair of household goods has been carved which has been sub-divided at the group level according to the way goods are sold and at the class level mainly according to the goods that are sold.

33. A separate division (63) has been created in the 'Transport' Section to encompass all supporting and auxiliary transport activities regardless of the mode of transport they serve. This is contrary to the approach followed in NIC 1987, where these activities were included in the categories for each mode of transport. It has been experienced that many of these activities are performed by independent units that often work for different modes of transport, especially when more than one mode of transport is involved in a particular consignment.

34. The tabulation category J relating to 'Financial Intermediation' is more developed as compared to NIC 1987. The new approach reflects better recent developments in the Banking and Insurance Sector. Financial leasing is also included in this category.

35. In NIC 1987 renting and leasing activities were scattered. Since all renting and leasing activities are similar regardless of the goods rented or leased, such activities are now all combined in a new division (71) relating to 'Renting of machinery and equipment without operator and of personal and household goods'.

36. A new division (72) has been created for all computer related activities. It includes activities such as consultancy of hardware and software configurations, software supply, data processing and data base activities as well as repair and maintenance of (mostly smaller) computers and office machines. Much of this repair and maintenance is carried out by independent units with no relationship with the units that produce or trade these machines. Upgrading or updating of main frames is to be classified under manufacturing.

37. Research and development activities which were classified in NIC 1987 in Section 9 relating to 'Community, Social and Personal Services' have been transferred to Business activities (division 73). It includes basic and applied research in the fields of natural and social sciences.

38. Units that repair or overhaul capital goods are classified in the same class as the units that produce the goods. Three main exceptions exist to this rule; repair and maintenance of motor vehicles and motorcycles, which is classified in group 502 and 504, respectively; repair of personal and household goods, which is classified in group 526; and repair and maintenance of computers and office equipment, which is classified in class 7250.

39. Retail trade of goods produced in the same unit should not be considered as a separate activity. Such units should be classified in the manufacturing industry. If, however, in addition

to self-produced goods other products are also sold, classification should be done according to the principal activity of the unit. The secondary and ancillary activities may be disregarded when classifying a unit.

40. Activities carried out by government units that are specifically attributable to other areas of classification should be classified in the appropriate class of NIC and not in division 75 “Public administration and defence; compulsory social security”.

Statistical Unit and Rules of Classification

41. The basis of classification being the nature of economic activity carried out in an establishment it follows that the unit of classification is taken as the establishment. The term “establishment” is defined as an economic unit, which is engaged in one or predominantly one economic activity (as identified by the activity codes in NIC-98) at a single physical location under single ownership control of a firm or enterprise, which may have more than one establishment engaged in different activities at the same location or the same activities at different locations. Each establishment is to be counted separately and classified appropriately. Where a single physical establishment is engaged in one or more than one activity it would be desirable to treat each of the component technical units as a separate establishment but where it is not possible to separate technical, ancillary or welfare units from the parent establishment, the establishment will have to be classified into one or the other groups in the classification according to the major activities of the establishment. The major activities of the establishment should be measured with regard to the value added by production of different products and services or net revenue derived from various activities. Where such assessment is not possible, classification may be done in terms of gross revenue attributed to the products, or services of the establishments, the number of persons employed for various activities.

Conversion keys

42. For the purposes of maintaining international comparability of data and also to maintain the time series of the national data, it is necessary that the data compiled according to a classification is convertible to the corresponding international classification and also to the earlier version of the classification. As regards international comparability, there exists perfect one-to-one correspondence upto 4-digit level between NIC 1998 and ISIC Rev.3. To meet the requirement of convertibility with earlier version (i.e. NIC-87), two concordance tables have been prepared and appear as a part of this publication : a concordance table between 4-digit level of NIC-98 and three-digit level of NIC-87 and the other between 2-digit level of NIC-87 and appropriate level of NIC-1998. The former is meant to enable translating NIC-87 based data in terms of the 4-digit classes of NIC-98 while the latter is to enable conversion of the NIC-98 based data in terms of 2-digit codes of NIC-87.

43. The NIC-1998 was later updated in 2004 based on ISIC 3.1 and a few shadow classifications were introduced.

National Industrial Classification – 2008

44. National Industrial Classification 2008 (NIC-2008) is a revised version of NIC-2004. The 38th session of the UN Statistical Commission recommend that countries should make an effort either to adopt national versions of the ISIC, Revision 4, or to adjust their national classifications in such a way that data can be presented according to the categories of the ISIC,

Revision 4. Specifically, countries should be able to report data at the two-digit (division) level of the Classification without a loss of information; that is, national classifications should be fully compatible with this level of the ISIC, or it should be possible to arrange them.

45. India being a part of the UN Expert group on classification, decided to adopt ISIC-rev. 4 as a basis to build up revised version of its own activity classification, NIC-2004. The National Industrial Classification 2008 seeks to provide a basis for the standardized collection, analysis and dissemination of industry (economic activity) wise economic data for India. Apart from being the standard industrial classification, that underpins Indian Industrial Statistics, NIC is widely used by the government agencies, industry associations and researchers for various administrative, analytical and research purposes. The revised NIC-2008 provides a more contemporary industrial classification system. Changes in structure and composition of the economy, changing user requirements and comparability with international standards have been taken into account while developing NIC-2008.

46. The structural difference between NIC-2004 (based on ISIC-rev.3.1) and NIC-2008 (based on ISIC-rev. 4) is in grouping of activities since more emphasis on ‘relevance’ was considered.

47. All the activities are grouped into several “activity groups” or “tabulation categories” in a hierarchical manner. Activities are first grouped into ‘section’ alphabetically coded from A through U, every section is divided into ‘division’ with 2-digit numeric code, every division into ‘group’ with 3-digit numeric code, every group into ‘class’ with 4-digit numeric code and every 4-digit class into 5-digit ‘sub-class’. The structure is illustrated below.

Level	Description
Section C	Manufacturing
Division 13	Manufacture of textiles
Group 131	Spinning, weaving and finishing of textiles
Class 1311	Preparation and spinning of textile fibres
Sub-Class 13111	Preparation and spinning of cotton fibre including blended cotton

48. The structure of NIC-2008 is identical to the structure of ISIC Rev. 4 up to 4-digit level ‘class’. Classes were then divided into 5-digit ‘sub classes’ according to national requirements.

Salient features of NIC-2008

- The sections A to Q of NIC-2004 have been replaced by sections A to U in respect of NIC-2008. NIC-2008 has 21 sections, 88 divisions, 238 groups, 403 classes and 1304 sub-classes.
- NIC-2008 is comparable with ISIC Rev.4 till 4-digit classes in totality.
- The concept of shadow classes introduced in NIC-2004 has been done away with in NIC-2008 as the emphasis has been given on activity rather than type of operation and scale of operation.

- In NIC-2008 some of the 5-digit sub-classes of NIC-2004 have been made separate 4-digit classes e.g. ‘Growing of Sugarcane (01115)’, ‘Growing of tobacco (01114)’, ‘Growing of fibre crops (01113)’ & ‘Growing of flowers (01122)’.
- Repair and installation of machinery and equipment has been classified as a separate division (Division-33) in NIC-2008.
- Repair of Personal & Household goods (5260 of NIC-2004) has been removed from section-G (wholesale and retail trade; repair of motor vehicles and motor cycles) and now included in section-S (other service activities).
- Publishing activity which was included in division-22 of manufacturing section in NIC-2004 is now included in division-58 (publishing activities) of NIC-2008 under section-J (information and communication).
- Activity ‘water supply’ under division-41 (Electricity, Gas and Water Supply) of NIC-2004 is now included in Section-E (water supply; sewerage, waste management and remediation activities).
- Explanatory notes of ISIC Rev.4 at 1/2/3 – digit level have been incorporated in NIC-2008 as Annexure for better understanding of the revised classification.
- Under 4-digit classes of NIC-2008, inclusion and exclusion statements have been included in the detailed structure itself to remove ambiguity in the scope of classification and to facilitate the classification of economic activity distinctly.

Part-IV
Explanatory Notes
{NIC-2008}

A : AGRICULTURE, FORESTRY AND FISHING

This section includes the exploitation of vegetal and animal natural resources, comprising the activities of growing of crops, raising and breeding of animals, harvesting of timber and other plants, animals or animal products from a farm or their natural habitats.

01 Crop and animal production, hunting and related service activities

This division distinguishes two basic activities, production of crop products and production of animal products. This division includes the form of organic agriculture, as well as growing of genetically modified crops and raising of genetically modified animals.

Also included are service activities incidental to agriculture and hunting, trapping and related activities.

Group 015 (Mixed farming) breaks with the usual principles for identifying main activity. It accepts that many agricultural holdings have reasonably balanced crop and animal production and that it would be arbitrary to classify them in one category or the other.

Agricultural activity excludes any subsequent processing of the agricultural products (classified under divisions 10 and 11 (Manufacture of food products and beverages) and division 12 (Manufacture of tobacco products)), beyond that needed to prepare them for the primary markets. However, the preparation of products for the primary markets is included here.

The division excludes field construction (e.g. agricultural land terracing, drainage, preparing rice paddies etc.) classified in section F (Construction) and buyers and cooperative associations engaged in the marketing of farm products classified in section G.

Besides the production of timber, forestry activities result in products that undergo little processing, such as firewood, charcoal, wood chips and roundwood used in an unprocessed form (e.g. pit-props, pulpwood etc.). These activities can be carried out in natural or planted forests.

021 Silviculture and other forestry activities

022 Logging

023 Gathering of non-wood forest products

024 Support services to forestry

03 Fishing and aquaculture

This division includes capture fishery and aquaculture, covering the use of fishery resources from marine, brackish or freshwater environments, with the goal of capturing or gathering fish, crustaceans, molluscs and other marine organisms and products (e.g. aquatic plants, pearls, sponges etc).

Also included are activities that are normally integrated in the process of production for own account (e.g. seeding oysters for pearl production).

This division does not include building and repairing of ships and boats (3011, 3315) and sport or recreational fishing activities (9319). Processing of fish, crustaceans or molluscs is excluded, whether at land-based plants or on factory ships (1020).

This group includes “capture fishery”, i.e. the hunting, collecting and gathering activities directed at removing or collecting live wild aquatic organisms (predominantly fish, molluscs and crustaceans) including plants from the oceanic, coastal or inland waters for human consumption and other purposes by hand or more usually by various types of fishing gear such as nets, lines and stationary traps. Such activities can be conducted on the intertidal shoreline (e.g. collection of molluscs such as mussels and oysters) or shore based netting, or from home-made dugouts or more commonly using commercially made boats in inshore, coastal waters or offshore waters. Unlike in aquaculture (group 032), the aquatic resource being captured is usually common property resource irrespective of whether the harvest from this resource is undertaken with or without exploitation rights. Such activities also include fishing restocked water bodies.

032 Aquaculture

This group includes “aquaculture” (or aqua farming), i.e. the production process involving the culturing or farming (including harvesting) of aquatic organisms (fish, molluscs, crustaceans, plants, crocodiles, alligators and amphibians) using techniques designed to increase the production of the organisms in question beyond the natural capacity of the environment (for example regular stocking, feeding and protection from predators).

Culturing/farming refers to the rearing up to their juvenile and/or adult phase under captive conditions of the above organisms. In addition, “aquaculture” also encompasses individual, corporate or state ownership of the individual organisms throughout the rearing or culture stage, up to and including harvesting.

B: MINING AND QUARRYING

Mining and quarrying include the extraction of minerals occurring naturally as solids (coal and ores), liquids (petroleum) or gases (natural gas). Extraction can be achieved by different methods such as underground or surface mining, well operation, seabed mining etc.

This section includes supplementary activities aimed at preparing the crude materials for marketing, for example, crushing, grinding, cleaning, drying, sorting, concentrating ores, liquefaction of natural gas and agglomeration of solid fuels. These operations are often accomplished by the units that extracted the resource and/or others located nearby. Mining activities are classified into divisions, groups and classes on the basis of the principal mineral produced. Divisions 05, 06 are concerned with mining and quarrying of fossil fuels (coal, lignite, petroleum, gas); divisions 07, 08 concern metal ores, various minerals and quarry products.

Some of the technical operations of this section, particularly related to the extraction of hydrocarbons, may also be carried out for third parties by specialized units as an industrial service which is reflected in division 09.

This section excludes:

- processing of the extracted materials, see section C (Manufacturing)
- usage of the extracted materials without a further transformation for construction purposes, see section F (Construction)

C: MANUFACTURING

Manufacturing includes the physical or chemical transformation of materials, substances, or components into new products, although this cannot be used as the single universal criterion for defining manufacturing (see remark on processing of waste below). The materials, substances, or components transformed are raw materials that are products of agriculture, forestry, fishing, mining or quarrying as well as products of other manufacturing activities. Substantial alteration, renovation or reconstruction of goods is generally considered to be manufacturing.

Units engaged in manufacturing are often described as plants, factories or mills and characteristically use power driven machines and materials-handling equipment. However, units that transform materials or substances into new products by hand or in the worker's home and those engaged in selling to the general public of products made on the same premises from which they are sold, such as bakeries and custom tailors, are also included in this section. Manufacturing units may process materials or may contract with other units to process their materials for them. Both types of units are included in manufacturing.

The output of a manufacturing process may be finished in the sense that it is ready for utilization or consumption, or it may be semi-finished in the sense that it is to become an input for further manufacturing. For example, the output of alumina refining is the input used in the primary production of aluminum; primary aluminum is the input to aluminum wire drawing; and aluminum wire is the input for the manufacture of fabricated wire products.

Manufacture of specialized components and parts of, and accessories and attachments to, machinery and equipment is, as a general rule, classified in the same class as the manufacture of the machinery and equipment for which the parts and accessories are intended. Manufacture of unspecialized components and parts of machinery and equipment, e.g. engines, pistons, electric motors, electrical assemblies, valves, gears, roller bearings, is classified in the appropriate class of manufacturing, without regard to the machinery and equipment in which these items may be included. However, making specialized components and accessories by moulding or extruding plastics materials is included in class 2220.

Assembly of the component parts of manufactured products is considered manufacturing. This includes the assembly of manufactured products from either self-produced or purchased components.

The recovery of waste, i.e. the processing of waste into secondary raw materials is classified in class 3830 (Materials recovery). While this may involve physical or chemical transformations, this is not considered to be a part of manufacturing. The primary purpose of these activities is considered to be the treatment or processing of waste and they are therefore classified in Section E (Water supply; sewerage, waste management and remediation activities). However, the manufacture of new final products (as opposed to secondary raw materials) is classified in manufacturing, even if these processes use waste as an input. For example, the production of silver from film waste is considered to be a manufacturing process.

Specialized maintenance and repair of industrial, commercial and similar machinery and equipment is, in general, classified in division 33 (Repair, maintenance and installation of machinery and equipment). However, the repair of computers and personal and household goods is classified in division 95 (Repair of computers and personal and household goods), while the repair of motor vehicles is classified in division 45 (Wholesale and retail trade and repair of motor vehicles and motorcycles). The installation of machinery and equipment, when carried out as a specialized activity, is classified in 3320.

Remark: The boundaries of manufacturing and the other sectors of the classification system can be somewhat blurry.

As a general rule, the activities in the manufacturing section involve the transformation of materials into new products. Their output is a new product. However, the definition of what constitutes a new product can be somewhat subjective. As clarification, the following activities are considered manufacturing in ISIC:

- Milk pasteurizing and bottling (see 1050)
- Fresh fish processing (oyster shucking, fish filleting), not done on a fishing boat (see 1020)
- Printing and related activities (see 1811, 1812)
- Ready-mixed concrete production (see 2395)
- Leather converting (see 1511)
- Wood preserving (see 1610)
- Electroplating, plating, metal heat treating, and polishing (see 2592)
- Rebuilding or remanufacturing of machinery (e.g. automobile engines, see 2910)
- Tyre retreading (see 2211)

Conversely, there are activities that, although sometimes involving transformation processes, are classified in other sections of ISIC (in other words, they are not classified as manufacturing). They include:

- Logging, classified in section A (Agriculture, forestry and fishing);
 - Beneficiating of agricultural products classified in section A (Agriculture, forestry and fishing);
 - Beneficiating of ores and other minerals, classified in section B (Mining and quarrying);
 - Construction of structures and fabricating operations performed at the site of construction, classified in section F (Construction);
- Activities of breaking bulk and redistribution in smaller lots, including packaging, repackaging, or bottling products, such as liquors or chemicals; sorting of scrap; mixing paints to customer order; and cutting metals to customer order, produce a modified version of the same product are classified to section G (Wholesale and retail trade; repair of motor vehicles and motorcycles).

10 Manufacture of food products

This division includes the processing of the products of agriculture, forestry and fishing into food for humans or animals, and includes the production of various intermediate products that are not directly food products. The activity often generates associated products of greater or lesser value (for example, hides from slaughtering or oilcake from oil production).

This division is organized by activities dealing with different kinds of products: meat, fish, fruit and vegetables, fats and oils, milk products, grain mill products, animal feeds and other food products. Production can be carried out for own account, as well as for third parties, as in custom slaughtering.

Some activities are considered manufacturing (for example, those performed in bakeries, pastry shops, and prepared meat shops etc. which sell their own production) even though there is retail sale of the products in the producers' own shop. However, where the processing is minimal and does not lead to a real transformation, the unit is classified to Wholesale and retail trade (section G).

Production of animal feeds from slaughter waste or by-products is classified in 1080, while processing food and beverage waste into secondary raw material is classified to 3830, and disposal of food and beverage waste in 3821.

17 Manufacture of paper and paper products

This division includes the manufacture of pulp, paper and converted paper products. The manufacture of these products is grouped together because they constitute a series of vertically connected processes. More than one activity is often carried out in a single unit. There are essentially three activities: The manufacture of pulp involves separating the cellulose fibers from other impurities in wood or used paper. The manufacture of paper involves matting these fibers into a sheet. Converted paper products are made from paper and other materials by various cutting and shaping techniques, including coating and laminating activities. The paper

articles may be printed (e.g. wallpaper, gift wrap etc.), as long as the printing of information is not the main purpose. The production of pulp, paper and paperboard in bulk is included in class 1701, while the remaining classes include the production of further-processed paper and paper products.

170 Manufacture of paper and paper products

18 Printing and reproduction of recorded media

This division includes printing of products, such as newspapers, books, periodicals, business forms, greeting cards, and other materials, and associated support activities, such as bookbinding, plate-making services, and data imaging. The support activities included here are an integral part of the printing industry, and a product (a printing plate, a bound book, or a computer disk or file) that is an integral part of the printing industry is almost always provided by these operations.

Processes used in printing include a variety of methods for transferring an image from a plate, screen, or computer file to a medium, such as paper, plastics, metal, textile articles, or wood. The most prominent of these methods entails the transfer of the image from a plate or screen to the medium through lithographic, gravure, screen or flexographic printing. Often a computer file is used to directly “drive” the printing mechanism to create the image or electrostatic and other types of equipment (digital or non-impact printing). Though printing and publishing can be carried out by the same unit (a newspaper, for example), it is less and less the case that these distinct activities are carried out in the same physical location.

This division also includes the reproduction of recorded media, such as compact discs, video recordings, software on discs or tapes, records etc.

This division excludes publishing activities (see section J).

181 Printing and service activities related to printing

31 Manufacture of furniture

This division includes the manufacture of furniture and related products of any material except stone, concrete and ceramic. The processes used in the manufacture of furniture are standard methods of forming materials and assembling components, including cutting, moulding and laminating. The design of the article, for both aesthetic and functional qualities, is an important aspect of the production process.

Some of the processes used in furniture manufacturing are similar to processes that are used in other segments of manufacturing. For example, cutting and assembly occurs in the production of wood trusses that are classified in division 16 (Manufacture of wood and wood products). However, the multiple processes distinguish wood furniture manufacturing from wood product manufacturing. Similarly, metal furniture manufacturing uses techniques that are also employed in the manufacturing of roll-formed products classified in division 25 (Manufacture of fabricated metal products). The molding process for plastics furniture is similar to the molding of other plastics products. However, the manufacture of plastics furniture tends to be a specialized activity.

310 Manufacture of furniture

32 Other manufacturing

This division includes the manufacture of a variety of goods not covered in other parts of the classification. Since this is a residual division, production processes, input materials and use of the produced goods can vary widely and usual criteria for grouping classes into divisions have not been applied here.

33 Repair and installation of machinery and equipment

The repair and maintenance of machinery and equipment includes specialized repair of goods produced in the manufacturing sector with the aim to restore machinery, equipment and other products to working order. The provision of general or routine maintenance (i.e. servicing) on such products to ensure they work efficiently and to prevent breakdown and unnecessary repairs is included.

This division does only include specialized repair and maintenance activities. A substantial amount of repair is also done by manufacturers of machinery, equipment and other goods, in which case the classification of units engaged in these repair and manufacturing activities is done according to the value-added principle which would often assign these combined activities to the manufacture of the good. The same principle is applied

for combined trade and repair. Rebuilding or remanufacturing of machinery and equipment is considered manufacturing. Repair and maintenance of goods that are utilized as capital goods as well as consumer goods is typically classified as repair and maintenance of household goods (e.g. office and household furniture repair, see 9524). Also included in this division is the specialized installation of machinery. However, the installation of equipment that forms an integral part of buildings or similar structures, such as installation of electrical wiring, installation of escalators or installation of air-conditioning systems, is classified as construction.

This division excludes:

- cleaning of industrial machinery, see 8129
- repair and maintenance of computers and communications equipment, see 951
- repair and maintenance of household goods, see 952

331 Repair of fabricated metal products, machinery and equipment

The repair and maintenance of fabricated metal products, machinery and equipment includes specialized repair of goods produced in the manufacturing sector with the aim to restore these metal products, machinery, equipment and other products to working order. This group excludes:

- rebuilding or remanufacturing of machinery and equipment, see corresponding class in divisions 25-31

Wholesaling and retailing are the final steps in the distribution of merchandise. Also included in this section are the repair of motor vehicles and motorcycles.

Sale without transformation is considered to include the usual operations (or manipulations) associated with trade, for example sorting, grading and assembling of goods, mixing (blending) of goods (for example wine or sand), bottling (with or without preceding bottle cleaning), packing, breaking bulk and repacking for distribution in smaller lots, storage (whether or not frozen or chilled), cleaning and drying of agricultural products, cutting out of wood fibreboards or metal sheets as secondary activities.

Division 45 includes all activities related to the sale and repair of motor vehicles and motorcycles, while divisions 46 and 47 include all other sale activities. The distinction between division 46 (wholesale) and division 47 (retail sale) is based on the predominant type of customer.

Wholesale is the resale (sale without transformation) of new and used goods to retailers, to industrial, commercial, institutional or professional users, or to other wholesalers, or involves acting as an agent or broker in buying merchandise for, or selling merchandise to, such persons or companies. The principal types

of businesses included are merchant wholesalers, i.e. wholesalers who take title to the goods they sell, such as wholesale merchants or jobbers, industrial distributors, exporters, importers, and cooperative buying associations, sales branches and sales offices (but not retail stores) that are maintained by manufacturing or mining units apart from their plants or mines for the purpose of marketing their products and that do not merely take orders to be filled by direct shipments from the plants or mines. Also included are merchandise and commodity brokers, commission merchants and agents and assemblers, buyers and cooperative associations engaged in the marketing of farm products.

Wholesalers frequently physically assemble, sort and grade goods in large lots, break bulk, repack and redistribute in smaller lots, for example pharmaceuticals; store, refrigerate, deliver and install goods, engage in sales promotion for their customers and label design. Retailing is the resale (sale without transformation) of new and used goods mainly to the general public for personal or household consumption or utilization, by shops, department stores, stalls, mail-order houses, door-to-door sales persons, hawkers and peddlers, consumer cooperatives, auction houses etc. Most retailers take title to the goods they sell, but some act as agents for a principal and sell either on consignment or on a commission basis.
