

Report No. 467(55/1.0/8)

IRDP Assistance and Participation in Public Works 1999-2000

NSS 55th Round
July 1999- June 2000

**National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India**

August 2001

PREFACE

The National Sample Survey Organisation (NSSO) has been carrying out all-India household surveys on Consumer Expenditure and Employment & Unemployment with a large sample usually once in every five years. The sixth such survey was conducted in the 55th round (July 1999-June 2000) - which covered Non-agricultural Enterprises in the Informal Sector in addition. The schedule of enquiry on Consumer Expenditure for the survey was, more or less, similar to that adopted in previous quinquennial rounds.

The present report is the eighth in the series of reports through which the results on consumer expenditure survey are being released. The present report studies the extent to which these two programmes of poverty alleviation - the IRDP and public works - have actually reached the rural population of the country and in particular, its disadvantaged sections. The proportions of rural households benefiting from IRDP and public works have been generated in different social groups, occupational types, size classes of land possessed and MPCE classes in each State and UT of India.

This report has four sections and one appendix. Section 1 of the report is introductory while Section 2 presents Sample Design and Estimation Procedure. Section 3 gives Concepts and Definitions. Section 4 discusses Survey Findings. The detailed tables are provided in the Appendix.

The Field Operations Division (FOD) of the Organisation conducted the fieldwork for the survey. The collected data were processed and tabulated by the Data Processing Division (DPD) of the NSSO. The Survey Design & Research Division (SDRD) of the NSSO developed the survey design and prepared the report.

I am grateful to the Chairman and members of the Governing Council, Heads of various Divisions of the NSSO and their colleagues for the contribution made in preparing the report.

Comments/suggestions from the readers will be most welcome.

New Delhi
August 2001

N. S. Sastry
Director General & Chief Executive Officer
National Sample Survey Organisation

Section 1	Introduction	1-2
Section 2	Sample Design	3-8
Section 3	Concepts and Definitions	9-12
Section 4	Summary of Findings	13-29
Appendix	Detailed Tables	
Table 1R	Distribution of households by participation in public works (during the last 365 days) and receipt of IRDP assistance (during the last 5 years), and by type of IRDP assistance, along with average MPCE of different groups of households by household type and State/UT in rural areas	A-1
Table 2R	Distribution of households by participation in public works (during the last 365 days) and receipt of IRDP assistance (during the last 5 years), and by type of IRDP assistance, by household social group and by State/UT in rural areas	A-34
Table 3R	Distribution of households by participation in public works (during the last 365 days) and receipt of IRDP assistance (during the last 5 years) and by type of IRDP assistance along with average monthly per capita expenditure of different groups of households, by size class of land possessed and State/UT in rural areas	A-67
Table 4R	Distribution of households by participation in public works (during the last 365 days) and receipt of IRDP assistance (during the last 5 years), and by type of IRDP assistance, by MPCE class of household and by State/UT in rural areas	A-100

Highlights

- ◆ The proportion of "IRDP beneficiaries" i.e. proportion of rural households reporting receipt of IRDP assistance at any time during the last 5 years prior to the date of survey was lower (52 per 1000) in 1999-2000 than in the two preceding quinquennial (1987-88 and 1993-94) surveys, when the same proportion was 63 per 1000 households (in both the surveys).
- ◆ Among the different forms in which IRDP assistance was received, the share of "milch animals" registered a rise in relative importance from 26% to 71% (in terms of number of beneficiary households), while the share of "drought animals" declined from 26% to 2% during 1987-2000.
- ◆ During the 55th round, among the scheduled tribes 73 per 1000 households were IRDP beneficiaries (during the last 5 years), which were higher than among scheduled castes (61 per 1000), and among the non-SC/ST population (45 per 1000).
- ◆ The other labour households showed the highest proportion in getting IRDP assistance during the last 5 years, compared to other household types.
- ◆ The proportion of rural households reporting participation in public works (PPW) - that is, reporting at least one member employed in public works for 60 days or more during the last 365 days preceding the date of survey - was 29 per 1000 in 1999-2000 compared to 64 per 1000 in 1987-88 and 59 per 1000 in 1993-94.
- ◆ The highest rate of participation in public works during the last 365 days was observed for scheduled tribes, followed by scheduled castes and 'others' in many of the States and UTs

Section 1

Introduction

1.0 The Integrated Rural Development Programme (IRDP) of the Indian Government aims at alleviating rural poverty through the provision of production assets and inputs (livestock, pumpsets, etc.) to selected households. The target group is the rural poor mainly consisting of scheduled castes and scheduled tribes households, agricultural labourers, marginal farmers etc with annual incomes less than a specified threshold level, and bonded labour families. Studies have shown*, however, that the Government has not been able to stop leakages of IRDP benefits to ineligible households. In contrast to the IRDP, the "public works" strategy for poverty alleviation is wholly employment-oriented. Thus, the National Rural Employment Programme (NREP), Rural Landless Employment Guarantee Programme (RLEGP), Minimum Needs Programme (MNP), and other schemes aim at providing employment in construction of roads, dams, bunds, digging of ponds, etc., for wages set at a suitable level which are expected to attract only the poor. However, the extent to which various disadvantaged sections of the population actually participated in such schemes requires to be investigated from time to time.

1.1 The present report studies the extent to which these two programmes of poverty alleviation - the IRDP and public works - have actually reached the rural population

of the country and in particular, its disadvantaged sections.

1.2 The study is based on two questions put to rural households in the NSSO's¹ 6th quinquennial survey (1999-2000) of consumer expenditure² for which 120309 households in 6046 villages and 4116 urban blocks spread over the entire geographical area of the country were interviewed.

1.3 The two questions put to each sample household were:

- Did the household receive any assistance during the last 5 years from IRDP and if so, in what form (physical asset)?
- Did any member of the household work for at least 60 days on public works during the last 365 days?

1.4 Based on the responses, estimates have been generated of proportions of rural households in different social groups, occupational types, size classes of land possessed and MPCE (monthly per capita expenditure) classes benefiting from IRDP and public works in each State and UT of India. Average MPCE of households receiving each type of assistance is also provided.

1.5 Such studies were undertaken by NSSO during earlier two quinquennial rounds – NSS 43rd round (1987-88) and

NSS 50th round (1993-94) - and the results were released in Sarvekshana, Vol. XVII, No.2, 1993 and Vol. XXI, No.4, 1998, respectively.

.....

Notes

1. The National Sample Survey: The NSS was set up in 1950, with the idea of having a permanent survey organisation to collect data on various facets of the economy through nationwide sample surveys in order to assist in socio-economic planning and policy-making. The NSS is a continuing survey in the sense that it is carried out in the form of successive "rounds", each round usually of a year's duration, covering several topics of current interest in a specific survey period. At present each NSS round reaches, at the all-India level, about 12,000 to 14,000 villages and blocks in the Central sample (covered by the Central agency NSSO) and an independent sample of about 14,000 to 16,000 villages and blocks in the State sample (covered by the Governments of various States and Union Territories). The entire area of the country - rural and urban - is covered, with the exception of some interior areas of Nagaland and Andaman & Nicobar Islands,

and Ladakh and Kargil districts of Jammu & Kashmir.

2. Household consumer expenditure survey: It was originally the practice to collect data on household consumer expenditure in every round of NSS, starting from the very first round (1950-51). From 1972-73, according to a decision of the Governing Council of NSSO, the consumer expenditure survey became a quinquennial feature and was also integrated with the employment and unemployment survey in the sense that a common sample of households was subjected to both the enquiries. However, independent samples of households for these two surveys were canvassed during the 55th round. An annual series of consumer expenditure surveys was again launched from the 42nd round (1986-87) to fill the data gaps which planners and researchers had begun to feel. It is the larger-scale quinquennial surveys, however, which are expected to be more useful for the study of trends in the level of consumer expenditure and of the emergence of new spending patterns. So far, six quinquennial surveys of consumer expenditure have been conducted and these are the 27th, 32nd, 38th, 43rd, 50th and 55th rounds of NSS. They relate, respectively, to the years 1972-73, 1977-78, 1983, 1987-88, 1993-94 and 1999-2000.

Section 2

Sample Design and Estimation Procedure

2.1 Sample Design

2.1.1 General: A stratified sampling design was adopted for selection of the sample first-stage units (FSU's). The FSU's were villages (panchayat wards for Kerala) for rural areas and Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USU's) were enterprises for schedule 2.0 and households for schedule 1.0/ 10/ 10.1, which were selected by the method of circular systematic sampling with equal probability from the corresponding frame in the FSU. Large FSU's were subdivided into hamlet-groups (rural)/ sub-blocks (urban) that were grouped into two segments, and USU's were selected independently from each of these segments. For the purpose of systematic sampling, households in the frame of second stage stratum 2 were arranged by means of livelihood and land possessed classes for rural samples and by means of livelihood and MPCE classes for urban samples.

2.1.2 Sampling frame for first stage units:

List of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks were respectively used for selection of rural and urban sample FSU's. For selection of sample villages from the State of Jammu & Kashmir, list of villages as per 1981 Census was used as the sampling frame. It may be mentioned that all the uninhabited villages of the country as per 1991 Census, interior villages of Nagaland situated beyond 5 km of a bus route and inaccessible villages of Andaman & Nicobar

Islands were left out of the survey coverage of the NSS 55th round.

2.1.3 Stratification

2.1.3.1 Rural: Two special strata were formed at the State/ UT level, viz.,

Stratum 1: all FSUs with population between 1 to 100, and

Stratum 2: FSUs with population more than 15,000.

[Note: The above two strata were spread across a given state and were not confined to any particular administrative division within the state.]

The above-noted strata of either type were formed if at least 50 such FSU's were there in the respective frames. Otherwise, they were merged with the general strata.

While forming general strata (consisting of FSU's other than those covered under strata 1 & 2), efforts were made to treat each district as a separate stratum. If limitation of sample size did not allow the formation of many strata, smaller districts within a particular NSS region were merged to form a stratum. Each district with rural population of 2 million or more as per 1991 Census (1.8 million or more as per 1981 Census in case of Jammu & Kashmir) was split into a number of strata.

2.1.3.2 Urban : Strata were formed within NSS Regions as follows:

stratum number	composition of strata by considering population of various towns as per the 1991 Census
1, 3, 5 *	'hospital area' (HA) / 'industrial area' (IA) / 'bazaar area' (BA) blocks taken together, of each single city with a population of 10 lakhs or more (there could be a maximum of 3 such cities within an NSS Region)
2, 4, 6 *	Other blocks of each single city with a population of 10 lakhs or more
7	HA or IA or BA blocks of all towns with population between 50,000 and less than 10 lakhs
8	Other blocks of all towns with population between 50,000 and less than 10 lakhs
9	HA or IA or BA blocks of all towns with population less than 50,000
10	Other blocks of all towns with population less than 50,000

* Stratum numbers 3, 4, 5 and 6 remain void if there is only one city in an NSS region with a population of 10 lakhs or more.

If sample size was not adequate for forming so many strata, all blocks of stratum 7 were merged with those of stratum 8 and all blocks of stratum 9 were merged with those of stratum 10.

2.1.4 Sample size: A total number of 10,384 FSU's was selected for survey in the *central sample* at all-India level (rural & urban combined) in the 55th round. For *state sample*, there was normally an equal matching. Exceptions were only for Nagaland (urban), Delhi, Goa and Maharashtra (urban) where the state sample size was higher than central sample. Sample for the whole round for each State/UT and sector (i.e., rural/ urban) was allocated equally among the four sub-rounds. Sample FSU's for each sub-round were selected afresh in the form of two independent sub-samples. The details of allocation and survey of FSUs, households and persons were given in Statement 0.

2.1.5 Allocation of first-stage units (FSU's): State/ UT level rural sample size was allocated among the rural strata in proportion to population. State/ UT level urban sample size was first allocated among the three classes of towns (i.e., 10 lakh +, 50000 to less than 10 lakhs and less than 50000) in proportion to population. Then sample allocation for each of the three classes of towns, within an NSS region, was further allocated between two strata types consisting of – (i) HA/ IA/ BA blocks, and (ii) the rest, in proportion to total number of FSU's in the respective frames with double weightage given to the first category of blocks. Stratum level allocations for both rural and urban areas of a sub-round were made in even numbers in order to facilitate selection of FSU's in the form of two independent sub-samples. Sub-sample numbers were 1 & 2 for sub-round 1; 3 & 4 for sub-round 2; 5 & 6 for sub-round 3 and 7 & 8 for sub-round 4.

2.1.6 Selection of first-stage units: For each sub-round, sample FSU's from each stratum were selected in the form of 2 independent sub-samples by following circular systematic sampling with (a) probability proportional to population for all rural strata other than stratum 1, and (b) equal probability for rural stratum 1 as well as all urban strata. Thus, stratum level allocation of FSUs was a multiple of 8.

2.1.7 Formation of hamlet-groups in large villages and number of hamlet-groups selected for survey : Depending upon the values of approximate present population (P) and approximate total number of non-agricultural enterprises (E), decision was taken to divide the FSU into a fixed number of hamlet-groups (hg's - the term applicable for rural samples) / sub-blocks (sb's - the term applicable for urban samples) as per the rules given below:

value of P	no. of hg's/ sb's formed in the FSU as per population criterion	value of E	no. of hg's/ sb's formed in the FSU as per enterprise criterion
(1)	(2)	(3)	(4)
less than 1200	1 @	less than 100	1 @
1200 – 1999	5	100 – 249	5
2000 – 2399	6	250 – 299	6
2400 – 2799	7	300 – 349	7
2800 – 3199	8	350 – 399	8
	(and so on)		(and so on)

@ no. of hb's/ sb's = 1 means the whole FSU is considered for listing.

[For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, number of hg's formed in the village as per population criterion was: 1 for P < 600, 5 for P = 600 to 999, 6 for P = 1000 to 1199, 7 for P = 1200 to 1399, 8 for P = 1400 to 1599, and so on.]

The number (D) of hamlet-groups (hg)/ sub-blocks (sb) formed in the FSU was the higher of the two values as per population and enterprise criteria. If the value of P was less than 1200 (600 for certain hilly areas specified above) as well as the value of E was less than 100 for an FSU, hg/ sb formation was not resorted to and the whole FSU was considered for listing. In case hg's/ sb's were formed in the sample FSU, the same was done by more or less equalizing population.

2.1.8 Formation of segments within FSU:

The hg/ sb having maximum concentration of non-agricultural enterprises was selected with certainty for listing of households/ enterprises. This hg/ sb was referred to as segment 1. From the remaining (D-1) hg's/ sb's of the FSU, 2 more hg's/ sb's were selected circularly systematically and these 2 selected hg's/ sb's together were referred to as segment 2 for doing a combined listing of households/ enterprises. Thus, the listing of households/ enterprises was done only in segments 1 and 2 of the FSU. The FSU not

requiring hg/ sb formation was to be treated as segment 1.

2.1.9 Stratification of households : All the households listed in a segment (both rural & urban) were stratified into two second stage strata, viz., 'affluent households' (forming second stage stratum 1) and the rest (forming second stage stratum 2). In the rural sector, a maximum of ten households which were relatively affluent compared to others and possessed at least certain item(s) like motor car/ jeep, colour TV, telephone, etc. or owned land / livestock in excess of certain limits were included in second stage stratum 1. In urban sector, the households having MPCE (monthly per capita consumer expenditure) greater than a certain limit for a given town/city were treated as 'affluent' households for the present survey and were included in the frame of second stage stratum 1, and the rest of the urban households were included in the frame of second stage stratum 2.

2.1.10 Number of households/ enterprises selected for survey: The number of households/ enterprises selected for survey from each FSU in general is given below:

segment	number of households allotted for consumer expenditure schedule		
	second stage stratum (SSS)		
	1	2	total
(1)	(2)	(3)	(4)
FSU with hg/ sb formation:			
1	1	3	4
2	1	7	8
FSU with no hg/ sb formation:			
1	2	10	12

2.2 Estimation Procedure:

2.2.1 Approach: The estimate for a sub-round was obtained by combining the estimates of the corresponding sub-sample replicates. Similarly, an estimate for the

Round was obtained by combining the four sub-round-wise estimates.

2.2.2 The following notations are being used in this section:

- a = subscript for the a-th stratum
- r = subscript for the r-th sub-sample replicate (r = 1,2,...,8)
- q = subscript for the q-th sub-round (q = 1,2,3 and 4)
- f = subscript for the f-th sampled village/ block as First Stage Unit (FSU)
- s = subscript for the s-th segment of sampled village/ block (s = 1 and 2)
- c = subscript for the c-th 2nd stage stratum of households in the sampled village/ block (c = 1,2)
- j = subscript for the j-th sampled household
- p = subscript for pooled estimate
- z = size used for selection of an FSU from the sampling frame
- Z = total of sizes in the sampling frame for the stratum

[Note: For urban sector, z=1 and Z=N which is the total number of UFS blocks (FSU's) in the frame.]

- n = number of sampled FSU surveyed within a stratum and a sub-sample replicate (including zero cases but excluding casualty and not reported cases) and used for tabulation
- L= number of sub-sample replicates surveyed and used for tabulation
- D = number of hamlet-groups/ sub-blocks formed in rural/ urban sampled FSU
- H = total number of households listed in the appropriate frame

- h = number of sampled households surveyed and used for tabulation from the frame
- E = total number of enterprises listed in the appropriate frame
- e = number of sampled enterprises surveyed and used for tabulation from the frame
- y, x = value of characteristic y, x obtained in the sample
- \bar{y}, \bar{x} = estimated value of aggregate of characteristic y, x obtained from the sample.

2.2.3 ESTIMATES OF AGGREGATE: In the formulae given in this section, \bar{y} is the estimate of aggregate of any characteristic y for a given stratum (a), and for a particular sub-round (q) and sub-sample replicate (r). These formulae are provided for the general case of FSU's having two segments 1 and 2. For the FSU's requiring no hg/ sb formation, the formula is identical to that given for segment 1 while the contribution from segment 2 is taken as zero for estimating a characteristic of household from a given 2nd stage stratum (c) in the selection frame

$$\text{Rural : } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \frac{1}{z_f} \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad (1)$$

Here $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1)

and $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$, for segment 2 (s=2).

$$\text{Urban: } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad \dots(2)$$

Here $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1)

and $B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}$, for segment 2 (s=2).

Note: For tabulating any characteristic from this detailed schedule $\hat{Y} = \sum_c \hat{Y}_c$ is to be used.

2.2.3.1 COMBINED ESTIMATE FROM SUB-SAMPLES: In the previous section, the estimate of a characteristic \hat{Y} as obtained for a stratum (a), for a particular sub-round (q) and a sub-sample replicate (r), actually represent \hat{Y}_{aqr} . The combined /pooled estimate for a particular stratum and a particular sub-round is computed as the average of sub-sample replicate estimates and is given below:

$$\hat{Y}_{aq} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{aqr} \quad \dots(3)$$

2.2.3.2 ESTIMATE OF AGGREGATES FOR A SUB-ROUND AT STATE/ UT/ REGION LEVEL: If \hat{Y}_{qr} be the State/ UT/ Region level aggregate from the r-th sub-sample replicate and q-th sub-round, and \hat{Y}_{qp} , the combined/ pooled estimate of the aggregate based on the whole sample, for a given sub-round q, then

$$\hat{Y}_{qr} = \sum_a \hat{Y}_{aqr} \quad \dots(4)$$

based on sub-sample replicate group r, and

$$\hat{Y}_{qp} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{qr} \quad \dots(5)$$

based on all sub-sample replicates.

2.2.3.3 ESTIMATES OF AGGREGATE FOR THE ROUND (i.e., taking all the 4 sub-rounds together) AT STATE/ UT/ REGION LEVEL: The estimates of aggregates for the whole round are computed as the simple average of the sub-round estimates derived in section 2.2.2, and are given below:

$$\hat{Y}_r = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qr} \quad \dots(6)$$

based on sub-sample replicate1 and 2*and

$$\hat{Y}_p = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qp} \quad \dots(7)$$

based on whole sample.

**Note: In the Round, sub-samples 1, 3, 5 and 7 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate1 (annual) while sub-samples 2, 4, 6 & 8 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate 2 (annual). This has been followed in the remaining sections also. Stratum level estimate for the Round is obtained similarly.*

2.2.4 ESTIMATES OF RATIO: If \hat{X} and \hat{Y} be the State/ UT/ Region level aggregate estimate corresponding to variables x and y, then the estimate of ratio is given below:

$$\hat{R}_r = \frac{\hat{Y}_r}{\hat{X}_r} \quad \dots(8)$$

based on sub-sample group r, and

$$\hat{R}_p = \frac{\hat{Y}_p}{\hat{X}_p} \quad \dots(9)$$

based on the whole sample.

The formulae for \hat{X} are obtained similarly by replacing \hat{Y} by \hat{X} and y by x in the above formulae stated in previous sections.

Note: Estimates for the sub-round \hat{R}_{qr} and \hat{R}_{qp} have been obtained by replacing \hat{Y}_r and \hat{Y}_p by \hat{Y}_{qr} and \hat{Y}_{qp} , respectively and \hat{X}_r and \hat{X}_p by \hat{X}_{qr} and \hat{X}_{qp} , respectively.

Statement 0: Number of villages/ blocks allotted and surveyed and number of households and persons surveyed

State/UT	no. of villages		no. of blocks		no. of households surveyed		no. of persons surveyed

Section 3

Concepts and Definitions

3.0 The concepts and definitions followed in the sixth quinquennial survey on household consumer expenditure are more or less the same as in the earlier rounds. The concepts and definitions of the terms used or relevant in the report have been expanded below.

3.1 Household: A group of persons normally living together and taking food from a common kitchen constitutes a household. The word 'normally' means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host household. 'Living together' is usually given more importance than 'sharing food from a common kitchen' in drawing the boundary of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered a single-member household except that a family living in a hotel (say) is considered to be one household only; and the same applies to residential staff of such establishments.

3.2 Household size: The size of a household is the total number of persons in the household.

3.3 Household consumer expenditure: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely, (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

3.4 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear is considered to be consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipts in exchange of goods and services; (d) any other receipt through gift, charity, borrowing; and (e) free collection. Home produce is evaluated at the ex farm or ex factory prices. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable goods, a different approach is followed. In this case, the expenditure made during the reference

period for the purchase of goods and services is considered to be consumption.

3.5 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the household and also by the guests, whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan, advance, etc., made by the household are not considered consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item 'cooked meals' is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty in estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and of guests and employees are recorded for the purchaser household.

3.6 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the estimates of nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients).

This point has to be kept in mind while using the NSS consumer expenditure data for any studies relating to the nutritional status of households.

3.7 Reference period: Reference period means the period of time for which data on consumption was collected. The reference period used for the survey was a "moving" one, varying from household to household, although it was a fixed length of period. During the 55th round of NSS, information on consumption of food, pan, tobacco and intoxicants was collected independently for two different reference periods of last 7 days and last 30 days from the same households. For items of clothing, footwear, durable goods, education and medical (institutional) expenses, data were collected for the reference period of "last 365 days" preceding the date of survey. For the remaining items, a reference period of "last 30 days" preceding the date of survey was used. However, the monthly estimates of consumer expenditure presented in this report are based on data collected for "last 365 days" for clothing, footwear, durable goods, education and medical (institutional) expenses and for "last 30 days" for the rest of the items.

3.8 Sector : The word "sector" is used for the rural-urban demarcation: rural and urban are the only two sectors as far as this report is concerned.

3.9 Major States : This refers to the following States of India: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

3.10 Monthly per capita consumer expenditure (MPCE): For a household, this is its last 30 days' total consumer expenditure divided by its size. As stated above, data were collected for the 'last 365

days' for several groups of items, but these were expressed on a 'last 30 days' basis at the time of computing MPCE of the households. A person's MPCE is understood as that of the household to which he or she belongs.

3.11 MPCE class: The MPCE classes are normally revised during quinquennial surveys of consumer expenditure. Usually, 12 MPCE classes are formed from a table giving estimated cumulative percentage frequency distribution of persons by MPCE separately for each sector. The upper limits of these classes correspond broadly to cumulative percentages 5%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 95% and 100% - of population. The class limits chosen for this report based on NSS 55th round are given below:

sl. no.	MPCE (in Rs)	
	rural	urban
1	0 – 225	0 - 300
2	225 – 255	300 - 350
3	255 – 300	350 - 425
4	300 – 340	425 - 500
5	340 – 380	500 - 575
6	380 – 420	575 - 665
7	420 – 470	665 - 775
8	470 – 525	775 - 915
9	525 – 615	915 - 1120
10	615 – 775	1120 - 1500
11	775 – 950	1500 - 1925
12	950+	1925+

3.12 Household type: Rural households were classified into five types and urban households into four types on the basis of the occupations pursued by the household members. The five types of rural households are: *self-employed in non-agriculture, agricultural labour, other labour, self-employed in agriculture,* and

other households. The four types of urban household are: *self-employed, regular wage / salary earner, casual labour, and other households.*

3.13 In rural areas, the “type” of a household was determined as follows.

A household was classified as “agricultural labour”, if its income from that source was 50% or more of its total income. The same criterion was followed to classify a household as “self-employed in agriculture”. A household was classified as “self-employed in non-agriculture” if its income from that source was greater than that from rural labour as well as that from all other gainful sources put together. If a household was not one of these three types but its income from total rural labour was greater than that from all self-employment and from other gainful sources, it was classified as “other labour”. The remaining households were classified as “other households”.

3.14 Social group: Three social groups were distinguished - scheduled tribe, scheduled caste, and other households.

3.15 Land possessed: The area of land possessed (in hectares) includes land owned, leased in, and (encroached) land neither owned nor leased in, but excludes land leased out. The size classes of land possessed are:

- < 0.01 ha
- 0.01– 0.40 ha
- 0.41-1.00 ha
- 1.01-2.00 ha
- 2.01-4.00 ha
- 4.01+

3.16. IRDP: Integrated Rural Development Programme (IRDP) is one of the Indian Government's main poverty alleviation

programmes in the field of rural development. Its object is the uplift of rural families identified as poor. The objective is sought to be achieved by providing productive assets and inputs to households belonging to target groups. The assets under the programme were: milch animal, drought animal, sheep/goat, pump-set, fish-pond, sewing machine, other agricultural tools and equipment, etc. The assets were provided through financial assistance in the form of subsidy from the Government and term credit advance by

financial institutions. The programme is implemented in all the community blocks in the country.

3.17 Public works: This covers the construction of roads, dams, bunds, digging of ponds etc. as test relief measures under national employment schemes such as National Rural Employment Programme (NREP), Rural Landless Employment Guarantee Programme (RLEGP), Minimum Needs Programme (MNP) etc.

Section 4

Summary of Findings

4.0 This section discusses the estimates of proportions of households benefitting from the Integrated Rural Development Programme (IRDP) and/or participating in public works, among households in different occupational types, social groups, MPCE classes and size classes of land possessed. All the estimates provided in this section pertain to the rural sector of the country.

4.1 Receipt of IRDP Assistance

4.1.1 Per 1000 distribution of rural households in India into those reporting IRDP assistance received, and those not reporting, and the break-up of the former category by form of assistance received, is given separately for different household (occupational) types, social groups, size classes of land possessed and MPCE classes in Tables 1 to 4 (separately for each State/UT and for India as a whole) of Appendix. Each table also compares per 1000 numbers of households which reported both IRDP assistance and public works participation, with numbers reporting only one of these, and numbers reporting none, for the different socio-economic categories under study. In all these tables, columns showing average MPCE of the different types of household (with respect to receipt of IRDP assistance and participation in public works) have been provided alongside to

enable comparisons of their levels of living.

4.1.2 **Changes over time:** The overall proportion of rural households in India reporting receipt of IRDP assistance during the last 5 years prior to the date of survey was at the same level - 63 per 1000 - in the 1993-94 survey (NSS 50th round) as in the 1987-88 survey (NSS 43rd round). But, the proportion declined to 52 per 1000 in 1999-2000. This has been graphically presented in Figure 1.

Figure 1: Percentage of Rural Households Receiving IRDP Assistance

4.1.3 **Inter-state variation** (see Statement 1): Number of households per 1000 reporting receipt of IRDP assistance during the last 5 years varied between 40 and 64 (per 1000) across the major States except for Andhra Pradesh (26 per

1000) and Punjab (122 per 1000). Among the smaller States and UTs, as high as 32% households had received assistance in Mizoram, 17% in Arunachal Pradesh and 15% in Daman & Diu.

Statement 1 also gives the proportions of households receiving IRDP assistance estimated from three quinquennial rounds – 43rd, 50th and 55th – for each State, UT and all-India. Notable increases in the proportion of households receiving IRDP assistance is observed in States like Assam and Punjab. However, for many of the States and UTs the proportion of households benefiting from IRDP has declined over the period 1987–2000.

4.1.4 Form of IRDP assistance: The assets provided through IRDP assistance were milch animal, drought animal, sheep/goat, pump-set, fish-pond, sewing machine, other agricultural tools and equipment, etc. Per thousand distributions of households by form of assistance in each State, UT and all-India is given in Statement 2. The corresponding distributions at all-India level for NSS 43rd and 50th rounds are also given in the Statement. It is seen that the distribution of beneficiary households by form of assistance has undergone considerable change over the period 1987-2000. Among the households reporting receipt of IRDP assistance, ‘milch animals’ accounted for 71% in the 55th round. However, this figure was only 26% during NSS 43rd round (July 1987-June 1988) and 40% during NSS 50th round. The share of milch animals was the highest among different forms of assistance for all States and UTs except for Himachal

Pradesh (269 per 1000 households), Maharashtra (371 per 1000 households), Mizoram (72 per 1000 households), Nagaland (308 per 1000 households), Sikkim (97 per 1000 households).

For many other forms of assistance, the share has dropped over the period 1987-2000. The fall in the share was sharpest for drought animals (from 26% to 2% of households receiving IRDP assistance). Even the share of the category “others” – which included all forms of assistance not specified – has fallen during the period. During 1999-2000, among the States and UTs, sheep/goat accounted for relatively high percentage of households benefiting from IRDP in Maharashtra (11% of households) and Tripura (26%). For pump-set, the percentage was the highest for Sikkim (19%), followed by Nagaland (12%).

4.1.5. Variation by MPCE: The proportion of households reporting receipt of assistance did not show any pattern over MPCE classes at all-India level, although it ranged from 44 to 62 per 1000 households (see Statement 3). This lack of pattern is also discernible for many of the States and UTs.

4.1.6. Variation by size class of land possessed The proportions of households receiving IRDP assistance by size class of land possessed are shown in Statement 4 for all States, UTs and all-India. In addition, Figure 2 has been provided to represent graphically the proportion (number per 1000) of households by size class of land possessed over NSS 43rd, 50th and 55th rounds.

Statement 4 does not show any trend in the proportion of households receiving IRDP assistance over the size classes of land possessed.

At all-India level, the proportion of households benefiting from IRDP assistance has decreased for all the size classes of land possessed except the top class (4.01 ha and above) - which has marginally decreased over the period 1987-2000. However, the proportion of IRDP recipient households in the size class of land possessed '4.01 ha and above' was relatively higher in only Kerala (29% households), Orissa (13%), Punjab (11%) and Karnataka (10%) among the major States.

4.1.7. Variation by household type: Statement 5 shows the proportion of households receiving IRDP assistance (during the last 5 years) for each household type. The proportions at national level for three successive quinquennial rounds on household consumer expenditure have been depicted in Figure 3. It appears that the proportion of beneficiary households receiving IRDP assistance has fallen for each household type except 'others'. The fall was the highest for households belonging to self-employed in non-agriculture. However, the 'other labour' households showed the highest proportion of getting IRDP assistance compared to other household types during the 55th round. Among the 15 major States, it was Punjab where the proportion of households self-employed in agriculture reported the highest proportion (18%) getting IRDP assistance.

4.1.8. Variation by social group: The proportions of households receiving IRDP assistance for each social group and State/UT and all-India have been shown in Statement 6. The all-India estimates giving the proportion for different NSS rounds at all-India level have been depicted in Figure 4. At the national level, the proportion of households receiving IRDP assistance was the highest for scheduled tribes, followed by scheduled castes during the 55th round. Among the major States the percentage of households which benefited from IRDP assistance was relatively high for scheduled tribe in Assam (13% households) and Gujarat (12%). Among scheduled castes, the percentage was the highest for Kerala (12%) and Punjab (12%).

4.2 Participation in Public Works during the last 365 days

4.2.1 For the purpose of this report, a household reporting participation in public works (PPW) is to be understood as a household of which at least one member was employed in public works for at least 60 days, during the reference period of last 365 days preceding the date of survey. Detailed tables on the proportion of rural households participating in public works and receiving/ not receiving IRDP assistance, for different socio-economic categories of households and MPCE classes are given in Tables 1 to 4 of the Appendix (separately for each State/UT).

4.2.2 Changes over time: The overall proportion of rural households in India reporting participation in Public Works during the last 365 days declined from 64

per 1000 in 1987-88 to 59 per 1000 in 1993-94. But the proportion declined considerably to 29 per 1000 in 1999-2000.

4.2.3 Inter-state variation: Statement 1 shows that the proportion of households reporting PPW has changed a great deal over 1987-2000 at the all-India level. The proportion was 64 per 1000 households as per NSS 43rd round (1987-88) and 29 per 1000 households as per NSS 55th round (1999-2000). For all the States and UTs except Manipur, Chandigarh and Pondicherry, the percentage of households has declined over the periods 1987-2000. The reason for the exceptions of Manipur, Chandigarh and Pondicherry may be attributed to sampling fluctuations. In 1999-2000, among major States, the rate of participation of households in public works varied from 12 (per 1000) for Punjab to 42 (per 1000) for Bihar. The drop in the rate of participation of households over 1987-2000 was the highest for Gujarat (16 percentage points) followed by Rajasthan (14) and Maharashtra (9).

4.2.4 Variation with MPCE: Statement 7 presents the proportions of households participating in public works for households in different MPCE classes. It does not conform to any pattern at all-India level. The proportion of households ranged from 16 to 20 per 1000 households in 7 out of 12 MPCE classes. For the remaining MPCE classes, the percentage of households reporting PPW varied from 8 to 13. However, the degree of participation in public works was somewhat higher in the lower MPCE classes for some States like Arunachal

Pradesh, Gujarat, Punjab and Tamil Nadu.

4.2.5 Variation with size of land possessed: Statement 8 shows the proportion of households participating in public works for different size classes of land possessed for each State, UT and all-India. At all-India level, the PPW proportion did not vary much with size of land possessed. However, there was considerable diversity among the States in the way the PPW proportion varied with size of land possessed. Among the major States, the PPW proportion in the top class of land possessed (4.01 ha and above) was the highest in Assam (102 per 1000), followed by Tamil Nadu (54 per 1000).

4.2.6. Variation with household type: The variation in the rate of participation of public works by household type for States, UTs and all-India is shown in Statement 9. The proportions for all-India along with corresponding figures for NSS 43rd and 50th rounds are depicted in figure 5. It shows that the rate of PPW has fallen sharply at the all-India level for all the household types over 1987-2000. The rate of PPW was the highest (5% of households) for 'other labour' followed by agricultural labour (3.3%) during the 55th round. The rate was more or less the same for 'self-employed in agriculture', 'self-employed in non-agriculture' and 'others'.

4.2.7 Variation by social group: Statement 10 shows the proportions of households participating in public works for each social group by State and UT. It

is revealed that the highest rate of PPW was for scheduled tribes,

followed by scheduled castes and 'others' for many of the States and UTs.

Figure 2: Proportion of recipients of IRDP assistance by size of land possessed
