

Report No. 473(55/1.0/11)

Literacy and Levels of Education in India 1999-2000

NSS 55th Round
July 1999- June 2000

**National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India**

September 2001

PREFACE

The National Sample Survey Organisation (NSSO) has been carrying out all-India household surveys on Consumer Expenditure and Employment & Unemployment with a large sample usually once in every five years. The sixth such survey was conducted in the 55th round (July 1999-June 2000) - which covered Non-agricultural Enterprises in the Informal Sector in addition. The schedule of enquiry on Consumer Expenditure for the survey was, more or less, similar to that adopted in previous quinquennial rounds.

The present report is the eleventh in the series of reports through which the results on consumer expenditure survey are being released. This report brings out the results pertaining to literacy and educational levels. In the report comparison for these estimates has been made with the results of NSS 50th round: July 1993 – June 1994 and also with the Population Census 2001 estimates. It gives, broadly, estimates at State /UT and all-India level for males and females separately and for both types of residence (i.e., rural and urban). It also provides the break-up of the estimates by MPCE class, by social group, by household type, by religion, by size class of land possessed (rural only) and by age.

This report has four sections and one appendix. Section 1 of the report is introductory while Section 2 presents Sample Design and Estimation Procedure. Section 3 gives Concepts and Definitions. Section 4 discusses Summary of Findings. The detailed tables are provided in the Appendix.

The Field Operations Division (FOD) of the Organisation conducted the fieldwork for the survey. The collected data were processed and tabulated by the Data Processing Division (DPD) of the NSSO. The Survey Design & Research Division (SDRD) of the NSSO developed the survey design and prepared the report.

I am grateful to the Chairman and members of the Governing Council, Heads of various Divisions of the NSSO and their colleagues for the contribution made in preparing the report.

Comments/suggestions from the readers will be most welcome.

New Delhi

N. S. Sastry
Director General & Chief Executive Officer
National Sample Survey Organisation

Highlights

1. Literacy rate (%) by sector x gender

	Rural India	Urban India
male	68	87
female	43	72
all	56	80

2. Percentage of persons with educational qualification

not literate	44	20
literate but below	19	16
primary		
primary	14	15
middle	12	17
secondary	6	14
higher secondary	3	8
graduate & above	2	10

3. Literacy rate (%) for household types:

self employed in		
non-agriculture	63	-
agricultural labour	43	-
other labour	56	-
self employed in		-
agriculture	59	
others	74	-
self-employed	-	78
regular wage/salary	-	
earning		88
casual labour	-	59
others	-	84

4. Literacy rate (%) for household social groups:

scheduled tribe	42	70
scheduled caste	47	66
other backward class	55	75
others	68	86

5. Literacy rate (%) for size class of land possessed:

< 0.01 ha	52	-
0.01-0.40 ha	54	-
0.41-1.00 ha	56	-
1.01-2.00 ha	59	-
2.01-4.00 ha	61	-
4.01 +	64	-

6. Literacy rate (%) for religions:

	Rural India	Urban India
Hinduism	56	81
Islam	52	70
Christianity	74	91
Sikhism	62	84
Jainism	85	95
Buddhism	66	81
others	54	87

Section 1

Introduction

1.1 Background: Literacy rate is generally accepted as one of the basic indicators of progress of the population; and educational level of a population is one of the most important determinants of its quality.

In a vast country like India, the literacy rate, as well as educational level, exhibits wide variation by different socio-economic categories like region, gender, social group, etc. The Government of India is making planned efforts from time to time to raise literacy levels through various schemes of universal school education, adult education, non-formal education, literacy mission campaigns, etc. For the purpose, necessary data on literacy at appropriate levels is required.

1.2 Availability of data from other sources: Data on literacy and educational levels of the population are being collected as a part of the demographic particulars of the household members in most of the survey rounds of NSS. In the 42nd round (July 1986-June 1987), a comprehensive survey on education was carried out by NSSO to study the extent of participation of children and youth in the formal and non-formal educational systems including drop-outs at various levels. Subsequently, a survey on literacy was taken up during the 47th round (July-December 1991) of NSS. During the survey, a schedule was canvassed for ascertaining literacy status of persons and, in fact, literacy tests were conducted for certain categories of persons. Further, during the 52nd round (July 1995-June 1996) of NSS survey information on participation in education was collected. The other sources of literacy and educational statistics in the country are the Census of India, statistics compiled by the Ministry of Human Resources Development, District Literacy Surveys of the "Total Literacy Campaigns" of the National Literacy Mission and surveys and reports of National Council of Educational Research and Training (NCERT).

1.3 Geographical coverage: The geographical coverage of the survey was the whole of the Indian Union except Ladakh and Kargil districts of Jammu & Kashmir, 768 interior villages of Nagaland and 172 villages in Andaman & Nicobar Islands which remain inaccessible throughout the year. A few other areas of Jammu & Kashmir were also excluded from the survey coverage owing to unfavourable field conditions.

1.4 Sub-round: The survey period of one year was, as usual, divided into four sub-rounds of three months each as indicated below and equal number of sample villages and blocks were allotted to each sub-round.

Sub-round 1:	July-September 1999
Sub-round 2:	October-December 1999
Sub-round 3:	January-March 2000
Sub-round 4:	April-June 2000

1.5 Sample Design: The sample design adopted in the survey was a two- stage stratified design. The first stage units were 1991 census villages (panchayat wards for Kerala) for rural sector and Urban Frame Survey (UFS) blocks for urban sector. The second stage units were households in both the sectors for consumer expenditure and employment–unemployment surveys. However, there was an intermediate stage, as usual in the earlier rounds, for the larger sample villages or blocks. A larger sample village or block was split into a number of hamlet-groups or sub-blocks suitably to make the quantum of fieldwork manageable. The details of sample design and estimation procedure are given in Section 2.

This report brings out the results pertaining to literacy and educational levels on the basis of the sixth quinquennial survey on Household Consumer Expenditure that was carried out during July 1999 to June 2000. In the consumer expenditure schedule information on level of education was collected for each of the members of sample households. This report presents the estimates of literacy rates and educational levels based on such information.

An attempt is also made in this report to compare these estimates with the previous quinquennial round (NSS 50th round: July 1993 – June 1994) and also with the Population Census 2001 estimates. The report also makes an attempt to find the relation between literacy rate and educational level, on the other hand, some other characteristics like sex, type of residence, etc, on the other. In the way, it will provide, broadly, estimates at State /UT and all-India level for males and females separately and for both types of residence (i.e., rural and urban). It will also provide the break-up of the estimates by MPCE class, by social group, by household type, by religion, by size class of land possessed (rural only) and by age (in Appendix Table 6).

Although households were the ultimate stage units in each of the surveys, educational level is a person characteristic. The estimates in this report have been presented by sex. Therefore, it is imperative to have an idea of number of sample persons by sex that were used to generate the estimates. However, the number of sample persons may not tally exactly to the tables presented in this report with the other tables already released since these tables are generated excluding the not recorded cases (which includes inadmissible data for classificatory variables).

1.6 Contents in brief: The present report gives the estimates for educational levels and literacy rates by MPCE, household type, social group, religion, size class of land possessed (rural only) for male, female and combined separately for rural and urban areas and by States/UT's. It contains three sections and one appendix. Section One gives introduction and Section Two sample design and estimation procedures for NSS 55th round. Section Three deals with the concepts and definitions and various items / terms used in this report. Section Four brings out the summary of Survey Findings. Appendix gives the detailed tables, which have been used to prepare this report.

It should be stated, however, that the quality of data on literacy and levels of education collected as part of a survey, on Consumer Expenditure, which is summarised in this report, may not be as high as those collected in NSS Rounds 42 or 47 say, when the enquiries were focused on literacy and/or level of education.

Section 2

Sample Design and Estimation Procedure

2.1 Sample Design

2.1.1 General: A stratified sampling design was adopted for selection of the sample first-stage units (FSUs). The FSUs were villages (panchayat wards for Kerala) for rural areas and Urban Frame Survey (UFS) blocks for urban areas. The Ultimate stage units (USUs) were households for the consumer expenditure schedule. The households were selected by the method of circular systematic sampling with equal probability from the corresponding frame in the FSU. For the purpose of systematic sampling, households in the frame of second stage stratum 2 are arranged by means of livelihood and land possessed classes for rural samples and by means of livelihood and MPCE classes for urban samples. Large FSUs were subdivided into hamlet-groups (rural)/ sub-blocks (urban) that were grouped into two segments, and USUs were selected independently from each of these segments.

2.1.2 Sampling frame for first stage units: List of villages (panchayat wards for Kerala) as per 1991 Census and latest lists of UFS blocks were respectively used for selection of rural and urban sample FSUs. For selection of sample villages from the State of Jammu & Kashmir, list of villages as per 1981 Census was used as the sampling frame. All the uninhabited villages of the country as per 1991 Census, interior villages of Nagaland situated beyond 5 kms of a bus route and inaccessible villages of Andaman & Nicobar Islands were left out of the survey coverage of the NSS 55th round.

2.1.3 Stratification

2.1.3.1 Rural: Two special strata were formed at the State/ UT level, viz.,

Stratum 1: all FSUs with population between 1 to 100, and

Stratum 2: FSUs with population more than 15,000.

[Note: The above two strata were spread across a given State and were not confined to any particular administrative division within the State.]

The above noted strata of either type were formed if at least 50 such FSU's were there in the respective frames. Otherwise, they were merged with the general strata.

While forming general strata (consisting of FSUs other than those covered under strata 1 & 2), efforts were made to treat each district as a separate stratum. If limitation of sample size did not allow the formation of so many strata, smaller districts within a particular NSS region were merged to form a stratum. Each district with rural population of 2 million or more as per 1991 Census (1.8 million or more as per 1981 Census in case of Jammu & Kashmir) was split into a number of strata.

2.1.3.2 **Urban** : Strata were formed within NSS Regions as follows:

Stratum number	Composition of strata by considering population of various towns as per the 1991 Census
1, 3, 5 *	'hospital area' (HA) / 'industrial area' (IA) / 'bazaar area' (BA) blocks taken together, of each single city with a population of 10 lakhs or more (there could be a maximum of 3 such cities within an NSS Region)
2, 4, 6 *	Other blocks of each single city with a population of 10 lakhs or more
7	HA or IA or BA blocks of all towns with population between 50,000 and less than 10 lakhs
8	Other blocks of all towns with population between 50,000 and less than 10 lakhs
9	HA or IA or BA blocks of all towns with population less than 50,000
10	Other blocks of all towns with population less than 50,000

* Stratum numbers 3, 4, 5 and 6 remain void if there is only one city in an NSS region with a population of 10 lakhs or more.

If sample size was not adequate for forming so many strata, all blocks of stratum 7 were merged with those of stratum 8 and all blocks of stratum 9 were merged with those of stratum 10.

2.1.4 Sample size : A total number of 10,384 FSUs was selected for survey in the *Central sample* at all-India level (rural & urban combined) in the 55th round. For *State sample*, there was normally an equal matching. Exceptions were only for Nagaland (urban), Delhi, Goa and Maharashtra (urban) where the State sample size was higher than Central sample. Sample for the whole round

for each State/UT and sector (i.e, rural/urban) was allocated equally among the four sub-rounds. Sample FSUs for each sub-round were selected afresh in the form of two independent sub-samples. The details of allocation and survey of FSUs, households and persons are given in Statement 0.

2.1.5 Allocation of first-stage units (FSU's): State/ UT level rural sample size was allocated among the rural strata in proportion to population. State/ UT level urban sample was first allocated among the three classes of towns (i.e, 10 lakh +, 50000 to less than 10 lakhs and less than 50,000) in proportion to population. Then sample allocation for each of the three classes of towns, within an NSS region, was further allocated between two stratum types consisting of - (i) HA/ IA/ BA blocks, and (ii) the rest in proportion to total number of FSUs in the respective frames with double weightage given to the first category of blocks. Stratum level allocations for both rural and urban areas of a sub-round were made in even numbers in order to facilitate selection of FSUs in the form of two independent sub-samples. Sub-sample numbers were 1 & 2 for sub-round 1; 3 & 4 for sub-round 2; 5 & 6 for sub-round 3 and 7 & 8 for sub-round 4.

2.1.6 Selection of first-stage units: For each sub-round, sample FSUs from each stratum were selected in the form of 2 independent sub-samples by following circular systematic sampling with (a) probability proportional to population for all rural strata other than stratum 1, and (b) equal probability for rural stratum 1 as well as all urban strata. Thus, stratum level allocation of FSUs was a multiple of 8.

2.1.7 Formation of hamlet-groups in large villages and number of hamlet-groups selected for survey: Depending upon the values of approximate present population (P) and approximate total number of non-agricultural enterprises (E), decision was taken to divide the FSU into a fixed number of hamlet-groups (hg's - the term applicable

for rural samples) / sub-blocks (sb's - the term applicable for urban samples) as per the rules given below:

Value of P	No. of hg's/ sb's formed in the FSU as per population criterion	Value of E	no. of hg's/ sb's formed in the FSU as per enterprise criterion
(1)	(2)	(3)	(4)
Less than 1200	1 @	Less than 100	1 @
1200 – 1999	5	100 – 249	5
2000 – 2399	6	250 – 299	6
2400 – 2799	7	300 – 349	7
2800 – 3199	8	350 – 399	8
(and so on)		(and so on)	

@ no. of hb's/ sb's = 1 means the whole FSU was considered for listing.

[For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur and Doda districts of Jammu & Kashmir, number of hg's formed in the village as per population criterion was : 1 for P < 600, 5 for P = 600 to 999, 6 for P = 1000 to 1199, 7 for P = 1200 to 1399, 8 for P = 1400 to 1599, and so on.]

The number (D) of hamlet-groups (hg)/ sub-blocks (sb) formed in the FSU was the higher of the two values as per the population and enterprise criteria. If the value of P was less than 1200 (600 for certain hilly areas specified above) as well as the value of E was less than 100 for an FSU, hg/ sb formation was not resorted to and the whole FSU was considered for listing. In case hg's/ sb's were formed in the sample FSU, the same was done by more or less equalizing population.

2.1.8 Formation of segments within FSU:

The hg/ sb having maximum concentration of non-agricultural enterprises was selected with certainty for listing of households/ enterprises. This hg/ sb was referred to as

segment 1. From the remaining (D-1) hg's/ sb's of the FSU, 2 more hg's/ sb's were selected circularly systematically and these 2 selected hg's/ sb's together was referred to as segment 2 for doing a combined listing of households/ enterprises. Thus, the listing of households/ enterprises was done only in segments 1 and 2 of the FSU. The FSU not requiring hg/ sb formation was to be treated as segment 1.

2.1.9 Stratification of households : All the households listed in a segment (both rural & urban) were stratified into two second stage strata, viz., 'affluent households' (forming second stage stratum 1) and the rest (forming second stage stratum 2). In the rural sector, a maximum of ten households which were relatively affluent compared to others and possessed at least certain item(s) like motor car/ jeep, colour TV, telephone, etc. or owned land / livestock in excess of certain limits were included in second stage stratum 1. In urban sector, the households having MPCE (monthly per capita consumer expenditure) greater than a certain limit for a given town/city were treated as 'affluent' households for the present survey and were included in the frame of second stage stratum 1 and the rest of the urban households were included in the frame of second stage stratum 2.

2.1.10 Number of households/ enterprises selected for survey: The number of households/ enterprises selected for survey from each FSU in general is given below:

segment	number of households allotted for consumer expenditure schedule in second stage stratum (SSS)		
	1	2	total
(1)	(2)	(3)	(4)
FSU with hg/ sb formation			
1	1	3	4
2	1	7	8
FSU with no hg/ sb formation			
1	2	10	12

2.2 Estimation Procedure:

2.2.1 Approach: The estimate for a sub-round was obtained by combining the estimates of the corresponding sub-sample replicates. Similarly, an estimate for the Round was obtained by combining the four sub-round-wise estimates.

2.2.2 The following notations are being used in this section:

- a = subscript for the a-th stratum
 - r = subscript for the r-th sub-sample replicate (r = 1,2,...,8)
 - q = subscript for the q-th sub-round (q = 1,2,3, 4)
 - f = subscript for the f-th sampled village/ block as First Stage Unit (FSU)
 - s = subscript for the s-th segment of sampled village/ block (s = 1, 2)
 - c = subscript for the c-th 2nd stage stratum of households in the sampled village/ block (c = 1,2)
 - j = subscript for the j-th sampled household
 - p = subscript for pooled estimate
 - z = size used for selection of an FSU from the sampling frame
 - Z = total of sizes in the sampling frame for the stratum
- [Note: For urban sector, z=1 and Z=N which is the total number of UFS blocks (FSU's) in the frame.]
- n = number of sampled FSU surveyed within a stratum and a sub-sample replicate (including zero cases but excluding casualty and not reported cases) and used for tabulation
 - L = number of sub-sample replicates surveyed and used for tabulation
 - D = number of hamlet-groups/ sub-blocks formed in rural/ urban sampled FSU

- H = total number of households listed in the appropriate frame
- h = number of sampled households surveyed and used for tabulation from the frame
- E = total number of enterprises listed in the appropriate frame
- e = number of sampled enterprises surveyed and used for tabulation from the frame
- y, x = value of characteristic y, x obtained in the sample
- \bar{y}, \bar{x} = estimated value of aggregate of characteristic y, x obtained from the sample.

2.2.3 ESTIMATES OF AGGREGATE: In the formulae given in this section, \bar{y} is the estimate of aggregate of any characteristic y for a given stratum (a), and for a particular sub-round (q) and sub-sample replicate (r). These formulae are provided for the general case of FSU's having two segments 1 and 2. For the FSU's requiring no hg/ sb formation, the formula is identical to that given for segment 1 while the contribution from segment 2 is taken as zero for estimating a characteristic of household from a given 2nd stage stratum (c) in the selection frame

$$\text{Rural : } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \frac{1}{z_f} \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad (1)$$

Here $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1) and

$$B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 2 (s=2).}$$

$$\text{Urban: } \hat{Y}_c = \frac{Z}{n} \sum_{f=1}^n \sum_{s=1}^2 B_{fsc} \sum_{j=1}^{h_{fsc}} y_{fscj} \quad \dots(2)$$

Here $B_{fsc} = \frac{H_{fsc}}{h_{fsc}}$, for segment 1 (s=1) and

$$B_{fsc} = \frac{D_f - 1}{2} \times \frac{H_{fsc}}{h_{fsc}}, \text{ for segment 2 (s=2).}$$

Note: For tabulating any characteristic from this detailed schedule $\hat{Y} = \sum_c \hat{Y}_c$ is to be used.

2.2.3.1 COMBINED ESTIMATE FROM SUB-SAMPLES: In the previous section, the estimate of a characteristic \hat{Y} as obtained for a

stratum (a), for a particular sub-round (q) and a sub-sample replicate (r), actually represent \hat{Y}_{agr} . The combined /pooled estimate for a particular stratum and a particular sub-round is computed as the average of sub-sample replicate estimates and is given below:

$$\hat{Y}_{aq} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{agr} \quad \dots(3)$$

2.2.3.2 ESTIMATE OF AGGREGATES FOR A SUB-ROUND AT STATE/ UT/ REGION LEVEL: If \hat{Y}_{qr} be the State/ UT/ Region level aggregate from the r-th sub-sample replicate and q-th sub-round, and \hat{Y}_{qp} , the combined/ pooled estimate of the aggregate based on the whole sample, for a given sub-round q, then

$$\hat{Y}_{qr} = \sum_a \hat{Y}_{agr} \quad \dots(4)$$

based on sub-sample replicate group r, and

$$\hat{Y}_{qp} = \frac{1}{L} \sum_{r=1}^L \hat{Y}_{qr} \quad \dots(5)$$

based on all sub-sample replicates.

2.2.3.3 ESTIMATES OF AGGREGATE FOR THE ROUND (i.e. taking all the 4 sub-rounds together) AT STATE/ UT/ REGION LEVEL: The estimates of aggregates for the whole round are computed as the simple average of the sub-round estimates derived in section 2.2.2, and are given below:

$$\hat{Y}_r = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qr}$$

... (6)

based on sub-sample replicate 1 and 2* and

$$\hat{Y}_p = \frac{1}{4} \sum_{q=1}^4 \hat{Y}_{qp} \quad \dots(7)$$

based on whole sample.

***Note:** In the Round, sub-samples 1, 3, 5 & 7 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate 1 (annual) while sub-samples 2, 4, 6 & 8 (in sub-rounds 1 to 4) are combined together to form sub-sample replicate 2 (annual). This was followed in the remaining sections also. Stratum level estimate for the Round is obtained similarly.

2.2.4 ESTIMATES OF RATIO: If \hat{X} and \hat{Y} be the State/ UT/ Region level aggregate estimate corresponding to variables x and y, then the estimate of ratio is given below:

$$\hat{R}_r = \frac{\hat{Y}_r}{\hat{X}_r} \quad \dots(8)$$

based on sub-sample group r, and

$$\hat{R}_p = \frac{\hat{Y}_p}{\hat{X}_p} \quad \dots(9)$$

based on the whole sample.

The formulae for \hat{X} are obtained similarly by replacing \hat{Y} by \hat{X} and y by x in the above formulae stated in previous sections.

Note: Estimates for the sub-round \hat{R}_{qr} and \hat{R}_{qp} have been obtained by replacing \hat{Y}_r and \hat{Y}_p by \hat{Y}_{qr} and \hat{Y}_{qp} , respectively and \hat{X}_r and \hat{X}_p by \hat{X}_{qr} and \hat{X}_{qp} , respectively.

Statement 0: Number of villages/ blocks allotted and surveyed and number of households and persons surveyed

State/UT	no. of villages		no. of blocks		no. of households		no. of persons	
	allotted	surveyed	allotted	surveyed	rural	urban	rural	urban

Section 3

Concepts and Definitions

3.0 The concepts and definitions followed in the sixth quinquennial survey on household consumer expenditure are more or less the same as in the earlier rounds. The concepts and definitions of the terms used or relevant in the report have been expanded below.

3.1 Household: A group of persons normally living together and taking food from a common kitchen constitutes a household. The word 'normally' means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. 'Living together' is usually given more importance than 'sharing food from a common kitchen' in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered a single-member household except that a family living in a hotel (say) is considered to be one household only; the same applies to residential staff of such establishments.

3.2 Household size: The size of a household is the total number of persons in the household.

3.3 Household consumer expenditure: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer

expenditure is the total of the monetary values of consumption of various groups of items, namely, (i) food, *pan* (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

3.4 For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear is considered to be consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipts in exchange of goods and services; (d) any other receipt through gift, charity, borrowing; and (e) free collection. Home produce is evaluated at the ex farm or ex factory prices. For evaluating the consumption of the items of group (iii) i.e., items categorised as miscellaneous goods and services and durable goods, a different approach is followed. In this case, the expenditure made during the reference period for the purchase of goods and services is considered to be consumption.

3.5 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the household and also by the guests, whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan, advance, etc., made by the household are not considered consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item 'cooked meals' is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others

would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty in estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and of guests and employees are recorded in the purchaser household.

3.6 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept in mind while using the NSS consumer expenditure data for any nutritional studies relating to the nutritional status of households.

3.7 **Reference period:** Reference period means the period of time for which data on consumption was collected. The reference period used for the survey was a “moving” one, varying from household to household, although it was a fixed length of period. During the 55th round of NSS, information on consumption of food, pan, tobacco & intoxicants was collected independently for two different reference periods of last 30 days and last 7 days from the same

households. For items of clothing, footwear, durable goods, education and medical (institutional) expenses, data were collected for the reference period of “last 365 days” preceding the date of survey. For the remaining items, a reference period of “last 30 days” preceding the date of survey was used. However, the monthly per capita consumption expenditure (MPCE) classes used in this report are based on data collected for “last 365 days” for clothing, footwear, durable goods, education and medical (institutional) expenses and for “last 30 days” for the rest of the items.

3.8 **Sector :** The word “sector” is used for the rural-urban demarcation: rural and urban are the only two sectors as far as this report is concerned.

3.9 **Major states :** This refers to the following states of India: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

3.10 **Monthly per capita consumer expenditure (MPCE):** For a household, this is its last 30 days’ total consumer expenditure divided by its size. A person’s MPCE is understood as that of the household to which he or she belongs.

3.11 **MPCE class:** The MPCE classes are normally revised during quinquennial surveys of Consumer Expenditure. Usually, 12 MPCE classes are formed from a table

giving estimated cumulative percentage frequency distribution of persons by MPCE for each sector separately. The upper limits of these classes correspond broadly to 5%, 10%, 20%, 30%, 40%, 50%, 60%, 70%, 80%, 90%, 95% and 100% - of population. The class limits are given below:

sl. no.	rural (in Rs)	urban (in Rs)
1	0 – 225	0 - 300
2	225 – 255	300 - 350
3	255 – 300	350 - 425
4	300 – 340	425- 500
5	340 – 380	500 - 575
6	380 – 420	575 - 665
7	420 – 470	665 - 775
8	470 – 525	775- 915
9	525 – 615	915 - 1120
10	615 – 775	1120 - 1500
11	775 – 950	1500 - 1925
12	950+	1925+

The MPC E classes have been assigned to the households

on the basis of data with reference period of “365 days” for items of education, medical expenses (institutional), clothing, footwear and durable goods and of “last 30 days” for the rest of the items.

3.12 Household type: Rural households were classified into five types and urban households into four types on the basis of the occupations pursued by the household members. The five types of rural households are: *self-employed in non-agriculture, agricultural labour, other labour, self-employed in agriculture, and other households*. The four types of urban households are: *self-employed, regular wage / salary earner, casual labour, and other households*.

3.13 The “type” of a household was determined as follows.

Rural

A household was classified as “agricultural labour” if its income from that source was 50% or more of its total income. The same criterion was followed to classify a household as “self-employed in agriculture”. A household was classified as “self-employed in non-agriculture” if its income from that source was greater than that from rural labour as well as that from all other gainful sources put together. If a household was not one of these three types but its income from total rural labour was greater than that from all self-employment and from other gainful sources, it was classified as “other labour”. The remaining households were classified as “other households”.

Urban

A household was classified as “self-employed”, “regular wage or salary earning”, or “casual labour”, according to the major sources of its income from “gainful employment” during the 365 days preceding the date of survey. A household not having any income from gainful employment was classified under “others”.

3.14 Social group: Four social groups were distinguished - scheduled tribe, scheduled caste, other backward class, and other households.

3.15 Land possessed: The area of land possessed (in hectares) includes land owned, leased in, and (encroached) land neither owned nor leased in, but excludes land leased out. The size classes of land possessed are:

- < 0.01 ha
- 0.01– 0.40 ha
- 0.41-1.00 ha
- 1.01-2.00 ha
- 2.01-4.00 ha
- 4.01+

3.16 Educational level: The level of general education of a member of the household refers to the highest course successfully completed by him/her. The different levels of education recorded in the Consumer Expenditure schedule are given below:

1. not literate
- literate through attending:
2. NFEC/AEC
3. TLC
4. others
5. literate but below primary
6. primary
7. middle
8. secondary
9. higher secondary
- graduate and above:
10. agriculture
11. engineering/technology
12. medicine
13. other subjects

3.17 For a person who has studied up to, say, the first year B.A., his/her educational attainment will be considered as higher secondary. For a person who has studied up to 12th standard but has not appeared for the final examination or has failed in that examination, his/her educational attainment will be considered under 'secondary'.

3.18 A person who can both read and write a simple message with understanding in at least one language is to be considered literate. Those who are not able to do so, are to be considered not literate. There are persons who achieve literacy through attending Non-Formal Education Course (NFEC) or Adult Education Centres (AEC), Total Literacy Campaign (TLC) and other similar courses have been given a separate level. Criteria for deciding primary, middle, secondary etc. depended on the recognition of concerned State or Union Territory. For

the level 'graduate and above' agriculture includes 'forestry', 'fishery science', etc. If more than one of the subject codes 10 to 13 are relevant for a person, the following procedure will be adopted:

- (i) when code 13 as well as one of the codes 10 to 12 are appropriate code 13 will not be considered.
- (ii) when more than one of the codes 10 to 12 are relevant, the code indicating the degree last obtained will be considered.**
- (iii) no distinction need be made between graduate and post-graduate.

Persons who have attained proficiency in Oriental languages (e.g., Sanskrit, Persian etc.) through formal but not the general type of education will be classified appropriately at the equivalent level of general education standard.

3.19 Literate and Illiterate: In the NSS rounds under consideration, a person who can both read and write a simple message with understanding in at least one language was considered as literate. Those who were not able to do so were considered as "not literate" or "illiterate". This definition is the same as that adopted in the decennial population censuses in the country.

3.20 Literacy rate: It is defined as the ratio of literate persons to all persons aged 7+. In this report, literacy rate has been expressed in the form of a percentage.

corresponding Census estimates for external validation. The literacy rates, unless otherwise specified, are given in this section for the persons aged 7 years and above. In Appendix Table 6 the distribution of persons by level of education for each age group at all-India level has been provided.

4.2 Variation over MPCE classes: Statement 1R shows per 1000 distribution of persons aged 7 years and above by education level separately for each MPCE class and sex at all-India level. It is evident that in rural India the literacy rate is an increasing function of MPCE for both males and females and thus for all persons also. Like the literacy rate, the proportion of persons in any specific level of education also tends to rise with MPCE for both males and females. At all-India level, the proportion of not literate rural males was 322 out of 1000 males. Among the 678 literate males, only 151 had qualifications secondary and above in rural areas. Among the females in rural areas, the literacy rate at all-India level was only 434 out of which only 64 had qualifications secondary and above. Overall, in rural India, 560 persons out of every 1000 persons are literate and out of these 560 persons, only 109 possessed educational qualification level secondary or above.

In urban India, as Statement 1U shows, the proportion of literates was 798 out of 1000. Therefore, about one-fifth of the urban population was not literate. Among the literates, 325 persons (out of 798) attained education level secondary and above. This is much higher compared to rural India. Among the males, the literacy rate was as high as 865 out of 1000 while the same for females was about 72%. The proportions of persons in each education level were lower for females than for males. The proportion of persons in any education level was an

Section 4

Summary of Findings

4.1 This section summarizes the results on literacy and levels of education of persons classified by different socio-economic categories like household type, social group, size class of land possessed (rural only) and MPCE classes. The discussions are mainly concentrated at all-India level. However, overall literacy rates have also been discussed for all States and UTs. Further, the results of this round (NSS 55th round) have been compared with those of the earlier quinquennial round (NSS 50th round: July 1993 – June 1994) on household consumer expenditure. At the end, the estimates were compared at State level with the

increasing function of MPCE as in rural areas for each education level and also for both males and females.

4.3 Variation over household types:

Statement 2 shows the distribution of persons by level of education, separately for each household type and sex. (See Figures 2R and 2U in this connection.) Accordingly, in rural India, literacy rate per thousand was the highest (737) for household type 'others' followed by self-employed in non-agriculture (630). The rate was the lowest (426) for agricultural labour households. These differentials were similar for both males and females. Similar patterns may be observed for proportion of persons in each level of education. In urban India, the literacy rate was distinctly low for casual labour households compared to other households. It was 59% (593 out of 1000) of persons belonging to casual labour households compared to the national average of 80%. For the remaining household types, the proportions of literates among males, females or persons were the highest for regular wage /salary earning households.

4.4 **Variation over social groups:** Statement 3 presents distributions of persons aged 7 years and above by level of education separately for each social group and sex. (See also Figures 3R and 3U.) The pattern of variation in the literacy rate was almost the same for both males and females in rural as well as urban sectors. However, in rural India, the literacy rate was the lowest for persons belonging to ST households (42%) followed by persons belonging to SC households (47%). But in urban India, the literacy rate was the lowest for SC households (66%) followed by ST households (70%). For both the sectors the literacy rate was the highest for persons belonging to social group 'others'.

4.5 Variation over size classes of land possessed (rural):

Statement 4 shows the distribution of persons aged 7 years and above by level of education, separately for each size class of land possessed and sex in rural India. (See also Figure 4R.) It brings out the fact that literacy rate is a very slowly increasing function of the area of land possessed for both males and females and so for all persons. For the lowest size class of land possessed the literacy rate of all persons was 52% while it was 64% for the highest size class of land possessed. As expected, the literacy rate for males was much higher than that of females for any specified size class of land possessed, the differential being above 20 for different size classes.

4.6 Variation across religions:

Statements 5R and 5U show the distribution of persons aged 7 years and above by level of education separately for each sector, sex and religion. (See also Figures 5R and 5U.) It is seen that the literacy rate was rather low for both males and females in rural India for 'Islam' compared to other religions. 'Hinduism' and 'others' are not much better, especially for females. In urban India, the literacy rate was 88-89% for males following three religions, namely, Hinduism, Sikhism and Buddhism. Further, males who followed Christianity or Jainism had a still higher rate of literacy, 94% or more. Here also 'Islam' shows a lower literacy rate. The picture is similar for females in urban areas.

In rural areas, gender disparity in literacy rate was very large for Hinduism and Islam, compared to other religions. The pattern was similar to some extent in urban areas, but here the gender disparities were generally smaller.

4.7 Comparison of literacy rates between NSS 50th and 55th rounds: Statements 6R and 6U present the percentage of literates for each State, UT and all-India separately for rural and urban areas from NSS 55th and 50th rounds. These statements reveal the following points.

At all-India level, literacy rate (%) increased during the period from 1993-94 to 1999-2000. For males, it increased from 63 to 68 in rural areas and from 85 to 87 in urban areas. For females, the corresponding figures were 36 and 43 in rural areas and 68 and 72 in urban areas. The figures for persons were 50 and 56 in rural areas and 77 and 80 in urban areas. The changes in literacy rate over this period for each sex and residency sector have been depicted in Figure 1. Such rise in literacy rates was observed in most States/UT's separately for rural and urban areas and for males and females.

Among the rural areas of 15 major states, Rajasthan and Madhya Pradesh showed the highest increase in literacy rate for males and females over 1993-94 to 1999-2000. The increase was by 9% for males and by 10% for females. For females, there was one more major state, namely, Maharashtra, for which the increase in literacy rate was 10%.

Among urban areas of the major states, the increase over 1993-94 to 1999-2000 was more than the national increase in urban areas of Karnataka, Rajasthan, Andhra Pradesh and Tamil Nadu.

It is worth mentioning that literacy rates for males had not changed much for most of the States and UTs although there were some increases for females. One may like to conclude that literacy rates for urban males

are relatively high and are being stabilized while the literacy rates for females are increasing.

Figures 6R and 6U depict the literacy rates based on NSS 55th round on the map of India.

In a developing country, it is normally observed that literacy rates for males are higher than those for females. It is observed from the tables presented in this report that the literacy rate in each state was higher for males than for females. Similarly, rates for rural areas were, normally, lower than the corresponding rates for urban areas.

Among the major States, the rural literacy rate for all persons was the highest in Kerala. It was around 90% in both the NSS rounds – 50th and 55th. The second highest literacy rate among the rural areas of major States was found for Assam (69%). The rate was the lowest for Bihar (42%) followed by Andhra Pradesh (46%) and Rajasthan (47%). The literacy rate was also relatively low (between 50 and 60%) in the rural areas of the following States: Karnataka, Madhya Pradesh, Orissa and Uttar Pradesh.

Out of a total of 32 States and UTs, there were only 8 where the rural literacy rate was 80% and above. These States and UTs were Goa, Kerala, Mizoram, Nagaland, Andaman & Nicobar Islands, Daman and Diu, Delhi and Lakshadweep.

In urban areas the variation of literacy rates across States/UT's was much smaller compared to the rural areas. It ranged from 70% to 99% over the urban areas of different States and UTs while it varied from 42-91% in rural areas. The urban literacy rate (%)

was very high in Kerala (94), Meghalaya (92), Mizoram (99), Nagaland (94) and relatively low in Andhra Pradesh (75), Bihar (70), Orissa (76), Punjab (79) and Uttar Pradesh (70).

4.8 Comparison of literacy rates between NSS 55th round (1999-2000) and Census 2001 estimates:

The comparative statement of literacy rates between estimates from NSS 55th round and Population Census 2001 is presented in Statement 7. This statement does not give the rural-urban break-up. Rather, it gives the State level comparison. Broadly speaking, the census and NSS estimates of literacy rates are close to each other. However, NSS estimates are generally lower than the corresponding figures from Population Census 2001 for all major states except Assam and Kerala. In contrast, NSS estimates for smaller States and UTs are generally higher than the corresponding figures of the Population Census. The reason may be due to the arduous field conditions prevailing in Tripura, Jammu & Kashmir and North-Eastern States. North-Eastern States presented similar discrepancies in NSS 47th round. At all-India level, the difference in census and NSS estimates of literacy was 3% for both males and females. For rural males,

NSS literacy rate was 73% while census literacy rate was 76%. Similarly, for females NSS estimate was 51% and the census estimate was 54%.

The difference in literacy rate between NSS 55th round and Census 2001 was roughly similar for males and females for any State/UT.

For persons, the absolute difference in literacy rate was more than 5% in Andhra Pradesh, Assam, Madhya Pradesh, Mizoram, Nagaland, Orissa and Rajasthan and was less than 2% in Arunachal Pradesh, Gujarat, Kerala, Chandigarh, Lakshadweep and Pondicherr
